EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 27, 1918.

On the bill (H. R. 5687) to provide for the deportation of aliens, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, in addition to the statements made by me when this so-called "alien-slacker" bill was up for consideration one week ago, I desire to make a further statement as to my opposition. I believe the bill, if enacted into law, will only make a bad matter worse. I can not believe that the other branch of Congress—the treaty-ratifying body—will even bring this bill out of committee for consideration; certainly not while that body has before it treaties fully covering and curing the very situation at which the bill aims. Perhaps I might suggest to Members that, sim-

ply because they feel that this bill in this shape can never become a law, is no reason why they should vote for it. One does not ease one's conscience that way. The Nation does not write good laws on its statute books that way. Of course, the striking out of section 2 on the floor by the chairman of the Committee on Immigration [Mr. BURNETT] does away with some of the objections. But the principal objection—the first—that the Secretary of State has asked that consideration of the bill be postponed until he can complete the work of negotiating treaties with the countries most vitally affected, remains. He has two of those treaties ready for ratification in the body which ratifies treaties. The House has nothing to do with negotiating or ratifying treaties, and we should be a little careful as to how we tear them up, particularly when the affairs of so many of the nations of the world are on edge.

This bill gains prestige by being cleverly misnamed. It has been given a title which calls sharp attention to an evil every one of us wants to scotch. It is called the "alien-slacker" bill. That is enough. "Alien slacker." Everybody is after him, and justly so. But we have deportation laws which, if enforced, will catch many of them—particularly those beyond our National Army age limits. Many mischief-makers and anti-Government shouters, treason preachers, sabotage practitioners, and others of that destructive ilk can and should be sent out of the country now under existing laws, and will be sent out long before this bill is ever written into law. The class I speak of are not only found among the slackers of our cobelligerents—which this bill seeks to reach—but many neutral aliens and many enemy aliens. Bad eggs of both former classes can be shipped out instantly under the broad deportation clauses of the new Burnett immigration law; and, pardon me, if I say with much pride that I had considerable to do with enlarging the scope of those deportation clauses when the bill was being written. Alien enemies, who secretly work our destruction, can be interned and deported when the time comes—if it is not advisable to shoot some of them before that much-desired time.

We can hit and hit hard all of the real alien slackers in this country without waiting for this bill, which, in a roundabout way, dodges treaties now actually existing with our allies.

Earlier to-day in the debate I asked you to look at H. R. 9932, placed on the calendar to-day, and to read the report thereon. It deals with aliens—first-paper aliens—already taken into our National Army, and seeks to cure a serious defect in the law which created that army.

Now, let us take the case of a real alien slacker. Here, for instance, is a man from England in this country unnaturalized and of our military age. He refuses to join the forces of his country voluntarily. We are after him with this bill, and we offer him two alternatives. He can go into our Army or he can go back to England and be subject to military duty there. He ran away from fighting and he looks upon both of our provisions as punishments. He prefers to be in our Army rather than in his own. So he takes that form of punishment. And therefore our great Army, which carries the Stars and Stripes across the seas, is the penitentiary for this fellow. As a matter of fact, this fellow is poor material for our kind of citizenship, and poorer still for our kind of soldiers. Why not deport him outright as undesirable? Why make our Army his penitentiary?

Mr. Speaker, I joined the agitation against the importation of undesirable aliens—against the importation, in fact, of too many aliens—a great many years ago. Standing firmly for restriction, I have also stood firmly all these years for the deportation of undesirable aliens. Even had we not entered the world war, we still had that job to do.

For years I have been calling attention to certain unnaturalized people who have been and still are here gnawing away at the very foundations of this Government. Some of them in high places; editors of American-printed thought-making magazines; and these editors not even first-paper citizens. Out with them! Others, editing foreign-typed newspapers, telling their readers how to wreck and destroy, and these editors not citizens. Others on the rostrum—one from Canada has been running around my district telling the people how to build up a revolution and how to make our Army impotent. Hanging is too good for him. Others on the soap boxes at the street corners in bold words preaching treason and sedition. They are in small towns as well as large, and lots of them foreign born. I know one, a wharf rat from Liverpool—unnaturalized—an organizer of the I. W. W. He is of military age. Would you give him a chance to go into our Army by means of a bill like this, or only deport him after he has refused to put on a uniform, or after he has taken a soldier's oath of allegiance? By his I. W. W. oath he is sworn to perjure himself as he pleases. Such a skunk take a soldier's oath? Preposterous! Why not

deport him now, since he was not deported last year or the year before that?

No, gentlemen, you can not help our great Army by opening a way for entrance into its ranks of unnaturalized tripe of that kind. We have I. W. W.'s in the Army now, spreading their poisonous doctrines of sabotage, revolution, and destruction of property among the ranks of our young soldiers. Already a conspiracy to kill the officers has been discovered in a great cantonment out West. One slimy, skulking, foreign-born citizen, call him "alien slacker," if you will, can do more damage if given a chance to sneak into the Army through the clauses of this bill than our free people, who are only recently becoming alive to the dangers of I. W. W.ism and imported revolution, can realize.

You can not help our citizenship by leaving these destroyers of government within our land, and you do not need an "alien-slacker" bill to get them out, particularly as that bill would let them go through our Army ranks with their sabotage, their whispers of revolution, and their poison. You can deport them instantly under the clauses of the Burnett immigration law. While I honor and praise the distinguished gentleman from Alabama [Mr. BURNETT] for that great immigration-restriction measure which makes such deportation possible, I can not conscientiously support this ill-timed measure which bears his name.

Furloughs to Soldiers.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 8, 1918.

Mr. SCHALL. Mr. Speaker, under the selective-draft law there was plenty of leeway given to local boards to exercise common sense and good judgment. These local boards were calculated to be made up of men in every day touch with the boys from whom they were to make selection, in a position to know what would be just and what would be unjust; who would be eligible and who should be exempted; who would be essential and who less essential. This local board was meant to be a jury to sit in judgment upon the just or unjust claims of exemption. But in many cases instead of taking this broad view they have used a narrower construction and shoved everyone along, no matter how clear their claim nor how vital they were to their country in another service than military.

In our eager desire to be sure that the selected boys should have justice, and in our earnest wish not to subject the boys to cold, hard, unsympathetic militarism, we lodged the discretion in the local board, who have, in thousands of instances, all over the country, failed to judiciously exercise it, to the extent that we are to-day facing a crisis, especially from the food-producing element. I am therefore heartily in favor of this resolution, which gives the Secretary of War discretion to grant furloughs to enlisted men of the Army of the United States, upon their application, with or without pay and allowances or with partial pay and allowances, for such periods as he may designate, to permit them to engage in civil occupations and pursuits.

This resolution is wide enough to cover any emergency case and give opportunity for the exercise of judgment and humanity. We did not foresee that it was impossible to legislate the exercise of good judgment into many of the local boards. We felt sure that a local board would be far better for the local boys than a department of the Government at Washington.

Careful and sympathetic attention was expected from local boards to the claims of men who in their place as producers of food are indispensable to the success of our armies and our home prosperity.

The chief merit to the argument for the selective draft was that it purposed really selecting. The essential man, the necessary producer, was to serve his country in the niche for which he had been trained, while the casual or untrained man, whose place could easily be filled, was to take his position in the line. Instead of exempting the farmer as a class, it has almost come to the point that the local boards take the farmer as a class. True, the farm breeds a class of men that war wants. The husky sons of the soil make cracking good fighters, but the country can not spare them. Local boards are absolutely disregarding claims for exemption from farmers having dependents or because farmers are essential and skilled.

Here are some letters taken at random from hundreds. If I were to print them all, it would fill the RECORD. One says:

My third son has been taken in the draft. It is almost too much for poor families to lose all the help they have. Suppose I will have to give up my farm and go up on a logging camp in northern Minnesota. That is what I did in my young days, but now it is almost too hard for me, after I have been working hard here for 18 years trying to work up a farm.

Another says:

We are 69 years old, and it is impossible for us to get along without our boy. He takes care of us and our land and his own. We shall have to dispose of our three horses, seven milk cows, and some young stock if we can't get him home.

And still another says:

We have 205 acres of land. I ask if they won't let my two boys come back. I can get no help. These two boys have run my farm as long as they were able to work, and now they are both taken in the draft. My husband died in 1903, and we struggled along. I often had to send them to school with only a little sirup on their bread. But they are grown now. I am 60 years old, lame, and not very strong. We will have to let the land lie. We can not work it.

The colossal blunder of drafting the farmer as a class is a crime against our national policy that will pinch every one of us before another year is out. It does not take half vision to see that. It would seem that we might have profited by England's mistakes in sending to the trenches her skilled producers, her necessary labor reserves. She had to recall them from the trenches, a costly blunder, which in our case will mean a fatal loss of time and money. War is a business proposition on a tremendous national scale.

The most disastrous of all the "less" conditions that we are called upon to face in this war is the spectacle of the farmerless farm. The farmer is called upon to increase his acreage, which he does. Then he is called upon to send his sons away to the camps in class A. What use is it to bend enormous energies to increase acreage when there comes an inexorable mandate removing the laborers who could bring this increased acreage to fruition?

The farmer is the Nation's most indispensable asset. No one can take his place on the farm. Farming has become a highly specialized and scientific business. It is the fundamental occupation. The city man in his conceit may think that any green hand can farm, when, on the contrary, it requires long training, aptitude, and almost a special instinct. I know by experience that a green hand can do more damage, make more costly mistakes, require more supervision than he is worth.

It is a fiction that any farmer can rent his farm at any time. Renters are scarce and too often destroy the land and produce less, as anyone familiar with farm conditions knows. To take the holder of a farm will simply mean that his acres lie idle.

Scarcity of labor on the farm is not a new condition. The workday for the farmer was long and hard because labor was so hard to come by. Increasing attractiveness of labor conditions, hours, and wage of the manufacturing industries had well-nigh drained the farm of transient help long before the war. It was a problem of late years even to hold the farmer boys and girls, and only the rapid growth of agricultural colleges, with their splendid uplift and progressive tendencies, has saved their sons and daughters to the farm.

Take this year, when supreme and patriotic efforts were made to attain an unusually large output, before the drain on labor that the war has levied, many a field of potatoes was frozen for lack of garnerers. Crop after crop of corn was still ungathered in February for lack of help.

The farmer's sons, whom he has trained, on whom he relies, and in whom he has invested years, are taken from him; he must replace them with idle, indifferent, untrained substitutes. Men to whom farm work and farm conditions are distasteful will not make good farmers.

All down the line there is a heavy stress that the farmer should be patriotic. It is not a question of the patriotism or nonpatriotism of the farmer. It is a question of getting food enough for our soldiers and our allies and ourselves, to say nothing of overbalancing the wasted food that "goes down to the sea in ships," and providing for the lean years of reconstruction after the war, when all nations will be in the throes of readjustment.

It is absurd to insist that if the farmer is patriotic he will willingly go and share the privation that all classes have to bear in war. That is beside the mark. Of course the farmer class is as patriotic as when at Lexington they "fired the shot heard round the world" or when in the Civil War they laid aside their plows to shoulder their muskets for an ideal. They are eager to help. They would strain their 16-hour day to 20 if only stupid, short-sighted policy did not fret and hinder them at every turn. They know the importance of every furrow of earth, but they must not be met with conditions that destroy

their confidence. They are faced with a shortage of seed and its consequent high price, yet the Agricultural Committee has not seen the necessity of passing the bill to furnish seed to the farmer.

The farmer must meet a shortage of credit and a shortage of supply. He should not from his patriarchal Government be faced with a price fixing that is not based on cost of production. The food producer is not the food pirate. Production must not be choked for the sins of the profiteer. If the farmer is not to be bankrupt, a minimum price must be guaranteed high enough to cover the higher wages for labor and the larger supplies that go to the increased acreage.

We must insure the security and peace of mind of the farmer, and attain a greater Nation through greater agriculture. Cheap food in war time is a Utopian dream impossible of fulfillment. Do not try to make a benevolent institution of the farmer. You will only ruin him and the country and defeat our success in war.

You are not going to stimulate production by fixing prices below cost. You can take a horse to water, but you can not make him drink. Put the price of any farm product below profit to the producer and what kind of idiot would he be to raise that instead of a paying crop?

There is a limit to the amount of food that can be raised in a twelvemonth. When that limit is reached and passed we and our allies and our soldier boys, too, face starvation. We think comfortably of our crop in billions, but we forget the billion demand, increased in every way over normal times. The winter wheat is 25 per cent below normal. Canada's production is cut short by the prevailing shortage of labor. Lack of shipping has cut us off from the relief of New Zealand, Australian, and Indian wheat.

We read on every envelope that food will win the war. Sufficient supply of food can do more to sustain the morale of an army and a people than any other condition.

There is a bigger issue involved than the ruin of the farmer, individually or as a class. The prosperity of the Nation in peace times is indissolubly joined with the prosperity of the farmer. In war times this is immeasurably truer, for food is as necessary as bullets.

The sooner the whole Nation gets a war point of view, the shorter will the conflict be.

Furloughs for Civil and Industrial Occupations.

EXTENSION OF REMARKS OF HON. GILBERT N. HAUGEN, OF IOWA, IN THE HOUSE OF REPRESENTATIVES, Friday, March 8, 1918.

The House had under consideration the bill (H. R. 9100) authorizing the Secretary of War to grant furloughs for civil and industrial occupations.

Mr. HAUGEN. Will the gentleman yield?

Mr. DENT. Yes.

Mr. HAUGEN. As I understand, the purpose of the bill is to relieve the labor situation on the farm?

Mr. DENT. Yes; and also in the industries.

Mr. HAUGEN. But more particularly to relieve the labor situation on the farm.

Mr. DENT. Yes.

Mr. HAUGEN. Is the question of skill to be taken into consideration?

Mr. DENT. No; skilled or unskilled labor has nothing to do with it.

Mr. HAUGEN. Mr. Speaker, this is a most important question. It is not only a matter of vital importance to the farmer, but is of grave importance in the conduct of the war as well; hence a question of general interest that many of us desire to discuss. Now, that the chairman is going to move the previous question at the expiration of his time, and as no time will be granted to others, I ask unanimous consent to extend my remarks in the RECORD.

The fact that there is a shortage of labor on the farm and that it is a problem difficult to solve is not denied. House bill 9100, now under consideration—a bill authorizing the Secretary of War to grant furloughs, with or without pay and allowances, to enlisted men of the Army of the United States, and for other purposes—will, according to the statement of the chairman and

the Secretary, evidently give relief in a large measure. The Secretary of War states in his letter as follows:

The main purpose for which it is intended to use this authority is to furlough soldiers in the National Army during harvest and planting time to enable them to assist in the agricultural production of the country.

Under the law as it now stands the furloughed men would be entitled to pay and allowances during the period of their absence. It is necessary, therefore, to have authority to grant such furloughs without raising a claim against the Government for pay.

According to the bill the matter of furloughing enlisted men in the National Army is left to the discretion of the Secretary. With the Secretary's assurance that farm labor will be furloughed during planting and harvesting time, relief may be looked for to that extent. In many sections of the country this plan will give the desired relief, not to all, however, for on some farms skilled farm labor is required during the whole year, as, for instance, in diversified farming, dairy farming, and in instances where the old and feeble are dependent upon their sons or other experienced help. For example one man writes me:

My oldest son is at the head of my 485-acre farm. I have 150 head of cattle and 125 hogs. The farm is one of the best farms in Cerro Gordo County. He has worked on the farm all his life and is a No. 1 man on the farm.

He states further that he has only the one son on the farm, who now will join the Army, and asks the question, "How can we be expected to work the farm if our help is taken away from us, and what can be done about it?" As has been stated here to-day, nothing can be done. True, an appeal can be taken, but as has been said appeals are without result. The writer of the letter points out that, unfortunately, boys, girls, and old men can not meet the requirements, and that what is necessary to run the grain and corn binders, cut and stack hay, drive the horses, and attend the stock is strong, vigorous men, trained in the school of experience. This is one of many letters received. Similar appeals have been received by many Members, many of which come from old and feeble parents greatly in need of their only sons' service. The question of relief in the necessity of skilled labor on the farm is, of course, only one side of the case, and not the most important side to be considered, for no matter what is done in the way of legislation or otherwise affecting the farmer, no matter how much he may be in need of help, he will in some way provide for himself and his family. His hens and cows and what grain he may be able to produce will enable him to supply his family with eggs, butter, meat, flour, and the foodstuff necessary for the subsistence of his family. The other, the all-important, side of the question is this: How can we best conduct and win this war? In order to win we must have men, money, and food.

Battles can not be fought and won without men, and the strong, vigorous farmer is of inestimable value in the trenches. Obligations fall equally upon all. Obviously it would be unjust to deprive him of the opportunity of fighting actively in defense of his country. Yet we still have the important question of how to feed our soldiers, our people, and our allies. "Food is fuel for fighters."

It is unnecessary to say that our soldiers can not fight nor can our people endure without food, and that, in order to conduct successfully the war, those on the firing line must not only have food but must have the best of food if they are to accomplish the results so much desired.

The President, through Mr. Hoover, is pleading for foodstuffs, feeds, and fats. Considering the submarine activities and the world's limited facilities for shipping, our supply is to a large extent the only available food source of the allied countries. Therefore we must furnish a large portion of the world's supply. There are, of course, other sources to draw upon, as, for instance, Australasia, India, and South America, but when we consider that to make these supplies accessible a journey of 120 days for a cargo steamer to Australasia and 65 or 70 days to Argentina is required, as compared to 42 days to the United States, this reduces the carrying efficiency of a given ship in going to the east. It is obviously true that our supply and the limited supply of Canada are about the only available supplies.

Food conservation and food regulation will not entirely solve the problem. We must first have the food. It requires soil, seed, labor, sunshine, rain, and the cooperation and hearty support of kind Providence to produce it. Many seem to overlook the importance of skilled farm labor. Many seem to think that the farmer can fight and farm at the same time; others that loafers not desired in the trenches can run the farm; others that the college boy can master the job, that skill is not required in farming successfully. England and other countries tried it, but soon discovered their mistake. We started out along that line. I believe that now all appreciate that it can not be done. Of course, anyone that knows anything about

farming realizes that farming is impossible without industry, practical and trained labor; that skill is as necessary on a farm as in the factory, in the mill, in banks, or in the various professions. We started out by exempting skilled farm labor, which was interpreted to mean graduates from agricultural colleges. I have the highest regard for the scientist and graduates of agricultural colleges, their accomplishments, and their ability to aid in making farming a success; but my experience is that the industrious and experienced practical farmer can hold and steer the plow better than the one who has been devoting his time to school and who depends largely upon the textbook as his guide. His function is not to plant, cultivate, and harvest, but to advise and direct. Without reflecting on anyone, I contend that skill in the art of farming is better attained in the school of experience and that it is of the greatest importance, which also applies to all other lines of activity. To substitute the inexperienced would, in my opinion, result in farms going into the hands of the receiver and many people going hungry. Education, no matter along what line, should be given assistance and every encouragement. Knowledge is power, and all should seek it as for a hidden treasure; but it goes without saying that burning the midnight oil in an endeavor to master languages, farming, or science is accumulating knowledge along a different line than milking cows, swilling hogs, and performing various forms of farm work. The one devoting his life to the accumulation of technical knowledge is not expected to have the practical experience of a farmer, and vice versa. So it will not do to expect the farmer to produce the necessary food without help or to depend upon inexperienced farm labor. No matter how willing he may be to help, he is as helpless as a layman in trying a lawsuit or in healing the sick. Certainly it will not do to rely on the tramp or on the pool-hall loafer. No! Skill is required on the farm as much as in the factory, in the mill, or in the various professions.

In order to insure an adequate supply of foodstuffs we should also have just laws and an honest administration of those laws. We can not afford to be contented with anything else. We must have laws dealing with all questions in a broad and comprehensive manner, with a spirit of justice and fairness to all concerned. Unfortunately there seems to be some question or misunderstanding as to the fairness and administration of laws enacted. The act of August 10, 1917, section 5, contains a licensing provision. It gives the President authority to license the importation, manufacture, storage, mining, or distribution of any necessities in order to carry into effect any of the purposes of that act. The purpose of that act was to facilitate the movement of foods, feed, fuel, including fuel oil and natural gas, and fertilizer ingredients, tools, utensils, implements, machinery and equipment required for the actual production of food, feed, and fuel, which are defined as necessities. In another section it fixed the guaranteed price of the 1918 wheat crop at \$2 per bushel. Through the licensing, regulation, and the combination made with our allies in concentrating in one man the buying of foodstuffs for all the allies it was made possible to fix or depress the price of all necessities defined in the act, such as foods, feed, farm implements, and so forth, as has been fully demonstrated in the fixing of prices of bran, middlings, fertilizers, cottonseed meal, cattle, and hogs. But little objection has been raised to price fixing, provided all are treated alike and if prices fixed are reasonable and fair. The objection raised is as to the apparent discrimination and unproportioned price. First the farmers were advised through the press that the minimum price of hogs would be fixed at \$15.50 per hundred pounds.

The bases given for the ratio or for fixing the price at \$15.50 were that 100 pounds of pork was equal to 13 bushels of corn. Recently cash corn has been selling in Chicago and other primary markets, No. 4, from \$1.80 to \$2 per bushel; No. 5, from \$1.50 to \$1.90. Hogs, from \$16.35 to \$16.70. Pigs, \$10 and up. Thirteen bushels of corn at \$1.80 would, according to the estimates made, bring hogs up to \$23.40, which is \$6.70 in excess of the price of 100 pounds of pork at \$16.70.

Much of the time during the last year feeders who were obliged to ship in corn have been paying \$2.25 per bushel for good quality dry corn. A hundred-pound hog, at that price, would bring less than 7 bushels of corn. If the object of the Food Administration was to keep the production up to normal, evidently the knocking off of several dollars a hundred on hog prices at the beginning of the fall breeding season did not bring about the results anticipated. To the contrary, according to Mr. Hoover's statement and testimony submitted to the committee, instead of an increase in production we have a shortage, as, for instance, in a large section of Oklahoma the number of brood sows has been reduced to less than one to each farm. So if pigs are, as Mr. Hoover has said, as important to us as shells,

we better take Mr. Farmer into our confidence and tell him just what he may expect or stop fixing prices. What is true as to the price of hogs also applies to cattle, as everyone knows that feeders of hogs and cattle are losing money; that is, if the price of corn is taken into consideration.

With results obtained it would seem that if we can allow the trust makers to fix their own terms and prices, as is being done, it would be safe and fair to allow the producer to sell his products unhampered in the open market, to give him the benefit or privilege of taking his chances on the law of supply and demand fixing prices on his products. The shortage of foodstuffs is not due to lack of patriotism on the part of the farmers, but evidently to the abnormal demand, conflicting reports, and unsatisfactory regulations. All the farmer asks is a square deal, to be treated like a business man, like everyone else. Their representatives did not come to Washington asking for higher prices. As all know, prices on farm products were high and were sure to continue. Mr. Hoover expressed the belief that wheat might go up to \$7 per bushel. No one wanted that. The price of wheat was fixed at \$2.20. According to reports, as a result much wheat has been fed to stock instead of being ground for food, as was desired and needed. All know that price fixing meant lower prices. As evidence of the farmers' patriotism, their representatives said, "If price fixing is necessary to prosecute successfully the war, we are for it." Not a single complaint was registered against it by them, but what they and a number of us did contend for was that if found necessary to fix and to lower prices on their products we believed that prices should also be fixed accordingly on the things which they had to buy, such as farm machinery and equipment required for the actual production of food, feed, and fuel, and the bill as finally enacted provided for that very thing. All came in under one blanket, so that whatever power was given as to one applies to the other; that is, all that were defined as necessary in the bill.

As my only purpose is to point out facts, and I have no desire to criticize, I refrain from referring to the recent complaints of Hog Island and investigation of the packers and facts brought out which indicate that favoritism has been indulged in—unintentionally, I trust. If half of this is true, there evidently is a deplorable lack of patriotism somewhere.

When the resolution declaring war against Germany was under consideration I stated, "When war is once declared it becomes the duty of American citizens to do everything in their power to sustain the President in every honest and patriotic endeavor to successfully prosecute and end the war. Certainly no one voting for war and the sacrifices to be made will desert him and the country in its hours of peril."

"Now is not the time to criticize the action of anybody as to what has been done. The time has come for refraining from questioning the loyalty of any and every citizen. If war is declared, every effort should be to unite, not to divide, our people. Let the unfortunate, indiscreet insinuations made in the past be forgotten. Indiscreet, ambitious politicians may endeavor to make capital out of it, but sound judgment and patriotism will hold that the best interests of the country will be served better by everyone putting his shoulder to the wheel and aiding the President in every honest effort to successfully prosecute and end the war."

I felt contented then, as I do now, in simply stating facts.

I believe all agree that destructive legislation and unfounded fault finding is out of place at this time. On the other hand, constructive legislation and wholesome criticism founded on facts is always in order, certainly in time of war. Therefore, rather than unjustly criticize or claim a corner on loyalty, it would be better to follow Col. Roosevelt's advice, "We must shun equally the mere selfish egotist and the mere well-meaning fool," and ungrudgingly give not only our sons to the Army, our money to the Red Cross, the Young Men's Christian Association, and in the purchase of liberty bonds, but, in short, give all that we have; yes, our blood, if necessary.

As I have stated, the price has been fixed on practically everything that the farmer produces. How about the trust-made articles which the farmer buys at more than 100 per cent advance? Upon investigation we find that the trust maker and price boomer has been overlooked. As a result the farmer, for whom so many tears have been shed, sells his product at prices controlled or fixed under the bill and buys at prices fixed by the trust maker. The only explanation that can be given is that the Food Administrator has exercised his power, while the Department of Agriculture, to whom was delegated the power to execute the law as to farm implements, fuel, including fuel oil and natural gas, has questioned the power and has remained inactive in the matter.

With the lack of effective coordination and cooperation in our various departments evidently there is a need of information,

as suggested here in the House a few days ago, to advise the departments of their function to administer the laws that have been passed. Nevertheless it would seem that after all the laws that we have enacted giving power to curb the trusts, to fix prices, all the money appropriated, and after all the correspondence and efforts to procure information and relief, that the American people would be entitled to something more than to be advised that nothing had been done, that no power to act in the matter had been granted, that prices of raw material, labor, fuel, and other supplies necessary have increased greatly, and that at the present prices on farm implements as compared with the prices on farm products do not seem out of proportion. The people are entitled to have investigations made, the laws enforced, and to know the facts. Inasmuch as the same power was given to fix prices on farm machinery, fuel, oil, as was given to fix prices on foodstuffs, all come under the same definition and are defined as necessities. Hence the power granted as to one extends to all. If so, we should not only be advised, but we should have an honest enforcement and uniform application of the law. I contended for that when the bill was under consideration, and still so contend, that it should be applied to the trust maker as well as to the farmer, certainly if the producer, the consumer, and the taxpayers are to be taken into consideration, and, furthermore, we should not enact and execute laws to regulate the prices and profits or to depress the price of one and not the other. Amos Pinchot in his letter to the conference committee of the Senate and House calls attention to the excess of 1916 net income over prewar average of a few of the companies of which 33 members of the Council of National Defense are officers or directors. The figures are alleged to be official, being those published in the companies' annual reports.

The figures show an increase in profits of \$640,083,669. Julius Rosenwald, of the advisory commission, a member of the firm of Sears, Roebuck & Co., whose increase of profits is reported to be \$8,376,883; Theodore M. Vall, of the cooperative committee on telegraphs and telephones, a member of the American Telephone & Telegraph Co., whose increase in profits is reported to be \$7,107,845; G. W. Garrett, of the cooperative committee on shoe and leather industries, a member of the Central Leather Co., whose increase of profits is reported to be \$12,016,397; James McLean, of the cooperative committee on copper, a member of Philip Dodge & Co., whose increase in profits is reported to have increased in one year from \$9,720,475 to \$21,974,263; Albert H. Gary, of the cooperative committee on steel and steel products, a member of the United States Steel Corporation, whose increase in profits is reported to be from \$75,833,833 in 1915 to \$271,531,730 in 1916, an increase of \$207,945,953 over the prewar average; Murray Guggenheim, of the cooperative committee on copper, a member of the American Smelting & Refining Co., whose increase of profits is reported to be \$12,258,082 over the prewar average; Charles M. Schwab, of the cooperative committee on steel and steel products, a member of the Bethlehem Steel Co., whose profits are reported to have increased \$40,518,860 over the prewar average; and many others. This is enough to show that enormous increases have been made. According to reports of packers, Armour & Co. increased its profits from \$11,000,000 in 1915 to more than \$20,000,000 in 1916; Swift & Co. from \$14,087,510 to \$20,465,000; Wilson & Co. from \$2,463,732 to \$4,913,873. I have not the report of increase for 1917 of these companies at hand, but it is common knowledge that they are running full time and still increasing their profits. The railroad bill recently passed by both Houses, which is now in conference and which is soon to become a law, guarantees carriers profits equal to the average net operating income of companies during the three years ending June 30, 1917, which is estimated to be \$175,000,000 or \$200,000,000 annually in excess of what the people ought to pay. According to the tables prepared by the Interstate Commerce Commission, compiled from data as returned in the annual reports of the carriers named to the Interstate Commerce Commission, the average per cent of net income to capital stock for the three years ending June 30, 1917, the Philadelphia & Reading Railway Co. will be guaranteed upon its stock 25.70 per cent; the Delaware, Lackawanna & Western Railroad Co., 32.90 per cent; the Michigan Central Railroad Co., 18.48 per cent; the Central Railroad of New Jersey, 20.25 per cent; the Bessemer & Lake Erie Railroad Co., 647.22 per cent; the Chicago & Erie, 70.45 per cent; the Chicago, Burlington & Quincy, 22.05 per cent; the New York, Philadelphia & Norfolk Railroad Co., 35.74 per cent; the Lehigh & Hudson River Railroad Co., 27.98 per cent; the Duluth, Missabe & Northern Railway Co., 114.12 per cent; the Colorado & Wyoming Railway Co., 162.64 per cent, and so on down the line, the percentage ranging to 647.22 per

cent, which seems to be a most liberal guarantee as net income on stock, much of which is watered. Two years ago the railroad employees asked for an increase of pay for additional work, overtime. Many producers and shippers protested against that proposition, others favored it, but that was a mere drop in the bucket as compared with the proposed extraordinary increased compensation guaranteed to railroads. Besides that, increase was asked for under normal conditions, and in my opinion justifiable. The apparent extraordinary compensation guaranteed to carriers comes in time of war, when least warranted, and in my opinion wholly unjustifiable—certainly in time of war, when economy is necessary and when every endeavor should be to avoid excess expenditures or to incur unnecessary burdens and certainly unreasonably high when compared with prices and profits fixed for the farmer.

I quote from an article by Clifford Thorne, formerly chairman of the State Railway Commission of Iowa. In the *Annals of the American Academy*, Mr. Thorne states:

Summarizing the situation, it may be stated that the railroad bill now pending before Congress proposes the following guarantees made on behalf of the Government of the United States: (1) To return the properties at the end of the period of Government control in as good condition as that at the time they were taken over; (2) to loan the railroads all the money necessary for betterments and improvements, probably at the rate on Government bonds; (3) to shield the large prosperous railroad systems from all future increases in the cost of labor and supplies while the war lasts; (4) to protect these larger railroads from all financial hazards of the war which will threaten the very life of many industries, and possibly wreck many railroads that will not be granted a Government guaranty; (5) and to guarantee the larger railroads, annually, sums that will be sufficient to pay all their operating expenses, taxes, interest, dividends, and surplus equal to that which they have earned during the years 1915 to 1917, inclusive, the most prosperous three-year period in their entire history.

It is also proposed, as stated by the author of the major portion of the bill, that the shippers, who will have their own burdens to carry during this perilous time, will be expected to make up any deficit of the Government in the guaranty made to the railroads.

We can snuff out the life of our boys in the trenches. We can wreck many industries. We can blast the business of the short line, the poor road. But when it comes to these rich, powerful corporations, the big companies, the great railroads, we heroically announce that we are going to protect them from the effects of the war. And we do all this in the name of patriotism.

To the Burlington Railroad we say: "You now have a stock paying a regular dividend of 8 per cent. While the war lasts please accept this 22 per cent Government bond in lieu of that railroad stock. We not only guarantee you this 22 per cent annually on your stock but we guarantee to return the principal in full in this manner: After the war is over we solemnly guarantee to give back your property in just as good a condition as we take it." This has all the essential elements of a 22 per cent Government bond. While the war lasts the Government guarantees the annual payment on the stock, and at the end of the war the Government guarantees to return the property in full. Here you have the payment of the principal and the interest. Not only do we guarantee to the Burlington Railroad annually that 22 per cent on its capital stock but we also guarantee, with all the wealth and resources of the United States Government back of the pledge, that we shall pay all interest charges on all its funded and unfunded debt, maintain its properties adequately and efficiently, and present to the Burlington Railroad an absolute Government credit, enabling the company to borrow all the money it may need. We tell the Burlington Railroad to go ahead, rehabilitate and improve its property out of the Public Treasury, while many other industries are being prostrated—and then, don't forget to take that little check annually for 22 per cent. We do all this in the name of patriotism.

It has been suggested that the payment of these large earnings to the railroads is necessary to facilitate the sale of Government bonds. How will it help the sale of 4 or 4½ per cent Government bonds to give a Government guaranty to railroad stocks amounting to 10 per cent annually?

Our first task is to win the great war, but that can not be used to throw dust in our eyes on matters of justice as between the citizens of this country. There are some offenses that can not be committed with impunity, even though they be done in the name of patriotism. We are patriots first, last, and all the time; but we are not fools. There is such a thing as camouflage in the demagogic panegyrics of the politician who does everything, big and little, right or wrong, in the name of patriotism.

Mr. Thorne is president of the National Association of Railway Commissioners and considered one of our best-informed men upon the subject of transportation rates. His statement is worthy of consideration and credit.

It is generally conceded that under existing conditions it was wise to take over the railroads, yet many question the justness of the compensation guaranteed to the railroad companies. Railroads, as well as every worthy and legitimate enterprise, are, of course, entitled to a just and reasonable return on their investment. That guarantee was made in the Hepburn Act. That is guaranteed in our Constitution, and to that no one objects. Railroad employees are entitled to liberal compensation and pay, and are entitled to due and friendly consideration, and no legislation should be enacted that would deprive them or the employers of their just rights. It seems to me that inasmuch as we have a railroad commission, with training and equipment, whose function it is to pass upon and determine just and reasonable rates, it would have been wise to utilize the commission in determining the compensation to railroads instead of turning the question over to

one man, no matter how competent and honest he be, and that the interest of the employees would be equally safeguarded. One, of course, can not be considered without the other, for in determining the compensation every element entering into the question must be considered, which includes labor. I believe that, generally, all have confidence in the Interstate Commerce Commission, in its integrity, fairness, and ability in fixing just and reasonable rates of compensation, which in either case includes the fixing of wages; hence I see no advantage in turning the matter over to one person or to a commission appointed by that person.

In conclusion I desire to say that, in my opinion, Congress and the executive branch of this Government can not afford to overlook the importance of skilled farm labor, an adequate supply of foodstuffs and feed, and the apparent discrimination in the enactment and execution of laws. The sooner the American people are taken into our confidence and given assurance and evidence that all will receive just and equal treatment the better. With that assurance, we will have less complaint, not only from the farmer but from the laborer, and we will also have more food. All are patriotic, with but one end in view.

When assured that their ship will have all its leaks patched they will all get aboard. The farmer will bring in the beef and the pork, the ham and the eggs, the wheat and the corn, in great abundance. The oleo, the palm, and coconut oil will give way to the genuine article, butter, and there will be sufficient foodstuff for not only our own people and soldiers, but for our allies as well. There will be feed for our stock, and pigs will cease to squeal for corn; our march to victory will steadily be onward and upward.

I shall cheerfully vote for this bill authorizing the furloughing of enlisted men; though it may not afford full relief, it is worthy of support. I have voted for all important measures proposed by the President with the exception of the railroad-compensation bill now in conference, which I did not believe just in its form in that it guaranteed excessive compensation to carriers and transferred the authority to fix rates from the Interstate Commerce Commission, which I did not consider just as a war measure or necessary inasmuch as the roads had been taken over under authority granted nearly a year ago, in which action I heartily acquiesced.

Judging from past experience my vote against the railroad bill will undoubtedly stimulate opposition to me by the railroad interests and in railroad officials, with their many attorneys, storming my district with convincing eloquence and powerful influence. Nevertheless I could not vote for the bill, as it seemed indefensible and unjust to the shipper, the farmer, the consumer, and, in fact, to everybody except those to share in the extraordinary profits proposed.

Now, in time of war, I have felt that it was the duty of every Member to vote with the President, because he was chosen by the American people our President, and under our Constitution, by virtue of his position, he is the Commander in Chief of our Army and Navy and should have the loyal support of Congress in his every honest effort in carrying on this war to a triumphant conclusion.

The Rights of the Loyal Laboring Man.

EXTENSION OF REMARKS

OR

HON. J. THOMAS HEFLIN,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 12, 1918.

Mr. HEFLIN. Mr. Speaker, it is the duty of a Member of Congress to be fair and just to both employer and employee in matters that touch the rights and interests of both. The employer is entitled to all of the protection that the law can give for the proper conduct of his business, and the employee is entitled to all of the protection that the law can give for the proper protection of his rights as a laboring man. If it is shown that any person employed in a munition plant in the United States shall refuse to work, with the intent to prevent the manufacture of munitions for use in this war by ourselves or our allies, why then he would be guilty of violating the provisions of this act, and he ought to be convicted and punished. For his conduct would be that of an enemy, and he would be

guilty of doing that which would injure the country. But, on the other hand, it must be made perfectly clear that while we would protect the Government against the wrongdoing of one whose purpose is to injure the Government that we do not intend to deprive the honest and loyal laboring man of his right to demand a living wage.

This bill is intended to punish those who do things to delay or hinder the Government in carrying out its war program. It is intended to reach any person who by word or act says or does anything to handicap or hinder the Government in the prosecution of the war. When it is shown that it was his intention to so handicap and hinder the Government, he is guilty and should be punished. There is a distinction, however, and should be, in the position of a man working in a munition plant for a private individual and who ceases to work on some pretense or other when it can be shown that his real purpose was to stop or delay the matter of manufacturing munitions for ourselves and our allies and a man working under like conditions, but who in perfect good faith reminds his employer that the high cost of living requires an increase in his wages. Nobody who believes in just and fair treatment would wish to deny to the American citizen thus situated the right to seek employment where he could best provide for himself and family. It is not our intention to put it in the hands of any munition profiteer to force any citizen to work in his manufacturing establishment when to do so means financial loss and suffering to such a citizen and his family. If we should deprive the workingman, the employee, of his right to raise the question of adequate wages with the employer when he finds that what he has to pay for house rent and the other necessities of life makes it necessary for him to have an increase in wages, why we would put him at the mercy of the man for whom he works and conditions might be so intolerable and wages so inadequate that grave injustice would be done to the laboring man. We must bear in mind that in the absence of stipulations to the contrary the employer can discharge the employee for any reason satisfactory to himself and upon the same theory the employee ought to have the right to quit working in one establishment and seek to better his condition in another. Let me illustrate: Suppose a munition maker should contract to manufacture a hundred million tons of munitions and he should have a force of 10,000 men working for him for so much per day and the prices of food, fuel, and house rent should all advance to such an extent that the laboring man could not pay his bills with the wage that he received, and suppose he should go in good faith and say to the employer, "Here is the amount that you paid me for my work last month and here is the amount that I paid out last month for living expenses, and as you can plainly see the wage that you pay me is not sufficient to enable me to meet my living expenses, so I must ask you to give me such a raise in wages as will enable me to properly provide for those nearest and dearest to me." Now, I am not going to put it in the hands of the man whose manufactured product is bringing a good price to put his employee in the penitentiary simply because he refuses to work in his particular munition plant at starvation wages. I want him to have a living wage. He is entitled to it, and if he did not desire to provide properly for himself and family he would not be a good American citizen.

The amendment that we have just adopted draws the distinction between the loyal laboring man who is exercising for an honest purpose his right to obtain a living wage and the laboring man who undertakes to hinder or delay the manufacture of munitions for use in the war.

If you deprive the workingman of his right to say for whom he will work and at what wage he will work, you take from him the only power that he has to protect himself as a wage earner, and it is wrong to deprive the great industrial army of our country of the only power that it has within itself to enforce fair treatment in the struggle for existence. Now, I realize that the situation is different in time of war, but if the man who has to pass upon these questions is honest he must admit that the difference applies to both employer and employee. I would not vote for a measure that would put the employer at the mercy of the employee, and I would not vote for a measure that would put the employee at the mercy of the employer. I am for just and fair treatment for both. If the exigencies of the occasion shall demand it, the Government can and will take charge of all munition plants, and if it does it will deal with employer and employee alike. The President does not want to injure any legitimate business in the country. He wants every one of them to have a fair profit, and the President wants the great and loyal army of wage earners in the United States to receive a living wage, one that will enable them to live comfortably.

Salaries of Railway Employees.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. COX,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 8, 1918.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include the following:

MEMORANDUM.

The attached table represents an analysis of data submitted to the railroad wage commission of the Interstate Commerce Commission by one of the important railroad systems operating through Washington, D. C., showing salaries paid to its clerical employees during the month of December, 1917. The analysis herewith is based on a summary submitted by the company covering five representative divisions of the company's system. The divisions reported on were selected by the railroad company under the following instructions from the commission: "These divisions must be so selected as to avoid valid criticism as to their not being truly representative."

It may be assumed that the divisions selected are fairly representative of the salaries paid for the reason that the data transmitted to the wage commission are to be considered in connection with demands for increases in wages during the war, and it would be to the interest of the railroad company to select divisions representing the better conditions of employment as to hours and salaries.

The following comparisons are significant:

290 clerks receive \$75 to \$100 per month.

616 clerks receive \$30 to \$75 per month.

A total of 915 clerks received \$100 and less per month out of a grand total of 1,042 employees covered by the report.

Salaries paid to railway employees.

CLERKS, \$600 AND UPWARD (EXCLUDING TELEGRAPHER CLERKS).

Furloughs to Soldiers.

EXTENSION OF REMARKS
OF
HON. C. BASCOM SLEMP,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 8, 1918.

Mr. SLEMP. Mr. Speaker, the bill before the House is the bill to permit the Secretary of War to issue furloughs to soldiers upon their application to the Secretary of War. The purpose is to permit these soldier boys, during the spring and summer months, to return home and assist their parents in the farming work so necessary to be done in this country. I have talked personally with the Secretary of War on the subject, and he favors the bill.

The truth is that we have several hundred thousand boys in the camps, some of whom have been there many months and few of whom can be sent to France before fall. It is a simple question as to whether these soldier boys shall be kept in the camp during the coming months or be permitted to go home and do work equally as worthy and serviceable in helping their parents on the farms to meet the demands for food in the world.

I have numbers of letters from parents begging their boys to be sent home to help put out the crops. Through the passage of this bill these requests can now be granted under military rules and restrictions that will permit the military organization to be preserved, and at the same time the farmers assisted in their great work. There will be another advantage more or less psychological, yet important. The fathers and mothers will again see their sons and will learn about Army life, its duties and its responsibilities. They will imbibe the spirit of their brave sons and will work the harder to back them up. The young soldiers, on their part, will find the warmest welcome when they again cross the family threshold. They will be stimulated at home and in their efforts and later in their service in the Army by the knowledge that they are fighting to protect these very homes. I am glad to vote for the bill. I believe it is a good thing all around—good from a military standpoint, good from a food standpoint, and good because it brings together, if only for a brief time, the family unit that the dire necessities of war had temporarily separated.

Bishop Hill Colony.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GRAHAM,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 9, 1918.

Mr. GRAHAM of Illinois. Mr. Speaker, I desire to insert in the Record the following remarkably interesting and able historical address of my colleague, Mr. KING, of Illinois, recently delivered by him at Bishop Hill, Ill. It recites a hitherto largely unknown chapter of the history of Illinois and the Nation, and is worthy of preservation.

ADDRESS, IN PART, OF CONGRESSMAN EDWARD J. KING ON THE CELEBRATION OF THE SEVENTIETH ANNIVERSARY OF THE FOUNDING OF BISHOP HILL COLONY, SEPTEMBER 23, 1916, AS PUBLISHED IN THE OCTOBER, 1916, ISSUE OF THE JOURNAL OF THE ILLINOIS STATE HISTORICAL SOCIETY.

As I stand on this historic spot my heart goes out in gratitude to those who have so graciously permitted me to be present on this great day, and the past achievements of those sturdy yeomen who left the homes of their native land, braved the hardships of voyage, and by their own efforts made the history of Bishop Hill rise before me in strong array.

Bishop Hill is the cradle from which sprang that mighty impetus of Swedish immigration into the West and Northwest, to its great development and to the benefit of our entire common country. True, the original purpose of building a New Jerusalem which would spread its force and control throughout the civilized world failed of realization; nevertheless their efforts succeeded in a field of endeavor never dreamed of by them.

Emigrants from nearly every Province in Sweden settled at Bishop Hill, and their letters home to their friends and relatives describing the advantages of America blazed the way for that long line of emigrants who now living, including their descendants, number in the United States to 1,334,230 souls. How inviting would be an incursion into their accomplishments, but time forbids, and I hesitate to enter those fields which ought to be reserved for my illustrious friend, Judge Trimble, the speaker of the day.

Somewhere back of the conception of Bishop Hill colony was the man with the idea, and back of him was the one who prepared conditions of fertility where the idea might grow. John the Baptist was such a man. John Ericsson's inventions prepared the groundwork for Edison, the wizard of Menlo Park. I have but a moment to address you, and in my allotted time I wish to speak of the man who cleared the underbrush and prepared the way for that great preacher, leader, and genius, Eric Jansen, leaving to the others the merited praise of the virtues of Jansen. Without disparagement of the great services rendered the colony by Stoneberg, Jacobson, Norberg, Bergland, Swanson, and many others, I plead permission to pay a humble tribute to one who was the Alpha and Omega of the colony and whose life runs through its history like a strong cord—Jonas Olson, a typical Swedish-American of a type whose influence for good has made a most lasting impression not only upon the younger Swedish-Americans but upon the entire Nation as well.

Helsingland, the home of so many of the colonists, with its iron, timber, and flax; its landscape dotted with red-painted cottages, surrounded by beautiful patches of flowers, was the native Province of Jonas Olson. He was born on the 18th day of September, 1802, the son of peasants. History states that his father was a drunkard, and that one day when the young Jonas, who was desirous of learning to read, write, and cipher, was using his writing materials this father grabbed them from him saying, as he destroyed them, that such things were not for peasants' sons. At 15 he was compelled to shift for himself. He became a farm laborer and a fisherman on the banks of the Gulf of Bothnia. He disposed of salmon on the Stockholm market to advantage and became a well-to-do and respectable citizen of the parish. The year 1825 brought him to a turning point. Intemperance prevailed among the peasantry. The clergy even had become lax. The pastor always danced the first round with the bride, drank as deeply as his parishioners, and transformed the tithes of grain into liquor by means of his own still. Up to that time it had not dawned upon Jonas Olson there was something far better in life. At a dance on a winter eve in 1825 liquor was passed around in sacrilegious mockery of the Lord's Supper. It made a deep impression upon Olson. He became converted and resolved to lead a new life. And so, like Simon Peter, the fisherman of old, he dropped his nets and became a follower of his Lord. He studied the Great Book and all the devotional literature assiduously. He bought books and visited the libraries in Stockholm and became a well-educated man. At Stockholm he met Rosenius, the representative of Helian Pietism, and also George Scott, the founder of Methodism in Sweden. They found in each other warm and sympathetic friends. Jonas, over the greatest of opposition, first began to organize temperance societies in his own and neighboring parishes, but later, with the aid of the Crown, he met with great success. Not only did he engage in temperance work, but immediately upon his conversion began to preach in the conventicles of the Devotionalists, who were then just beginning to appear in Helsingland.

After the loss of his wife, about a year and a half after his marriage, he threw himself with additional vim into the church work, and he is the man to whom it is due that Devotionalism was carried to every quarter of Helsingland. The Devotionalists were a pious people who were displeased at the absence of real piety in the Established Church. They did not seek to overthrow the church, but to purify it from within. They were called Devotionalists because they assembled in private houses to hold devotional meetings and because they read their Bibles and books of devotion assiduously in their homes. Devotionalism produced no great national leader after whom it might be named. It spread under Jonas Olson and other local leaders. Its stronghold was Norrland, one of the great political divisions of Sweden, of which Helsingland was a subdivision. Under its influence a radical change in the condition of the people took place and they began to read and to take up habits of industry and sobriety.

For 17 years Jonas Olson was the leading lay member among the Devotionalists in Helsingland, whose membership consisted largely of peasants and independent artisans. He enjoyed the

respect and confidence of the community, representing them in a public capacity as juror to the district court. During this time Jonas Olson and his Devotionalists assembled in their conventicles and read their Bibles and books of devotion unmolested and enjoyed the confidence of the Established Church.

The ground was now prepared for the seed. The minds of the people were attuned to the idea. One night a flour merchant asked for lodging at the home of Jonas Olson. It was quickly granted. The stranger was Eric Jansen. His devoutness inspired even the devout Olson. He brought Jansen to the conventicles and introduced him, and by reason of the high standing of Olson he met with instant success. Jansen was powerful and eloquent. With his advent into Helsingland Jansenism began. The conditions were favorable to the reception of his doctrines. He advanced the idea that too much attention was given to devotional literature and not enough to the Bible. His preaching was forceful and of the John Wesley type, and the results of his revivals rivaled those of Moody and Sunday of more modern times. Persecution began. His followers were mobbed and their meetings disturbed. When their conventicles were prohibited they assembled in the woods. They praised the God who permitted them to be persecuted. Finally the followers burned the books of devotion in the market place, the news of which soon spread throughout the Kingdom. You are familiar with the arrest of Jansen, his escape and flight to America, eventually reaching the town of Victoria, Ill.

Jonas Olson remained at home. He had work to do there. He was heavily fined for participating in the burning of the books and was summoned before the house of bishops to answer for his religious opinions. Naturally, as did the Pilgrim fathers, the Jansenists, under persecution, turned to America as a place where they could worship God as they pleased.

Bishop Hill having been selected for a colony, Jonas Olson, along with Andreas Bergland and Olof Stoneberg, were appointed to conduct the immigration. The communistic plan of ownership having been decided upon, Jonas, having the courage of his convictions, put his property into the common fund for the benefit of all. So did they all, the sums ranging from 25,000 crowns downward.

When the time for departure arrived Jonas and his associates had gathered together 1,100 willing souls, who for their religion's sake were willing to embark for an unknown land. As they were about to leave their passports were withheld, until Jonas Olson made a personal plea to King Oscar I, who released them.

They left their native shores at different times and in different ships. Some were lost at sea. Others starved to death. Others died of cholera. Across the sea to New York, by Erie Canal and Great Lakes to Chicago, and mostly on foot to Bishop Hill from Chicago, was the trip they made.

Jonas Olson arrived safely with his party on October 28, 1846, where two log cabins and four tents invited them to enter for the winter. He was then 44 years of age and had already accomplished what most men only succeed in doing in a whole lifetime. Did he stop? Not Jonas Olson. He immediately proceeded to live another lifetime of 50 years more in work and honest endeavor.

He saw the birth of the colony. He saw it in the busy hum of its prosperous days. He viewed with sadness its decline, its decay, its death, and its final obliteration.

On more than one occasion in Sweden had his judgment and ability in handling men been of service to the Jansenists, and these same characteristics were brought into play on a larger scale during his life in America, and as a resident of Bishop Hill. He must have been a man of splendid physique. One can almost see him now, coming down the street, proceeding here and there attending to the duties as one of those upon whom the responsibility of providing for others rested. On July 22, 1849, cholera broke out in the colony and raged until the middle of September, carrying away 143 persons in the prime of life. The horrors of it all have never been related, yet one must know that rugged and heroic character of Jonas Olson placed him in the thick of the disaster, where day and night he nursed the sick, prayed for the dying, and buried the dead. His influence with the colony must have been great, and it is not related that this confidence was ever misplaced. Under the advice and counsel of this great old patriarch, Bishop Hill shone as a bright example to other immigrants as to what could be done in America, not only along material and religious lines but in love of their adopted country and her institutions. It was not long before a teacher of English was at work at Bishop Hill. The laws of the land were always obeyed with respect and veneration. Patriotism in its full sense imbued their hearts; and when the great conflict of 1861 came on and the Nation's life

was in danger, these faithful people—these Devotionalists—these pilgrims to whom liberty was a vital issue, rose as a man, followed the Stars and Stripes, and spilled their blood and died upon the southern fields, that free institutions should not perish from the earth. And it is due to these colonists to say that their example has had a tremendous influence upon every Scandinavian who has ever come to America, translating him at once into a strong, patriotic citizen of the American Republic and who will fight the world in her behalf.

Had it not been for the early devotional work of Jonas Olson in his native land, the brilliant efforts of Jansen to arouse the people must have failed and with its failure immigration to America from Sweden would have been postponed for many years, and the aid of the Swedish-American in working our national destiny. So for this reason in awarding the benefactors of the Nation, the distributor of laurels must not overlook the brow of Jonas Olson, the typical Swedish-American of early Bishop Hill.

There are many foundation stones in the colony, but none supported a greater weight of its structures than did this man. He was faithful to his trust. He accepted no thirty pieces of silver. His dependability was certain and continuous. If an Indian assassin was hired to kill the leaders, he must not overlook Jonas at the head of the list of proposed victims. If a colonist is kidnapped, Jonas heads the party of rescue. If gold is necessary to replenish the coffers, Jonas Olson braves the dangers of the overland trip to California at the head of the expedition. When the leader of the colony lies stiff and stark in death, it is Jonas Olson who rushes back to take charge of the affairs of the colony. He it is who is among the leading spirits on the board of trustees after incorporation.

In his latter days he continued his preaching in the old colony church—feeble in limb, dim of eyesight; his congregation dwindled to a handful, he went on with his work. No doubt the enthusiasm of his early devotional work in the conventicles of his own Helsingland was upon him and he saw before him the vast audience which greeted his youthful work. And even this small congregation under his kind guidance one by one lay them down in the community graveyard, where peace reigns and the true community of good prevails. He saw nearly all pass to the beyond. He saw dissolution approaching. The edifices crumbled about his ears, yet Jonas Olson, like the Roman centurion of Pompeii, when the hot ashes of the eruption fell about him, awaited his orders of release which never came, and stuck to his post until the end.

His body lies in yonder cemetery, but it is pleasant to think that perchance his great soul, with its fine strength of devotionism, adventure, and service, with his old friend, Eric Jansen, and in joyful company with Stoneberg, Jacobson, Norberg, Bergland, Swanson, and the rest, is engaged in that Greater Colony to which all mortals, one by one and in their turn, must emigrate.

Memorial to "Nuns of the Battle Field."

EXTENSION OF REMARKS

OF

HON. AMBROSE KENNEDY,

OF RHODE ISLAND.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 18, 1918.

On the joint resolution (H. J. Res. 154) authorizing the erection of a memorial in Washington to the memory and in honor of the members of the various orders of sisters who gave their services as nurses on battlefields, in hospitals, and on floating hospitals during the Civil War.

Mr. KENNEDY of Rhode Island. Mr. Speaker, in all the struggles through which this country has passed to build up, foster, and maintain the principles of democracy, history will prove that the greatest service has been given by the quiet and determined men and women whose activities were inspired by a stout-hearted and unswerving devotion to duty.

To-day, after a lapse of nearly sixty years, we are called upon to consider a resolution of extraordinary merit whose purpose is to grant a site upon which to erect an appropriate memorial to the memory and in honor of the members of the various orders of sisters who gave their services as nurses on battlefields, in hospitals, and on floating hospitals during the late Civil War.

In the years that have since come and gone during which monuments and memorials have been erected to perpetuate the

memory of many of the brave heroes of that war, not a stone or tablet has ever been raised on public ground to bear testimony to the generous and heroic sacrifices of these dark-robed messengers of sympathy and love who came voluntarily to the assistance of the wounded and dying soldiers on both sides of the struggle.

Yet it is estimated that Congress has already appropriated about five millions of dollars for public monuments erected to the memory of men in the District of Columbia—less than two hundred thousand having been contributed to the same purpose by public subscription.

Before entering into the subject matter of my story, let me emphasize the fact that the resolution now under consideration specifically provides that the United States shall be put to no expense in or by the erection of the contemplated memorial. A bare permission for the erection of a monument on public grounds in the city of Washington is all that is requested. The Ladies' Auxilliary of the Ancient Order of Hibernians in America, in response to sentiments of patriotism, will assume the entire expense of the execution of the memorial, the site to be chosen and the design of the memorial to be approved by the Commission of Fine Arts.

Mr. Speaker, it has been asserted recently, in the course of debate in this Chamber, that the erection of memorials on public grounds can only be justified by service of a national character; that conspicuous service to the Nation must always be the test of official recognition. If this be so, then sir, I respectfully submit that the services of the Nuns of the Battlefield fulfill every requirement of such a standard.

Their services were not only conspicuously national; they were also singular and unique. The story of these messengers of mercy is not so well known to Americans of the present day and generation, due, perhaps, to the modesty and humility of the sisters themselves, who sought not the plaudits of the world but rather the rewards of the hereafter. It is my privilege here to present an outline of their services in the Civil War, and merely an outline it must be, for the scope and character of their labors were so great that only volumes could unfold the story completely.

Hundreds of sisters took prominent part in the service, many of them belonging to orders whose victories for charity constitute a bright page in the history of numerous battlefields of the Old World.

Six years prior to the opening of the Civil War in America England was involved in a gigantic struggle with Russia. She threw her strength on the side of Turkey in the Crimean War to maintain the integrity of the Ottoman Empire in order to prevent Russia, her greatest rival, from seizing Constantinople and the Bosphorus and controlling the affairs of Asia through the command of the eastern Mediterranean. Throughout that terrible struggle, which ended after the fall of Sebastopol, at the invitation of Her Majesty's Government, Sisters of Mercy went through the awful hardships of caring for the sick and wounded in military camp and hospital. Sisters of Charity also labored in that theater of action. Among the first to volunteer in the service were several nuns from Bermondsey, where stood the first Mercy Convent established in England—Bermondsey of beautiful historic traditions and religious associations, once a charming and healthy suburb of London.

On arriving at the scene of military operations they immediately entered the Turkish barracks, an immense structure which had been given by the Sultan as a depot for English troops. It was then occupied by sick and wounded soldiers to the number of about twenty-five hundred during the winter of 1854-55. In that field of action the sisters labored in connection with Florence Nightingale under extremes of climate, without fire and with little food or water, in the snows of winter, giving their services without even a murmur; and though face to face with the most bitter trials, under a constant strain of mind and body that seemed almost unendurable, they never for a moment faltered, but with abiding patience and sublime self-command, exhibiting a meekness and benevolence that was celestial, there amidst such scenes they wrought and labored for the sake of God and humanity.

As the days went on, the miseries of the sick and wounded called forth responses from every part of Great Britain and Ireland, and soon a second band of Sisters of Mercy from Liverpool, Dublin, Chelsea, Kinsale, Charleville, Carlisle, and Cork betook themselves to the eastern hospitals for service. Surrounded by most heart-rending scenes, awful beyond expression, they mingled among the dead and dying, never surprised, never put out, always ready in resource, meeting all the difficulties that beset them with a calm and cheerful spirit.

Two lonely graves remain on the hillside overlooking the Black Sea beneath. There lie the earthly remains of an English

and an Irish sister who died from the ravages of fever, finishing their labors of love and pity in the service of God and their suffering fellow creatures. Over these graves are white marble crosses bearing simple epitaphs. On the arm of one of these crosses a chaplain who visited the place found a paper on which were written the following lines, composed, as he afterwards learned, by one of the orderlies of the sister:

Still green be the willow that grows on the mountain
And weeps o'er the grave of the sister that's gone;
More blessed its lot than to droop by a fountain,
And bespangle its green leaves with gems not its own.

Much more glorious its lot to point out to the stranger
The hallowed remains of the sainted and blest;
For those angels of mercy had dared every danger
To bring to the soldier sweet comfort and rest.

They left their own homes when war's trumpet was blowing,
When hunger and cold laid our brave comrades low;
Their pure hearts were filled with heaven's brightest glories
As they came here to banish fell sickness and woe.

Still be hallowed their memories! They'll ne'er be forgotten
Though their bones lie so far from their green island home;
And should e'er these wild hills be by Erin's sons trodden,
Thou'lt point out, green willow, who sleeps here below.

No one except an eyewitness to such service can form any conception of its magnitude or attempt even to measure its value. Florence Nightingale, who had general charge of the work of nursing in the Crimea, in fitting language addressed this warm and affectionate tribute to the superior of these nuns:

No one of your children values you more than I do. You were far above me in fitness for the general superintendency, both in worldly talent and administration, and far more in the spiritual qualifications which God values in a superior.

Thirty years after the labors of these sisters were concluded the Victorian Jubilee was celebrated, and during the ceremonies the English survivors received the Royal Red Cross from the Queen. Ten years after the jubilee the sole surviving Irish sister, Aloysius Doyle, was summoned from the convent at Gort to receive the decoration. The following correspondence relative to conferring the decoration passed between Her Majesty's representative and the veteran sister of mercy at the time:

PALL MALL, LONDON, S. W.,
February 15, 1897.

Sister MARY ALOYSIUS.

MADAM: The Queen having been pleased to bestow upon you the decoration of the Royal Red Cross, I have to inform you that in the case of such honors as this it is the custom of Her Majesty to personally bestow the decoration upon the recipient when such a course is convenient to all concerned, and I have, therefore, to request that you will be so good as to inform me whether it would be convenient to you to attend at Windsor some time within the next few weeks. Should any circumstances prevent your receiving the Royal Red Cross from the hands of Her Majesty it could be transmitted by post to your present address. I am, madam,

Your obedient servant,

GEORGE M. FARQUHARSON.

ST. PATRICK'S, GORT, COUNTY GALWAY.

SIR: I have received your letter of the 15th, intimating to me that Her Most Gracious Majesty the Queen is pleased to bestow on me the Order of the Royal Cross in recognition of the services of my sisters in religion and my own in caring for the wounded soldiers at the Crimea during the war. My words can not express my gratitude for the great honor which Her Majesty is pleased to confer on me. The favor is, if possible, enhanced by the permission to receive this public mark of favor at Her Majesty's own hands. The weight of 70 years and the infirmities of age will, I trust, dispense me from the journey to the palace. I will, therefore, with sentiments of deepest gratitude ask to be permitted to receive this mark of my Sovereign's favor in the less public and formal manner you have kindly indicated. I am, sir,

Faithfully yours in Jesus Christ,

SISTER M. ALOYSIUS.

FEBRUARY 17, 1897.

In August, 1897, at the close of the ceremonies incident to the celebration of her Diamond Jubilee the Queen of Great Britain conferred the decoration of the Royal Red Cross upon Army Nursing Sisters Mary Helen Ellis, Mary Stanislaus Jones, Mary Anastasia Kelly, and Mary de Chantal Huddon in recognition of their services in tending the sick and wounded at the seat of war during the Crimean campaign of 1854-1856. Their services were very much appreciated by Miss Nightingale, who, indeed, ever afterwards showed her interest in them in many ways.

Forgotten passages in the life of Florence Nightingale has the following noteworthy comment on the work of the nuns in the Crimea:

Unexpectedly the sisters had come on the scene, and suddenly they disappeared. Without noise or hurry, they exchanged the calm of medieval convents, where orders are given in whispers and the hours pass in prayer and meditation, for what were then the ghastliest horrors known of modern warfare. In his farewell address Manning bidden them "make the hospital a cloister and their heart a convent" and they had done so. In their grim surroundings they fulfilled their twin vocation to humanity and religion. In the valley of the shadow which hung over the military hospitals they kept their religion intact. Softly and without noise they carried out the nursing to them. When that was over they packed up their slight belongings and were gone in a night. So swift and unobtrusive did they disappear

that no historian remembered their names, no ruler sent them decorations, and no assembly offered its eulogy. It was not until the Victorian Jubilee, 30 years later, that the English survivors received the red cross from their sovereign, and 10 years more had to elapse before the last of the Irish sisters was summoned from the convent at Gort to receive the decoration. All unconscious was the irony in Sister Aloysius Doyle's reply: "The weight of 76 years and the infirmities of age will, I trust, dispense me from the journey to the palace." Forty-two years had passed since the war, and she herself was now in need of nursing.

It was a similar devotedness to duty that led the various Sisterhoods to answer the official call and go forth, accompanied by military officers and physicians, to labor in numerous camps and hospitals during the late Civil War. And, needless to say, they brought into the work a skill and discipline which had long been prominent features of their daily training and experience. Hence the unique character of the services they rendered during the entire period of the war. At the very moment of their enlistment they were admirably equipped for the task, and a hard and laborious task it was, but they met and discharged it as a duty of sacrifice every moment of the day and night, animated only by an undying love of country and the spirit of Christian charity and zeal. And these qualifications for the service were characteristic of all the orders of Sisters who participated in the work, for it is a self-evident truth that there is something about the religious life that makes it akin to the military life—uniformity of action, community of interest, thorough organization, obedience, respect for authority, the discipline that governs by a look, a sign, or a suggestion—attributes all of which blend a number of individuals into one harmonious whole to promote a concert of purpose.

And so, because the services rendered by these various Sisterhoods stand forth in bold relief, evincing a heroism unsurpassed in the infinite details of that war, it is altogether fitting that a memorial be erected in their honor, now that the period of well-nigh three score years has passed and their memory been almost forgotten. Now is the time to bring back their memory to the people. Now, while the resources of America are again being organized for war; now, while the wealth of the nation is being generously offered to provide for the comforts of American troops who will soon face the angry vicissitudes of European battle fronts; now, while the boys are rallying again to fight the battles of democracy under the old flag and are marching forth to offer a full measure of devotion to their country's cause, it becomes the American Congress to stop a minute and pay this tribute of recognition and respect to the dark-robed ministering angels who exchanged the salutary atmosphere of the peaceful convent for the noxious vapors of the fever-stricken camp and faced the perils of the battle field to comfort and relieve the sick and dying soldiers on both sides of the line in the Civil War.

Monuments to the memory of departed heroes are the immortal legacies bequeathed to future generations; they are the silent footprints of history upon the pages of time. Like the songs of a country, they are a part of the life of a people. The Nuns of the Battlefield are the immortal heroines of the Civil War in America, and the passage of this resolution will be a wholesome and lasting expression of a people's gratitude, belated though it is, for their deeds of self-sacrifice and devotion. Volumes might be written extolling the virtues of these sisters, but no words can tell the story of their sacrifices so tersely or half so well as the words contained in the "Recollections of Abraham Lincoln," at whose call they volunteered in the service:

Of all the forms of charity and benevolence seen in the crowded wards of the hospitals, those of some Catholic sisters were among the most efficient. I never knew whence they came or what was the name of their order. More lovely than anything I have ever seen in art, so long devoted to illustrations of love, mercy, and charity, are the pictures that remain of those modest sisters going on their errands of mercy among the suffering and the dying. Gentle and womanly, yet with the courage of soldiers leading a forlorn hope, to sustain them in contact with such horrors. As they went from cot to cot, distributing the medicines prescribed, or administering the cooling, strengthening draughts as directed, they were veritable angels of mercy. Their words were suited to every sufferer. One they incited and encouraged, another they calmed and soothed. With every soldier they conversed about his home, his wife, his children, all the loved ones he was soon to see again if he was obedient and patient. How many times have I seen them exorcise pain by their presence or their words! How often has the hot forehead of the soldier grown cool as one of these sisters bathed it! How often has he been refreshed, encouraged, and assisted along the road to convalescence, when he would otherwise have fallen by the way, by the home memories with which these unpaid nurses filled his heart!

Mr. Speaker, throughout the hundreds of volumes constituting the hospital and the military records of the Civil War and the original records prepared during that war under the supervision of Miss Dorothea Dix some official information is obtainable concerning the ministrations of the sisters, but the lack of comprehensive indexes to these records makes an exhaustive search impossible. Careful and painstaking examination, however,

among other sources and personal and direct communication with the various institutions from which the sisters went out to administer to the needs of the soldiers disclose a large mass of data, illuminating and authentic, which shows that seven different orders of sisters, namely, Sisters of Mercy, Sisters of the Holy Cross, Sisters of St. Joseph, Sisters of Charity of Nazareth, Sisters of Charity of St. Vincent de Paul, Sisters of the Mother Seton Order of Charity, and the Ursuline Nuns, furnished their respective quotas to labor in the humane and merciful work. And they did service in the following States: Ohio, Illinois, Indiana, New York, Pennsylvania, Mississippi, Tennessee, Virginia, Missouri, Maryland, West Virginia, North Carolina, South Carolina, Kentucky, Georgia, Alabama, Louisiana, and Texas, and also in the District of Columbia. Not only did they labor in the hospitals but, moreover, they went from one battlefield to another, in ambulances, in old wagons, in every form of vehicle that was available, for in their work they cared not for flourish or ostentation, but only for the chance to come as quickly as possible to the assistance of suffering humanity.

SISTERS OF MERCY.

Prominent among the sisters who served in the Civil War were the various communities of the Sisters of Mercy, a congregation founded September 24, 1827, by Miss Catherine Elizabeth McAuley, of Dublin, Ireland, and later, on December 22, 1843, established in the United States at Pittsburgh, Pa., by seven sisters who came here from Carlow, Ireland, with Mother M. Francis Warde as Superior.

Numerous Sisters of Mercy from New York, Baltimore, Pittsburgh, Cincinnati, Chicago, Charleston, Savannah, Vicksburg, and New Orleans served during the entire course of the war, laboring on both sides of the line; but their principal scenes of action were southern battlefields.

On the 15th of July, 1862, supported by the counsel of Archbishop Hughes, of New York, seven members of this order embarked on the Government boat *Catawba*, bound for Beaufort, N. C., under the care of Maj. Gen. Foster. On arriving at their destination they entered the Hammond General Hospital and immediately began the process of house cleaning so sorely needed to dispel the gloom that was everywhere apparent. So many hardships confronted them that two of their number died and others were stricken by illness. But they labored and persevered and by diligent and patient application overcame the difficulties in their pathway. Not only did they nurse the patients, but they spoke the words of consolation that comforted and cheered them and averted the mental anxieties which soldiers are wont to feel concerning their friends and families at home.

After remaining a short time at Beaufort a detachment of these sisters were brought by Gen. Foster to take charge of a hospital at Newbern where special cases needed attention. At Newbern these sisters were given possession of the headquarters of Gen. Burnside, which, during the War of the Revolution, had been occupied by Gen. Washington. These headquarters communicated with other houses which were used as hospitals and in these institutions the sisters nursed the wounded, maimed, and sick soldiers that were brought in from day to day. Among the patients there was one young fellow who was the brother of the late Bishop Phillips Brooks.

Newbern, Vicksburg, Mississippi Springs, Oxford, Jackson, and Shelby Springs bear eloquent testimony to the silent devotion and quiet heroism of these women.

Memorable and heroic were the sacrifices they made and many a tribute has been paid them by soldiers of the Union and Confederate sides. Some years after the war a number of Sisters of Mercy, traveling through the South, met Jefferson Davis, ex-president of the late Confederacy, who noticed their garb as they boarded a train upon which he also was a passenger. He went from his place to the section of the car in which the sisters were seated and addressing them said:

Will you allow me, ladies, to speak a moment with you? I am proud to see you once more. I can never forget your kindness to the sick and wounded in our darkest days, and I know not how to testify my gratitude and respect for every member of your noble order.

It would be an unpardonable oversight not to mention in passing that woman of superior attainments, the Irish-born Mother Superior, Augustine McKenna, who did admirable service throughout the war. It was this same Irish Sister of Mercy, with Mother M. Theresa Maher of Cincinnati, and their devoted companions, who, at the call of the mayor of Cincinnati, personally attended to the needs of the Ohio regiments in February, 1862, when an epidemic of smallpox swept over them. They personally dressed the infectious and contagious eruptions of these patients when all others had gone away and abandoned them. The sick and wounded soldiers in the blue and the gray who shared in the

ministrations of the Sisters of Mercy were supplied with everything that could be obtained for their comfort. Sisters of Mercy worked zealously at St. Louis in the hospital on the fair grounds in that city, where patients numbering from one to two thousand were the objects of their tender solicitude. At McDowell College also they rendered notable service.

The deep interest manifested by high officials of the Government in the humane and sympathetic labors of the sisters can be gathered here and there among the records of the war. It is needless to multiply examples of this official appreciation. One instance, however, may be cited here in the following letter written by President Lincoln himself when supplies had been refused the Sisters of Mercy:

To all whom it may concern:

On application of the Sisters of Mercy of Chicago, of the military hospital in Washington, furnish such provisions as they desire to purchase and charge the same to the War Department.

ABRAHAM LINCOLN.

The following Sisters of Mercy of Houston Street, New York City, were sent into the service by Lincoln's friend, the distinguished Archbishop Hughes:

Sister M. Augustine McKenna.
Sister M. Ignatius Grant.
Mother M. Madeline O'Connor.
Mother M. Madelaine Deveraux.
Mother M. Alphonsus Smith.
Sister M. Gerard Ryan.
Sister M. Agatha McCarthy.
Mother M. Elizabeth Callanan. (accompanied Gen. Foster to the war).

Sister M. Vincent Sweetman.
Sister M. Paul Lennon.
Sister M. Gertrude Ledwith.
Sister M. Paula Harris.
Sister M. Veronica Dimond.
Sister M. Francis Murray.
Sister M. Martha Corrigan.

Shortly after the outbreak of the war the Sisters of Mercy of Baltimore tendered their services to the governor of Maryland as nurses for the sick and wounded soldiers. The offer was quickly accepted and the sisters were assigned to duty in a hospital in the city of Washington known as the "Infirmity," a structure which belonged to Senator Stephen A. Douglas, of Illinois. A fire reduced this building to ruins and necessitated the removal of the sisters and their patients to an old school building, where they remained until other quarters were made ready to receive them. Without much delay the Douglas Hospital on I Street was fitted up by Government authorities, who transformed into a hospital three large senatorial residences, the most pretentious of these being the residence of Senator Douglas, whose name was given to the institution. To these buildings were added four extensive and commodious barracks. There, among the sick and wounded, these sisters labored unceasingly until the termination of the war. Sister M. Collette O'Connor, superior in charge of the Douglas Hospital, died there on July 16, 1864, and her remains were escorted to Baltimore and buried with the military honors of a major.

On the 21st day of May, 1910, Sister M. Anastasia Quinn, one of the Nuns of this order who labored at the Douglas Hospital, was still living at Mount St. Agnes College in Baltimore. On that same date a committee, consisting of Past Commander in Chief John R. King, Past Department Commander Maj. Frederick C. Tarr, and William J. Klugg, past commander of Wilson Post, of the Grand Army of the Republic, visited that institution for the purpose of presenting her a bronze pin in recognition of her services during the war. In presenting the pin Gen. King said:

Sister Anastasia, at the Thirty-eighth National Encampment of the Grand Army of the Republic, held at San Francisco, an order was passed to have prepared a suitable medal to be presented to the Army nurses of the Civil War as a token of our appreciation of their self-sacrificing work and our undying gratitude for their priceless services, a service rendered under most trying circumstances, when these noble women abandoned all thought of self and labored to aid the sick and wounded, to soothe the last hours of many a dying comrade. These badges, under the resolution, were to be presented to the members of the Army Nurses' Association. When I became Commander-in-Chief, it came to my knowledge that there were Catholic sisters who were Army nurses, but not members of that association.

I thought they were also entitled to our consideration, so at the national encampment at Denver, Colo., provision was made to similarly honor those good sisters. As you, my dear sister, were one of those noble women sent of God as ministering angels to alleviate the sufferings of the Union soldier and nurse him back to health, to soothe the dying hero and make smooth his pathway to the grave, we are here as representatives of the Grand Army of the Republic to present you this small token of our gratitude for services you rendered. It is but a small bit of bronze, of no intrinsic value, but O, my dear sister, how much it represents—the tears, the prayers, the gratitude that go with it from every survivor of that dreadful war.

We feel that you were one of us; that your sacrifices were as great as ours, for it was not always that the greatest praise was due to the man who stood on the firing line, for there were heroines with ever watchful eye and loving sympathy, waiting in the rear to minister to him who might fall in the shock of battle.

Take this, my dear sister, and wear it, and as you wear it, a flood of memories will come back to you of the many scenes through which you passed in those unhappy days of "grim-visaged war." With you, as with us, the shadows are lengthening, and we pray that He who "covered our heads in the day of battle" will be with you through the remaining years of your journey and at the last give you abundant entrance into those everlasting joys above, where there will be no more wars or rumors of war.

About one month after the reception of the Grand Army of the Republic medal this venerable sister died. Under her pillow was found the bronze medal she treasured so highly wrapped up in an American flag.

The names of the Sisters of Mercy of Baltimore who served at the Douglas Hospital in Washington are here given in full:

Sister M. Collette O'Connor.

Sister M. Bernard O'Kane (served in Civil and Spanish-American Wars).

Sister M. Stanislaus Matthews.

Sister M. Cephas Flynn.

Sister M. Anastasia Quinn.

Sister M. Lucy Duffy.

Sister M. Agnes Moran.

Sister M. Veronica Flaherty.

Sister M. Baptista Kearney.

Sister M. Regina Brown.

Sister M. Magdalene Healy.

Sister M. Gonzaga Mulhern.

Sister M. Pauline Fitzgerald.

Sister M. Ann Rigney.

Sister M. Catherine Brown.

Sister M. Agatha Flynn.

Sister M. Gertrude Wynne.

Sister M. Patricia Smith.

Sister M. Veronica Doyle.

Sister M. Timothy Liddy.

Sister M. Bernadine Keefer.

Sister M. De Sales Brown.

The Stanton, another hospital in Washington, named after the distinguished Secretary of War, Edwin M. Stanton, was controlled during the entire war by the Sisters of Mercy of Pittsburgh, who came there in response to an application made by the Government authorities in Washington. Sisters of this same Pittsburgh community also served in the Western Pennsylvania Hospital at Pittsburgh. At the Stanton Hospital hundreds of soldiers were attended to, among them being a large number of Confederate troops who were wounded at the second battle of Fredericksburg, December 13, 1862.

"It was a beautiful sight," said one of the sisters, "to see how tenderly the convalescent Union soldiers helped to nurse back the health of those whom they had so fiercely fought a short time before."

During the stay of these sisters at the Stanton Hospital they were honored by a visit from President Lincoln, who spent some time with them, speaking warm words of praise and commendation and complimenting them on the order and cleanliness of the place and the comfort and relief they had given the wounded.

The following are the names of some of the Sisters of Mercy of Mount St. Mary's Convent, Mount Mercy, Pittsburgh, Pa., who served at Stanton Hospital, in Washington, and also at West Pennsylvania Hospital, Pittsburgh, during the war:

Stanton Hospital:

Sister M. Borgia Dougherty (Superior).

Mother M. Regina Cosgrave.

Sister M. Vincent Delaney.

Sister M. Flavia Byrne.

Sister M. Celestine Rafferty.

Sister M. Nolasco Kratzer.

Sister M. Basil Maginn.

Sister M. Gonzaga Myers.

Sister M. Stephana Ward.

Sister M. Odella Dusch.

Sister M. Helen Devlin.

Sister M. Remigius McQuade.

Sister M. Julia Ford.

Sister M. Ursula Ford.

Sister M. Collette Kuhn.

Sister M. Isadore Fisher.

Sister M. Apollonia Leahy.

Sister M. Augustine Schuck.

Sister M. Basil Maguire.

West Pennsylvania Hospital:

Mother M. Sebastian Gillespie.

Sister M. Bernard Maher.

Sister M. Berchmans Hostetter.
Sister M. Rose Hostetter.
Sister M. Benedicta Duffy.
Sister M. De Pazzi Russell.
Sister M. De Ricci Tierney.
Sister M. Leo Driscoll.

The Sisters of Mercy of Cincinnati were enrolled among the communities who applied themselves with generous and painstaking zeal to the spiritual and corporal works of mercy during the war. Their House of Mercy, on Third Street in that city, was converted during the war period into an auxiliary hospital for the treatment of sick and wounded soldiers. Numbers of the soldiers who were cared for in that institution were prisoners from the Southern Army. But service far more important and extensive was given by members of this same community after the battle of Pittsburg Landing, Tenn. Responding to a call of the mayor of Cincinnati, several Sisters of Mercy went on board a vessel known as the *Superior* and sailed down the Ohio and Mississippi Rivers to the scenes of suffering at Shiloh. The vessel was used as an emergency hospital to receive the stricken soldiers who were carried in for medical attention. Among the afflicted patients were a number of smallpox cases. In administering to the comforts of these unfortunates the sisters exemplified a wonderful spirit of fortitude and charity. They remained at their post of duty until all the soldiers had been properly cared for in that awful hour of misery and affliction.

The names of the Sisters of Mercy of Cincinnati who attended the soldiers on board the *Superior* and in the hospital on Third Street are as follows:

Mother M. Theresa Maher.
Mother M. Gertrude O'Dwyer.
Mother M. Baptist Kane.
Sister M. Frances Nunan.
Sister M. Stanislaus Murphy.

The Sisters of Mercy of Chicago nursed the sick and wounded at Jefferson City, Mo., and also on the floating hospital known as the *Empress*. About this same period these sisters tried to reach Lexington to administer to the troops stationed there under command of Col. Mulligan, of the Chicago Irish Brigade, to whom and to whose officers and soldiers a resolution of thanks for gallantry in defending Lexington was passed on December 20, 1861, in the House of Representatives in Washington. They embarked on a vessel called the *Sioux City*, which was conducting a detachment of troops to Lexington. While proceeding on its voyage this boat was nearly riddled with bullets fired by the infantry on the right and the cavalry on the left bank of the river. In justice to the Southern soldiers, however, it must be said that they disclaimed all knowledge that there were women on board the vessel; above all, the Sisters of Mercy. When these sisters had finished their labors at Jefferson City in April, 1862, they prepared to return to Chicago, but on reaching St. Louis their plans were changed, for there they were requested to take charge of the hospital work on the steamboat *Empress*, above referred to, which was then bound for Shiloh, to transfer the sick and wounded from that scene of strife to where they would receive the care and attention they needed. They spent five weeks in this service carrying the sick and wounded to Keokuk, St. Louis, Louisville, and other landing points along the Mississippi and Ohio Rivers. While these sisters were occupied with the work at Jefferson City Hospital Gen. Fremont paid them a visit. Being apprised that the sick and dying soldiers were suffering for want of actual necessities of life, he soon saw that relief was given.

Most conspicuous among the Sisters of Mercy then in the service of the country was Mother M. Frances (Mary Mulholland), born at Armagh, Ireland. This sister did wonderfully effective work during the war, bringing comfort to many a soldier in the hour of agony and distress. It was she who personally escorted a band of Nuns to Lexington at the request of Col. Mulligan, of the Chicago Irish Brigade, whose life was sacrificed in the cause of the Union.

The Chicago Sisters of Mercy who served at Jefferson City, as well as on the *Empress* and *Sioux City*, are the following:

Mother M. Frances Mulholland.
Mother M. Borromeo Johnston.
Sister M. Alphonsus Butler.
Sister M. Louise Perry.
Sister M. Bernard Welsh.
Sister M. Patricia Reardon.
Sister M. Raymond Garrity.
Sister M. Elzear McGratton.

On the 10th day of July, 1863, as the Federals unmasked their guns and opened fire on Morris Island, the memorable siege of Charleston, S. C., began. It lasted until the formal surrender on February 18, 1865, the city being practically all

the while under fire. In the course of this protracted siege the city was reduced to a ruinous condition by the destructive force of shot and shell. Distress and sorrow were widespread among the poorer classes. In describing the gloomy picture Gen. Sherman said:

Anyone who is not satisfied with the war should go and see Charleston, and he will pray louder and deeper than ever that the country may in the long future be spared any more war.

In the midst of the desolation that prevailed in every quarter of this locality the Charleston community of the Sisters of Mercy rendered most timely and valuable services among both inhabitants and soldiers.

The following are the names of the sisters of that community who performed the work of relief:

Mother M. Theresa Barry (Superioress).
Sister M. De Chantal Cleary.
Sister M. Helena Marlow.
Sister M. Stanislaus Coventry.
Sister M. Ignatius Clarke.
Sister M. Bernard Frank.
Sister M. Frances Kyte.
Sister M. Vincent Jones.
Sister M. De Sales Brennan.

Sisters of Mercy of the community at Savannah, Ga., voluntarily tendered their services to the military authorities, and with self-sacrificing zeal, joined their co-religionists in the humane work of comforting the stricken soldiers.

Among the number who participated were:

Sister M. Vincent Mahoney.
Sister M. Agnes Fagan.
Sister M. Ignatius McKenna.
Sister M. Veronica North.
Sister M. Annie Donoghue.

A few years before the outbreak of the war some of the Sisters of Mercy had been transferred from convents farther north to newly established foundations in Southern States. At Vicksburg, Miss., in the spring of 1861, a convent of the Sisters of Mercy was founded just one year before hostilities began. Some time after the call to arms this convent was turned into a hospital with the sisters remaining as nurses; but the structure was not large enough to comfortably accommodate any considerable number of patients. Later, the Confederate government established a hospital at Mississippi Springs, where members of this same community presided amidst the most harassing difficulties, taking care of about 800 sick and wounded patients. From Mississippi Springs they went to Jackson to take charge of a few hundred wounded men in the deaf and dumb institute; but, finding that these men were receiving proper medical assistance they proceeded to Oxford, where their services were greatly needed in caring for a large number of men who lay sick and wounded in the buildings of the University of Mississippi.

These sisters were on the scene, amid shot and shell, when Gen. Grant besieged Vicksburg. When famine and desolation stalked through Confederate camps and cities the Sisters of Mercy followed the ill-fated army, devoting themselves with all the aspirations of their souls to the one absorbing purpose of solacing human misery in attending to the sick and binding up the wounds of those who had fallen. During the siege of Jackson they accompanied the wounded in a cross-country expedition, stopping by night wherever they could find shelter until they reached Alabama. At Shelby, Ala., they continued their fatiguing services until the war finally came to a close. It is related that at Shelby, Ala., the Superioress, Mother De Sales, in addition to nursing the wounded soldiers, gathered wood during the nighttime to keep the fires burning in the deserted hotel which they occupied. The convent of the Sisters of Mercy at Vicksburg was taken by Gen. Slocum for a headquarters during the war, but was returned to the sisters a few months after peace had been restored.

The following sisters of the Convent of Mercy at Vicksburg, Miss., which community was small at its foundation in 1860, bore with patience and fortitude their part in the labors of nursing the sick and wounded during the hard fortunes of war:

Mother M. De Sales (Fannie Browne).
Sister M. Vincent (Martha Browne).
Sister M. Ignatia (Fannie Sumner).
Sister M. Agnes (Mary Magaigan).
Sister M. Philomena (Rose Farmer).
Sister M. Xavier (Amenaide Poursine).

SISTERS OF THE HOLY CROSS.

The Sisters of the Holy Cross were numbered among the most efficient and devoted nurses in the country's service during the entire period of the war. No height of self-denial was beyond their capacity or desire. They were under the able direction of Mother Angela (Eliza Gillespie), a woman of great personal

magnetism and accomplishments, who was the first cousin of James G. Blaine, one of the ablest Speakers of this House, distinguished as a United States Senator, Secretary of State, and Republican nominee for the Presidency. She was also related to Gen. Sherman and Gen. Fwing, both stalwart soldiers, who fought for the preservation of the Union. This gifted and highly educated lady was born in West Brownsville, Pa., under the same roof where James G. Blaine first saw the light of day. As children they were reared together and were associated by the most endearing attachments, which lasted throughout their lives. Mother Angela was the foundress of St. Mary's Academy at South Bend, Ind. Prior to her entrance into the Order of the Holy Cross she moved in the most exclusive circles of Washington society.

When the Civil War clouds settled over the country and the need of nurses became pressing, Mother Angela and her associates in religion at the Academy of the Holy Cross volunteered their services as nurses and went out from the fruitful field of education to labor amidst the hazardous enterprises of war. She was accompanied by Dr. Brinton, a Philadelphia physician, who had been one of the first to suggest the sisters as war nurses, and also by the Rev. Louis Lambert, one of the most notable priests of his time. It was Dr. Brinton who introduced Mother Angela to Gen. Grant, who thus addressed her on their meeting:

I am glad to have you with us, very glad. If there is anything at all I can do for you, I will be glad to do it. I thoroughly appreciate the value of your services and I will give orders to see that you do not want for anything.

Gen. Grant spoke of her ever afterwards as a woman of rare charm of manner, unusual ability, and marvelous executive qualities.

Mother Angela and other members of her order were in charge of hospitals at Mound City, Cairo, and Paducah. From the Academy of the Holy Cross about four score sisters went out to help the sick and wounded in the military hospitals of Louisville, Ky., Paducah, Ky., Cairo, Ill., Mound City, Ill., Memphis, Tenn., St. Louis, Mo., and Washington, D. C. Moreover, several of their number served on the *Red Rover*, a floating hospital that plied up and down the Mississippi River.

Many non-Catholic tributes have been paid to the work of the Sisterhoods during the war, but none more cordial than that of Mary A. Livermore, who was a relief worker herself during the struggle. In her book, "A Woman's Story of the War," she mentions the general hospital at Cairo as an example of the thoroughness of the work done by the Sisters of the Holy Cross. "There was one general hospital at Cairo, called by the people 'the Brick Hospital.' Here the Sisters of the Holy Cross were employed, one or more to each ward. Here were order, cleanliness, and good nursing." Of the Mound City Hospital the same writer said:

At the time of my visit the Mound City Hospital was considered the best military hospital in the United States. The most thorough system was maintained in every department. The Sisters of the Holy Cross were employed as nurses, and by their skill, quietness, gentleness, and tenderness were invaluable in the sick ward. Every patient gave hearty testimony to the skill and kindness of the sisters. The sisters had nearly broken up their famous schools at South Bend to answer the demand for nurses. If I had ever felt prejudiced against these sisters as nurses, my experience with them during the war would have dissipated it entirely. The world has known no nobler and more heroic women than those found in the ranks of the Catholic sisterhoods.

The following-named Sisters of the Holy Cross were engaged as nurses for the Union soldiers in the military and naval hospitals at Paducah, Ky., Mound City, Ill., Cairo, Ill., Louisville, Ky., Memphis, Tenn., St. Louis, Mo., and Washington, D. C.:

Mother M. Angela (Eliza Gillespie).
Mother M. Eusebia (Ann McIntosh).
Mother M. Augusta (Amenda Anderson).
Mother M. Compassion (Margaret Gleeson).
Mother M. Ligouri (not known—after war went to Mother House in France; never returned to United States).
Sister M. Lydia (Mary Clifford).
Sister M. Ferdinand (Agnes Brugaman—still living).
Sister M. Paula (Winifred Casey—still living).
Sister M. Catherine (Ann Kilkenny).
Sister M. Victoria (Mary O'Keefe—still living).
Sister M. F. De Sales (Hanora O'Neill—still living).
Sister M. Matilda (Margaret Hartnett).
Sister M. Helen (Catherine Fitzpatrick).
Sister M. Passion (Ann Cowley—still living).
Sister M. Veronica (Regina Scholl).
Sister M. Fidelis (Bridget Lawler).
Sister M. Athanasius (Margaret O'Neill).
Sister M. Odella (Hanora Higgins).
Sister M. John of the Cross (Catherine McLoughlin).
Sister M. Angelica (Bridget O'Brien).
Sister M. Theodore (Mary Kearns).
Sister M. Macrina (Anne Snow).

Sister M. Martha (Catherine Reddy).
Sister M. Adela (Catherine Moran).
Sister M. Providence (Marie Daget).
Sister M. Francis de Paul (Johanna Sullivan).
Sister M. Calista (Esther Pointan).
Sister M. Isadore (Mary Conlin).
Sister M. Theodosia (Mary McCushing).
Sister M. Holy Angels (Catherine Muldoon).
Sister M. Conception (Mary McIntyre).
Sister M. Rose of Lima (Mary McDermott).
Sister M. Bernard (Winifred Shandley).
Sister M. Bartholomew (Frances Darnell).
Sister M. Celestine (Bridget Cavanaugh).
Sister M. Placidus (Bridget Sullivan).
Sister M. Magdalene (Ellen Kiernan).
Sister M. Angeline (Virginia Blake).
Sister M. Irene (Anne Keough).
Sister M. Anthony (Bridget Mannix).
Sister M. Rita (Mary Brennan).
Sister M. Felix (Mary Kelly).
Sister M. Faustina (Anne Morrissey).
Sister M. Anne (Mary Dorsey).
Sister M. Agnes (Bridget Nevils).
Sister M. Winifred (Catherine McGinn).
Sister M. Felicitas (Margaret Mulloy).
Sister M. Alice (Bridget Flannery).
Sister M. Patrick (Bridget McGockin).
Sister M. Josephine (Mary Reilly).
Sister M. Elise (Unity O'Brien).
Sister M. Edward (Mary Murphy).
Sister M. Christina (Anselma Sophia).
Sister M. Aurelia (Mary Leavy).
Sister M. Holy Cross (Ellen Welch).
Sister M. Aloysius (Mary Garen).
Sister M. Gregory (Mary Barry).
Sister M. Augustina (Anne Flannagan).
Sister M. Holy Infancy (unknown).
Sister M. Calvary (Mary Ann Stace).
Sister M. Celeste (Mary Duffy).
Sister M. Mount Carmel (Mary Dougherty).
Sister M. Flavia (Bridget Smith).
Sister M. Henrietta (Mary McLoughlin).
Sister M. De Chantal (Barbara Knoll).

SISTERS OF ST. JOSEPH.

The State of Pennsylvania was one of the scenes of great military activity during the war. Located at Harrisburg, the capital city, was Camp Curtin, named after the governor of the State. In this institution were many sick soldiers who needed the attention of nurses. Early in the year 1862 Surg. Gen. Smith, of Pennsylvania, requested the Sisters of St. Joseph, whose convent was located at Chestnut Hill, Philadelphia, to come to the assistance of these suffering men. Dr. Smith had refused other nurses, having implicit confidence only in these sisters, who, he realized, could overlook the privations of existence in camp and sacrifice personal comfort to the performance of what they would regard only as a Christian duty.

Responding to the application made by the Surgeon General, twenty-three sisters of this congregation proceeded to Camp Curtin. At the camp were stationed about 3,000 militia, with three matrons in charge, and a number of soldiers who were acting as nurses. Not long after the sisters entered upon the work, throughout the temporary building signs of neatness, order, and comfort became everywhere visible.

At the Church Hospital, another institution in Harrisburg, three sisters under the charge of Sister Mary John, took care of the sick who were not able to go to the camp.

A period of three months passed away, whereupon the soldiers at Camp Curtin were summoned to the front, which marked the parting of them and their tender nurses. Upon leaving Camp Curtin the thanks of the State authorities were extended to the sisters in the following letter addressed by the governor of Pennsylvania to their Superior:

MADAM: During a period of several weeks, amidst the confusion of a constantly changing camp, and amidst an epidemic of measles, with typhoid fever, etc., six of "the Sisters of St. Joseph," sacrificing all personal comfort, ministered faithfully and truly to the comfort and welfare of the sick. Neatness, order and efficient ministrations immediately followed their arrival in the camp.

Highly appreciating their valuable services and Christian devotion to the relief of human suffering, the State authorities desire to express to them and your order high appreciation of the self-sacrificing spirit which they exhibited among the sick soldiers, both at Camp Curtin and the Church Hospital in Harrisburg.

By order of:

A. G. CURTIN,
Governor of Pennsylvania.

No time was wasted by these Nuns in proceeding from one scene of action to another. A few days after the closing of

Camp Curtin they proceeded farther south to Fortress Monroe, where they were detailed on two floating hospitals, the *Whilden*, a small boat, and the *Commodore*, a large one. On the *Whilden* were three sisters; the rest were on the *Commodore*. The sisters engaged in this work were Mother Monica, Sister Constantia, Sister Philomena, Sister Patrick, Sister Anselm, Sister Camillus, Sister Mount Carmel, Sister Laurentia, Sister Felix, and Sister Bruno. On the 6th day of May, in company with the Surgeon General and his assistants, these sisters went down the James River to bring up the wounded from the battle field of Yorktown. On arriving they went in small boats to the landing, whither the wounded were being carried from the field. It took all night and part of the next day to place the entire number on board the vessels, many among them being southern soldiers who had been taken prisoners. With the load of afflicted passengers they proceeded to Philadelphia, the sisters remaining on board until the patients were transferred to hospitals in that city. Concluding this trying experience, they went back to receive the wounded from the battle near Richmond.

In the meantime, however, the camp at Harrisburg was reopened, and there the sisters immediately resumed their ministrations. In the course of time their services were no longer needed, and then these Nuns returned to their convent home. All but three of their number have quietly passed out of this life, but their memory is preserved by many an old veteran who pays a pilgrimage annually on Decoration Day to lay a garland on their silent graves.

Several of the Sisters of St. Joseph from Brooklyn, N. Y., took part in the good offices of supplying relief to the stricken and wounded soldiers during the war. Among these Mother M. de Chantal Keating, whose family name was Jane Keating, deserves special mention for the Christian heroism and devotion she displayed throughout her long life. She was born at Kebra, County Tipperary, Ireland, on September 30, 1833, and came to America in 1852, where she entered St. Mary's Convent, at Williamsburg, N. Y., then the Mother House of the Order of the Sisters of St. Joseph. At the time of her death she was the oldest Mother Superior of the order. She departed this life in the summer of 1917 at the ripe old age of 84 years, having spent 60 years as a Nun in the work of education and religion. The story of a life so full of Christian charity and devotion would make up a volume in itself.

After the Civil War began Mother de Chantal went to Wheeling, W. Va., to become the head of the Community of the Sisters of St. Joseph in that city. For four years during the war, with other members of her community, among them Sister de Sales, she rendered aid and comfort to many distressed and afflicted soldiers at White Sulphur Springs, Montgomery County, Va., and also at Wheeling Hospital, which was rented and used by the Government as a post hospital during the war, she and her devoted companions tenderly nursed the soldiers who were brought in from prisons and neighboring battlefields, never failing to render them ready and sympathetic attention. Mother de Chantal was one of the nuns who received from the Grand Army of the Republic a bronze medal as a token of her devotion to the soldiers whom she nursed back to health at the Wheeling Hospital. She afterwards made it a practice to wear this medal on Memorial Day every year up to the time she died.

She belonged to a lineage some of whose members are to-day devoting their lives to the advancement of religion and education in this and in other countries. Sister M. Magdalen Keating, of the Convent of the Presentation, at Fitchburg, Mass., is her sister, and the Rev. James Keating, S. J., a missionary in China and India, and the Rev. Joseph Keating, S. J., editor of the English Jesuit periodical, *The Month*, who has recently written several masterful and scholarly articles on "International Morality and the War," are her nephews.

The following is a partial list of the Sisters of St. Joseph, of Mount St. Joseph's, Chestnut Hill, Philadelphia, who attended the soldiers during the Civil War at Camp Curtin and the Church Hospital, at Harrisburg, Pa., and after the battle at Yorktown, Pa., the first three of whom are still living:

- Sister M. Laurentia (Ellen O'Donnell).
- Sister M. Camillus (Julia Phelan).
- Sister M. Anselm (Catherine Jennings).
- Mother M. St. John Fournier.
- Mother M. Ignatius Ryan.
- Sister M. Mount Carmel (Eliza Fagan).
- Sister Mary John (Elizabeth Kiernan).
- Sister M. Xavier (Mary Walker).
- Mother M. Monica (Elizabeth Pue).
- Sister M. Philomena (Margaret Maher).
- Sister M. Bruno (Ellen McMahon).
- Sister M. Patrick (Mary Ward).
- Sister M. Constantia (Eliza McMenamen).
- Sister M. Felix (Anne Haverty).

SISTERS OF CHARITY OF NAZARETH.

During the trying days between 1861 and 1866 no body of men or women did more for suffering humanity than the patient, zealous Sisters of Charity of Nazareth, near Bardstown, Ky. A score of sisters from that community offered their services without hope of earthly reward of any character. In November, 1812, the Mother House of this order was a log cabin, and two pious ladies of mature age, Sister Theresa Carico and Miss Elizabeth Wells, made up the community. On January 21, 1813, they were joined by Sister Catherine Spalding, who later in the spring of the same year was chosen as the first Mother Superior. In the course of years, however, between that date and the outbreak of the Civil War, through many trials, the institution grew steadily onward until the humble log cabin had developed into a splendid academy, which spread its refreshing influence throughout the old Blue Grass State.

In the spring of 1861 Bishop Martin P. Spalding sent a formal communication to Gen. Robert Anderson, of Fort Sumter fame, then in command of the Department of Kentucky, tendering the services of the Sisters of Charity of Nazareth to nurse the sick and wounded soldiers. Gladly was the offer accepted, and Gen. Anderson wrote as follows:

The Sisters of Charity will nurse the wounded under the direction of the Army surgeons, without any intermediate authority or interference whatever. Everything necessary for the lodging and nursing of the wounded and sick will be supplied to them without putting them to expense, they giving their services gratuitously. So far as circumstances will allow, they shall have every facility for attending to religious and devotional exercises.

ROBERT ANDERSON,
Brigadier General, United States Army.

In Louisville three large factories had been converted into hospitals and placed in the service of the Government, over which twenty-three sisters of this order presided. Hundreds of soldiers of the blue and the gray, wounded and stricken with disease—fever, pneumonia, and other ailments—were lying in the cot-lined rooms of the improvised hospitals, among them being little drummer boys and buglers not yet arrived at their teens, who were writhing in pain and agony alongside of these seasoned fighters, all of whom, without distinction as to rank or color of uniform, were there receiving the tender and reverential care of these sisters.

Though lapse of years has obscured the records of many valiant sisters who gave up their lives in the service, we can, nevertheless, gather from the testimony yet remaining shining examples of martyrdom among the Sisters of Charity of Nazareth. One single instance will tell the story. It is that of a young sister, Mary Lucy by name, who volunteered to nurse some of the typhoid cases. During her ministrations she contracted the disease herself from a convalescing patient, and after a few days' illness passed away. So highly was she esteemed that a military funeral was arranged in her honor by the soldiers, who, marching to the beat of muffled drums, bore the remains from the Central Hospital to the Ohio River, where a black-draped gunboat received them and, under a flag of truce, bore them to Uniontown, Ky., the birthplace of this gentle sister. A short distance away was St. Vincent's Academy. At her own request this was to be her final resting place. There in the community burial plot she was laid by the soldiers who had watched the coffin day and night until the sod had finally hidden it forever.

One night twelve weary Confederate soldiers marched into Nazareth to solicit the services of the sisters. They had journeyed from Lexington to ask the sisters to return with them and nurse their sick and wounded comrades. Their request was immediately granted, and that same night, late though it was, protected by a flag of truce, they proceeded on their journey, arriving in Lexington at the end of two days. They were ushered into a large hall which had been fitted up for hospital purposes, and there they began immediately to work among the sufferers.

At Bardstown, Ky., where several engagements had kept the place alternately in possession of Union and Confederate troops, there was a hospital under the care of the same order of Nuns. Western Kentucky was then a place of military operations, and Gen. Smith, in command of Union forces, called upon the sisters in Paducah to nurse the soldiers. The sisters from St. Mary's Academy responded, taking over the Baptist Church for the carrying on of their work.

The Sisters of Nazareth Community were in every place where there was suffering and sorrow. They served with distinction in Louisville, Paducah, Bowling Green, Owensboro, and Calhoun, Ky. At Calhoun two Protestant churches sheltered the sick and wounded, and in both these edifices the sisters labored with the same devotedness which they had shown in other localities.

Many branch houses of this congregation were converted into hospitals, but the Mother House at Nazareth kept on as an edu-

cational institution, though at times the sisters were apprehensive that the school would have to be abandoned. Both armies were operating in the neighborhood, and the sisters feared that harm might come to the seventy northern and southern children who were pupils in this institution. Their fears were allayed, however, by a letter addressed by Gen. Wood, of the Union forces, to Mother Columba, who had made known her fears to him. The following is the letter of the Union general:

To the LADY SUPERIOR AND SISTERS OF THE CONVENT OF NAZARETH:

I hasten to apprise you that it is my earnest desire and intention to afford you perfect protection and the enjoyment of all your rights, both as an institution and as ladies individually. It is my earnest wish and intention to secure you and your ancient institution, which has educated so many fair daughters of my own native State, Kentucky, from all molestation and intrusion; and to this end I pray you will not hesitate to make known to me any grievances you may have on account of any misconduct on the part of any officer or soldier under my command. I assure you it will be equally my duty and my pleasure to attend to any request you may have to make. I beg you to dismiss all apprehensions on account of the presence of soldiery in your sacred neighborhood and to continue your peaceful and beneficent vocation as if the clangor of arms did not resound in our midst.

I have the honor to be, ladies, your very obedient servant.

TH. J. WOOD,
Brigadier General, Commanding.

During the same period of confusion President Lincoln also sent a card to Mother Columba, which read as follows:

Let no depredation be committed upon the property or possessions of the Sisters of Charity of Nazareth, near Bardstown, Ky.

A. LINCOLN.

From Louisville in February, 1862, the Surgeon in charge wrote to Mother Frances Gardner:

I regret very much to have to inform you of the death of Sister Catherine at the General Hospital of this city. She, as well as the other sisters at the hospital, has been untiring and most efficient in nursing sick soldiers. The military authorities are under the greatest obligations to your order.

No more glowing tribute has ever been paid to this order than that recently expressed by Gen. R. B. Brown, of Ohio, a soldier of renown and former Commander-in-Chief of the Grand Army of the Republic, in the following extract from a letter written by him to Ohio's representatives in the United States Senate:

There is only written in heaven a true story of the holy devotion of the various sisterhoods of the great Catholic Church, and other religious societies to the sick and wounded soldiers of both the Union and the Confederate Armies during the early months of the mighty struggle. I was a boy in 1861-2, sick unto death at the Planters' Hotel in Louisville, Ky. But for the unceasing zeal of a Sister of Charity the issue of that illness might have been different. I do not admit that I owe my life to human ministrations, but if I do I owe it to that sweet-faced Sister of Charity, whose name I never knew, and from whence she came I only learned during the summer of 1912—a sister from the mother house at Nazareth, Ky. Of the eight who served in that hospital, but one, and she 82 years old, was alive at that time (October, 1912).

I am moved to write you without delay, asking that this righteous and long-delayed bill receive your support, as I do not for a moment doubt that it will. All honor to the loyal Ladies' Auxiliary, Ancient Order of Blueburnians in America, in initiating this movement. I shall esteem it a great privilege to contribute to this enterprise. I feel very certain that the American Congress will promptly make this resolution a law.

Very cordially, yours.

(Gen.) R. B. BROWN.

This institution at Nazareth, Ky., which furnished so many nurses for the camps and hospitals during the War between the States, is noted for its distinguished patrons and graduates. Among its patrons were Henry Clay, who sent his daughter, granddaughter, and great-granddaughter there; Judge Benjamin Winchester; John J. Crittenden, Judge John Rowan; Zachary Taylor; Jefferson Davis; James Guthrie; George D. Prentiss; and Charles Wickliffe. The graduates include Sarah Knox Taylor, daughter of President Zachary Taylor and first wife of Jefferson Davis; Madame Henrietta Spalding, Superior of the Sacred Heart Convent in Chicago; Mary Eliza, daughter of James Breckinridge, of Kentucky; Mary Gwendoline Caldwell, the original benefactress of the Catholic University of America; the wife of United States Senator Vance, of North Carolina; the four nieces of Jefferson Davis, all converts; Mary Anderson, whose professional career is as much a matter of pride to the good sisters as are her private virtues; and Mary Florence Taney, the author of the volume entitled "Kentucky Pioneer Women."

The advancing years have not preserved the names of all the Sisters of Charity, of Nazareth, Ky., who silently and uncomplainingly soothed the stricken soldiers in the Civil War. I close this brief account of their services with a recitation of some of the names:

Sister M. Philippa Pollock.
Sister M. Mildred Travers.
Sister M. Mary Vincent Hardie.
Sister M. Patricia Grames.
Sister M. Mary Lucy Dosh.
Sister M. Mary Joseph Holliland.

Sister M. Martha Drury.
Sister M. Sophia Curtin.
Sister M. De Chantal Kenney.
Sister M. Blanche Traynor.
Sister M. Regina Drumm.
Sister M. Gaudentia Beatie.
Sister M. Constancia Moran.
Sister M. Borromeo McKenny.
Sister M. Claracene Hanly.
Sister M. Domenica Byrne.
Sister M. Catherine Malone.
Sister M. Peter Brady.
Sister M. Mark Byrne.
Sister M. Apollonia McGill.
Sister M. Louis Hines.
Sister M. Ida Brophy.
Sister M. Erminilda Kelly.
Sister M. Angela Brooks (died in 1863).
Sister M. Alexia Highon.
Sister M. Placida Sisness.
Sister M. Humberline Fagan.
Sister M. Justine Linnehan.
Sister M. Scholastica Fenwick.

SISTERS OF CHARITY OF ST. VINCENT DE PAUL.

Out amidst the mountain scenery in one of the most beautiful portions of Maryland stands the Mother House of the Sisters of Charity of St. Vincent de Paul, about half a mile south of the village of Emmitsburg. A log house on the mountain side was the original home of this benevolent community. From here this order, founded by Elizabeth Bayley Seton, began its works of charity half a century before the outbreak of the Civil War. Little did the foundress of this institution then realize that within that neighborhood would one day be fought the bloodiest battle in American history. Little, too, did she realize that the sisters of this community were destined during the progress of that battle and afterwards to give to the world one of the grandest exemplifications of Christian heroism ever displayed on this continent.

The village of Emmitsburg is but ten miles distant from the memorable battlefield of Gettysburg, the scene of the great military drama which marked the turning point of the Civil War. History records the fact that more than 140,000 men were engaged in that sanguinary struggle. In the three days of fighting 2,834 Union soldiers were killed and 14,492 were wounded. On the Confederate side 5,500 were killed and 25,500 were wounded.

On the Sunday morning after the third day Rev. James Francis Burlando, accompanied by a dozen sisters, left Emmitsburg to go through the rain-drenched and mud-clogged roads which led to the scenes of carnage. After great difficulty they arrived. Never did human eyes behold such a spectacle! Soldiers slain or half dead lay before them groaning in ghastly heaps, some calling for aid and others gasping alongside hundreds of breathless steeds whose nostrils no longer scented the grimy smoke of battle. Here among these ruins of life thousands of guns, side arms, wheels, projectiles, and all sorts of military accoutrements were promiscuously scattered. Into the midst of these grim ravages of war went these noble messengers of peace and charity, with hardly an inch of ground to step on, and helped to pick up the wounded and carry them to attending farm wagons which had been requisitioned as ambulances.

From the labor of assisting on the battle field, the sisters proceeded to the town of Gettysburg, which by this time had become a hive of improvised hospitals. Every large building in the town was converted into a hospital and filled as fast as the awkward ambulances could carry the wounded from the field. In addition, many private homes were transformed into relief stations. Altogether there were 113 hospitals in and around Gettysburg. The Catholic Church was strewn with the sick and wounded. Transylvania College contained more than 600 sufferers, and the Methodist Church was also busy with hospital activities. In all these places the Sisters of Charity were in attendance. Besides the numbers interned in these temporary hospitals, thousands were shipped to Satterlee Hospital at West Philadelphia, a military hospital in charge of Dr. Walter S. Atlee, a prominent physician. To this institution the Sisters of Charity had come in June, 1862, as a result of an interview between Dr. Atlee, Surg. Gen. Hammond, and Secretary Stanton. Many carloads of soldiers were brought there from Gettysburg. It was a large establishment, with a number of tents auxiliary to the main institution. Soldiers were brought there from Bull Run as well as from Gettysburg, and conservative estimates show that during the period of their ministrations at Satterlee Hospital the Sisters of Charity took care of 50,000 sick and wounded soldiers.

Sister Mary Gonzaga (Mary Agnes Grace) was in charge of the work in this institution. A large portion of her interesting career, which began at Emmitsburg in 1827, when she was received into the community of the Sisters of Charity of St. Vincent de Paul, had already been spent at St. Joseph's Orphan Asylum in Philadelphia, where many soldiers from Bull Run had received careful treatment.

No narrative of the labors of these sisters at Satterlee Hospital could be half so edifying as the Journal kept by Sister Gonzaga and her coreligionists, which appeared in December, 1897, in the records of the American Catholic Historical Society, edited by the late Miss Sarah Trainor Smith and reproduced by Miss Eleanor C. Donnelly in her "Life of Sister Mary Gonzaga Grace," published in 1900.

The work of these sisters began in the hospital on the 9th day of June, 1862, as a result of a requisition made for Sisters of Charity by Surg. Gen. Hammond. The Journal above referred to states that the hospital grounds covered an area of 15 acres and that the buildings when completed contained 33 wards, each accommodating 75 patients. On the 16th day of August, 1862, over 1,500 soldiers were brought in, most of them from the Battle of Bull Run.

Besides the usual maladies to be found in such an institution there were a number of cases of smallpox, and the patients afflicted with this disease were removed to the smallpox hospital several miles from the city. But, in the course of a short time, the surgeon in charge obtained permission to keep the smallpox cases in the camp at some little distance from the hospital and, accordingly, an order was issued, much to the joy and gratification of the patients who were afflicted with this contagious disease. During a period of seven months there were 90 cases of smallpox, and all of them, including the number removed as well as the number allowed to remain near the camp, were entirely under the care of the sisters.

From June 9, 1862, until August 3, 1863, ninety-one sisters had been on duty there. Though the war was over in April, 1865, the sisters remained at the request of the physicians until the hospital was finally abandoned. In the three and a quarter years that were spent by the sisters in this institution uniform harmony prevailed; not a single discordant note ever sounded to mar the concord and cooperation among the officers, the physicians, and the sisters.

The Satterlee Military Hospital was not the only institution that was under the management of these sisters. All the sisters that could be spared went forth from the mother house at Emmitsburg to do the nursing on battle fields and in various camps and hospitals. Appeals for sisters from various quarters, both North and South, had widely separated the members of the Emmitsburg community. In response to a telegram from the authorities some went to Harpers Ferry, leaving Emmitsburg for this destination June 8, 1861. Sisters were permitted to pass through the lines of either army without interruption, for the religious garb was a badge which everywhere commanded respectful attention. Harpers Ferry is a rugged old town located in the angle formed by the confluence of the Potomac and Shenandoah Rivers. The town is buried in the surrounding hills. At Bolivar Heights above was the military hospital, where the sisters were to continue their pious avocations.

This hospital was filled with the sick and wounded, but provisions were scarce, owing to the fact that the town had been by turns in possession of both the contending armies. The stay of the sisters was very short, for a telegram was received not many days after their arrival ordering the Confederate troops to Winchester. The entire equipment, sisters and all, proceeded at once to that place. In a large hospital in Winchester, to which all the Confederate troops had come from Harpers Ferry, these sisters resumed their labors, remaining there until the Confederates had later removed all their sick and wounded comrades to Richmond.

On July 14, 1862, the Surgeon General at Washington called for one hundred sisters to come to White House, Va., where many thousands of wounded had been brought from recent battles. Notwithstanding the number of sisters already in the service, sixty others immediately set out in response to this request. This place was then in possession of the northern forces. Gen. George B. McClellan, then chief in command, who was some miles distant at the time, sent orders that every possible care and attention should be offered to the sisters. But the presence of the opposite forces in this vicinity made it necessary to leave the place very soon, and accordingly the wounded and dying men were hurriedly placed upon transport boats and transferred to other places, a detachment of sisters going along with them. So oppressive were the hardships on this voyage that one of the sisters died of exhaustion, another martyr added to the list. The remaining sisters not engaged with the sick returned to Baltimore, only to receive a hasty summons to go to

Point Lookout, a place at the southern extremity of Maryland, where the waters of the Potomac commingle with those of Chesapeake Bay. Twenty-five sisters went from Baltimore to Point Lookout, and here, two weeks after their arrival, another sister died, succumbing to the ravages of typhoid fever. There they buried this heaven-born Sister, Consolata Conlon, down where the Potomac rolls quietly into the bay. In the summer of 1862 Point Lookout was covered with shacks containing soldiers, many of them Confederate prisoners, agonizing under the pangs of suffering and disease. To-day, however, there is scarcely anything to be seen at Point Lookout except a Government lighthouse.

Late in August, 1862, Dr. Williams, who was medical director of the Army of the Potomac, hastily summoned a party of sisters to wait upon the sick and wounded at Manassas, where a very severe battle had recently occurred. Five sisters went there immediately from Richmond and found 500 patients from both armies in a sad and neglected condition awaiting their arrival. These sisters conducted their gentle ministrations in the temporary hospitals which had been erected there until finally they received orders from Gen. Johnson to pack up quietly and prepare to leave on short notice.

We next find them in the military hospital at Gordonsville taking care of 200 patients, and subsequently at Danville administering to the needs of 400 sick and wounded. At Lynchburg, too, they faithfully served 1,000 patients, some of them half starved owing to a scarcity of food. But their stay here was short. The Federal troops were approaching, and it was decided, therefore, to abandon Lynchburg and remove the sick and all the hospital stores to Richmond.

On the 17th of September, 1862, the Battle of Antietam was fought, and thousands on both sides were killed and as many more left wounded on the field. To the relief of these men Sisters of Charity went out direct from Emmitsburg, making straightway their path to the battle field, where they labored assiduously among the wounded and dying. Gen. McClellan was operating in the vicinity, and on approaching the scene of their ministrations he immediately disclosed his identity and said:

I am Gen. McClellan, and I am happy and proud to see the Sisters of Charity with these poor men.

Sisters of Charity from Emmitsburg had been in Richmond since the early part of June, 1861. They gave over their infirmary in that city for the use of the wounded soldiers. Here they were summoned by Dr. Gibson, who had charge of the military hospital in the Confederate capital. This hospital became known as St. Anne's Military Hospital and received the wounded from Phillips, Big Bethel, Romney, Rich Mountain, Carricks Ford, and Manassas, Va. Many other hospitals were opened in and around Richmond with the sisters in charge. They were at Richmond when the city fell. On the arrival of the Federal troops a Union officer rode at once to their quarters and informed them that their property would be held sacred, and that a special guard would be detailed for their protection. There were about 1,000 prisoners in the southern capital and about 5,000 sick and wounded. The sisters remained in Richmond until the sick and wounded were able to leave the hospitals, whereupon they returned to their home at Emmitsburg with the gratitude and affection of the soldiers of both armies.

More than two hundred of these Emmitsburg sisters gave watchful care and attention to thousands of afflicted and battle-scarred sons of the North and South who had fallen in the heat of battle. With the greatest ease they turned from one line of action to another. In their starched cornettes of Normandy, they were familiar and pathetic figures as they went from battle field to hospital, finding no difficulty in plying their labors, always open-hearted, meek, and humble, shrinking from no labor and fearing no suffering.

When the war ended and peace reigned throughout the country the Sisters of Charity of St. Vincent de Paul went back to their accustomed pre-war occupations, where they kept the noiseless tenor of their way, thrice blessed by the tender mercies they displayed amidst the sufferings and the sorrows of the men in the Blue and the Gray.

Sister Mary Gonzaga Grace, who served with distinction at Satterlee Hospital, returned whence she had come—to St. Joseph's Orphan Asylum at Philadelphia—and there ended her earthly career in October, 1897. In her demise there passed out of this life a woman of boundless charity, whose ministrations among thousands of Union and Confederate soldiers contributed a note of beauty to the many harassing details of the war.

During the latter period of her life grateful soldiers whom she had nursed during the war frequently came to see her. One of these who had heard of her serious illness called to inquire about her, and afterwards sent the following tribute to the Philadel-

phia Evening Star as "A soldier's tribute to the noble work of Mother Gonzaga during the war":

In your valuable paper dated yesterday the announcement was made that Mother Gonzaga, in charge of St. Joseph's Orphan Asylum, southwest corner of Seventh and Spruce Streets, was lying dangerously ill. In reciting her many acts of charity for the young orphans under her care and protection, victims of epidemics, etc., during the many years of her life, you were not aware that the short notice touched a tender chord of affection in the breast of many a veteran of the late war.

Mother Gonzaga was a mother of 60,000 soldiers, as patients under treatment in Satterlee United States Army Hospital, Forty-fourth and Pine Streets, from 1862 until 1865. Those who were under her care, no matter of what religion or creed, when they received the midnight visits of Mother Gonzaga, her silent steps after "taps" and by the dim gaslight, will recognize her familiar countenance surrounded by that white winged hood or cowl, just bending her form to hear the faint breath or whisper of some fever patient or some restless one throwing off the bed clothes; she kindly tucking them in around his body as a mother would a child; then a visit to the dying to give them expressions of comfort. Those who recall these scenes, I say, think of her truly as an angel of peace and sweetness.

Administering medicine when required, loosening a bandage or replacing the same, watching a case of a sufferer in delirium—at all times annoying to those near him—was her daily duty. To see her always calm, always ready, with modesty and fidelity, faithfully performing a Christian duty as an administering angel when physicians, surgeons, friends and all human aid had failed, was a beautiful sight. No poet could describe, no artist could faithfully portray on canvas the scenes at the deathbed of a soldier, that would convey to those not having witnessed them the solemnity of the quiet kneeling, the silent prayer, a murmur faintly heard as a whisper, a Sister of Charity, paying her devotion to Him on high, and consigning the spirit of the dying soldier to His care.

As one of the many thousands under her care, I shall always think of Mother Gonzaga as one of a constellation of stars of the greatest magnitude—surrounded by many others that were devoted servants, among whom I would mention Dorothea Dix, Annie M. Ross, Hettie A. Jones, and Mary Brady. We soldiers can not forget the service they rendered.

J. E. McLANE.

Not long ago, when the Battle Cry of Peace was playing in New York, Capt. Jack Crawford, the poet-scout, appeared at each performance to plead for national preparedness. He was famous as a scout in the Union Army during the Civil War. After the war he had become popular as a lecturer. Once, while lecturing in a Middle West town, the following tribute to the Sisterhoods fell from his lips:

My friends, on all God's green and beautiful earth there are no purer, no nobler, no more kind-hearted and self-sacrificing women than those who wear the sombre garb of Catholic sisters. During the war I had many opportunities for observing their noble and heroic work, not only in the camps and hospitals, but on the death-swept field of battle. Right in the fiery front of war I have seen the black-robed sisters moving over the field. My friends, I am not a Catholic, but I stand ready at any and all times to defend these noble women, even with my life, for I owe my life to them.

This eloquent tribute pronounced by the poet-scout will meet the concurrence of many an old surviving veteran to-day.

Before concluding the story of the Emmitsburg Sisters I shall digress for a moment to relate one of the most touching episodes of the war. It sums up the self-sacrificing devotion of a Sister of Charity from Emmitsburg in caring for a youthful soldier, Thomas Trahey, of Detroit, a member of Company H, Sixteenth Michigan Volunteer Infantry. The sister was Regenia La Croix, a French-Canadian by birth, and known in religion as Sister Louise.

Grit and gratitude were characteristics deeply set in the personality of Trahey. The former he displayed throughout the trying incidents of the war and the latter for many years after its termination. Wounded at Fredericksburg, he recovered, but after the Battle of Gettysburg he was stricken first with typhoid fever and immediately afterwards with smallpox. As he lay in the hospital at Frederick City, Sister Louise, the young and beautiful Canadian religieuse, stayed at his bedside and personally nursed him through the agonies of both these ravaging diseases. Upon recovering he went back to the front and again was wounded at White Oak Road, Va.

Soon afterwards the war came to a close, and Trahey went home impaired in health but bearing with him most precious memories of the faithful Sister of Charity to whose prayers and ministrations he was sure he owed his life. A few years passed away before Trahey regained his strength, and then he resolved to locate this kind-hearted sister and convey to her his gratitude in person. Where to find her he did not know. So he wrote to the mother house at Emmitsburg, only to be informed that two years after the war the faithful sister had died. Her remains had been laid in Calvary Cemetery, at St. Louis. To this spot the battle-scarred veteran made an annual journey on Memorial Day to pay his respects to her memory. But a boundless gratitude like his must take a form of expression more tangible than the mere laying of flowers annually upon the sister's grave. Trahey decided to purchase a monument in the shape of a rustic stone cross, to be set over the sister's grave, little reckoning, however, that his plans were in conflict with the established rules of the cemetery. Meeting with the opposition of the church authorities, he appealed to Sister Magdalena, the local superior of the order, who, moved by the pathos of his story, interceded in be-

half of the project. Now the simple monument stands over the grave bearing humble testimony to the gratitude of a stout-hearted soldier for the deeds of heroism and devotion performed by this dark-robed Sister of Charity. Upon this monument, the only memorial of its kind in the country, the following inscription may be seen:

To Sister Regenia La Croix.
Died March, 1867, in this city.
Erected as a tribute of gratitude
From an old soldier.

T. T.

This soldier in his own humble way set an example of gratitude which on a larger and more comprehensive scale may well be followed to-day. Multiply this single instance of gratitude a hundred million times, thus comprehending the present population of the country, and that would scarcely represent the full measure of grateful recognition that is due the various sisterhoods for the heroic services so generously bestowed by them in the dark and trying days of the Civil War.

The following is a list of the Sisters of Charity who served at the Satterlee Military Hospital at West Philadelphia during the war:

June 9, 1862:

Sister Mary Gonzaga Grace (superioress).
Sister Mary Louis.
Sister Louise Collins.
Sister Ann Joseph Dougherty.
Sister Josephine Keleher.
Sister Ann Maria Boniface.
Sister Clare McGerald.
Sister Mary Cremen.
Sister Augustine Valentine.
Sister Dolores Smith.
Sister Mary Xavier Lucot.
Sister Angela Mahony.
Sister Maria Noonan.
Sister Catherine Harty.
Sister Edna Heney.
Sister Margaret Hepp.
Sister Philippa Connelly.
Sister Delphine Wivelle.
Sister Neri Matthews.
Sister Onesime.
Sister Teresa McKenna.
Sister Aloysia Daley.
Sister Stella Moran.
Sister Elizabeth Freze.
Sister Adeline Byrnes.
Sister Eleanora Tyler.
Sister Vincent Saunders.
Sister Mary Joseph Sinnott.
Sister Magdalen Groell.
Sister Clotilda Welty.
Sister Pacifica Ulrich.
Sister Alphonsa McNichols.
Sister Annie O'Leary.
Sister Mary Laurence Kane.
Sister Felix McQuaid.
Sister Mary Bernard Moore.
Sister Henrietta.
Sister Alix Merceret.
Sister Martha Moran.
Sister Mary Jane Douglass.
Sister Mary Alice Delahunty.
Sister Vincentia Waltzing.
Sister Martina Tragesser.
Sister Marie Mulkern.
Sister Julia Fitzgerald.
Sister Loretta McGee.
Sister Angeline Reilly.
Sister Gabriella McCarthy.
Sister Petronella Breen.
Sister Amie Dougherty.
Sister Marcella Finnigan.
Sister Frances Griffin.
Sister Mary Josephine Gamel.
Sister De Chantal Costello.
Sister Mary Eliza Dougherty.
Sister Dionysia O'Keefe.
Sister Cecelia Groell.
1863:
Sister Euphrasia Mattingly.
Sister Mary Martha Lynch.
Sister Mary Harmer.
Sister Mary Bernard Farrell.
Sister Ann Teresa Roche.
Sister Amelia Davis.

Sister Severina Relihan.
Sister Rosalie Bouligny.
Sister Irene McCourt.
Sister Clementine McCaffrey.
Sister Felicitas Puls.
Sister Cornelia McDonnell.
Sister Agnes Weaver.
Sister Euphrasia Wittenanes.
Sister Ann Maria Shaughanessy.
Sister Generosa Foley.
Sister Julia Sheehan.

1864:

Sister Genevieve Kavanaugh.
Sister Celestine Adelsberger.
Sister Bernadine Farrell.
Sister Josephine Edelen.
Sister Antonia Asmath.
Sister Alphonsa McBride.
Sister Catherine McQuaid.
Sister Clara Doyle.
Sister Eloise Lacroix.
Sister Ann Joseph Cummin.
Sister Francis McDonald.
Sister Mary Xaxier Vendrome.

1865:

Sister Genevieve Garvey.
Sister Agnes McDermott.
Sister Sylvia O'Neill.

The following Sisters of Charity also served as war nurses during the four years of the war at various places in Virginia and Alabama:

Sister Anastacia O'Donnell.
Sister Vincent Foster.

During the siege of New Orleans the faithful Sisters of Charity were busily engaged in assuaging the sorrow and sufferings of those who were wounded during the historical bombardment and taking of that city by the cooperative action of Gen. Butler by land and Admiral Farragut by sea. Among these humble Sisters of Charity in New Orleans was Sister Mary Gabriel (Kraft), whose generous deeds of kindness and benevolence won for her the esteem and admiration of all whom she assisted during that distracting period of our country's history. She labored not only in New Orleans but in many other places through the South, notably at Mobile, Ala., and Holly Springs, Miss. At Corinth, Miss., Sisters of Charity from Mobile, Ala., were in control of the military hospital. They also served at Jacksonville, Miss., bestowing their bountiful charities upon the helpless soldiers who lay sick and wounded in a large hotel that had been appropriated for hospital purposes.

After the capture of New Orleans Admiral Farragut proceeded up the Mississippi with his gunboats and hurled heavy broadsides into some of the towns along its banks. In shelling Donaldsonville the property of the Sisters of Charity was damaged. The sisters presented a protest to Gen. Butler, who had made his headquarters at St. Charles Hotel in New Orleans, and from him they received the following reply:

HEADQUARTERS DEPARTMENT OF THE GULF,
New Orleans, La., September 2, 1862.

TO THE SUPERIOR OF THE SISTERS OF CHARITY.

MADAME: I had no information until the reception of your note that so sad a result to the sisters of your community had happened from the bombardment of Donaldsonville. I am very, very sorry that Rear Admiral Farragut was unaware that he was injuring your establishment by his shells. Any injury must have been entirely accidental.

No one can appreciate more highly than myself the holy, self-sacrificing labors of the Sisters of Charity. To them old soldiers are daily indebted for the kindest offices. Sisters to all mankind, they know no nation, no kindred, neither war nor peace. Their all-pervading charity is like the boundless love of "Him who died for all," whose servants they are, and whose pure teachings their love illustrates.

I repeat my grief that any harm should have befallen your society of sisters, and will cheerfully repair it as far as I may, in the manner you suggest, by filling the order you have sent to the city for provisions and medicine. Your sisters in the city will also further testify to you that my officers and soldiers have never failed to do to them all in our power to aid them in their usefulness and to lighten the burden of their labors.

With sentiments of the highest respect, believe me,
Your friend,

BENJ. F. BUTLER.

Higher up the Mississippi River is the city of Natchez, Miss., which was also bombarded by the Federal gunboat *Essex*. In Natchez the Sisters of Charity had conducted an orphan asylum from which all the inmates had been removed. Three of the sisters from this institution, at the request of Gen. Blanchard, left Natchez to go to Monroe, La., where there were many Southern soldiers in need of hospital treatment. These sisters crossed the Mississippi River in a skiff in the dead of night in order to meet the conveyance at Vidalia on the opposite side of the river, which was there to take them to their destination on an overland route of about 100 miles. After three days they arrived

at Monroe and began the work of ministering to the afflicted soldiers. There were a number of cases of fever and malaria, but no epidemic prevailed. Much of the illness there was caused by the ordinary fatigues and hardships of war. Altogether there were about one hundred patients who came within the ministrations of the sisters. The sisters remained at Monroe for a year, at the end of which time, Gen. Blanchard proposed to move his troops to Shreveport and requested the sisters to go along with the regiment. Circumstances prevented them from making the journey, and instead they were sent back to Natchez by Gen. Blanchard, under a flag of truce, with a detachment of seven soldiers and a captain, the soldiers riding on horseback and the sisters proceeding in a carriage.

The following are the names of the sisters who bore with pious patience and meek resignation the trials and burdens of the work at Monroe:

Sister Geraldine Murphy.
Sister Emerita Quinlan.
Sister Vincentia Leddy.

SISTERS OF MOTHER SETON ORDER OF CHARITY.

The black-cap Sisters of Charity of Cincinnati bore an important part in the works of mercy during the war. Most prominent among them was Sister Anthony O'Connell, a modest and unpretending woman, who was born in Limerick, Ireland, and came with her parents to this country at an early age. Her earlier years were spent in the mother house at Emmitsburg, Md. She was in charge of the community at Cincinnati when Gov. David Tod, of Ohio, issued a call for volunteer nurses at the outbreak of the war. To this call Sister Anthony and a group of sisters responded. Most of their work was done around Nashville, Camp Dennison, about 15 miles from Cincinnati, Shiloh, Richmond, New Creek, Gallipolis, and Cumberland. These sisters spent many months at Nashville, administering both to Union and Confederate soldiers. Though comparisons are unknown among the various orders, a reference to the work of Sister Anthony will be pardoned, for it stood out in bold relief from that of all the other war-nursing sisters. She herself tells the story of Shiloh as follows:

At Shiloh we ministered to the men on board what were popularly known as the floating hospitals. We were often obliged to move farther up the river, being unable to bear the terrific stench from the bodies of the dead on the battlefield. This was bad enough, but what we endured on the field of battle while gathering up the wounded is simply beyond description.

The soldiers were remarkably kind to one another. They went around the battlefield giving what assistance they could, placing the wounded in comfortable places, administering cordials, etc., until such time as the nurses could attend to the wounded and sick. I remember one poor soldier whose nose had been shot off, who had almost bled to death and would have been missed had we not discovered him in a pen, where some kind comrade had placed him before he left the field, every other place of refuge being occupied.

Day often dawned on us only to renew the work of the preceding day without a moment's rest.

In a soldier's diary we find this tribute to Sister Anthony:

Amid this sea of blood she performed the most revolting duties for those poor soldiers. She seemed like a ministering angel, and many a young soldier owes his life to her care and charity. Happy was the soldier who, wounded and bleeding, had her near him to whisper words of consolation and courage. She was revered by blue and gray, Protestant and Catholic, alike; and we conferred on her the title of the "Florence Nightingale of America." Her name became a household word in every section of the North and South.

After the Battle of Shiloh or Pittsburg Landing the sisters sailed down the Mississippi River, intending to go to Corinth, but they encountered grave dangers from obstructions in the river and it appeared for a while that all on board would be lost. The captain counseled flight for safety, but the sisters heroically refused to harken to his admonitions. Women who were not terrified by the sights they had already seen could not be dismayed, even though death stared them in the face. They resolved, therefore, that, come what may, they would not forsake the wounded boys, but would remain on board and share their fate to the end. The excitement was at length allayed by the advent of two pilots who came on board and skillfully steered the vessel to its destination.

Many of the sisters with whom she worked fell upon the field of duty, but Sister Anthony lived on and enjoyed a peaceful old age. She died December 8, 1897, at St. Joseph's Infant Asylum at Norwood, Ohio, where she had lived during the last few years of her life. Her death brought forth expressions of regret from many military organizations, which took formal action in manifestation of their regard for this faithful nun.

The William H. Lytle Post, Grand Army of the Republic, passed the following resolution of respect:

Whereas the venerable Sister Anthony departed this life on Wednesday afternoon, after a life of usefulness in taking care of the sick and doing boundless charity; and
Whereas she was one of the most active nurses during the war, doing many kind, silent acts; and

Whereas she will be buried from St. Peter's Cathedral Saturday, at 9 o'clock: Therefore be it

Resolved, That in order to show our gratitude and affection for her and appreciation of her services as an Army nurse, we attend her funeral and invite all other posts to participate with us.

The following beautiful description of the funeral and interment of Sister Anthony appeared in the Cincinnati Tribune on December 12, 1897:

Friday afternoon the remains of Sister Anthony were brought to the Good Samaritan Hospital, where they lay in state in the chapel, visited by hundreds of sorrowing friends. A great number of girls employed in factories near the hospital visited the chapel after working hours to pay a last tribute of respect to her who was at all times their friend and confidant in times of trouble. It was at the earnest request of the sisters at the hospital that the remains of Sister Anthony were brought in. They wanted to have her with them once more for the last time amid the scenes of her noblest work, to pray beside her bier and bid a last farewell to the spirit which they all emulate. Visitors thronged the chapel far into the night, and there was little rest for the sisters, who were up at dawn and in the chapel again, where the Rev. Father Finn, of the Society of Jesus, sang requiem mass, assisted by the St. Xavier's choir, under the direction of Mr. Boex. When the time came for the departure to the cathedral a number of the friends joined in singing "Lead, Kindly Light" and "Sweet Spirit, Hear my Prayer," while the body was borne from the chapel. These two beautiful hymns were the favorites of Sister Anthony, and she would have wished that they be sung at her funeral. In the cathedral, the temple of the religion she loved and worked and prayed for, two veterans of the Grand Army of the Republic, bearing aloft flags of their country draped in somber black, stood sentinels at the bier. There was the procession of priests and companies of Sisters of Charity instead of the rank and file of soldiery; there were embroidered robes and black habits in place of the blue and gray; there were candles instead of camp fires; there was the chime of bells and the chanting of the choir instead of the call of trumpets and the beat of drums; there was the organ pealing instead of the musketry roll; there was the fragrance of incense instead of the smoke of the battle field; there was the counting of beads instead of the binding of wounds; there was the bier and the sable pall instead of the hospital stretcher; there were the whispered prayers of 2,000 people on bended knees for the repose of the soul of Sister Anthony. The morning light streamed dimly and softly through the stained glass windows, and electric lights took the place of the stars in heaven's blue canopy, but it was the bivouac of the dead. The ministering angel to soldiers, the comfort of widows and orphans, the friend of the poor, the sick, and the unfortunate was dead, and about her, come to do her honor, were soldiers, orphans, and widows; those who had been poor and sick and unfortunate, her greatest care in life. The altars of the church were draped in black, and with high requiem mass and eulogies the priests of the church paid tribute to a noble member of their sisterhood.

Far up above the Ohio, on a beautiful plateau, with a view for miles in every direction, is the mother house of the Sisters of Charity, founded away back in the thirties by pioneers of the order from Emmitsburg, Md. Here is the grave of Sister Anthony. She lies beside Mother Regina Mattingly and Mother Josephine Harvey, who were with her when she first came West, and with her helped to found the mother house. To-day they sleep together in the little graveyard and near the home they made for their sisterhood. Their graves are in a little grove of birches and evergreens and surrounded by the graves of their sisters who had gone before. Their graves are marked by simple stone crosses, bearing their names in the world and in religion. When the funeral train reached the house the sisters, headed by their chaplain, received the body and bore it to the chapel, where it lay in state for two hours. The sisters wanted their dear friend for that long at least, for the mother house she always considered her home, and they regarded her as a mother and loved her as such, for to all she was ever the same sweet, lovely, and loving friend. The services for the dead were read by the Right Rev. Bishop Byrne, after which the body was borne to the grave. With slow and solemn tread the long file of black-robed sisters marched before. A drizzling rain had begun to fall, and in the murky atmosphere the scene took on a solemnity and grandeur impossible to picture. The sisters chanting prayers and the priests following in their purple robes and their heavy bass voices joining in had a beautiful effect. As the procession neared the burying ground "The Miserere" was chanted by all. There were very few at the graveside besides those connected with the church. Thus ended the earthly career of this "Angel of the Battlefield."

Sister Anthony was personally acquainted with many of the most prominent generals who took part in the war, among them being Grant, Sherman, Sheridan, McClellan, and Rosecrans. Jefferson Davis, President of the Confederacy, was also well known to her.

In Battles and Leaders of the Civil War is found an article by Jacob D. Cox, major general, United States Volunteers, ex-governor of Ohio and ex-Secretary of the Interior, concerning the work of the Sisters of Charity of Cincinnati, from which the following is quoted:

The Sisters of Charity, under the lead of Sister Anthony, a noble woman, came out in force, and their black and white robes harmonized picturesquely with the military surroundings as they flitted about under the rough timber framing of the old barn, carrying comfort and hope from one rude couch to another.

The scene was Camp Dennison, and the old barn was an improvised camp hospital, organized for the purpose of taking care of the number of contagious diseases aggravated in form and made worse on account of exposure.

The following is a list, probably complete, of the Sisters of Charity, of Cincinnati, Ohio, whose noble deeds of courage and devotion illuminate their lives and labors during the war:

Sister Anthony O'Connell.
Sister Sophia Gillmeyer.
Sister Dominica Lavan.
Sister Augustine Barron.
Sister Louise Barron.

Sister Ambrosia Schwartz.
Sister Agnes Phillips.
Sister Veronica Phillips.
Sister Bernadine King.
Sister Benedicta Cain.
Sister Clotilda Cain.
Sister Jane Garvin.
Sister Theodosia Farran.
Sister Alphonsa Gordon.
Sister Mary Garvin.
Sister Magdalen Cooper.
Sister Gonzaga Sheehan.
Sister Camilla O'Mara.
Sister Etienne Bonner.
Sister Beatrice Hastings.
Sister Ann Cecelia McDonald.
Sister Gabriella Crowe.
Sister Seraphine McCrane.
Sister Euphrasia McGary.
Sister Basilla Applegate.
Sister Ann Joseph Hughes.
Sister Mary Ignatia Mulcahy.
Sister Cephas Bray.
Sister Constantia Dolin.
Sister Winifred Cummins.
Sister Cleophas Cummins.
Sister Clement Doyle.
Sister Philomena Erwin.
Sister De Sales Brady.
Sister Mary Laurence Donaher.
Sister Stanislaus Ferris.
Mother Josephine Harvey.
Sister Eugenia McMullen.

Another foundation of the Black-Cap Sisters of Charity had been established in New York City several years before the Civil War began. A quaint little house, famous for Revolutionary memories, located upon an eminence at One hundred and ninth Street and Fifth Avenue, was the original mother house of the congregation. On this site sprang up the Academy of Mount St. Vincent in September, 1847. But twelve years later, when the new Central Park was established, the academy property, being within an area inclosed for that purpose, was abandoned and a new structure was erected at Font Hill on Hudson, where a flourishing academy—Mount St. Vincent on Hudson—has ever since been conducted by the Sisters of Charity. During the second year of the war, in September, 1862, the old academy building was given to the Government for use as a military hospital by the commissioners of the new Central Park, who, in the following letter, addressed to the Secretary of War, requested that the Sisters of Charity be selected as nurses for soldiers wounded in the struggle:

16 WALL STREET, September 9, 1862.

HON. EDWIN STANTON,
Secretary of War.

The commissioners of the Central Park of this city have given a very large building for a Government hospital for the reception of wounded soldiers. This building was formerly a Catholic school of high order. The point is this: We want the nurses of this hospital to be the Sisters of Charity, the most faithful nurses in the world. Their tenderness, their knowledge, and religious convictions of duty render them by far the best nurses around the sick bed which have ever been found on earth. All that is asked is that they be permitted to be nurses under the direction of the War Department and its physicians. Alderman Farley, of this city, will take this letter. I beg you to consider this matter and to do what is possible, and you will truly oblige your numerous friends, and especially,

Your friend, very truly,

EDWARDS PIERPONT.

The request was speedily granted, and the Government authorities appointed Rev. Edward McGlynn as chaplain of the institution. The building was well adapted for hospital purposes, accommodating about two hundred and fifty wounded soldiers at a time. Here with unaffected humility and boundless charity these pious sisters pursued their daily tasks of caring for the sick and wounded soldiers, meeting without repugnance all sorts of human afflictions, from 1862 to 1866.

The following is a list of the Black-Cap Sisters of Charity, of New York, who served as nurses in St. Joseph's Military Hospital:

Sister Mary Ulrica (Mary O'Reilly).
Sister Mary Rosina (Margaret Whightman).
Sister Ann Cecilia (Anne Nealis).
Sister Mary Christine (Elizabeth Meyers).
Sister Mary Genevieve (Hannah McCormack).
Sister Mary Columba (Mary Lawrence).
Sister Mary Teresa (Mary McCloskey).
Sister Mary Antoinette (Mary Kelly).
Sister Mary Perpetua (Mary Drumgoole).
Sister Mary Justine (Margaret McGlynn).

Sister Ann Scholastica (Catherine Quinn).
 Sister Francis Assisium (Jane Madden).
 Sister Mary Francesca (Amanda Molitor).
 Sister Mary Emerentia (Bridget Hanaway).

URSULINE NUNS.

Half a century before the Declaration of American Independence the first convent in the present territory of the United States was established by the Ursuline Nuns at New Orleans, La. Members of this same order were among the pioneer settlers in North America.

When John Harvard, in the year 1639, was laying the foundation of what is to-day Harvard University the Ursulines, under the leadership of Mother Mary of the Incarnation, had already gathered about them on the heights of Quebec above the St. Lawrence River the daughters of the French settlers, as well as the maidens of the Indian tribes, in their newly established work of religion and education. The institution they founded there was the first religious house that appeared on the American Continent.

At New Orleans this order had long been flourishing when the Louisiana Territory was purchased from Napoleon and the Stars and Stripes of the United States raised in place of the tricolor of France. The active services of the New Orleans Ursulines were not required during the War between the States, but at an earlier date, during the second war for American independence (1812-1815), they devoted their time and energies to the sick and wounded who were brought into the hospital after the Battle of New Orleans. When they saw from their convent windows the distant smoke rising from the plains of Chalmette, they realized that the battle had begun and immediately they prepared to receive the men who were stricken during that memorable defense of American soil. In this work they showed a marvelous spirit of patriotism and self-devotion to the needs of the wounded and dying. For this service Gen. Jackson personally thanked them at the time, and again, in after years on the occasion of his visit to New Orleans, he expressed warm feelings of gratitude. He is the only President of the United States who ever stood within the sacred precincts of the old cloister on Charles Street.

During the Civil War, however, the Ursuline nuns of Texas, especially the Galveston community, shared actively in the labors of alleviating the grief and distress of the sick and wounded soldiers. This community was instituted by five Ursulines and three novices, who came from New Orleans in 1847 and laid the foundation in Galveston of the first community of religious established in Texas.

On September 10, 1861, the new wing of the Ursuline convent at Galveston, which was then nearing completion, was offered to the authorities for hospital purposes, and several Ursulines volunteered their services as nurses. They served during the years 1861 and 1862; but their principal ministrations were performed after the siege of Galveston, which occurred on January 1, 1863. Tenderly they cared for the sick and wounded who were brought in from the scenes of destruction wrought by the continuous shelling of the town. In appreciation of the charitable and merciful services rendered by Mother St. Pierre and her loyal band of Ursuline Sisters, her grave in the little convent cemetery in Galveston is annually decorated by the surviving veterans of both the Blue and the Gray.

The Ursuline Nuns of Galveston who bore their part in the service were:

Mother St. Pierre (Margaret Harrington).
 Sister St. Ursula (Madeline Prenard).
 Sister M. Anastasia (Marie Corinne Goux).
 Sister Mary Ambrose (Elizabeth Bennett).
 Sister St. Mary (Josephine Nolte).
 Sister St. Anne (Mary Stohl).

The records of the war do not register a single instance of failure or shirking on the part of the sisterhoods, and it must have been an edifying sight indeed to see these pious and unassuming women, whose souls were enriched with the jewels of heavenly sanctity, as they went from battle field to hospital to apply their tranquil ministrations. No page in all our history can present any nobler deeds of courage and devotion. Easily and without emotion they turned from school and asylum to take up the war duties, and, no matter how appalling were the sights that came before them, they labored with a unity and harmony under the most trying and difficult circumstances.

Many a time has the memory of these war sisters evoked sympathetic expressions of esteem and affection from the wearers of the Blue and the Gray who were the objects of their impartial devotion during the trying days of the war. Lapse of years has depleted the ranks of the veterans on both sides, and only a handful of these sisters still survive the hundreds of dark-

robed companions who have long since responded to the summons to their rewards beyond the grave.

No more shall the war cry sever,
 Or the winding rivers be red;
 They banish our anger forever
 When they laurel the graves of our dead—
 Under the sod and the dew,
 Waiting the judgment day—
 Under the one, the Blue;
 Under the other, the Gray.

Too long have we delayed in paying an official tribute of praise and gratitude to the various sisterhoods whose heroic self-sacrifices and benevolent ministrations rescued thousands of soldiers from the grasp of wasting disease and whose constant piety and devotion moved many a convalescing patient, as well as an expiring patriot whom the curtain of death was surrounding, to utter a humble prayer.

More things are wrought by prayer
 Than this world dreams of. Wherefore let thy voice
 Rise like a fountain for me right and day.
 For what are men better than sheep or goats
 That nourish a blind life within the brain,
 If, knowing God, they lift not hands of prayer
 Both for themselves and those who call them friend?
 For so is the whole round world in every way
 Bound by gold chains about the feet of God.

Such disinterested benevolence as these faithful sentinels exhibited during the anxious days of our civil strife deserves far higher acknowledgment than the mere modicum which is sought in the pending resolution.

All that Congress is asked to do is to pass this resolution which authorizes the erection of a memorial. The Ladies' Auxiliary of the Ancient Order of Hibernians in America, in manifestation of a patriotic devotion to the country and all its cherished traditions, will furnish the funds to build a monument which shall ever remain among the treasures of the country in honor of the services of the numerous sisters whose names appear in the foregoing recital and the hundreds of others whose precious deeds are well remembered but whose honored names, alas, with the advancing years have been forgotten.

Mr. Speaker, the preceding rehearsal of events presents the names of nearly four hundred war sisters, and I would it were possible to give the names of all that splendid assemblage of patriotic and devoted women whose ministrations among the soldiers shed glory and light unfading upon the many thrilling occurrences of the Civil War. The greatest pains have been taken to secure a complete list, but, unhappily, without avail. Though incomplete, the roll of names inserted in this narrative is, I believe, the most complete register of the war-nursing sisters that has ever been presented in any single document on this subject. In assembling the names of these sisters who served their God and country in that momentous war I am deeply sensible of the gracious and unremitting assistance given me by Mrs. Ellen Ryan Jolly, an able and distinguished resident of the district I have the honor to represent in this House. For this, sir, I gratefully acknowledge my obligations to this patriotic woman. She has been the head and front of the movement to erect the memorial contemplated in the pending resolution. A careful student of the labors of the sisters for nearly half a century, she has gleaned information on this subject from every nook and corner in the country, pursuing her work with great patience and earnestness, ever looking forward to the day when her fondest hope would be realized—the erection of a fitting memorial in the city of Washington in memory of the "Nuns of the Battlefield."

Abraham Lincoln.

EXTENSION OF REMARKS

OF

HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 1, 1918.

Mr. FESS. Mr. Speaker, under leave to extend my remarks in the RECORD I insert the following:

Speech by Hon. L. W. FAIRFIELD before the National Ministers' Alliance of America, and the Cosmopolitan Baptist Institutional Church on February 12, 1918.

Mr. Chairman, we are here to-night in honor of the life and services of Abraham Lincoln. We are met in a building dedicated to the solution of a problem his services bequeathed to the race whom he was privileged to set free. This institutional church deserves the hearty support of the colored people

of this city and the kindly aid of the white people. The solution of your social, intellectual, and religious problems is largely your own. Self-help will make you independent and strong. I take it that the purpose of this institution is to cultivate in the individual himself that which will make him a self-respecting and useful citizen.

A race is ultimately no more worthy than its average man or woman. To lift the individual to a moral, economic, social, and intellectual plane is the supreme aim in the progress of a race. The beginning may be from forces without the race, but only self-urgency from within the race itself, intensified by the earnest appeal of its leadership, will ever reach the goal. All that can be done for you has been done. You have your chance to compel our respect by the wisdom with which you order your lives. Here and now in the city of Washington, through school and church, you are ever on trial, for here, as nowhere else, you have every right under the law.

I trust that in the wise and generous support you may give to institutions that are worthy among you you will show to the world that you have caught the vision of an end to be attained and that you will permit no difficulties to keep you from attaining that end.

The life of Abraham Lincoln means much to you. As the years go by his life is widening in its influence, for we are coming to know that what he did for you as a race is only part of that great work which he did for all humankind. The elements of human history are circumstances, principles, and personalities. To measure the personality one is required to survey the circumstances and make an inventory of the principles.

The attitude of foreign countries not only toward the issues between the North and the South but their attitude toward free government itself enables us to understand the difficulties under which Mr. Lincoln labored.

In 1857 Lord Macaulay wrote to a friend in America: "Your Constitution is all sail and no anchor. Either some Cæsar or Napoleon will seize the reins of government with a strong hand or your Republic will be fearfully plundered and laid waste by the barbarians of the twentieth century as the Roman Empire was in the fifth, with this difference, that the Huns and Vandals will have been engendered within your own country by your own institutions." He further states: "I have long been convinced that institutions purely democratic will sooner or later destroy liberty or civilization, or both." Thus the foremost historian and statesman of England characterizes our experiment in government as doomed to failure. This judgment was held, no doubt, by the ruling class of England and the continental countries of Europe.

The revolution of 1848 had passed over France and had left "a despotism, a silent tribune, and an enslaved press. Liberty was gone, but civilization was saved." The world did not hope for the triumph of democracy.

The verdict was in, so far as the judgment of those who ruled in Europe was concerned. They believed and taught that a free State had inherent weaknesses that will be its undoing. The world of diplomacy was against us in its inner thought. Majority rule, as guaranteed by our Constitution, was looked upon by every country of Europe as a dream of the well-meaning visionary, but as a certain cause of ultimate ruin when the time of testing should come.

I need not tell you here to-night of domestic conditions in this country on the 4th of March, 1861. The fleet scattered, the arsenals looted, the Treasury bankrupt, the people of the North divided, coercion denounced, the right under the Constitution to preserve the Union denied, peace conventions everywhere. Bitterly assailed by a partisan press, his life threatened, ridiculed, and caricatured, it was Lincoln's task to show that our Constitution was an anchor. That anchor is the power the Constitution has conferred upon the Federal Government. The great war governor of Indiana expressed it in these words: "The Constitution and laws of the United States operate directly upon the individual and not upon the State, and as if there were not States." That was the issue upon which Oliver P. Morton was elected governor of the State of Indiana. A great political party denied that statement. It is the anchor of our liberties and the safeguard of civilization on this continent.

Our fleet at hand, our arsenals with all the munitions in them, the Treasury full and running over into the laps of our allies, our people united, the prosecution of the war urged by all, no constitutional right of the Government to reach out and lay its hands on the men of every State is raised, no peace conventions in any State, no partisan press assailing President Wilson, a large part of the world allied with us and dependent upon us, the press of the world praising and not cursing, all the parties united to help and not to hinder. If the problems of President

Wilson are stupendous with a united people behind him, with three-fourths of the world in alliance with him, and with an almost inexhaustible supply of men and money available, what must have been the magnitude of the task set before President Lincoln?

Great men defy analysis. There is an indefinable element that eludes us. Yet a study of the environment assists in placing an estimate upon the degree in which we are willing to assign the element of greatness.

The formative years of Mr. Lincoln were spent in Indiana. It was my privilege a few years ago to visit Lincoln City. Here Thomas Lincoln brought a child of 3 years to live in a log cabin with one side open. He was so poor that it was many years before he was able to secure a deed for 40 acres at \$1.25 per acre. One day in early spring a boy of 10, barefooted and in homespun, with broken heart, followed his mother, in a rude box, down the hill, through the little valley, and up the knoll to the grave, where she was hidden forever from his sight. Little promise here of greatness. The stubborn hills yielded scant return, yet he lived in that log cabin and toiled over those hills until he was 21.

It is related that when the family moved to Illinois Lincoln walked and drove the cattle. The first night they broke away, and it was Lincoln's task to return on foot and bring them back.

Time forbids that I should detail his life. He fought in the Black Hawk War. He waded the streams, pushed his way through the tangled forests, and slept at night under the stars, safe hidden in the heart of a continent that no veneer of the schools should weaken him until his time had come. Flatboatman, surveyor, storekeeper, bankrupt. As flatboatman he saw human beings sold as chattels, and turning to his companion he said, "Let us get out. By God, if I ever have a chance to hit that thing, I'll hit it hard."

As surveyor he was appointed by a Democrat, but would not accept the position until he was assured that he might act in accordance with his own political convictions. He failed as a storekeeper. He became a bankrupt. He paid not only his own part of the debt but that of his partner as well. Said he, "My name is on the note." He was honest, so honest that they called him Honest Abe. Tall, homely, big of limb, and strong, he compelled the admiration of those frontiersmen. Had he not possessed unusual strength it is not certain that he would have been able to make himself their intellectual leader. His feats of strength gave him audience and his intellect challenged admiration.

No analysis is adequate. He is elemental—a part of the infinite.

Others may emulate him; none are his equal. The qualities of his mind and heart are strangely blended. He had the vision of the coldly intellectual and the brooding tenderness of the poet. He came forth from the womb of the common people, and though he knew himself to be the peer of those who assumed to be the leaders and statesmen, yet he never forgot his source of authority nor allowed himself to get out of touch with the farm and field, or the factory and the shop.

He did this by personal contact. Two days of every week were set aside for meeting anyone who might want audience with him. Many things of little moment were brought to his attention, while at times matters of far-reaching consequence were called to his mind.

The specific things brought to him by no means measures these meetings. There came to him the Nation in epitome—the light, the frivolous, the foolish, the dreamer, the enthusiast, the serious, the wise, the place-hunter, the patriot, the burdened, the sorrowing, the hopeless, the hopeful, the critic, the friend of the critic, the friend, the foe. He saw in that current of unofficial life the gulf current of the Nation's life. Sometimes that current beat against him, and it was his to turn the current into channels of hope and duty. He knew that there was always a counter current, with a mighty undertow, that broke against the end he ever had in view—the preservation of the Union. That opposition, open before, was intensified when he issued the emancipation proclamation. So pronounced had it become that in May of 1864 a great political party declared the war a failure, not the conduct of the war, but the war, the end for which it was being fought, and demanded that a peace be concluded. Lincoln stood firm through it all.

He knew the heart of the common folks. They trusted him. He had never betrayed them. He had spoken clearly on the issues. No soft words on slavery or the preservation of the Union. The people of this country have never thought that Abraham Lincoln ever betrayed them by word or deed, not even by his silence when he should have spoken.

Through it all he was conscious of the home folks in the humble home while he lived among those in official life who

so easily forget that they are but servants. It was this ever-abiding sense of the misery and suffering of others that led him to pen the immortal summary of the mighty conflict in a single sentence, "If it shall please God that this conflict must go on until every drop of blood drawn by the lash through 250 years of unrequited toil shall be paid by another drawn by the sword, who shall say that his judgments are not just and righteous altogether?"

It is a hundred and nine years since he was born in a log cabin in Kentucky. He died 53 years ago. The fierce anger and hate of those years of strife, thank God, are over; but its lessons remain. Another crisis is on us, and not upon us alone. This is the crisis of crises, of all human history.

Lincoln demonstrated that the Constitution is not all-sail, but that it has an anchor that will hold.

Every act of Congress that places in the hands of our Government men and means to effectively conduct this world war has been made possible by the labor of Abraham Lincoln and those who, with him, were loyal to the Constitution. We washed out the stain of human slavery in the blood of martyred heroes, both North and South. We found that the anchor of our liberties would hold even when we were divided. Now no State needs coercing. The draft is looked upon as a sacred duty. The successful conduct of the war on our part is acclaimed as our just share in this struggle to preserve the freedom of the seas and to defend our own most sacred rights.

Ten million men called; ten million more to call if need be. We can, with the help of our allies, insure that the world be made safe for democracy.

There is another task of equal magnitude. That task is to see to it that democracy shall be made safe for the world. A moral, intelligent, law-abiding citizenship is our only hope.

Gouverneur Morris was sent to France by President Washington during the French Revolution as his personal representative. He wrote, "The French people can not form a republic that will stand. They are not moral enough. Their public men do not trust each other, and with good reason. They boast of having misled, combined, and deceived to attain their ends." His judgment was correct. "The suppressed passions of a century burst forth in the French Revolution." Drunken with their new freedom, they ruthlessly struck at the basic rights upon which alone any orderly government can rest—the rights of life and property. Another Caesar was at hand and, in the person of Napoleon, led the French soldiers upon every battle field of Europe and at the same time took the reins of government into his own hands, while liberty died. The fitful revolution of 1848 swept over Europe and echoed in France the dream of 50 years before, but a king still ruled and liberty had no resurrection.

It was not till the Germans in 1871 had humiliated France in the dust and exacted indemnity, both in territory and money, that the French Republic of to-day was born. That first upheaval had shaken and appalled the world nearly a hundred years before the child, the modern Republic of France, came into being. This child of the revolution, conceived in 1789, was not born till 1871. Happily it was given 40 years in which to grow strong before the testing time should come. The Battle of the Marne and three years of mighty and successful resistance of the German Army is the final answer to those who ask, "Can a representative democracy be efficient?" But it is nearly a hundred and fifty years since the French Republic had its beginning.

Russia, big, awkward, awakened, in earnest, groping toward the light, will yet find it, when sobered and appalled by the crimes that have been committed in the name of liberty. You of the colored race are to have a part in this great war for the freedom of the world.

How long will the war last? Nobody knows. This is the tragedy of all history, the most critical period through which the human race has ever passed. No inglorious or premature peace must be concluded. The principles involved are irreconcilable. This is an irrepressible conflict between autocracy and democracy. There will be other calls for sale of bonds. There will be other drafts of men. There will be other campaigns for the Red Cross and Young Men's Christian Association. There will be sorrow and suffering. The wounded will be coming back; the dead will be numbered in our own households; but under God human liberty will not perish. Human courage is a universal quality. France, bled white, will still fight on. Belgium, with its towns destroyed, its works of art ruined, its people enslaved and outraged, still lives, for you can not shoot to death the spirit of the Belgian people. And we are coming, a hundred million strong, to lay our property, our wealth, our hopes, our desires, our lives on the altar of human liberty; and out of it all shall come a reconstructed, a transfigured, and glorified American citizenship.

Daylight Saving.

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 15, 1918.

Mr. HAYDEN. Mr. Speaker, some time ago I received a letter from Mr. Jay D. Stannard, of Phoenix, Ariz., in which he suggests that the boundaries of the time zones in the United States be changed in such a manner as to benefit the entire country. Since the daylight-saving act will undoubtedly become a law in the near future, I thought it proper that his letter be printed in the CONGRESSIONAL RECORD for the information of the House and in order that those charged with the administration of the law might have the benefit of the study that Mr. Stannard has made of this question. The letter is as follows:

PHOENIX, ARIZ., July 6, 1917.

HON. CARL HAYDEN,
Washington, D. C.

DEAR MR. HAYDEN: Your favor of June 27 inclosing copies of daylight-saving bill has been received, and I wish to thank you for this favor. I have gone carefully over the matter sent and with your permission I desire to present some facts and conclusions that I think would be important to consider before the passage of this law.

As shown in the hearings before the subcommittee of the Committee on Interstate Commerce, United States Senate, the railroads of the country established our present "standard-time system" in 1883, without regard to any other interest. This system was a great advance over the lack of system that prevailed prior to that time. It has been, and still is, very satisfactory from the railroad point of view. But other interests are learning that it is not so satisfactory for the general mass of the people.

As you know, under the present system the meridian upon which the time for each zone is based is located in the center of the zone. Clocks on the meridian keep mean sun time, those to the east of the meridian are slow, and those to the west are fast. Theoretically the maximum limit is 30 minutes either slow or fast. The slow time has proved very unsatisfactory, and cities in the eastern parts of the eastern and central time zones have been agitating the question of advancing the clocks of the country one hour to give them one hour more of daylight.

The plan proposed is borrowed from Europe, the reports from which seem to indicate that the plan is very satisfactory. Some of the countries from which reports come are very small. The time required for the sun to pass over the entire country is less than an hour. In our own country about four hours are required for the passage of the sun. Due to these conditions it is possible that objectionable features might develop in our own country, in attempting to apply this scheme, that would not appear in the European countries.

The plan seems very simple—just advance the clocks one hour at the beginning of summer and retard them one hour at the end of summer. There seems to be a very serious objection on the part of the railroads of the country to making these two changes each year. (See statement of Mr. D. C. Stewart, pp. 35 to 42 of the hearings.)

It will be observed that the active support for this change comes from cities of the East located in the eastern parts of the eastern and central time zones—Chicago, Detroit, Cleveland, New York, and Boston. (See the report of committee on daylight saving, Chamber of Commerce of the United States.) Other cities are represented in the hearings. Under the present system some clocks are 30 minutes slow, others are 30 minutes fast. Those who have the 30 minutes slow time would like to change to 30 minutes fast time. Those who have 30 minutes fast time seem to be satisfied with present conditions.

Let me direct your attention especially to the experiences of Detroit and Cleveland. Standard time in these two cities is about 30 minutes slower than mean sun time. By setting their clocks one hour ahead they will then be about 30 minutes faster than mean sun time. The evidence shows that they each have tried the experiment of advancing their clocks one hour, and each reports that conditions are much more satisfactory than before such advance. Phoenix, as well as Detroit and Cleveland, has found 30 minutes fast very satisfactory. Present standard time at Phoenix is about 30 minutes fast. I have used our home town as an illustration because we are more familiar with conditions here. Should the present bill pass Congress the problem of adjusting living conditions to a schedule 1 hour and 30 minutes faster than the sun will be put up to not only to the people of this community but to all others similarly located in the western parts of all the present time zones. Numerous statements have been made showing the advantages of having clocks 30 minutes fast, but I have seen no statements showing the benefits to be derived from having clocks three times 30 minutes fast.

There is, however, a plan that some of us here are advocating that we think will cure the defects of the present standard time system without introducing any of the objectionable features of the plan proposed by the present bills before Congress. By this plan the time zones would be changed. The meridians now in use would be retained, and their present use would be retained; in addition, these meridians would form the boundaries of the new time zones. For example, the eastern zone would lie entirely to the east of the seventy-fifth meridian and its clocks would all be set on the sixtieth-meridian time. This is the same result reached by the present bill. Boston, New York, Providence, and all this area are at present keeping the time of the seventy-fifth meridian. Under the bills now pending they would advance their clocks one hour. Under the plan that I am proposing their clocks would be set on the time of the sixtieth meridian, which is one hour ahead of the time of the seventy-fifth meridian.

The seventy-fifth meridian would form the eastern boundary of the next zone to the west. The ninetieth meridian would form the western boundary. All the clocks in this zone would be set on seventy-fifth meridian time. Chicago, Detroit, Cleveland, and other cities similarly situated, now keeping ninetieth-meridian time, would advance their clocks one hour under the pending bill; under the plan here proposed

their clocks would be set on seventy-fifth-meridian time, which is one hour ahead of their present standard time. And so on through the rest of the time zones. Those people who find the present standard time somewhat inconvenient at times would be relieved of that inconvenience, and those who are satisfied with the present system would not be disturbed.

The proposed change in the boundaries of the time zones here proposed is no more radical, and will cause no greater trouble and anxiety to the railroads of the country than did the change to the present system in 1883.

Under the present system half the clocks are slow and half are fast, varying in each case from zero to 30 minutes. Under the plan proposed by the pending bill, in summer, all the clocks will be fast, varying from 30 minutes to 1 hour and 30 minutes. In winter half of the clocks will be slow and half will be fast, as at present, and varying from zero to 30 minutes. Two changes in time are made necessary each year by the bill, advancing at the beginning of summer and retarding at the end of summer. Under the plan here proposed, a permanent change in the boundaries of the time zones will be made. By this change, the clocks that are now slow will be advanced one hour. There will be no change in the clocks that are now fast. This will result in making all clocks fast, varying from zero to one hour. The change is designed to be a permanent one so that after its installation it will not again be disturbed. A plan bearing promises to effect a permanent cure of the defects of the present standard time system is worthy of serious and thoughtful consideration.

This plan was first proposed to the writer by Mr. Harry Welch, secretary of the Phoenix Chamber of Commerce.

Trusting that you may see your way clear to bring this matter before the proper committees for favorable consideration, I am,
Very truly yours,

JAY D. STANNARD.

Memorial to "Sisters of the Battle Field."

EXTENSION OF REMARKS OF HON. AUGUSTINE LONERGAN, OF CONNECTICUT, IN THE HOUSE OF REPRESENTATIVES, Monday, March 18, 1918,

On the joint resolution (H. J. Res. 154) authorizing the erection of a memorial in Washington to the memory and in honor of the members of various orders of sisters who gave their services as nurses on battle fields, in hospitals, and on floating hospitals during the Civil War.

Mr. LONERGAN. Mr. Speaker, the members of the Ladies' Auxiliary, Ancient Order of Hibernians in America, in asking permission to erect in Washington a memorial in honor of the members of the various orders of sisters who gave their services as nurses in the Civil War do honor to themselves.

The action of the ladies of the organization is as deserving as the services of the noble sisters are praiseworthy.

To attempt to review in full the wonderful works of mercy of the sisters who gave their all to alleviate the sufferings of the men who fought heroically for the preservation of the Union or gallantly for the lost cause would be presumption indeed. For after all the stories were read, all the noble sacrifices recited, there would still be left untold innumerable acts of kindness to men in their last hours, secrets to-day of the grave or of the unwritten traditions of the cloister. These women of the sisterhoods asked only to serve. Her life each had laid at the disposal of her God. Poverty, chastity, obedience were their rule of conduct; but, wedded to poverty, they were rich in the esteem of the soldiers and sailors of their day; chaste, their lives were ever bringing forth as fruits deeds of valor as great as any martial hero's; obedient, they seemed but to command and disease and pain, aye, even death, were gone.

With their individual courage they brought on the battle field the advantage of organization.

The principal orders that sent their members into the Civil War were the Sisters of St. Joseph, the Sisters of Charity, the Sisters of Mercy, the Sisters of the Holy Cross, and the Ursuline Nuns. Of the order of the Sisters of Charity there were the "black caps," or Mother Seton Sisters; the "white caps," or Cornette Sisters; and the Sisters of Charity of Nazareth, Ky. To all the soldiers and sailors, however, they were the "Sisters of Charity," and as such remembered by the veterans in later life.

From the mother house at Emmitsburg, Md., went out nurses whose work was conspicuous at Manassas, Big Bethel, Harpers Ferry, Antietam, and in the Virginia campaigns. After the occupation of New Orleans, Gen. Benjamin F. Butler took occasion to pay a tribute to the sisters in a letter to Sister St. Maria, who had written him from Donaldsonville, in complaint against the destruction of property of sisters in that town by the guns of Farragut's fleet:

No one can appreciate more fully than myself the holy, self-sacrificing labors of the Sisters of Charity—

He wrote.

To them old soldiers are daily indebted for the kindest of offices. Sisters to all mankind, they know no nation, no kindred, neither war nor peace. Their all-pervading charity is like the boundless love of "Him who died for all," whose servants they are, and whose pure teachings their love illustrates.

This praise from the noted Union leader but typifies the esteem in which those noble women were held by officers of both sides during the war.

It even seems that by some great plan the decisive battle of the war—Gettysburg—was fought almost within sight of the mother house at Emmitsburg. The thundering of the guns could be heard at the house; and as the battle progressed the sisters only too willingly cared for the wounded thus brought to their very doors. And even the injured transferred to Philadelphia found waiting to assuage their sufferings a sainted member of the order, who was in charge.

The same zeal that characterized the work of the main body of the Sisters of Charity was evidenced in the service of the Sisters of Charity of Nazareth, Ky., in the Kentucky campaigns; and this branch, as others, contributed its fair, innocent martyrs to their work.

The Sisters of Mount St. Vincent readily volunteered from the mother house in Cincinnati, going to Camp Dennison, and later aiding throughout all Kentucky.

The Sisters of Mercy, answering the call, worked wonders in the Carolinas and wherever their duties brought them. Part of their time was spent in Washington at the Stanton Hospital. President Lincoln, after a visit to the latter institution, hastened to pay a frank tribute to the disinterestedness of their efforts. It is interesting to note in this connection that the President of the Confederacy also praised the same order. To these women there was no South, no North. To them there was only suffering mankind to be relieved.

The Sisters of St. Joseph inaugurated their work at the invitation of the surgeon general of the State of Pennsylvania and continued it throughout the conflict, leaving their record as another glowing page in the story of the times.

The Sisters of the Holy Cross were early on the field, and Gen. Grant himself complimented their superior, Mother Angela. In fact, even the official records contain allusions to their activities, for on June 20, 1862, Flag Officer Charles H. Davis reported to the Hon. Gideon Wells, Secretary of the Navy, from his ship *Benton* at Memphis, that "Sister Angela, the superior of the Sisters of the Holy Cross, has kindly offered the services of the sisters for the hospital boat of this squadron when needed."

Efforts have been made, Mr. Speaker, noticeably by Mr. George Barton in his *Angels of the Battle Field*, and by editors of Catholic papers and collaborators of Catholic encyclopedias, to compile information on the inspiring sacrifices of these women of mercy. But the complete story will never be written, for it is locked in the hearts of men who long ago paid the "last full measure of devotion" to their native land.

Since the day when a divided Nation became one and a gallant conqueror returned to a worthy foe his sword, there have been erected works of art as memorials to the leaders of each side. But no work of art, no monument, no shaft, no bronze will serve more fittingly to help us forget those days of strife than a memorial to the sisters who knew no North, no South.

Permission should be given at once to the women of the ladies' auxiliary to erect this memorial, and, erected, the Nation will learn from its story a lesson of sacrifice, of obedience, of devotion.

Manning Merchant Ships With Naval Crews.

EXTENSION OF REMARKS OF HON. FREDERICK C. HICKS, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, Wednesday, March 20, 1918.

Mr. HICKS. Mr. Speaker, in order that both sides of the question of manning merchant ships with naval crews could present their views, the Navy investigating committee held hearings which were attended by representatives of the Shipping Board and Seamen's Union. As this testimony was from a different angle than that previously given, I feel it only fair to quote extracts from it, for my sole purpose in calling attention to the matter is to improve, if possible, the present conditions, which I can not but feel are unsatisfactory.

Above every consideration is the safety and welfare of our soldiers at the front. The whole force of the Government should be directed to the single purpose of winning this war quickly and with the least sacrifice of life. Nothing should be left undone to safeguard the lives of our boys wherever they may be, and nothing should be omitted that will insure the certainty of their being supplied with food and munitions. Naval crews on ships engaged in this transportation will, in my judgment, accomplish these purposes with a greater degree of success than civilian crews.

In order to correct any misunderstanding in regard to the complement of naval crews on ships operated by the Navy I submit the following figures furnished by the department, showing the number of men carried on the different ships:

<i>Gargoyle</i>	96
<i>Oriente</i>	146
<i>Occidente</i> (special service).....	236
<i>Lake Placid</i>	54
<i>Lake Shore</i>	54
<i>Lake Tahoe</i>	72
<i>Proteus</i>	161

This includes gun crews, lookouts, radio operators, and a complete complement to man the ships operating in the war zone.

El Rio and *El Dia* (now the *Housatonic* and *Roanoke*)..... 350

These two vessels are naval ships engaged in laying mines and can not be compared with merchant ships, as the duty is entirely different. They carry a large number of men for handling mine-laying gear and equipment.

[Extracts from testimony given on February 14 by Mr. Andrew Furuseth, of the Seamen's Union; Mr. Donald and Mr. Page, of the Shipping Board; and Mr. Howard, of the Shipping Board's Training Service.]

Mr. OLIVER. Gentlemen of the committee, I should like to say that on Monday last Mr. Furuseth, the president of the International Seamen's Union of America, came to my office and requested that he be given an opportunity of presenting some facts to the committee in connection with a speech made by our colleague, Mr. Hicks, on the floor of the House, on the question of supplying naval crews for vessels carrying troops and supplies to the Army abroad. Mr. Hicks, in support of his position, quoted from information submitted to this committee, at its request, on this subject. I presume that Mr. Furuseth desires to now submit some facts touching that phase of our inquiry, which relates to the divided responsibility on the naval gunners and civilian crews on ships traversing the danger zone.

We shall be pleased to hear from you now, Mr. Furuseth.

Mr. FURUSETH. We believe that the proposal to man merchant vessels now sailing or to sail as transports or otherwise with naval men is ill advised and ought not to be done, and we have the following reasons for that: First, it would be a waste of man power. Experience proves that three times as many men are required to man a merchant ship when operated by naval men than when operated by merchant seamen. This is the record of ships taken over and operated by the Navy in this war.

Mr. OLIVER. Please give in that connection the ships which you have in mind.

Mr. FURUSETH. That is what I was going to do.

The *Gargoyle*, a tank steamer, when running to make money for its owner, carried 35 men. Now she carries 135 men. That is, including the gun crew.

Mr. OLIVER. You have not included in your statement the gun crew, which, of course, would have to be added to the complement.

Mr. FURUSETH. I said "including the gun crew."

Mr. BRITTEN. How many in the gun crew?

Mr. OLIVER. Twenty-six ordinarily, and sometimes they carry men for training, and it may run to 35; usually from 26 to 29.

Mr. HICKS. To get the proper proportion you would have to add the gun crew.

Mr. FURUSETH. Three to one, two to one, as stated.

Mr. HICKS. You would have to add the gun crew to your figures?

Mr. FURUSETH. The crew was 35.

Mr. FURUSETH. The *El Rio* and *El Dia*, running for the Morgan Line from New York to Galveston running in that trade, carried 64 men each. They are now manned by the Navy and carry a crew of 301 in all, including the gun crew, which is more than 3 to 1.

Mr. OLIVER. In that connection, I am informed those ships are used for an entirely different purpose now from what they were when you were manning them. They are mine ships, and it is of the utmost importance, so I learn, that they have a considerable crew to properly handle the mines. The members of the committee know something of this work from having seen it demonstrated.

Mr. FURUSETH. I want to say this, that the expression "when you man them" is not correct. We never man them.

The collier *Proteus* carried 110 civilians, and she now carries 200.

Mr. OLIVER. She is now carrying 164. They have installed on each of these colliers four pretty good-sized guns, and the gun crews, instead of being from 26 to 30, will probably number about 50.

Mr. HICKS. That would make the civilian crew about 160 and the naval crew about 164.

Mr. OLIVER. Mr. Furuseth came to my office and called my attention to this matter. I had read a written statement which Mr. Furuseth had sent to the Secretary of the Navy on this subject, and calling attention to these same facts, and I found from the Navy Department that he was incorrectly informed as to the complements on these ships. I knew that some one had furnished him the information on which he based the statement to the Secretary of the Navy, and I am only endeavoring to write into the record correct information as to matters that I felt he had been misinformed about.

Mr. FURUSETH. The *Gargoyle* has 135 men, the *El Rio* has 301 men, and the *El Dia* has 301 men, but they are in different kinds of service and would necessarily have to have more men. That is the explanation.

I make this as a plain statement, and I will challenge the Navy Department or anyone else to deny it, that the number is two to one and generally three to one; that is usually the complement that the Navy puts on as compared to the merchantmen. It is so generally understood. The sailors say that that is the situation. Why the Navy does that is something that I can not explain. The Navy may have 100 different reasons for it that I do not understand. I am simply stating the number of men that I have been informed they carry. As far as the *Jason* and the *Proteus* are concerned, they would not carry 110 men. The *Proteus* would not carry 110 men if she was running as a merchant vessel; her size and her machinery would probably require 65 or 70 men, but the war crew makes an addition. That is the situation. What I am trying to show here is that the manning of the vessels with naval-reserve men is a waste of man power—that there are more men than needed. I think that can be sustained under all the circumstances.

Mr. OLIVER. It is not the issue of parties we want, but the facts, because in these instances that you have given you have been led into error by the information furnished; you have been led into error as to the complement now carried by the Navy, and they have overlooked calling your attention to the different purposes for which some of the ships are now used. Many of these ships, in addition to carrying a gun crew, when they are taken over by the Navy, carry men along for training purposes, and oftentimes as a part of complement a draft; that is, men transported across to be left there for military service. On one of the ships you have mentioned, the *Jason*, they carried upward of 40 for this reason. They are included in the ship's complement but are carried for military purposes, as I have shown, either for training or for service abroad.

Mr. HICKS. At the bottom of page 2 of the statement from which you read a part, you mentioned the fact that it is only possible to train seamen on water and not on shore?

Mr. FURUSETH. That is right.

Mr. HICKS. Of course, you believe that is a necessary thing to be done?

Mr. FURUSETH. Absolutely, sir.

Mr. HICKS. Of course, you know that the Navy is placing a great many men on ships for the purpose of training them. Therefore, does not that answer, in a large way, the argument you have made that they are carrying excessive crews—that is, the fact that they are training those men on those ships—because how else could they train them?

Mr. FURUSETH. I want to say this: That I suspect that where a crew was exceptionally large and where the gun crew was exceptionally large that they were there for the purpose of giving them sea legs. We suspected that, but we could not say that positively.

Mr. HICKS. So that answers, to a large extent, your objection?

Mr. FURUSETH. To some extent that is true, of course.

Mr. HICKS. You think a man who is able to handle a naval ship is not able to handle a merchant ship?

Mr. FURUSETH. There is a certain number of men on board of naval vessels who could do that, for instance, the navigating crew, but there is a whole lot of other men, whom you call naval men, who could not handle a ship at all. I have talked with them and examined them in seamanship and found that they did not know the compass; they could not steer, and they could not make some of the common splices.

Mr. HICKS. Do you not think that a fireman on a naval ship is just as able as a fireman on a merchant ship?

Mr. FURUSETH. No; not as a general proposition. All you have got to do is to have the Navy Department send you the instructions for educating those men and you will find there is as much difference as between night and day. I am not saying that the Navy has not the best men in the world in it. They are there for a specific purpose and in the Navy of the United States they have some of the best men the world can produce, and for the purposes that they are there they can not be beaten. They are all right and are well trained, there is no question about that; but they are not trained for the merchant-marine service, being trained for a different purpose.

Mr. HICKS. How many of the alien crews do you imagine have taken out first papers?

Mr. FURUSETH. I do not know how many, but I presume a good many lately, because they have been practically forced to.

Mr. HICKS. With the naturalized and native citizens what would be the total percentage of Americans sailing under the flag?

Mr. FURUSETH. Not over 25 per cent. They may have their first papers, taken out under pressure.

Mr. FURUSETH. Now, with reference to the Germans, I just want to say this: That in the month of July, the 21st of July, the Department of Commerce issued instructions to get rid of Germans on boats going to foreign neutral ports, and they were not permitted to be signed on after that; also to get rid of them in the coastwise trade as fast as possible, and after November they had to get rid of them completely in all kinds of trade, except on the Lakes, where they were permitted to sail for a while as a special privilege granted to the Lake Carriers' Association, because they asked for it.

Mr. HICKS. In your letter to Judge ALEXANDER, under date of July 26, you state, "There are about 5,000 Germans now sailing under the American flag."

You would supplement that or correct it by stating that in last November there were no Germans at all sailing under the American flag?

Mr. FURUSETH. Exactly.

Mr. OLIVER. That the members of the Shipping Board may understand how this question first arose, I will say that it was not brought to our attention by officers of the Navy. We had noticed many press reports stating that trained crews supplied by the Navy on merchant ships had been hindered in the performance of duties assigned them by reason of not having a trained organization on the ship. The inquiry we first made was to ascertain to what extent such reports were true. In the course of the inquiry it developed that the Navy felt if they were to be later called on by the Shipping Board to supply crews for ships in addition to those mentioned by Mr. Donald they should be notified as soon as possible. We were informed further, that it was not contemplated to seriously interfere, where it could be avoided, with the ship's personnel, and where it was shown that the existing personnel, including officers, were qualified, they would be taken over and given a naval status, the whole purpose being to expedite so far as they could with your board, Mr. Page, if you should have ask that the Navy man the ships.

[Mr. Donald and Mr. Page testifying.]

Mr. HICKS. You stated a moment ago that all ships carrying Army and Navy personnel and supplies should be manned by naval crews?

Mr. DONALD. Yes.

Mr. HICKS. Isn't that likewise true of ships carrying supplies for our allies?

Mr. DONALD. How is that?

Mr. HICKS. That they should be manned in the same way. Why shouldn't ships carrying their supplies be manned in the same way as ships carrying our supplies? It is all for war service.

Mr. DONALD. I am afraid perhaps you did not get me right.

Mr. HICKS. Perhaps not.

Mr. DONALD. To compromise this matter and in order to have the best of feeling and to coordinate matters, we agreed that these munition ships should have Naval Reserve crews on board. But I did not say that our crews, our commercialized crews, could not bring the ships over just as safely.

Mr. HICKS. Did not you make the statement that ships carrying our troops and supplies for our troops should be manned by naval crews?

Mr. DONALD. For the purpose of settling a dispute; yes.

Mr. HICKS. If that be good argument for our ships carrying our troops and supplies for those troops, why isn't it just as important to have it apply to ships carrying supplies for our allies?

Mr. DONALD. As I stated, we settled on this arrangement by way of compromise, not because we were sure munition ships could not go over just as safely with commercial crews, but because we said to them that they should have it that way.

Mr. HICKS. It is a matter of some compromise, but not as a matter of what is best for the troops or supplies for the troops?

Mr. DONALD. I stated that.

Mr. HOWARD. We believe that it would be better for the merchant marine to have them all.

Mr. PAGE. I fear I may interrupt at this point, but I would like to have the privilege of making a statement, as I possibly had more to do with the analysis of the matter than did Mr. Donald, and I think this is a good point at which to make the situation clear. We are considering trans-Atlantic ships that go into the war zone only. The board divided these ships into four classes, roughly: (1) Ships carrying our troops; (2) those vessels engaged as animal transports, munition ships, or supply ships operating in the service and under the direction of the Ordnance Department, or the Quartermaster Department, whichever military department it is in; (3) the passenger liners or mail ships, of which there are comparatively few under the American flag; and (4) commercial ships which do not come within the foregoing three classes and which necessarily are those engaged in carrying supplies to our allies, doing more or less a commercial business, or commercial in this sense, that the supplies are bought in this country by agents of these Governments, or commercial houses, and transported in a commercial way under bills of lading. They are not put in a ship and sent to the Quartermaster Department on the other side.

Now, troop ships it was agreed should be manned by naval men. There are two reasons for that, which I think are sufficient reasons without going into the question of safety. The first is a psychological reason. I think everybody in this country who has a brother or son going across—and I am speaking of people in the interior and who do not know the sea—would feel more at ease in the thought that the Navy is manning these ships. The Navy is known to them, and the mercantile marine is not; and particularly in view of the newspaper comments that have been discussed here of lack of discipline on the part of merchant crews, and without assuming that to be correct or incorrect, I think that view is an outstanding factor.

There is another reason that appealed to us. When you have a trooper with 2,000 or 3,000 soldiers aboard you have a military boat. If you man such a ship with a mercantile crew you have a nonmilitary crew, thus presenting opportunity for friction, for lack of cooperation and efficiency in the handling of that vessel. These were reasons that at least led me to that conclusion, without you going into the question of physical safety, because I thought these sufficient.

With regard to the other ships, there were two elements that entered into the question: Mr. Donald has touched on one. Force of public opinion was undoubtedly given by each of us, quite humanly, some weight. Then that these ships are direct links in the military branch of the Government. They are operating in a military way. At the same time they are being handled at the foreign port by military organizations. I am talking about ships that carry munitions and supplies that were sent to the Quartermaster Department on the other side. In other words, in an operation by military men, with a civilian element not under their control, I personally felt would possibly make trouble, and that it would result in smoother operation in that department to eliminate the civilian element when it came to manning the ships.

Skipping the passenger and mail ships, of which there are very few flying our flag, and coming down to vessels carrying cargoes for our allies, you have a different situation. You have ships that are assigned by the Shipping Board to commercial organizations to operate, and being handled by merchant crews, and carrying goods that are consigned on bills of lading to people on the other side who are merchants. They are carrying cargoes under ordinary bills of lading, and doing business in the ordinary commercial way.

Mr. OLIVER. Let me ask you right there: Would it be feasible to separate the operation proper from the other operations necessary in the handling of a ship?

Mr. PAGE. That has been suggested. The Navy has suggested that notwithstanding that condition of operation prevailed, the actual manning of ships might be undertaken by the Navy, and still be operated in this way.

Mr. HICKS. I think that is what the Navy wants to do.

[Mr. Howard testifying.]

Mr. OLIVER. After these men have qualified for sea duty, or you have assigned them to ships for sea duty, what assurance have you then that you can retain them in that service?

Mr. HOWARD. In the first place they have signed an enlistment for the duration of the war.

Mr. HICKS. What does that consist of. I heard you use that term a while ago, that they enlist for the duration of the war.

Mr. HOWARD. I will show you this agreement [handing printed agreement to Mr. HICKS].

Mr. HICKS. In what way do they agree to stay in the service.

Mr. HOWARD. I will read you an extract in a moment. Here is what they say. "To serve for the duration of the war on board such merchant vessel or vessels of the American merchant marine, and for such voyage or voyages in the capacity of ———— that is, whether seaman or fireman—or for such other position to which I may be promoted."

These men agree to do that work. Of course, if they do not do it the desertion would not be like the desertion from the Army or Navy.

Mr. HICKS. There is no penalty at all.

Mr. WILSON. You have no absolute assurance they will remain, but you estimate that a great many of them will?

Mr. HOWARD. A great many of them will, we feel, and if they do not they go back into the draft. That is the real club we have over them.

Mr. OLIVER. Is it your policy to maintain the same personnel on the ships from time to time that you originally assign them?

Mr. HOWARD. That is a point that we have not gone into. That really comes in connection with the department of operations, and we ought to have some conference on that, but we have not gotten quite so far as that.

Mr. OLIVER. Do you think it would very materially weaken the service if men who are assigned to a ship, when they have completed a voyage, are allowed to remain off for some length of time, and then later go back with an entirely different crew?

Mr. HOWARD. I do not think that is any serious drawback. That has been the custom in merchant marine from time immemorial, that a new crew was signed on and the old crew was signed off. I do not think there will be any hazard there.

Mr. OLIVER. I understood you this morning to say that you did not consider it of very great importance to maintain the integrity of the personnel on any ship; that is, that it did not affect its efficiency materially to change its personnel often.

Mr. HOWARD. I would not say that as regards the officers.

Mr. OLIVER. I am speaking—

Mr. HOWARD. You were speaking of the crew?

Mr. OLIVER. Of the crew, yes.

Mr. HOWARD. I would say that it has been the custom for an indefinite time in the past to do that in times of peace, and I understand that it is now done in Great Britain and has always been done there, and it has not seemed to be a serious matter at all. There is so little difference between these vessels that it takes a very short time to get accustomed to the new conditions.

I have talked recently with a well-known naval captain regarding his experiences in convoying, and he stated that the captains and crews showed great skill in handling their vessels and in maintaining proper distances, etc. His principal criticism was that it was difficult to enforce regulations regarding the showing of lights; that was really the most serious objection which he had to bring up.

The question of drunkenness he did not bring up as a serious factor.

Mr. HICKS. Was not the matter of keeping courses also a point?

Mr. HOWARD. He did not mention that. He said they handled their vessels very well. This particular captain, I think, handled his convoy remarkably well. He called all of the captains of the convoy on board his ship for a conference before the trip began, and explained to them exactly what their duties would be and what they were supposed to do and what the authority was, and laid the cards right on the table—did not leave anything indefinite.

Mr. OLIVER. The information that our committee had was that many of the civilian officers had rendered very satisfactory service indeed, and Admiral Palmer praised very highly many of them; and the admiral also paid high tribute to some of the civilian crews. There were a number of complaints, however, not only of failure to observe the precautions with reference to showing lights, but also as to following the courses and failing to zigzag the ship in her course, and friction would arise sometimes between the naval and civilian crews. Then there were numerous specific instances given where efficiency had been seriously affected by drunkenness; I suppose I have here 60 or more complaints.

ADDENDUM.

AMERICAN MERCHANT MARINE.

MARCH 12, 1918.

SUBMARINE SINKINGS.

The following interesting figures were given by Sir Eric Geddes in a speech delivered in the House of Commons March 20. The First Lord of the Admiralty said that the world's tonnage, exclusive of enemy ships, had decreased 2,500,000 tons from July 1, 1914, to January 1, 1918. These figures include ordinary marine losses as well as losses due to enemy operations, and it must be borne in mind that they are net figures. During the period many new ships were constructed, and there were over 1,000,000 tons of German shipping taken over by the allies. The present total allied and neutral tonnage was given at 42,000,000 tons, exclusive of lake vessels and a large number of small craft. It was stated that the amount of tonnage sunk during the year 1917 was 6,000,000 tons, instead of 9,500,000 tons as claimed by Germany. These figures include vessels damaged and ultimately abandoned.

The merchant tonnage produced in British yards in the fourth quarter of 1914 was given as 420,000, since which time, until a few months ago, the decline had been continuous, reaching its low ebb in 1916. In the last quarter of 1915 the output was only 42,000 tons, but in the last quarter of 1917 it had risen to 420,000 tons. The conscription by yards other than British was given at 512,000 tons for the last quarter of 1917 and 932,000 for the year.

Various estimates have been published for the 1918 construction. It is expected that British yards will launch 2,000,000 tons and American yards between 3,500,000 and 4,000,000 tons.

Daylight-Saving Bill.

EXTENSION OF REMARKS

HON. ROBERT Y. THOMAS, JR.,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 18, 1918.

Mr. THOMAS. Mr. Speaker, the pending bill proposes to change the standard time now in use and adopt a different standard, which the proponents of this measure confidently claim will add an hour of daylight more every 24 hours that the earth revolves on its axis. To hear these wise solons argue, it seems they believe they can change the laws of nature and turn darkness into light and regulate the matters of this mundane sphere by a simple twist of the legislative wrist.

I do not believe these modern Joshuas can make the sun stand still or rise one minute earlier or set one minute later, or cause the moon or the planets to stay in their courses by any legislative legerdemain or so-called daylight-saving device, even as an alleged war measure.

The prophet Joshua is the only person in recorded history who claims to have accomplished that miracle, and he did it as a war measure when killing the Amorites, if we are to credit his claims and that of other prophets, as well as the historian Josephus. Our modern Joshuas will fail, because they are not inspired with the gift of divination or prophecy. How long the sun stood still or the moon was stayed in its course in the time of the olden Joshua no man can tell. He declares that at his command the sun stood still upon Gibeon and the moon in the valley of Ajalon, and that the sun "hasted not to go down about a whole day," until the people had avenged themselves on the Amorites, and Josephus states that "now the day was lengthened at this time." What the measurement of time was then or how accurate we can only surmise. If I mistake not, the time the sun is said to have stood still on that historical occasion has been variously computed.

This bill was sired by an uplift magazine and will be damned by a majority of the people. Radical change and paternal regulation seem to be the shifting order of the times. The people are

advised what and how much to raise, what and how much to eat, and when to eat it, and to whom to sell, by persons who never planted a crop and who do not even know the planting season of any foodstuffs whatever.

And now it is proposed by this bill to change the standard of time and the habits of a hundred millions of people by legislative Joshua, many of whom have not seen the sun rise in 20 years.

And they are so enthusiastic and have worked themselves into such a state of mind that they believe they can change darkness into daylight by the passage of this bill. A week or two since an uplift magazine seriously proposed to change the thermometric freezing point from 32° to 45° as a fuel-saving measure. The alleged argument was made that people generally keep their houses at a degree of heat between 60° and 70°, and to change the freezing point to 45° would deceive them into the belief that their houses were 13° warmer than they really were, and fuel would thereby be saved by such wise measure.

I confidently look for a bill of that character to be introduced in this House as a companion measure to this bill.

One thing, in my opinion, this bill will accomplish and that will be the losing of millions of dollars to the Government or its employees. I believe it will cause the Government or its employees to lose from half an hour to one hour each in the time its employees will be at work. Under present working hours the employees begin work at 9 o'clock in the morning, and most of them cease to work at 4.30 p. m. The proposition under this alleged daylight-saving scheme is to begin work an hour earlier and cease work an hour sooner—that is, at 3.30 p. m. It would be impossible for many of these employees, so far do they live from their place of employment, to get breakfast in time to begin work at what is now 8 o'clock; but every pen would drop at 3.30 and work would cease and time be lost either by the Government or by the employees.

I suspect this bill is more for the business interests of Washington than anything else. A Washington newspaper recently advocated a raise in the wages of Government employees because the bill, it declared, would put hundreds of thousands of dollars more into the pockets of Washingtonians. To be sure, the higher the wages of Government employees the higher the Washingtonians could elevate rents, with only the sky for the limit. Many Western Union employees receive only \$45 per month, yet these newspapers never mention that fact or urge an increase of pay for Western Union employees, nor for department-store clerks, many of whom do not receive more than \$8 a week. The department stores advertise in the newspapers, and hence no tears are shed over the pauper wages of such clerks, and then, maybe, I do not know, the proprietors of some of these papers may own stock in the Western Union, and the lower the wages the higher the dividend.

It is proposed by this measure to set the clock forward and thereby set the time back, so that those who now begin work at 9 o'clock will begin work at 8 o'clock and work eight hours. It is claimed that an hour of daylight will thereby be saved. How that can be done all the real and mythical lawyers that ever existed in Philadelphia can never figure out. The only thing accomplished is to compel certain people to go to work an hour earlier and quit an hour sooner. In either case their work would be done during daylight, perhaps with more profanity on account of having to arise earlier in the morning. But then that would give the Government employees an hour more in the afternoon to attend the movies and patronize the department stores and purchase goods at profiteering prices, which, of course, would put hundreds of thousands of dollars into the pockets of Washingtonians.

That is the kind of war measure this is.

I used to believe that more silly, impractical, useless measures could be proposed in a State legislature than any other place on earth, but my experience in Congress leads me to the conclusion that this body can give any State legislature the best five in eleven and the go and beat the game.

Too much legislative tinkering is the curse of American legislative bodies, and, like Sid Hicks's "foce" bill in the Kentucky Legislature, it gets "wusser en wusser."

This bill, in my opinion, should not pass, but it will, as there are too many Members here who think one way and, when the "scratch" comes, vote another. They are conscientious and try to do the right thing, but the "buck ager," or something akin to it, sometimes frightens some of them until they are uncertain just what is the best thing to do.

I believe this bill is useless and will result in confusion and dissatisfaction throughout the country. I believe the time of this House could be more usefully spent in enacting legislation to restrain profiteering and to win the war.

If I thought this bill could in the remotest degree be of any benefit to the country as a war measure I would cheerfully,

gladly support it. I am not one of those who believe in keeping still. If a policy of fear and stillness is pursued by Congress and the administration the speculators and profiteers will filch the entire wealth of this Nation. I am for anything or any measure to win the war, but I believe in vigorously shaking the rope when it needs shaking. Along the ropes which stretch from the centers of commerce in this country to the Capital of this Nation are walking the largest army of unpatriotic multimillionaire financial buccaneers that ever existed since the dawn of creation, the stocks of whose corporations have increased in value more than a thousand millions of dollars since this war began.

They are flocking to the seat of government like unclean beasts of prey eager to stick their felonious claws into the Federal Treasury and extract every profiteering dollar they possibly can, but fortunately we have at the helm of our grand old ship of state a conscientious, able President, who is not afraid to shake the rope, and as often as he discovers these robbers he shakes them off the rope, and they fall with a dull sound and are heard of no more.

They are slackers devoid of patriotism, and remind me of an anecdote: "Rastus, my man," said his employer one day to his colored help. "Col. Smith has positive proof that you looted his chicken house last week. I should think you'd be ashamed to take communion after such a rascally deed as that." "Mah goodness, sah," said Rastus reproachfully, "ah wouldn't let a few measly chickens stand twixt me and de Lawd's table."

And the profiteering pirates will not let little things like conscience or patriotism stand between them and the Treasury.

I am somewhat surprised at the extreme modesty of the supporters of this measure, though I know they are all modest, conscientious, able, hard-working Congressmen. They contend that by turning the clock forward an hour time in its ceaseless flight will be turned backward an hour, and an hour of daylight more will be the result.

If that be true, then if the clock be turned forward two hours there will result two hours more of daylight, and by a parity of reasoning if the clock be turned forward 12 hours, the result will be all daylight, and darkness will take its quick and final flight from this terrestrial globe, and Mary's little lamb can gambol forever in green and sunlit meadows beside rippling brooks without fear of slaughter by the Food Administrator. And the bird song will fill the circumambient air with continuous strains of sweetest melody through one eternal happy day, and the flowers will bloom forever, and the goose will hang altitudinal—

And we'll all be happy yet,
You bet.

Furloughs for Civil and Industrial Occupations.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 19, 1918,

On the bill (H. R. 9100) authorizing the Secretary of War to grant furloughs for civil and industrial occupations.

Mr. BURNETT. Mr. Speaker, the purposes of this bill are excellent. It will authorize the Secretary of War to grant furloughs to either drafted men or volunteers for the purpose of planting, making, and gathering crops.

When the conscription bill, which I opposed most earnestly, was up for consideration, it was said by some Members of Congress and by many newspapers that the farmer boys would be exempted. I did not believe this would be done, and so stated at the time. My prophecy came true, and many a farmer boy was taken from his home while a dependent mother and sisters needed him for their support.

The farm needed him, and to-day there is a cry for labor on the farms all over the country.

Who will feed our soldiers in the camps and in the trenches if the farms are deprived of these faithful toilers? Who will feed the industrial workers while they manufacture arms and munitions of war if we continue to take these boys from the farms? Who will feed the women and children left behind? Who will feed the millions of us who are not on the firing line?

Who will make the cotton to clothe the whole people, under arms as well as those at home?

Who will make the food and the clothing for our allies?

In a word, who will win this war if a sufficient number of our people are not left on the farms?

Gentlemen, this question of food supply is the most serious one that now confronts us. Why should we have Mr. Hoover or anyone else to conserve the food if there is no food to be conserved?

The point made by my colleague from Alabama [Mr. BLACKMON], who is ever on the alert for his people, is a good one. He makes the point that under this bill the soldier alone can make the application for the furlough, and he objects to that limitation. So do I. He and I believe that no one can know better about the need for the services of a young man on the farm than his father or mother, and the amendment offered by the gentleman from Virginia [Mr. SAUNDERS] meets that very point. I believe that amendment ought to be adopted.

I know what pressure will often be brought on the young soldier by his commanding officer to prevent his making the application for a furlough. I want to remove any danger of such pressure being brought on him, and if the parent or guardian has the right to make the application and furnish the proof that his services are urgently needed on the farm that danger will be obviated. If the Saunders amendment is not adopted I fear the bill will fail of its purpose to a very great extent.

Let either the father or the mother or the soldier make the application for his furlough and justice may then be done.

Address of Gov. Pleasant, of Louisiana.

EXTENSION OF REMARKS

OF

HON. H. GARLAND DUPRÉ,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 21, 1918.

Mr. DUPRÉ. Mr. Speaker, under leave to extend my remarks given me to-day I wish to place in the RECORD an address delivered by Hon. Ruffin G. Pleasant, governor of Louisiana, on the occasion of the recent visit to that State by a distinguished mission from the French Government, which included some of the descendants of Gen. de Polignac. The address breathes such an exalted spirit of patriotism, is couched in such eloquent language, and sets forth so felicitously the ties of sentiment and common ideals that bind together the French and American Republics, that I feel it worthy of being widely read and eminently deserving of perpetuation in the war literature of the day.

For those reasons I have asked to insert it in the CONGRESSIONAL RECORD.

[An address delivered by Gov. R. G. Pleasant on January 25, 1918, at New Orleans, on the occasion of the visit of a distinguished mission from the French Republic to the State of Louisiana.]

Ladies and gentlemen and distinguished guests, it has been said that every man has two countries, his own and France. I know that this is true with me. From earliest childhood I have especially loved the history of two great nations, ancient Greece and modern France. They live in my imagination like spirits of beauty and of light. God seemed to have marked them in their particular cycles as the centers around which all of the currents of the world should flow and against which all of the storms of the earth should rage.

Greece lived a glorious life. Her polished brow, like that of her Olympian god, was raised high above the fierce contending clouds that surged below, and wore the crown of a more exalted intellectuality than any other nation has ever known.

But France, immortal France, the wonder nation of the world, still lives. Her course is not run. Her great heart throbs on. Her destiny may reach even a nobler climax that is yet to come, for who can foremeasure the bounds of her greatness. Some there were who thought her dying. Some there were who thought her spirit crushed. But, thank God, the world has come to see that the men of France and the women of France were never stronger nor braver nor truer than now. On her face is the smile of glory, softened by sorrow, sweetened by sacrifice, and radiant with right. She is the disciple of duty, the defender of democracy, the champion of humanity. She is the crucible nation of the world. On her soil have been gorily determined many of the most momentous problems of the Caucasian race—eastern dominance or western civilization, Christianity or Mohammedanism, modern democracy or ancient tyranny.

Out of the east swept the medieval Hun and his allied tribes and threatened Europe with his heathen gods and barbaric life, but the Gallic armies overthrew him with a terrible slaughter and saved struggling Christian civilization on the very field in France where lately the Battle of the Marne was so heroically won from the modern Hun.

Three hundred years went by, and then the Islamic hordes of Arabia rushed through northern Africa and up through Spain and France to the banks of the Loire, but there they were beaten and humbled by the Franks and their allies of Gaul, and thus Europe was saved from the grip of Mohammed.

And now in the twentieth century of our Lord and Master comes the scientific savage from Prussia. Forth springs the hungry, hounding Hun again. But, by the eternal gods, he shall never reach the gates of Paris. One brief moment he stood on the banks of the Marne within sight of the beautiful city, but it was like the glimpse of the Peri through the portals of Paradise. Back he was driven, back over the tracks that brought him. And now he thunders at Verdun, but the unconquerable Frenchman swears, "He shall not pass, he shall not pass!" And he never will.

And there is England, the modern Rome, imperial but free, stern but just, brave but merciful. They thought that she, too, was old and palsied and weak, but the mighty spirits of Marlborough and Cromwell and the Black Prince and Alfred the Great look down upon her soldiers to-night and thrill with pride as of yore. The strong thews and sinews, the stubborn courage, the studied effort, the high resolve to do or die, all combine as in the days gone by to hold Great Britain to the forefront of the nations of Europe.

England and France! How much their names mean to mankind! Were they servile to the ideals of Prussia to-day, like Austria and Bulgaria and the intolerable Turk, dark and gloomy would be the morrow of the world. But their God is not the God of the Kaiser. Their God is the God of America and of ancient Israel, a God that is the friend of woman and of little children, a teacher of equality before the laws of earth and of heaven, the divine Father of a divine Son who came among men as a brother, preaching peace and good will, universal democracy, and eternal salvation.

There are no articles of incorporation on earth or in heaven signed by the Kaiser and God, and it is blasphemy for the Prussian King to say that he is the Lord's vicegerent in the German Empire and should extend his sway over the whole world by a right divine. To such a principle England and France and Italy and America will never submit. They will fight it till the last man dies; they will fight it till the earth and the "multitudinous seas incarnadine" with the blood of the world; they will fight it by sword and by reason till the Kaiser himself shall fall headlong, powerless and dishonored, from his shattered throne.

My friends, I shall detain you only a short while with my own remarks. There are distinguished guests with us to-night who bring serious and important messages from our allies across the seas. Dr. Charles Edward Russell, lately a member of the American mission to Russia, and a leading orator, diplomat, and man of letters, will presently address you on the political, social, and war conditions in Europe. He accompanies the Marquis and the Marquise de Polignac and the Marquis and Marquise De Courtivron, who have come to the United States to express the fraternal love of France for our country and to present to the city of Richmond the sword of the elder Prince de Polignac, who gallantly gave his services and offered his life for the cause of the Southern Confederacy. This beautiful and solemn ceremony was performed a few days ago, and now they have journeyed to that portion of our Nation where French influence has been greater than in any other section of all the Americas. Worthy of our most distinguished consideration, we are delighted to do them honor.

Only a little way from here, in this city, France brought the cross and the code and placed them reverently in the cathedral and the cabildo and made these historic edifices the center of a new empire. As this great domination, larger in territorial extent than France and the British Isles combined, grew in population and importance, the gospel and the law spread with it, until to-day millions of happy and God-fearing people live in this original French possession, which has subsequently become such an important part of the great American Republic.

And permit me to say to you, honored guests, that you are now upon soil consecrated to liberty by the hand of Jefferson, the sword of Jackson, and the blood of the descendants of France and of England. The State of Louisiana typifies more than any other part of the world the merging of French and English ideas under one flag, the flag of liberty. The people of our Common-

wealth are overwhelmingly of French and of English descent. Here they have laughed and loved and wept and sighed and fought and died together for more than 200 years. The starred flag of liberty is their blue heaven of mortal hope. France, the mother of Louisiana, fought with America to win her freedom over a century ago from a German King who disgraced a British throne and dishonored the true genius of a noble people. And now the child is speeding to the aid of the parent. We have not forgotten Rochambeau and Lafayette. Their shining spirits beckon us on and on. And we are coming, great Frenchmen, not only Louisiana, but all America, to kneel victorious at your hallowed tombs. The payment of this debt has been long deferred, but gratitude never prescribes. For every soldier you gave us a thousand American boys will march to the Marcellaise upon your soil and fight for American honor, for liberty, and for France!

O France, supernal France!
We love you for the blood you've shed;
We love you for your glorious dead;
O France, eternal France!

My distinguished friends, for myself and on behalf of the people of Louisiana I extend to you a most fraternal greeting and heartfelt welcome. May our countries live forever as worthy champions of justice, liberty, and Christianity; and may death to autocracy and tyranny come with the peace of the world.

Published Casualty Lists Should Identify Our Fallen Heroes.

EXTENSION OF REMARKS

OF

HON. LOUIS C. CRAMTON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 22, 1918.

Mr. CRAMTON. Mr. Speaker, up to and including Thursday, March 7, under the heading "List of casualties as reported among the United States forces overseas," the Official Bulletin presented such lines as these:

KILLED IN ACTION.

Pvt. Ellery A. Chism, Infantry, February 10. Mrs. D. E. Chism, mother, Petersham, Mass.

In the issues of March 8 and 9 no casualty lists appeared and no statement concerning them.

On Monday, March 11, you read among the list of "Killed in action," in the long casualty list there appearing, such lines as these:

Pvt. William Stover.

More than two columns devoted to names of our soldiers suffering death, wounds, accidents, and illness in far-off France, and no information given in any case as to date or place of death, nor as to the town or State that sent the boy forth to fight, nor the name of the mother or wife who will care the most and grieve the longest.

In the same issue half a column is used to tell the Nation that certain railroad attorneys and magnates that have become affiliated with the railroad administration had "given up their railroad connections," and their personalities are identified with very full particularity, though the relative value of what they "give up" and what they "get" is not disclosed.

And the little three-line filler, which, by the grim irony of chance, immediately follows the casualty list, says:

Remember, those boys in France are your boys. Do your bit in saving food and they will get their bite.

They are our boys, but when one of them "gives up" his life for us, makes the supreme sacrifice, his identity is, by red tape of unwarranted official censorship, effectively concealed from us by the anonymity which attaches to one name in a Nation of 100,000,000 people when unidentified by reference to home or kinfolk. And when one mother must necessarily suffer the supreme sacrifice of a son on the field of battle, others, perhaps a hundred or more, are unnecessarily caused shock and anguish and days of sharp suspense. That same method of announcing casualties without identification continues at the War Department.

How it works out is well illustrated by some data supplied by the Detroit News a few days since:

The American War Department gave out its casualty list the other day with such names as Smith, Sweeney, and Collins as men who had died. John Collins was picked as an example, and a half dozen cities

were wired to see how many John Collins there might be. The following table shows how useless it is to report that "John Collins is dead in France." There might be a half hundred "John Collinses" in the service. One of them is dead, and the families of the rest are torn with grief in the belief that the dead man is their son.

"JOHN COLLINS IS DEAD."

City.	Number of John Collinses.	Population (estimated).
Detroit.....	32	800,000
Cleveland.....	18	700,000
New York.....	142	5,500,000
Cincinnati.....	18	450,000
Philadelphia.....	83	1,500,000
Chicago.....	103	2,500,000
Total.....	396	11,450,000

Population of United States, 100,000,000.
Probable number of John Collinses, 3,450

Of that number it is easily possible that a hundred or more men named John Collins are in the service. Under the present censorship the death of one brings anguish alike to the families of all.

As is suggested, the British Empire has been fighting the German menace for over three years and does not deem it necessary to conceal from print sufficient data to reasonably identify a hero who dies in the field.

HOW BRITAIN TELLS THE NEWS.

The following list was clipped from the London Daily Mail. It gives the nature of the casualty, killed, died of wounds, etc., the man's name and rank and the designation of his unit, in abbreviated form. This list happens to be an officer's list only. Had privates been reported among the casualties it would, in addition, have shown the identification number of each enlisted man, just as in the Canadian list, which, as it happens, contains no officers. The identification in British lists, while not as complete as the Canadian, is adequate inasmuch as a man's relatives and friends usually know to which unit he is attached and the chances of duplication are slight.

OFFICERS KILLED.

Martin, 2 Lt. G. H., North'd.

NOW REPORTED KILLED.

Dippie, 2 Lt. H. P., Gord. H.
Ellis, Capt. F. B., North'd F.
Gillespie, Maj. W. R. B., Berks.
Bullock, Lt. R., R. Fus.
Law, Lt. C. J., Sco. Bord.
Winton, 2 Lt. J. H., North'd F.

DIED OF WOUNDS.

Sale, Lt. R. L., Hshld Cav.

DIED.

Kingham, 2 Lt. G. W. A., Buks.
Stevens, 2 Lt. G. V., Linc.

WOUNDED.

Royal Artillery.

Royal Field Artillery.

Godfrey, 2 Lt. L.
Pheazey, 2 Lt. J. R.
Vogel, 2 Lt. P. H.
Whitham, 2 Lt. R.

NOW REPORTED NOT WOUNDED.

Sievwright, 2 Lt. A. J. N., Lon.

Other regiments.

Ffoulkes, Lt. T. O. M., Ches., att. North'd F.
Finch, 2 Lt. H., W. Kent.
Isaacs, 2 Lt. G., Hamps.
Pearce, Capt. J. L., R. A. M. C.
Roe, Capt. E. A., W. Surr. (Lt., E. Surr.).
Ross, 2 Lt. R. O'C., Mdsx.
Shearman, 2 Lt. E. G. J., Innis. F.

MISSING, BELIEVED DROWNED.

Barber, 2 Lt. H. C., Glouc.
McCallum, 2 Lt. E., Lon.

MISSING.

Stanley, 2 Lt. L. A., R. Fus.
Tracey, 2 Lt. H. A., S. W. B., att. R. F. C.

NOW REPORTED PRISONERS.

Royal Flying Corps.

Brown, 2 Lt. C. H.
Miller, 2 Lt. D.
Ogden, 2 Lt. C. E.
Yeo, 2 Lt. H. A.

NOW REPORTED WOUNDED AND PRISONERS.

Braithwaite, 2 Lt. B. F., R. F. C.
Cartledge, 2 Lt. R. A., R. F. C.

HOW CANADA LISTS ITS LOSS.

This list was clipped at random from the Toronto Globe, showing casualties as given out officially at Ottawa. The list gives the nature of the casualty, killed, died of wounds, wounded, gassed, etc., the arm of the service, the man's name and identification number, and his home address, including the street address, which in this instance is printed only for Toronto men. His identification is as complete as it is humanly possible to make it.

Infantry.**KILLED IN ACTION.**

How the boys in khaki themselves feel about it is shown by the following newspaper dispatch published in the Mount Clemens Daily Leader:

CAMP CUSTER, MICH., March 19.

The men of the Eighty-fifth Division are not in sympathy with the censorship order preventing the home addresses and nearest relatives of overseas casualties being printed in newspapers. In a small way the division was canvassed this morning and with two exceptions the men all said they would prefer to have their names and addresses published in case they were among the dead.

In the majority of cases where friends of Camp Custer soldiers have been killed in France they received the news through newspapers and not from relatives. The mere publishing of the name is too indefinite and works more harm than good, because the more common names are duplicated in every cantonment. Thus the entire Army will be mourning for one man, each camp thinking him the man from their outfit.

Then this published list is regarded by the soldier as an honor list and he believes himself entitled to a place upon it if he goes overseas and gives up his life. He believes the War Department owes him the honor of being numbered among the heroes and the fact being spread broadcast. It is a greater incentive to heroism and gallantry in action to know their names will be set before the public as men who have made the supreme sacrifice.

One will look in vain in the pages of the Official Bulletin, which, while telling our people what they ought to know about the war, likewise has room to chronicle decisions of the Supreme Court and fraud orders of the Post Office Department, for any explanation of its change in policy in this matter of casualty announcements. One whose reading is not confined to the Official Bulletin has the impression from ordinary newspaper reports that the change is not one for which Mr. Creel's committee is responsible, and for that I wish to give him full credit, notwithstanding his dignified and modest reticence in his organ. In fact, we are given to understand that the new system is in effect despite protest of Mr. Creel, and that the responsibility for the change is "somewhere in the War Department" or "somewhere in France."

But whoever is responsible the practice is cruel to the friends of boys who are over there; unjust to those who die over there. As the Bulletin says, they are our boys, and their names, properly identified, should be known to the Nation and revered by its people.

And there is a further consideration which seems to me of importance.

Our Nation is a party to the most tremendous struggle that mankind has ever engaged in. The field of combat is several thousand miles from our shores, and the great war seems yet to many Americans but a dream which will soon fade away to the land of forgotten and harmless unreality.

It is not a dream; it is the most serious reality this Nation has faced. It is not distant from us. It is right at hand. We are a part of it, and the future destiny of our Nation is bound up in it. The quicker every man, woman, and child that loves the Stars and Stripes comes to realize it and to be governed by that knowledge the better it will be for us all.

Every such artificial and unnecessary barrier as the War Department in this instance unnecessarily puts between the people who pay and who bear and the war they are to carry on is an obstruction to the awakening of our national patriotism, to the full working of the national zeal, and is to be condemned.

Daylight Saving.**EXTENSION OF REMARKS**

OF

HON. EDMUND PLATT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 15, 1918.

Mr. PLATT. Mr. Speaker, it may seem an exaggeration to say that there are places where people are to-day getting up at 6 because the clock says it is 7, but Cleveland, Ohio, is an example. Travelers know that as you go westward on the New York Central or the Erie the railroad time changes to central time at Buffalo. You set your watch an hour back on leaving that city. Suppose you arrive at Cleveland, some five hours by train west of Buffalo, at 6 o'clock. You will find the clocks in the city set at 7 o'clock. After trying central time a while the people of Cleveland decided, as a matter largely of daylight saving, to reckon by the eastern standard of the seventy-fifth meridian instead of the central time of the ninetieth meridian, which is considerably west of Chicago and not far from St. Louis. As Cleveland is about at longitude 82°, its clocks were about 28 minutes slow by central standard time and are 32 minutes fast by eastern time. They found that everything went along better with the clocks indicating a half hour later than the actual time rather than a half hour earlier.

In my district eastern standard time is practically the same as actual time. The seventy-fifth meridian is the meridian that passes through Philadelphia, and it passes through Sullivan County, N. Y., at Lackawaxen, a little junction point on the Erie Railroad. Port Jervis, which is in Orange County and about the westernmost point in my district, is about 18 minutes of longitude east of this point. Its clocks are therefore a minute and some seconds only slower than actual time. The seventy-fourth meridian passes through the Hudson River, between the cities of Newburgh and Beacon, and clock time in those places and in Poughkeepsie is just 4 minutes behind the actual time—that is, behind what it would be if eastern standard time were reckoned from the seventy-fourth instead of the seventy-fifth meridian west longitude. Millerton, which is the easternmost place in my district, is about at longitude 73° 30', and its clocks are therefore about 6 minutes slow. When you get over to Boston, Mass., eastern standard time is some 16 minutes slow, and at Eastport, Me., longitude 67°, it is 32 minutes slow. It will be a particularly good thing for those far eastern points to set their clocks an hour ahead during the spring and summer, but it will also be a good thing everywhere else. It is expected that the enactment of this law will lead to a good deal more of food production, particularly by small gardeners in the suburbs of the smaller cities and villages, and I believe that expectation is warranted. It will be a pretty lazy individual who will not make some good use of the extra hour of the afternoon and evening. How it will work out with the genuine early risers, of whom there are some in every city and village—people who have been accustomed to doing half a day's work before breakfast—I am not so sure. They have always been daylight savers, like the farmers.

The Farmer and Food Production.

EXTENSION OF REMARKS

OF

HON. JOHN R. CONNELLY,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 22, 1918.

Mr. CONNELLY of Kansas. Mr. Speaker, the people of all parts of the country are coming to understand the necessity of food control and food conservation at this time, when the country is bending every energy to not only defeat our enemies, but to feed and sustain those who are fighting along with us and whose defeat would greatly add to the burden that this country must bear. I speak as the representative of an agricultural district and an agricultural people. I know that while here and there in every community there are people who are unreasonable and who live but to make trouble, I am sure that the great heart of the agricultural sections of this country is loyal to the country and to its cause. There are, however, some things that these people do not quite understand, and, not understanding, they do not fully indorse. I have in mind the price-fixing features of the food-control law. When that law was being considered upon the floor of this House the Representatives who here represent the agricultural sections of this country were assured that the provisions of this law were so wide in their scope that the power was given to the food-control department to not only guarantee the price of the wheat that the farmer raised, but he was assured that it also would permit this same power to tell the people who made and sold farm machinery which was assential to the producing of crops by the farmer what their profits should be and what prices they could charge the farmer for what he is compelled to buy. After the law was put into effect it was noticeable that the power to fix the price of the wheat that the farmer produces was at once brought into force; but if the power to fix the price of agricultural implements which the farmer must buy was lodged in that law, the people who had the enforcement of that law had a bad case of astigmatism and were unable to see that special provision. The result has been that while the farmer's wheat has been reduced in price from \$3 to \$2 per bushel, the profiteers have had an unrestricted license to hold the gun at the head of the farmer, and while his hands are tied by the law that limits the price of the wheat he produces, there are no restrictions placed upon the profits that are to be made by those who produce the things that he must buy to help him in producing this crop.

Mr. Speaker, the farmer has suffered more perhaps from the increased prices of everything that enters into the production of the farm than most any other class of people. I know there is a class of people in the country who sneer at the farmer, say that he is hard to please, and no matter what he gets he is not satisfied. I see that these people who thus speak of the glories and the profits and pleasures of farming seldom shows an inclination to break loose from their place in some soft snap in the city and go out on the farm to enjoy at short range these pleasures and profits that they fancy are scattered along the pathway of every farmer. With all of these fanciful attractions so gorgeously described by the swivel-chair farmer there does not appear to be any legislative action necessary to keep the crowds from rushing from the cities to the farms. This is the best evidence that much that is said about the profits of the farmers by these high-priced writers is known to be false by the majority of the people of the country.

One of the first people to feel the effects of the increase in the price of labor is the farmer. His sons and his daughters are educated and are capable of going to the city and accepting places with the great business concerns of the country. They are sought for by the city business man because as a rule they have better health and better habits than those who grow up in the city. When conditions become abnormal, as they are now, and the young man who lives on a farm finds that he can go to the city, take a position with greater pay and shorter hours and more congenial work than he has had on the farm, there is little need for the fellow who edits the agricultural forum in the various papers of the country to tell him that he is making a mistake in going to the city from the farm, for he is a person of intelligence and he often knows a good deal more about the subject than does the editor who sits in his swivel chair and gives out advice so copiously.

Mr. Speaker, from information that I believe to be authentic I am informed that the increase of the price of farm imple-

ments is so sharp and so great that it is not justifiable from any increase in the price either of labor or materials. As an example, the ordinary 7-foot self-binder with extra tongue truck was priced in 1915 at wholesale at \$120. The same machine in 1918 is priced at \$203. The 12-foot header and binder combined, which is a very popular machine in all wheat-raising countries, sold complete in 1915 for \$210 wholesale, while this year the same machine is priced at \$395 wholesale. In both instances the wholesale price is based upon the prices of these machines free on board Chicago. The farmer paid for these larger machines in 1915 about \$260; now he is asked to pay around \$600 for the same machine. The gang plow that the farmer was buying for \$55 three years ago is now selling for about double that price. I appreciate, and so does the farmer, that some increases based upon the increase of the cost of labor and materials are justifiable, but I know that there have been greater increases than can be justified because of the increases along the line indicated.

I hear people say that the percentage of increase is not more in the things that the farmer has to buy than what he has to sell. I do not believe that the assertion can be substantiated. Then, if I may be pardoned, there is a vast difference between the profits that can be computed to a certainty and the profits that can not. The man who puts his money into a manufacturing concern knows at the beginning of the year just about what his output will be, just about what his expense and what his profits will be. The farmer not only depends a great deal upon the manipulation of the stock markets, but he also is face to face, from the time that he sows until the day that he reaps, with various other agencies that may destroy all of his crop and his chance to reap a reward for his labor. He is compelled to pay high prices for farm labor, high prices for seeds, high prices for implements, high prices for horses and teams—in fact, he must compete with the inflated prices always prevalent in war times for a large part of his equipment. Then when he has equipped himself for the proper conducting of his farm he finds that he has to combat with floods and droughts, with insects and pests, with hailstorms and holocausts. In his stock he must run the chances of every form of disease in his horses and cattle, sheep, hogs, and poultry. There are very few years when all of these elements are to be contended with and there are very few years when at least some of them do not play an important part in the final returns that are to come from the farm. If there should be a difference in the profits permitted, it seems to me that it should go to the farmer, who takes the chances, rather than to the manufacturer, who can see to a great extent the problems that are before him and to some extent make plans to meet them. But in this food-control law and price-fixing feature we find that there was a very diligent policy pursued and very prolific promises made until the hands of the farmers were tied, and then it was discovered that much of the interest to conserve food at once disappeared. It is true that the price control thus far has touched only the wheat farmer and the meat farmer, but it matters not where injustice shows itself, it should be the purpose of honest men desiring to meet and cope with every emergency that arises to either take from the farmer's products the limitation of the price or it should be extended to other lines of equal importance. I am free to say to you, Mr. Speaker, that I do not believe that the remedy lies in the taking of the restrictions off and permitting the price of the foodstuff of the country to soar beyond the price where it is possible for the poor to buy it. I am rather persuaded that the proper move to make is to extend the activities of this branch and fix a maximum price upon those things that the farmer finds it necessary to buy in order to conduct his farm in the most efficient way and bring his production up to its highest output.

Mr. Speaker, I fear that those who are in control do not fully appreciate the condition that prevails on the farms of this country at this time. If some of the conditions are not remedied, the farmer will, through no fault of his, be compelled to greatly curtail the amount of crop that he will plant. In many cases the boys of the farmer have been taken to the Army to serve as soldiers. In the great majority of cases he has not complained, because he feels that everyone must do his share; but when the boy leaves the farm to go to fight with the armed forces of the country, the place made vacant by his having left the farm must be filled in some other way. The boy brought up in the city will not go to the farm, for he can find work in the city at better pay and with work that is more to his liking. If the city boy would go to the farm willingly, he would not fill the place made vacant by the enlistment of the farmer's son. The city boy does not know how to farm does not know how to harness, drive, or care for the teams; does not know how to run the tractor; does not know how to milk the cows; does not know how to work in order to get the greatest results from his labor. It is unfor-

fortunate that the country has not before this realized the conditions that prevail on the average farm and has not so planned as to leave every boy who can show that he is a real producer on the farm at his labor until the other classes who go into the Army are exhausted. I know of many cases in my district where the taking of the boy for the Army has made it necessary for the ones at home to greatly lessen the number of acres sown, and will necessarily mean a great reduction in the food production at harvest time. The conditions that prevail can not be remedied by advice, it must be handled so as to get results. You do not need to send men to the country to tell the farmer that he should make sacrifices, he knows that and is doing it, and in most cases doing it willingly. There is but one remedy for the conditions that exist on the farms of the country to-day, and that is to make the farms as profitable as are the other branches of industry. The test of the profits that come from the farm can not be safely computed by the prices that he gets for his produce until you also consider the cost of production to him. If it costs more for labor, equipment, taxes, and upkeep than the produce from the farm will bring in the markets, the steady flow of population from the farm to the city will continue, as it has for years, and which has moved with greater acceleration since the war began.

Mr. Speaker, there never was a question that confronted a people of more importance than the question now confronting this country in keeping its farms fully manned and keeping them up to the highest level of production. You can not do it by passing resolutions; you can not do it by talking about the glories of agriculture; you can not do it in any other way than by making the farm so attractive to the average boy as he comes to manhood that he will see that it promises at least an equal chance for independence and an equal return for energy and industry as is offered by the other lines of endeavor. In the present crisis in the production of food for our Army and the armies of our allies, the farmer is looking to this Congress to not only treat him fairly in the prices that he receives for the products of his farm but he is looking to Congress to break the death strangle of the profiteer, who up to this time has plied his nefarious and pitiless trade with but meager hindrance.

Federal Control of Railways.

EXTENSION OF REMARKS

OF

HON. ARTHUR G. DEWALT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 27, 1918.

Mr. SIMS. Mr. Chairman, I yield one hour to the gentleman from Pennsylvania [Mr. DEWALT], a member of the committee. [Applause.]

Mr. DEWALT. Mr. Chairman and gentlemen of the committee, judging from the statements made by the distinguished gentleman from Massachusetts I am fully aware that this railroad legislation, which we are about to discuss, is one of great importance. He emphasized that fact by saying that he was quite sure that there were Members of the House, other than members of the committee, who were quite equal to the task of discussing this bill. I grant him that, because in the very outset of my remarks I desire to say that the importance and the gravity of this bill are of such momentous character that, even though I as a member of the committee have been engaged in hearings for almost four weeks, I do not have the temerity to say that I am entirely able to discuss comprehensively and lucidly the provisions of this bill. The importance of it is beyond question, and perhaps in the outset it might be well to refer to some matters that make it so important for the earnest consideration of this great body.

In the first place, the property rights of the railroad companies amount in the aggregate, roughly estimating the same, to over \$18,000,000,000 in this country, and this legislation will vitally affect that tremendous amount of property interest. The mere statement of that fact is sufficient to warrant me in stating that this is one of the most important bills presented to this Congress. Again, there are 1,700,000 employees engaged by these railroad companies. Who would dare to assert in contradiction that their interests should not be conserved and preserved, and if that be true, then again the importance of this great measure must become apparent to you. Added to that you

should remember that there are over 250,000 miles of railroad lines in this country that must be affected by this legislation.

Added to that fact is another which is quite important, and that is that there are hundreds of thousands of stockholders in these corporations whose moneyed interests will be vitally affected by the passage or the nonpassage of this bill. And so whilst one perhaps is able, after hearings held in committee, to have some general knowledge of the subject that he is about to discuss, I am very frank to say to this membership that I am quite aware of my own deficiencies. I claim no pride of authorship in this bill, nor do I attempt to assert that it is a perfect bill.

RAILROADS BROKEN DOWN.

Mr. CANNON. Mr. Chairman, I would make the suggestion that the gentleman has omitted from his list of those who are vitally interested the 110,000,000 people in the United States.

Mr. DEWALT. If the gentleman from Illinois had permitted me a moment, I would have referred to that as perhaps the most important of all the considerations, and I am very glad the gentleman introduced it just the moment that he did. The great question of rates in this controversy is certain to be raised, and, after all, in the ultimate conclusion, if the gentleman from Illinois will permit me to suggest, it is the consumer who ultimately pays the freight. And it is entirely suggestive and proper that the gentleman from Illinois should say that 110,000,000 people are vitally interested in this legislation, because as the rates are changed, either for freight or passenger traffic, or as the management of these roads is changed ultimately, the people—men, women, and children—throughout the country must, in the popular expression used, "pay the freight."

Now, let us drop for a moment, if you please, the consideration of the importance of this legislation. The next thought that occurs to me, and possibly will occur to you, is, logically, admitting the importance of it, where is the necessity for it? The necessity for it became quite apparent to every man who had the situation in hand, and particularly and strongly apparent to the membership of this committee.

The whole Nation knew, and everyone now is convinced, of the fact that the railroad systems of the country had, according to popular expression, "broken down." Freight traffic, passenger traffic, all sorts of transportation facilities, were congested and for the time being almost at a standstill. What were the causes of this great discomfort to the people of this country? Was it the fault of the Government? No one could fairly charge that that was true. Was it the fault of the railroads? Partially so; yes. I think an affirmative answer could be given to that proposition. But there were other reasons which were momentous and almost paramount in regard to this great disaster that fell upon the country almost overnight. What were they?

TREMENDOUS WAR SHIPMENTS.

There was a tremendous demand for transportation. When the war came on, and when we were preparing for entrance into the war, it became necessary to make shipments almost beyond comparison with the shipments that had been made in years prior to our proposed entrance into the contest. The natural consequence was that freight traffic was congested. And the sequence of that congestion, and the sequence also of the demand of the Government for shipments of war munitions, led to priority orders, and priority orders meant in substance that governmental shipments should take precedence of all other shipments. And for that reason, and for other reasons consequent thereon, there was this congestion in freight and passenger traffic.

Added to that was the apparent desire, futile in the end, of the railroad managers to help the Government; and you will remember better perhaps than I can tell you that there was a war board of railroads established, which war board of railroads consisted of the general managers and presidents of the various roads of the country. To their credit—and I desire to voice that sentiment now—be it said, that they did the best they could under the circumstances, and they displayed loyalty and public spirit which deserves the recognition of the people of this country. Unfortunately, however, they were hampered. They were unable to do that which the Government desired and which they were willing to do. How were they hampered? They were hampered by the Sherman law and they were constrained by the rules and regulations of the Interstate Commerce Commission. Priority shipments were clearly against the provisions of these two methods of regulation. The routing of freight was clearly against the provisions of the interstate-commerce regulations, and they did under the law the best they could, but it was finally found that it was entirely inefficient, and that in order to render the service that the Government demanded, and in order to serve the public at the same time, it became necessary to do, what?

CARS USED FOR STORAGE.

It became necessary, in the judgment of the Government itself and of the committee acting under the authority of this House, to devise some means by which these rules and regulations should either be made lax, made wider, if you please, or entirely abrogated. Perhaps no more explicit and suggestive illustration of this fact can be shown than that of demurrage. There is not a man within the hearing of my voice who does not know that there were thousands of freight cars that were used as storage places. They were filled with freight; they arrived at terminal stations and remained unloaded not only for days but sometimes for weeks. And the fact was disclosed in the hearings that sometimes these cargoes of freight in these cars were sold and resold, and again sold and resold, without ever being unloaded. All of this resulted, as I am trying to show you, in this great disaster to the transportation systems of the country.

Mr. DENISON. Will the gentleman yield?

Mr. DEWALT. I will.

Mr. DENISON. I was going to ask the gentleman right at that point if he does not think that situation could have been met by Congress repealing those regulations and suspending the Sherman law?

Mr. DEWALT. It could have been met in that way, and that was suggested by the Interstate Commerce Commission itself, and there were two remedies, one of which you suggest and that which is now proposed. I am frank to admit that, sir. And in this discussion I beg pardon, gentlemen, for desiring, if possible, to answer all pertinent questions which may be submitted to me, disclaiming to have any more knowledge than anybody else has upon the subject, and I am quite sure that if the questions be relevant, material, and pertinent I will receive information and perhaps be able in my modest way to impart some.

Mr. CONNALLY of Texas. Will the gentleman yield?

Mr. DEWALT. Certainly.

Mr. CONNALLY of Texas. Right in this connection, in touching the causes of the congestion, I am interested to know what the gentleman's views are in reference to how far the diversion of traffic from other ports to New York contributed to that condition?

PHILADELPHIA A TERMINAL CITY.

Mr. DEWALT. I think you had better put that, sir, in the other way. "Nondiversion" to those ports would, in my judgment, be a more explicit term. It is true that the port of New York, by the natural influx and reflex of trade in this country, is the greatest port in the country; and it is also true, and shown by the testimony in some of these hearings, that the ports of Charleston, Savannah, New Orleans, and Philadelphia, if you please, also included, do not have the terminal facilities that New York has. They do not have the depth of water for large vessels, and the natural consequence is that trade seeks its easiest channel. It is like the flowing of the blood in the human body. If the veins are congested, the blood does not readily flow, and the system becomes affected or possibly ceases its functions. And the question is very pertinent from the fact that if Savannah, Charleston, and New Orleans, and Philadelphia, too, if you please, in my own State, had the terminal facilities and the depth of water, which possibly they have not, a great deal of this freight would be diverted from New York and would go to those other ports.

Mr. WHALEY. Mr. Chairman, will the gentleman permit a question right there?

Mr. DEWALT. Certainly.

Mr. WHALEY. You say the diversion of traffic from those ports was because of the lack of water at those ports. Is it not a matter of fact that those ports have that depth of water?

Mr. DEWALT. I understand the gentleman from South Carolina has received an appropriation, quite monumental in its aggregate, which will give the required depth of water at Charleston.

Mr. WHALEY. I would like to correct that. There is a depth of water already there sufficient to float any ship of the United States or any that England sends over here with the exception of the *Mauretania*.

Mr. DEWALT. I hope it will be increased to a depth of 35 feet and the appropriation in like proportion.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield there?

Mr. DEWALT. Certainly.

Mr. MOORE of Pennsylvania. I think the gentleman ought to advise the committee that Philadelphia has an assured high-tide depth now of 35 feet, and is capable of accommodating twice as much business as goes into that port, and that it has

terminal and docking facilities sufficient to take over a vast part of the business that now clogs New York.

DOCKING FACILITIES ADEQUATE.

Mr. DEWALT. I entirely agree with the gentleman, and yet strange it is that the general public throughout the West has an idea that Philadelphia has not the requisite terminal facilities and the proper depth of water.

Mr. GREEN of Iowa. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. GREEN of Iowa. I think the West is not quite that much in error and that they know something about the depth of water at Philadelphia. But regardless of that, is not the gentleman aware of the fact that it is now conceded that a great mistake was made in sending so much freight to New York, and that arrangements have been made for its diversion to these other ports to a very considerable extent?

Mr. DEWALT. I am very glad that is so.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. SLOAN. I would say that the misinformation throughout the country as to the port of Philadelphia was in no wise due to a lack of diligence and repeated statements on the part of the distinguished gentleman from Pennsylvania [Mr. Moore], of whom I have distinct recollections on several occasions as having mentioned, first, that there was such a port as Philadelphia and that the port was made up largely of water, and, second, that it was of great depth, corresponding therewith to his arguments and his speeches delivered here on the floor. [Laughter.]

WATER DEEP ENOUGH.

Mr. DEWALT. Well, I do not want to reply to that at all, except to say this: That the gentlemen who reside in the beloved city from which the gentleman from Pennsylvania comes are largely of the Quaker element and are always very modest; they are not like those of the West and they do not blow their horns so loudly. [Laughter and applause.]

Mr. MOORE of Pennsylvania. Of course, I thank the gentleman from Nebraska [Mr. Sloan] and the equally distinguished gentleman from Pennsylvania [Mr. Dewalt] for the fine personal compliments they have paid to me, but I would like the gentleman to permit me to incorporate in his remarks this fact, that Boston has a depth of 35 feet, that Baltimore has a depth of 35 feet, that Philadelphia has a depth of 35 feet, that Charleston has a depth of at least 30 feet, that Savannah has a depth of 30 feet, and so on down the line; as all those ports south of New York are nearer to the West than New York is, it is not strange that people should wonder why all the business of the West and of the South should be concentrated at the port of New York.

Mr. DEWALT. Whatever the reason is, the fact is quite apparent, and the result is the same. I am very glad that my colleague from Pennsylvania has given not only me but the House and the committee the information that it is so important for the people at large to know.

Mr. ALEXANDER. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Certainly.

RAILROADS SLOW TO ACT.

Mr. ALEXANDER. When the gentleman was diverted he was discussing the limitations caused by the accumulation of cars on the sidings and the use of them for storehouse purposes instead of for transportation. That was not caused by any provision of law. That condition might have been remedied by the railroad companies themselves, might it not?

Mr. DEWALT. Yes.

Mr. ALEXANDER. The gentleman also referred to the fact that under the provisions of the interstate commerce law—and I think he mentioned section 6—there were certain limitations which prevented the railroad companies from developing their system and making them as efficient as they may be under this legislation.

Mr. DEWALT. I did not mention the section, but that was my idea; yes.

Mr. ALEXANDER. I would like to ask the gentleman to develop that thought and tell us just what those provisions are; in other words, why these roads under private ownership could not be developed and utilized just as well as if those limitations were removed and the roads taken out of governmental control?

Mr. DEWALT. The only question that arises here, if the gentleman will permit me, is this, that in spite of the fact that we have a demurrage system, and in spite of the fact that the Government and the railroads themselves have been very assiduous in collecting this demurrage, the shippers of freight

are willing to pay the demurrage in order to have the storage facilities of the cars. They simply laugh at the idea of demurrage, because they think it cheaper to pay the demurrage than to take the freight off the cars in proper time except as that time suits their convenience. That is the truth of it.

Mr. AYRES. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

THE OLD SYSTEM FAULTY.

Mr. AYRES. Is it not a fact that the railroads themselves utilize a great many cars for storage purposes?

Mr. DEWALT. I am sorry to say that I think that is so. I am not here with any bill or brief for the railroad companies, nor do I excuse them at all for their laxity in not enforcing the rules which they themselves have made—and the regulations of the Interstate Commerce Commission. But there is very little use, gentlemen, in decrying these evils or blaming John or James for the existence thereof. We have a condition confronting us, and the question is, How are we to remedy it? Not "Who is to blame?" Not "Why he or it is to blame?" But the blame being here, and the condition existing, the question is, "What is the best thing to do under the circumstances?"

Now, let me proceed for a moment further, leaving that phase of the topic and going to another: Admitting the importance of the subject we are discussing, and admitting, if you please, the necessity for the legislation, as we have tried to point out, how did the legislation come about? And how is it that we now have before us this bill?

It came about in this way. You will recollect it, perhaps, without any refreshment of your memory on my part. In 1916 there was a bill enacted into law entitled "An act making appropriations for the support of the Army for the fiscal year ending June 30, 1917, and for other purposes." In that appropriation bill was the following section:

THE PRESIDENT COMMANDED.

The President, in time of war, is empowered, through the Secretary of War, to take possession and assume control of any system or systems of transportation, or any part thereof, and to utilize the same, to the exclusion as far as may be necessary of all other traffic thereon, for the transfer or transportation of troops, war material and equipment, or for such other purposes connected with the emergency as may be needful or desirable.

That act was passed August 29, 1916, and, gentlemen, I desire to enforce upon your attention this very momentous thing, that although in the judgment of a great many eminent lawyers, some of whom I have consulted, the President, under the provisions of the act of 1916, had the authority and the right then and there to take possession of and assume control of the railroad systems of this country, he did not do that. Why did he not do it? Of course, again I may say I hold no brief for the President of the United States, but the very fact that he did not do so is evidence to my mind that he was using the best of sound judgment in preparing the country at large for this momentous action when he must take over the railroad systems of the country.

I have heard it said here that this was an assumption of authority by the President of the United States that was almost autocratic in its exercise. I grant you we have proceeded along the lines of almost revolutionary processes; I grant you that an old-line Democrat like myself, reared with the idea that the Constitution must be strictly conserved and observed, is sometimes frightened, almost appalled, at these momentous powers that are given to the Executive. But the very fact that the President did not exercise them when he had the right to exercise them, if he saw fit, and that he waited all this time, until it became quite apparent to him and the country at large that it must be done, is good assurance to me that he did not desire and never assumed autocratic powers. [Applause.]

Mr. FORDNEY. Will the gentleman yield?

Mr. DEWALT. Certainly, sir.

INLAND CANALS EXCLUDED.

Mr. FORDNEY. In section 6, page 9, of the bill there is this language:

From said revolving fund the President may expend such an amount as he may deem necessary or desirable for the purchase, construction, or utilization and operation of canals, boats, barges, tugs, and other transportation facilities on the inland, canal, and coastwise waterways, and may in the acquisition, operation, and use of such facilities create or employ such agencies and enter into such contracts and agreements as he shall deem in the public interest.

Does the gentleman think in order to carry on this war it is necessary that the Government should purchase inland canals that will not admit ships?

Mr. DEWALT. If the gentleman will permit me to answer that question when I get to the discussion of the different sections of the bill, I will be very much obliged; but the power to purchase inland canals is, in my judgment, not contemplated in the act.

Mr. FORDNEY. I shall be very glad to do it.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. DEWALT. No; not for the present. I know the gentleman is very much interested in the subject of inland waterways, and his knowledge is authority on that subject.

Mr. MOORE of Pennsylvania. I do not want to interrupt the gentleman, but should like through him to remind the gentleman from Michigan [Mr. FORDNEY] that hundreds of barges laden with lumber have been using some of the canals referred to, while others have been delayed because the railroads were incapable of taking their cargoes, with the result that ship construction has been held up and the war has not proceeded as rapidly as it should.

REASON FOR EXECUTIVE ACTION.

Mr. DEWALT. Now, resuming the thought that was in my mind, gentlemen, after this provision in the appropriation bill of 1916 was incorporated into the law, then there was this period of preparation, as I have tried to illustrate. And then there followed what? A proclamation by the President of the United States, in which he said that he would do what?

Take possession and assume control at 12 o'clock noon on the 28th day of December, 1917, of each and every system of transportation and the appurtenances thereof located wholly or in part within the boundaries of the continental United States and consisting of railroads and owned or controlled systems of coastwise and inland transportation engaged in general transportation, whether operated by steam or by electric power, including also terminals, terminal companies, and terminal associations, sleeping and parlor cars, private cars and private car lines, elevators, warehouses, telegraph and telephone lines, and all other equipment and appurtenances commonly used upon or operated as a part of such rail or combined rail-and-water systems of transportation.

We then have as a consummation of these facts that I have tried to give you, first, The importance of the legislation; second, the necessity of it; third, the passage of the act of 1916; and fourth, the proclamation of the President of the United States. We have this fact, that now the President is in actual control of the railroad systems of this country. Why do I try to emphasize that statement? I emphasize it, gentlemen, for this reason, that it brings me to the discussion now in regular order of the bill itself.

When the President took over the railroads, as we say in popular terms, when he assumed control and took possession thereof, he was taking private property for public use, and, as we all know, the Constitution provides that there must be payment for such taking. The question then naturally came to the mind of the legislator as well as to the mind of the Executive, What means can be best devised to pay this stipulated sum, or, if not stipulated, how shall this remuneration be made?

THE PERIOD OF CONTROL.

If it were a complete taking over, if it were not only an occupation but a confiscation or a commandeering, which meant not only the use but the actual possession of the property for an indefinite or a definite time, which meant ownership, the question might be easier of solution, because it would amount to an appraisal of the value of the property, an appraisal of the franchise, and other concomitant features which go into such an appraisal, and then a lump sum could be paid by the Government for such taking. But this taking is different. This is the taking of the use for a time. What is that time? For and during the war, and for such a reasonable time thereafter, not exceeding a stipulated time, to wit, two years after the ratification of the treaty of peace.

It therefore became, in the mind of every sensible man who was studying this situation, a startling question as to what should be paid. There were several theories presented. I do not desire at this time, nor do I have the time, to cover the several theories that were presented to the committee. But this bill provides a specific method of arriving at what should be paid to the different railroad companies.

Mr. LAZARO. Will the gentleman yield in this connection?

Mr. DEWALT. Certainly.

Mr. LAZARO. In explaining this feature of the bill, will the gentleman explain how the British handled that feature of it when they took possession of their railroads?

Mr. DEWALT. I shall be very glad to, as well as I am able, sir. The Government of Great Britain had an act passed in 1871 which gave the Government the right to take over, without any further proceedings, the railroads in the United Kingdom. When the war came, in 1914, the Government took over the railroads. It was first asserted that they did it without any regard or agreement as to compensation, but they did afterwards make an agreement. They made an agreement in the spring after the war in August, 1914. They have continued the operation and extended the power week by week. In-

stead of for a time limited, they extend the power week by week.

Mr. MONTAGUE. Every two weeks.

POOLING RAILROAD INCOME.

Mr. DEWALT. Every two weeks, is it? Pardon me for saying one. The first system was for a pooling of railroad income. They paid to the lines for operating the amount that they had received for the years 1914 and 1913, dependent in amount as to whether the business of the first six or seven months of 1914 was in excess of the business done in the last six months of 1913.

After pooling all these rates, both for passenger and freight traffic, they divided the receipts in proportion to the amount of earnings the various roads had had prior to that time. That arrangement was again changed for what was called an inclusion of the bonus system. The labor agitation came on, and the laborers on the railroads insisted that they must have higher pay. The Government then said that they would guarantee a 25 per cent increase to the laborers on the railroads, and the amount given to the railroads was not made less by reason of the bonus, for the Government stood for the bonus. That bonus has again been increased 10 per cent and includes not only the male laborers but the females in the railroad offices taking the place of male employees.

Mr. RUSSELL. Will the gentleman yield?

Mr. DEWALT. Yes.

Mr. RUSSELL. I find that there are a number of small railways in Missouri that believe—whether it is true or not I do not know—that the action of taking the larger systems, to the exclusion of the short lines, is going to drive them into bankruptcy. Will the gentleman discuss the wisdom of the order or the law that excludes from operation under the Government of these small roads?

Mr. DEWALT. I will be pleased to do so hereafter.

Mr. DENISON. Will the gentleman yield?

Mr. DEWALT. Yes.

ENGLISH LABOR TROUBLES.

Mr. DENISON. My inquiry is suggested by the reply of the gentleman to the gentleman from Louisiana in reference to the labor troubles in England. I would like to ask the gentleman if he remembers the fact that there was a threatened and impending strike among the railroad employees of this country just before the President issued his program in December?

Mr. DEWALT. I am not certain about that.

Mr. COOPER of Ohio. If the gentleman will pardon me, I do not think there was any threatened strike; they did make a demand for increase of wages.

Mr. DEWALT. I do not think that since the passage of the Adamson bill there has been any threatened strike on the part of the employees of the railroads.

Mr. DENISON. Perhaps it was in the form of a general demand for increased wages.

Mr. DEWALT. There has been a demand for increased wages—the first demand was 40 per cent, but that has been graduated to 20 per cent, and I think gentlemen who represent the railroads and the unions have agreed upon some tentative proposition.

Mr. DENISON. Does the gentleman think that the demand for a decided increase of wages that was made at the time had anything to do with precipitating the action of taking over the railroads?

Mr. DEWALT. I do not think it had a particle of effect. I do not think it was a moving consideration in the minds of either the Executive or his advisers. It is a clear business proposition, and that is all this is, coupled with a legal liability that a party always has when he takes private property for himself, or when the Government takes private property for public use. That is the legal proposition, and it is a business proposition as well. The only question, in my judgment, that there is before this House at this time which is of great moment is how we can best determine what the remuneration shall be, taken in connection with the other things that are concerned with that vital question. If this is so, then let us proceed in the limited time I have to a discussion of the provisions of this bill.

RAILROADS ENTITLED TO COMPENSATION.

When I spoke of the pay of the railroad companies for the use of their lines I stated in the same breath this legal proposition, that when they were deprived, even for a moment, of their property rights they are entitled to compensation. Whether the time be 1 year or 10 years, the primal question is, What shall be paid?

In this bill the committee has provided for what is known as the standard return. What is the standard return? The

standard return can perhaps be best defined by giving you what I have tried to get out of the act itself. It is the annual average railway operating income, including income of lines acquired by lease of or connected with the carrier between July 1, 1914, and December 31, 1917, for the three years ending June 30, 1917; and the rate per cent to be fixed by the President upon the cost of any additions or betterments, less retirements or road extensions made during the six months ending December 31, 1917. Now that is the standard return as laid down by this act.

What does it amount to in figures? The net operating income of the roads in class 1—and that includes all the roads whose income was over \$1,000,000 a year—was \$1,020,800,000. That was for 1917. In 1916 the net income of these roads in class 1 was \$984,872,959. In 1915, which was what the railroad companies called the lean year, the net income was \$683,104,833.

Add these three amounts together and you have \$2,688,777,792, and dividing that by 3 you have \$896,254,264, which is the average net operating income for these three years for this class 1 railroad, to wit, the railroads whose annual income was over \$1,000,000 a year. But there were other railroads that were not of class 1, namely, railroads that did not earn \$1,000,000 a year.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

THE TOTAL MILEAGE.

Mr. BORLAND. How much of the total mileage of the country is included in class 1?

Mr. DEWALT. I am not able to give the gentleman that. The total mileage operated in 1917 on all of the railroads was about 230,000 miles. The total in 1916 was 257,000 miles, in round numbers. I can give the gentleman that exactly, if he will wait a moment.

Mr. BORLAND. I know the total mileage of the country is approximately 250,000 miles, but I was wondering how much of it was included in class 1.

Mr. DEWALT. Perhaps another way of answering the gentleman's question is this: Class 1 earned and received about 96 per cent of the total income of all of the roads, but as to the mileage I can not give you the exact figures.

Mr. CRISP. Would the gentleman mind giving us the per cent that the roads in class 1 earned, or has the gentleman reduced that to percentages?

Mr. DEWALT. That differs so variously and so radically that one could not estimate that; but if this figure were to be divided by the property valuation used in operation by all the roads in class 1, it would give them an average percentage of about 5.6 per cent on their property.

Mr. BANKHEAD. Is that based upon the amount of capital actually invested?

Mr. DEWALT. Yes; their operating property. As I tried to say before the interruption, this figure of \$896,000,000, in round numbers, did not include the average operating income of these roads that were not in class 1, and the Interstate Commerce Commission and others who were advising with the framers of this bill included a sum for them which made the total about \$935,000,000, which is a basis of payment if this agreement is carried into effect by the President of the United States.

VALUATION BASIS.

Mr. CONNALLY of Texas. How does the percentage for those three years compare with the percentage for the years immediately preceding, say, 1913, 1912, and 1911?

Mr. DEWALT. In some of the years preceding 1912 the gross earnings were larger, though not larger than 1917, because that was the banner year. Nineteen hundred and nine was a lean year, if I recollect; 1912 was a lean year, as the railroad men call it, and the scale of gradation runs up and down, best illustrated by a map that was presented to the committee itself, showing that in some years whilst the gross receipts were enhanced, the net income did not materially increase by reason of the greater expense in operation and the greater cost for material.

Mr. SWITZER. Will the gentleman state about what per cent of this net income finally went to the pockets of the stockholders?

Mr. DEWALT. I can tell that pretty nearly.

Mr. SWITZER. Not all of it, as I understand it?

THE BONDED INDEBTEDNESS.

Mr. DEWALT. Oh, no. The gross earnings of these roads were \$3,824,419,739. The operating expenses, and this will give the gentleman a clue to what he desires to know, were \$2,581,838,511, leaving a net, after the payment of taxes, which amounted to \$172,830,714, of \$1,069,750,514, which was for the payment of dividends and for the payment of the interest on

the bonds. When the gentleman asked me the question how much went into the pockets of the stockholders and the bondholders, not being fortunate enough to own any stock or bonds of railroad companies, I really can not answer the question.

Mr. SWITZER. Is it not true that a great part of this went back into betterments?

Mr. DEWALT. Some part of it did.

Mr. ESCH. Mr. Chairman, if the gentleman will permit, this may throw a little light on the question asked by the gentleman from Ohio [Mr. Switzer]: The bonded indebtedness of the carriers is \$10,000,000,000, on which was paid \$450,000,000, with interest. The amount paid in dividends was from \$250,000,000 to \$300,000,000, and that would leave a balance of possibly \$150,000,000 or \$200,000,000 for surplus, fixed betterments, and so on.

Mr. SWITZER. About one-fourth, then?

Mr. DEWALT. Mr. Chairman, I desire to hurry on, as I have promised, as well as I may, to touch one other question which some gentleman here on the left asked me. Before we get to that, however, how do we ascertain this standard return? The standard return is ascertained, according to the provisions of the bill, by taking the debits and credits arising from the accounts in the monthly reports to the Interstate Commerce Commission.

That is the basis, including equipment rents and joint facility rents, and then the standard return also includes the cost of additions and betterments, railroad extensions, and they are to be ascertained by the Interstate Commerce Commission from reports, books, and other data of the carriers, and these are to be certified to the President. What is the result? The result is this, that after you have fixed a basis for the standard return as outlined in one of the provisions of section 1 you determine almost in the same breath how that ascertainment shall be arrived at, and how is it?

Not by the railroad companies themselves, not by the President, if you please, not by the Director General, but by the Interstate Commerce Commission from their reports which have been submitted to them by the railroad companies, and which they have supervised, and which they have ratified. So that there can be no question either about the validity of the ascertainment nor about the justice of the ascertainment, provided always you agree with me in saying that the Interstate Commerce Commission is a body which is reasonable and just and loyal and conservative of the Government's interests. Now, this certificate as furnished by the Interstate Commerce Commission shall be conclusive as to the amount for the purposes of this agreement.

STANDARD RETURN EXPLAINED.

This same section 1—and I am hurrying along—provides further that Federal taxes under the act of October 3, 1917, assessed for the time beginning January 1, 1918, shall be paid by the carrier or charged against the sum known as the standard return, and other taxes shall be paid out of the revenue derived from the railway operations whilst under Federal control. All taxes before January 1, 1918, shall be paid out of the carrier's funds or charged against the standard returns and deducted therefrom. In other words, the Government will pay the tax whilst it is operating the roads, but the railroad companies will pay the taxes which ought to have been paid or which were assessed against them prior to the date specified and that I have just mentioned.

Mr. LENROOT. Will the gentleman yield?

Mr. DEWALT. I will.

Mr. LENROOT. Is there any provision in the bill in reference to taking care of these taxes except in cases where an agreement is made with the railroad?

Mr. DEWALT. Yes, sir; there is.

Mr. LENROOT. Will the gentleman point it out?

Mr. DEWALT. I will come to that in a few moments. We then follow in this section 1 a stipulation as to maintenance. Everyone knows who is engaged at all with railroad legislation or with railroad operation, or even though he be but a mere traveler upon a railroad, that there must be betterments for maintenance, there must be extensions, there must be repairs, there must be, if you please, the acquirement of new motive power and new cars.

AN EQUITABLE PROVISION.

So this section 1 provides that maintenance, repairs, renewals, depreciation shall be considered so that the carriers' property may be returned. How? That the carriers' property may be returned to the owners thereof when this period of Government control is ended substantially in the same condition as when it was taken from them. Certainly no more equitable provision can be had than that.

If I take the property of John Jones by right of eminent domain, if you please—but that is not quite a relevant comparison—but if I take the property of an individual for a certain time, with a promise to return it to him, I should return it in the same condition that I obtained it, or I should pay for the depreciation in the value thereof by reason of my use. Therefore, this provision of the bill provides that in regard to maintenance and betterments they shall be substantially replaced to the road in the same condition as it was at the time the Government took the control. Now, further than that, section 1 provides only one important feature, and that is as to nonoperating roads or those in the hands of receivers, and there the President may make such agreements with such corporations as are equitable.

Now, what do we mean by "nonoperating" roads? There were certain roads which were not entirely completed. There were certain roads which were in process, if you please, of stabilization and required betterments, and therefore were not able to operate as going concerns. There were other roads in the hands of receivers, and it was deemed best by the authorities who drew the bill, and also by the committee itself, to place in the bill some stipulation to meet that emergency and that condition, and that is met by saying that as to those particular roads the President may make such an agreement as to him seems equitable under the supervision of the Director General of Railroads.

THE SPECIFIED AGREEMENT.

Now, that condition contemplates something which is also of very great moment. This lays out the general plan of how the standard return shall be established; it lays out the constituent parts that go into the standard return. It specifies, if you please, that the Interstate Commerce Commission by the reports submitted to it by the railroad companies shall effectually and eventually determine what the rates have been and upon which this standard return is based, and all this contemplates something which is not fully explained unless I say something else to you. What is that? It contemplates an agreement between the railroad companies and the President of the United States.

In other words, after the standard return is fixed by this process that I have tried to demonstrate to you, then the President goes to the carrier company and says, "Here is the standard return, fixed according to the reports that you have made to the Interstate Commerce Commission, graduated according to the process that is named in this bill. I offer to you an agreement now that we will pay to you this sum. I can not pay you in excess thereof, but I will pay you that as a maximum amount and I want you to agree with me, as I have taken over the road."

Mr. STEELE. Will the gentleman yield?

Mr. DEWALT. I will.

Mr. STEELE. As I understand the bill, there are two methods of compensation provided. One is the judicial proceeding where the parties can not agree, and the other where they do agree. Now, does the method of the agreement provided here for compensation conform with the legal measure of damages?

Mr. DEWALT. It does, sir. In answer to that let me say this, that in every legal proceeding—as the gentleman knows far better than I do, as I concede to him greater ability as a lawyer than I have ever claimed—as the gentleman well knows, and every other Member knows, the legal standard for the assessment of damages is this: What was the property worth at the time of the taking? That is the general broad proposition. Now, when we come down to pay damages for the use of property, then we have the same standard. What was the use worth at the time of taking? And therefore it follows as a logical conclusion of the answer to the gentleman's question that the legal standard of payment would be what was its use worth at the time; and that is to be determined how? Why, by what it actually brought in; what it earned.

OBTAINING THE AVERAGE.

Mr. TOWNER. Will the gentleman yield?

Mr. DEWALT. Certainly.

Mr. TOWNER. I am going to ask the gentleman this question: Of course, we all agree that the rule established by the courts is when property is taken the value of it must be established at the time when it is taken. When we take over the use the gentleman says that is also to be established at the time of the taking. Is not that, however, subject to this modification, when you come to consider the question of use it must extend over a period of time, and for that reason there is no other standard except we shall take in the preceding years or months or days, or whatever may be proper for the purpose of determining what period of time the use is?

Mr. DEWALT. Certainly.

Mr. TOWNER. So it is hardly strictly true, I will ask the gentleman, to say that we determine the use of the property as of the time of the taking?

Mr. DEWALT. No; but, my dear sir, if the gentleman will take in connection that which I have just stated in reference to the establishment of the standard return, he will notice at once that the bill contemplates the taking in the receipts for three years and out of them making an average.

Mr. TOWNER. Yes. We say to the railroads under the terms of this bill: We are willing to determine its use by this standard which we offer you. Now, you have the right to take it or refuse it—

Mr. DEWALT. I am going to come to that in a moment. I will now yield to the gentleman from Iowa [Mr. DOWELL].

RAILROAD INCOMES DIFFER.

Mr. DOWELL. I take it from the gentleman's argument that some of these roads are not receiving the same income that others are receiving.

Mr. DEWALT. That is certainly so.

Mr. DOWELL. There are two methods that are adopted: One is by agreement and the other a remedy in the courts. Is it not true that the roads receiving the large incomes under this provision will accept the agreement and those receiving a less sum will refuse the agreement and obtain theirs through the courts?

Mr. DEWALT. Well, in answer to that, I would say to the gentleman that there is nothing more dangerous in the world than prophecy. I have never yet been able to prophesy as to what I myself would do on the morrow, and I can not tell what they would do the next day.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. DEWALT. May I have 15 minutes additional time?

Mr. SIMS. I yield 15 minutes more to the gentleman.

Mr. DEWALT. I am sorry, gentlemen, if I have wearied you, and I apologize for taking all of the time that I have taken.

I proceed now, gentlemen, to section 3 of this bill, which provides that in case the President of the United States and the carriers are not able to agree, then what follows? The scheme is carried out. First, we try to agree with the carrier companies. The reason for that is that we desire by this bill to prevent litigation, and certainly nothing could be more desirable at this time than to prevent and forestall, if you please, litigation. And so every means is to be used by the Executive authority to arrive at this agreement.

AVOIDING DISAGREEMENTS.

But suppose the carrier company says, "We will not agree," or suppose the President says that the demands are excessive according to the circumstances, or the standard return, if you please, in regard to this one particular road is excessive at this particular time; and the parties to this agreement do not agree? In other words, they agree to disagree. Then what follows? The bill then provides that three referees shall be chosen. Chosen by whom? Not by the President; chosen not by the carrier companies, but chosen by an impartial body, namely, the Interstate Commerce Commission. And these three men then shall determine the rights of these contending parties.

The bill also provides that any member of the Interstate Commerce Commission may serve as a referee or that anyone connected in official capacity with the Interstate Commerce Commission also shall have the right to serve if chosen. If then the reference is made, which is compulsory, of course, and the parties do not agree, what follows? Still the rights of the corporation are preserved, and still the rights of the Government are preserved. How? By referring the matter for final adjudication to the Court of Claims.

That is the last resort; but the whole design of this bill—the whole desire, as expressed throughout the bill—is to prevent as much litigation as possible, and to keep these railroad companies and the executive authority of the United States, and the Government itself, in such a position that litigation will not be necessary. I need not emphasize the importance of that, gentlemen. It is apparent to the mind of everyone who knows anything at all about the subject. Litigation—unprovoked, perhaps, in some instances; provoked in other instances—might possibly lead to the disruption of the transportation systems on the one hand or financial disaster on the other.

REVOLVING FUND DEFINED.

I pass over section 4 and section 5, although I have them noted here and would like to discuss them, and come down to the question of what is known as the revolving fund, which is section 6.

This bill provides that \$500,000,000, not otherwise appropriated, shall be appropriated for the purpose—of what? The expression is very clear in the bill. The revolving fund of \$500,000,000 is for operating expenses, and with the revenue derived from the operation of the road shall be used—for what? For just compensation of the railroads under control, for terminals, motive power, cars, equipment, and so forth. And the President may do what else? The President may order the road to make betterments and road extensions, and so forth, for road purposes, and may advance the cost thereof from the revolving fund for such betterments and extensions, and charge the same up against the carrier.

Now, I have heard some gentlemen in committee, as well as out of it, say, "Oh, well, this will inevitably lead to this, that the railroads will receive these betterments, receive these extensions, will receive these large improvements, at the expense of the Government, and then when the railroads are turned over they will have the benefits thereof without payment to the Government." No more ridiculous statement was ever made by anyone in regard to the provisions of a bill if he reads and syllogizes the bill itself. Because the revolving fund is specified at \$500,000,000, and the revenue derived from the operation of the roads by the Government shall be taken for the purpose specified, to wit, for betterments and improvements, and for the payment of a just compensation to the roads, and, more than that, the President can order and direct that these betterments and improvements shall be made and charged up against the standard return.

SHORT LINES PROTECTED.

I pass now to the question that was asked me in reference to the short-line railroad by the gentleman from Missouri [Mr. RUSSELL]. And permit me to say that I believe that portion of the controversy is no longer one that need agitate the minds of those who are interested in short-line railroads. Section 9, referring to this matter, is as follows:

That nothing in this act shall be construed to affect the routing instructions—

And I emphasize "routing instructions"—over, and the traffic arrangements—

Emphasizing again, "traffic arrangements"—of such railroads as may not be taken under Federal control by the President unless such arrangements and instructions prejudice—

What? Here are the two exceptions—the transportation of war materials or of Government supplies; in which cases—

And only in which cases, according to the provisions of this section—

the President may change the routing of such materials and supplies as the war and national interests demand.

And certainly that is a wise and patriotic provision.

And now, further:

If the President should deem it necessary temporarily to suspend such arrangements and instructions as to freight other than war materials and Government supplies he may thereafter, so far as practicable, cause to be diverted—

What?—

sufficient unrouted freight to such road as will compensate it in revenue for such temporary suspension.

MAY REROUTE FREIGHT.

Mr. RUSSELL. Now, that is the best provision that has been made there that is possible under the circumstances, and that is when the road is not taken over; but you notice that the section reads that the President may, as far as practicable, reroute other freights that might make up the loss to that road. But the mere fact that that may not be done, as I am informed, has already tended to reduce the value of stocks and bonds of some of these smaller lines, very much to their injury. I am informed, and they fear may result in driving them into the hands of receivers and into bankruptcy.

Does not the gentleman appreciate that there is a possibility of very great injury being done to those smaller lines if they are not taken over?

Mr. DEWALT. I do. One gentleman who appeared before the committee was president of one of the so-called short lines and the receiver of another; I think he came from Pittsburgh. His name I have forgotten. But he emphasized to the committee this important fact, saying in substance: "I am speaking for these short-line roads, in which I am interested, and there are others who take the same view. I, speaking for them, desire only two things: First, that their traffic arrangements, as now provided for by the Interstate Commerce Commission, shall remain practically as they are, to wit, that we shall be entitled to a proportionate rate for the service we have rendered; and, secondly, that if there be freight diverted from our lines as feeder lines to trunk lines, we receive such rate in return, if

it is possible to give it to us; and third"—which I do not think has been mentioned in the argument at all by anybody who has asked me a question—"that motive power and transportation facilities be given us as heretofore."

ACCORDED CONSIDERATION.

That is all they seem to be interested in, and it was with that view that this provision was drawn. And it was drawn, I believe—although I am not authorized to say so positively—by gentlemen who are interested in the short lines. I appreciate fully that these short lines are built, capitalized, and owned largely by local stockholders in the localities in which they are constructed.

Mr. RUSSELL. I understand, if the gentleman pleases, that there are about 800 of these short lines in the country?

Mr. DEWALT. I so understand.

Mr. RUSSELL. Several of them are in my district, built by the local people. As this great harm will come to them, I wondered why that situation should not be remedied so as to include them.

Mr. DEWALT. The only remedy, in my judgment, would be to take them all over; and there, I fear, the remedy would be worse than the evil.

Mr. LENROOT. Mr. Chairman, will the gentleman yield there?

Mr. DEWALT. Yes.

Mr. LENROOT. The language is, "That nothing in this act shall be construed so as to affect the routing instructions over and the traffic arrangements of such railroads as may not be taken under Federal control by the President," and so forth. I want to ask is there any other language but that which would affect those traffic arrangements? And, if it does not, does it not leave this language meaningless?

PRESIDENT MAY ACT.

Mr. DEWALT. Oh, no; there is something in this act that might possibly lead to a different conclusion.

Mr. LENROOT. What?

Mr. DEWALT. There is a provision in the act itself to the effect that the President of his own initiative may route freight.

Mr. LENROOT. There is nothing about traffic arrangements.

Mr. DEWALT. Routing freight is traffic arrangements. I believe that provision is in the bill.

Mr. WATSON of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Certainly.

Mr. WATSON of Pennsylvania. I want to give a practical illustration of a road which I know something about, it being a short-line road. A member of the Interstate Commerce Commission recommended that the Government should operate the road. The Secretary of the Treasury made the reply that "We have no money to operate small roads, and the President can deal with it as he deems wise." I therefore take it that the Government will not have anything to do with small roads. Am I correct in that?

Mr. DEWALT. I would not go quite as far as that, sir. I should think that the Government would have something to do with short-line railroads, and I appreciate very much the suggestion made by the gentleman from Missouri, Judge RUSSELL.

Mr. WATSON of Pennsylvania. But Mr. McAdoo said not.

FIGHTERS ONLY WANTED.

Mr. DEWALT. Mr. McAdoo illustrated it by saying:

We are calling into the draft service of the United States at this time those who are most efficient for service in the war. We want fighters, and we do not want cripples. Therefore I say to the railroads generally, "We want railroads that we can use, and we do not want railroads that we can not use."

Mr. WATSON of Pennsylvania. Then the small railroads must suffer?

Mr. DEWALT. Oh, no. That does not follow at all, because by the provisions of this bill I maintain, and they themselves maintain, that they are taken care of as far as possible.

Mr. LAZARO. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Certainly.

Mr. LAZARO. On day before yesterday the gentleman from Alabama [Mr. BURNETT] asked the chairman of the committee this question—it is short:

Mr. BURNETT. As I understand from your bill, you give this power to the President? That is, he may exercise it in regard to rates on railroads that are entirely inside of the border of a State, where the freight is entirely intrastate freight. Would not that absolutely, by this kind of legislation, destroy the power of the State railway commissions to fix intrastate rates on intrastate railroads, and so forth?

I would like to have the gentleman's opinion of that.

Mr. DEWALT. That raises a very important question. Some of these lines will not be taken over, and perhaps a number of them that are not small roads. So far as those roads are con-

cerned that have to do with interstate commerce, they will certainly be governed by the Interstate Commerce Commission itself. You grant me that, do you not?

Mr. LAZARO. Yes.

STATE RIGHTS PROTECTED.

Mr. DEWALT. The roads that are engaged entirely in intrastate business will, of course, be covered by the State commissions. But permit me to say that upon investigation it has been determined, at least it was so affirmed before the committee, that there were only three or four railroads in the United States that are exclusively devoted to intrastate traffic, and the reason for that is this: That if there be a car upon a road that carries any freight from Ohio to Pennsylvania or from one State through another, it is interstate traffic, and therefore if it gets on that line, it is interstate traffic.

RAILROAD DECLAMATIONS POPULAR.

I know how very popular it is in the minds of a great many Members of Congress, not only on this side of the Capitol but on the other side as well, to proclaim and declaim continually against railroads and corporations. I fully appreciate the fact, too, that it sounds very well back home to have gentlemen say that they are against corporations and railroads receiving enormous amounts of compensation for anything at anytime or anywhere. But that does not change the relation at all. The popularity of a measure or the unpopularity of a measure in the judgment of an honest legislator has nothing to do with the proposition.

Now, what is the proposition? I have heard the gentleman who has just spoken say that he demands justice, that he is willing to give justice, but he will not give anything in the way of tribute. Very well, let it be so. Now, what is justice? These roads are taken over. That is an accomplished fact. Having been taken over, they must be compensated. That is the law. Now, how shall they be compensated? The gentleman says, "Take over their property and give them a fair income or rental on that." Unfortunately for that proposition, gentlemen of the committee, it is at this time an utter impossibility. Judge Prouty, who is on the valuation committee of railroads, has definitely declared that all the railroads to-day in this country so far as he knows are not able, from the judgment of the valuation committee, assisted by the railroads themselves, to place any definite value upon their operating property and their valuation.

Mr. GORDON. Will the gentleman yield at that point?

Mr. DEWALT. Certainly, sir.

Mr. GORDON. Is the gentleman's contention that it is necessary to fix the value of this property now of these railroads? Has it got to be done instantaneously, or can it be deferred, as we have done with other people whose property we have taken, until the real value of this property can be determined?

PROPERTY INTERESTS CONSERVED.

Mr. DEWALT. I believe, sir, that for the stability of all the stocks and bonds and all the property interests concerned in this country, so far as railroads are concerned, time is of the essence of the contract.

Mr. HUDDLESTON. Will the gentleman yield?

Mr. DEWALT. I will.

Mr. HUDDLESTON. Does the gentleman assert that we ought to stabilize these securities at a higher rate than is just to the people?

Mr. DEWALT. Certainly not, and I am coming to that in a moment.

Mr. HUDDLESTON. Why does the committee take the three-year period instead of the one-year period, as the English did?

Mr. DEWALT. The reason is this: If we took only the one year, 1917, then you would certainly pay them more than under this.

Mr. HUDDLESTON. Will the gentleman yield?

Mr. DEWALT. Certainly.

Mr. HUDDLESTON. England took the prewar year of 1914. Why should not we do the same thing?

Mr. DEWALT. They did not take the prewar year of 1914; the gentleman is mistaken.

Mr. GORDON. They took 1912.

Mr. DEWALT. They took six months of 1913 and took six months of 1914.

In other words, gentlemen of the committee, it is just this: There are a great many who argue this question who do not know anything about the facts. [Applause.]

Mr. GORDON. And that is a fact. Will the gentleman yield?

Mr. DEWALT. One moment. If I was to agree with all the premises which were laid down by the distinguished gentle-

men, then I would certainly come to their conclusion; but the trouble is I can not agree with the premises.

Mr. COOPER of Wisconsin. Will the gentleman yield for a question?

EVASION NOT ATTEMPTED.

Mr. DEWALT. Yes.

Mr. COOPER of Wisconsin. I do not wish to get into this controversy any further.

Mr. DEWALT. It is not a controversy; it is a discussion.

Mr. COOPER of Wisconsin. The gentleman has just said that they could not take a prewar year, and yet he followed that statement by the statement that England took six months in 1913 and six months in 1914, including up to July, 1914, and the war began in August. And, then, they did take one year just before the war, by his own statement. [Applause.]

Mr. DEWALT. That is exactly what I said, only the gentleman did not hear it. The war broke out in 1914.

Mr. COOPER of Wisconsin. The gentleman can not evade that. That is what he did say.

Mr. DEWALT. This gentleman never evades anything. He always tries to argue from the facts as they are presented; and the fact is that in England they took six months of 1913 and six months of 1914, and they averaged it; and they averaged it in this way, that if the profits of the railroads in 1914 for the first six months were in excess of the profits of 1913, the last six months, they made the average.

Mr. DOREMUS. Will the gentleman yield?

Mr. DEWALT. I will yield.

Mr. DOREMUS. The gentleman from Alabama [Mr. HUDLESTON] has just asked you why we did not follow the English plan and take a year preceding our entrance into the war.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. DEWALT. I ask for two minutes more, so that I can respond to this query.

FIXING THE VALUATION.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent for two minutes more. Is there objection? There was no objection.

Mr. DOREMUS. If we had adopted that plan, would it not be even more favorable to the railroads than the one that is now incorporated in the bill?

Mr. DEWALT. I have already said that. If we had taken last year—1917—that is the most prosperous year any of the railroad companies have known; 1915 was a lean year, bringing in some \$683,100,000; and in 1917 over a billion dollars. The consequence was, they took a light year and a fairly prosperous year to determine the sum total and making the average.

Now, as to this question of compensation according to valuation of the property. Judge Prouty, who was on the valuation committee, has declared that there are now only three railroads in this country that have been investigated as to their property valuation, and they have not yet determined the amount of that valuation. And, further, he says that it will take at least three or four years more—I think he said four, but he said three I am sure. I am referring to the gentleman from Wisconsin [Mr. ESCH] for the correctness of my statement.

Mr. ESCH. The valuation, as far as the field was concerned, would take until 1920, and it would take a year before they could tabulate their returns.

Mr. DEWALT. So you see the utter impossibility of trying to fix the valuation upon the basis as presented by my friend from Alabama.

Now, this is a clear question of how we shall compensate them for the use of the property that is taken. The value thereof is represented by the earning capacity of that property, and that earning capacity is not determined by the railroad companies; it is not determined by the President; it is determined by the reports submitted to the Interstate Commerce Commission yearly, adopted, revised, and taken by them as a verity, and those sums are fixed and determined by the Interstate Commerce Commission after due investigation.

PERIOD OF GOVERNMENT CONTROL.

Mr. RAMSEYER. Will the gentleman yield?

Mr. DEWALT. Certainly.

The CHAIRMAN. The time of the gentleman has expired. All time has expired.

Mr. RAMSEYER. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended two minutes in order to answer a question.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent that the time of the gentleman from Pennsylvania be extended two minutes. Is there objection?

There was no objection.

Mr. RAMSEYER. The value of the use for what time?

Mr. DEWALT. The value of the use at time of taking would be the legal proposition. But in this instance that could not be a fair estimate, because if you were to follow that you would have to take the value of the use in 1917, and that would be disproportionately large.

Mr. RAMSEYER. And you fix three years?

Mr. DEWALT. Yes.

Mr. RAMSEYER. If you have the right to fix it at 3 years, why have you not the right to fix it for 5 years or 10 years?

Mr. DEWALT. Because the contract is about to be entered into. You must hear the rights of both of the contracting parties and must arrive at an average that will best suit the interests of not only one but both.

Mr. RAMSEYER. Then, in the judgment of the committee, three years is such a period?

Mr. DEWALT. I think so; yes, sir.

Mr. RAMSEYER. Now, if the gentleman was correct in his statement that a period of a year before the war would be unfair, because excessive, why did not the committee have a right to go back and take two years, or three years, at some period when the railroads of the country were not affected by the abnormal conditions of war abroad?

OBTAINING THE AVERAGE.

Mr. DEWALT. In answer to that, I wish the gentleman had had the privilege of inspecting all the reports of the Interstate Commerce Commission from the year 1902 all the way up to 1914, 1915, 1916, and 1917.

Mr. RAMSEYER. I am asking for information.

Mr. DEWALT. He would then have come to the determination that 1914 was a very lean year, that 1912 was what they called a bad year; and, going along the scale from year to year, it was determined by the committee from the inspection of those reports that the average was substantially the mean average during the entire time.

Mr. RAMSEYER. Now, why would not 1910, 1911, and 1912 be fair?

Mr. DEWALT. In other words, I have just been informed by one of my colleagues on the committee who has looked over the figures that this was the lowest net return during a period of 18 years for a like period of three years.

Mr. RAMSEYER. Would that be fair to the railroads?

Mr. DEWALT. As long as they have not objected, I should think so.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. LENROOT. I ask unanimous consent, Mr. Chairman, that the gentleman may have two minutes more. He is a member of the committee. I would like to know what objections he has to the amendment I have proposed.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that the gentleman from Pennsylvania [Mr. DEWALT] may proceed for two minutes more. Is there objection? There was no objection.

INEFFECTUAL AMENDMENT.

Mr. DEWALT. As I understand the gentleman's amendment, it is simply a transposition of the words "not exceeding" from the first page to the second page. Whether it changes the portent of the act I am not able to say. This, however, I will say in all candor to the gentleman that during the time of the discussion on this very phrasing in this first section the gentleman to my right, Mr. SNOOK, of Ohio, offered an amendment almost precisely similar in words and terms. That amendment was discussed, and the question came up as to whether these words should not be put in after the word "compensation" and before the word "not"—"an amount not exceeding an annual sum," and it was thought that that did not improve it at all. It did not clarify the situation or make it any stronger. Then the words "from time to time" were included as an amendment, and then the question came up as to the line, "equivalent as nearly as may be to the average annual railway operating income."

Now, I am going to say to the gentleman from Wisconsin that I do not believe the transposition of those words "not exceeding" from the first page to the second page makes one iota of difference in this bill, and, so far as I am concerned, as a member of the committee, I would vote for it.

Mr. LENROOT. I would like to ask the gentleman this question: Does it not change the entire character of the definition of standard returns unless this change is made?

Mr. DEWALT. I do not think it makes one bit of change. Otherwise I would oppose the amendment.

PREVENTING EXCESSIVE AMOUNTS.

If the gentleman from Wisconsin will return to page 2, lines 18 and 19, 20, 21, 22, and so forth, he will find this language:

In the computation of such income, debits and credits arising from the accounts, called in the monthly reports to the Interstate Commerce Commission equipment rents and joint facility rents, shall be included. The standard return and the cost of such additions, betterments, or road extensions are to be ascertained by the Interstate Commerce Commission from the reports, books, and other pertinent data—

And so forth. Now we come down to the gentleman's question, and he will notice how the extensions, betterments, or improvements are to be ascertained by the Interstate Commerce report—

(not including, however, assessments for public improvements or taxes assessed on property under construction, and chargeable under the classification of the Interstate Commerce Commission to investment in road and equipment)—

Now, the purpose of that phrase was to prevent an obligation being placed on the Government for assessment of taxes levied, if you please, by municipalities in the construction of the railroads during the time of Federal control. Evidently the purpose of that was to prevent municipalities exacting from the Government these excessive amounts—street paving and other things of similar character.

Now, you say, How shall it be collected? If it is a betterment or improvement of the railroad itself, then it is to be ascertained under the rules of the Interstate Commerce Commission under provisions of the foregoing section, and that is to be charged up against them in the standard return.

Mr. LENROOT. Is it not true that under the interstate-commerce classification special taxes are never included under the term of either betterments or improvements but are charged against capital direct? So it would not be covered by the language the gentleman states, because it being neither a betterment nor an improvement, it could not be taken into consideration by the Interstate Commerce Commission.

DISAGREES WITH CONTENTION.

Mr. DEWALT. I do not agree with the gentleman at all; I do not think that is a reasonable construction. I think the foregoing part of section 1 clearly includes that.

Mr. LENROOT. May I ask the gentleman a further question?

Mr. DEWALT. Certainly; we are here for information.

Mr. LENROOT. If it is neither a betterment nor improvement under the interstate-commerce classification, and is charged against capital, how could it be included in the language the gentleman has just read?

Mr. DEWALT. The general provision as to betterments, extensions, and improvements—if the municipality by the construction of this road wanted to change the grade of a street, for instance, or if a municipality insisted on an underground passageway or an overhead passageway, they might assess a municipal tax against the railroad company while under Federal control. The Government, by the inclusion of the words in parenthesis, avoided that as far as possible, and contemplated in this bill, by the words heretofore quoted, that it might be included under the word "extensions," and therefore be deducted fairly from the standard return and decrease their emoluments to that amount.

THE RAILROAD AGREEMENT.

Let us look concretely, if possible, at the question now before us, because I believe it is one of very great moment. This bill provides, in the first place, that there shall be an agreement, if possible, between the President of the United States and the railroad corporations for the use, compensation, and control of these railway systems. Now, the word "control," from its legal definition, contemplates the management and the administration of railroad affairs. If it contemplates the administration of railroad affairs and the management of railroad affairs, then it follows as a natural sequence that the President of the United States, through the Director General, must have control and administration of the financial affairs of the railway corporation.

The Government being in control and possession of the railway systems, must in some way take care of these maturing obligations. The railway officials themselves can not take care of them. They have no power to take care of them while these railways are under Federal control.

Mr. LENROOT. Will the gentleman yield right there?

Mr. DEWALT. I will.

Mr. LENROOT. Why not; what are we paying them compensation for?

Mr. DEWALT. We are paying them compensation of \$945,000,000 for operating expenses, operating the railroads, for betterments and improvements, and for the use and occupation of the roads.

Mr. LENROOT. Is it not a fact that their securities are higher to-day; that their stock and securities have risen on the stock exchange since we took Federal control?

Mr. DEWALT. I am very glad to say that that is so.

Mr. LENROOT. Therefore, are they no, in better shape to-day to take care of their securities than they were before the Government took them over?

POWER MUST BE UNDIVIDED.

Mr. DEWALT. That does not meet the question, whether they are better off to-day than they were day before yesterday. The paramount question is, Have they the power and authority to take care of them? I concede that the gentleman is entirely fair in his argument, and I can see, too, that his motives are patriotic and right from his point of view; but when you grant to the Director General certain powers in this bill, and under the powers granted in the act of 1916 the exclusive control and management and administration of these railway companies, you take from them in that very instant the management of their financial affairs. There can be no question about that. If that be true, the maturing obligations must be taken care of, the management and administration of affairs of the companies must be taken care of, by the party that has control over them, and that is the Director General.

We will say that railroad A has a million dollars of maturing obligations. If they endeavor to float a new loan, the bankers would at once say we will not float your new obligations to take up maturing obligations. Why not? Because you have no longer authority over them, because they are under Federal control. What is the Federal control? The Director General. Therefore it becomes necessary for the President to issue new bonds and new notes to take care of maturing obligations.

Mr. ALEXANDER. Will the gentleman yield?

Mr. DEWALT. Yes.

Mr. ALEXANDER. As I understand, there is no disagreement about the policy that the President should be bestowed with this power, but was it the intention of the committee to give him the power to spend money for that purpose in excess of the \$500,000,000?

THAT REVOLVING FUND.

Mr. DEWALT. No; and there I must disagree with the gentleman from Illinois [Mr. MADDEN]. He takes the position that the money could be expended in excess of the revolving fund. I can not so interpret this act.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. DEWALT. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. DEWALT. Let me read the provision—and I refer my remarks to the gentleman from Illinois [Mr. MADDEN]:

The President may purchase for the United States all or any part of such securities at prices not exceeding par, and may sell such securities whenever in his judgment it is desirable at prices not less than the cost thereof; any sums available from the revolving fund provided in section 6 may be used for such purchases. The President shall each year, as soon as practicable after January 1, cause a detailed report to be submitted to the Congress of all receipts and expenditures made under this section and section 6 during the preceding calendar year.

Now, what moneys does the President get into his hands under the provisions of this bill? There are two sorts of moneys obtained: First, he obtains the money from the operating income, to wit, receipts of the railroad companies from freight and passenger traffic. Secondly, he receives an appropriation of \$500,000,000 as a revolving fund. From this revolving fund of \$500,000,000 and from the income from operation of freight and passenger traffic he is allowed to do what?

To operate the roads and pay the expenses of the operation, make betterments and improvements, and to order betterments and improvements to be made, and to pay for them out of the revolving fund, if he so chooses, and charge them up against the standard return fixed by the terms of the bill. Third, he is authorized by this to take from the revolving fund, not from the operating income, money enough to pay for these maturing obligations or to renew maturing obligations.

UNITED STATES STABILITY.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. In just one moment. What is the result of this? The United States Government by reason of its great financial stability is able to issue bonds at 4 per cent—issued them at 3½ per cent prior to this last issue. It borrows money at 4 per cent. Suppose the Pennsylvania Railroad Co. owed a million dollars' worth of maturing obligations. I take the position, and I think it is sound in law and sound in reasoning, that after the Federal control the Pennsylvania Railroad Co. could not, without the affirmative consent of the President, issue anything to take the place of those maturing obligations, and that the power rests in the President of the United States, because he has control.

But suppose, now, they wanted to issue new obligations, and suppose they had obtained the consent of the President so to do, and those obligations bore 5 and 6 per cent, the Government stands back of those obligations; but it can borrow money at 4 per cent, and when it issues these bonds for the Pennsylvania Railroad Co. it is actually making 2 per cent on the bargain.

Mr. MEEKER. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. MEEKER. Is it not the purpose to put the next liberty-loan issue at 4½ per cent?

Mr. DEWALT. I do not know.

Mr. MEEKER. I do.

Mr. DEWALT. The gentleman's information upon that subject is more definite than mine.

Mr. MEEKER. I got it directly that the Government will not be borrowing money at 4 per cent.

CREDIT OF GOVERNMENT.

Mr. DEWALT. It would not change the situation.

Mr. MEEKER. It does as to the rate of percentage, to the credit of the Government.

Mr. LENROOT. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. LENROOT. Suppose the language read, "The President may purchase for the United States all or any part of such securities at prices not exceeding par," and stopped there, what would be the authority of the President?

Mr. DEWALT. He could not buy anything out of the revolving fund.

Mr. LENROOT. No; but what contracts could he make?

Mr. DEWALT. I do not catch the drift of the gentleman's question.

Mr. LENROOT. What contract could he make obligating the Government—to what extent could he obligate the Government?

Mr. DEWALT. Then he could go beyond the revolving fund.

Mr. LENROOT. Yes; I agree with the gentleman. Then the provision with reference to the revolving fund does not mean anything more than that he may use the money in the revolving fund to pay that obligation instead of coming to Congress and getting an appropriation.

Mr. DEWALT. Yes; it does mean just that very thing, and that is exactly what I think he ought to have the power to do.

Mr. LENROOT. Does it mean anything more than that?

Mr. DEWALT. No; I do not think it does.

Mr. LENROOT. Then the gentleman must concede that the authority of the President to obligate the Government is unlimited under the bill.

EXECUTIVE POWER OVER RATES.

Mr. DEWALT. I recognize very fully the immense importance of the provision granting to the executive power the right to initiate rates. I recognize with equal force the great gravity of taking away from a long-established tribunal, the Interstate Commerce Commission, this right to revise and finally settle upon the rates.

I am frank to say that, primarily, my sentiment was against the idea of lodging this great power in the hands of the Executive. Every man who thinks logically must come to one conclusion ultimately, and that is that we must have due regard and respect for established forms of procedure, and that all innovations and alterations of that which has been established by long custom, and found to be efficient, should be regarded with a great deal of caution and not adopted except after weighty consideration. Therefore, I am frank to say now to this committee that, were it not for the immense necessity of this matter, if I were not deeply impressed with the urgency of the occasion, I would unhesitatingly cast my vote in favor of the amendment of the gentleman from Ohio.

Mr. SHALLENBERGER. Will the gentleman permit an interruption?

Mr. DEWALT. Not just now; I will in a moment answer all questions if I have time. I have tried with an unbiased mind, without any reflex action in regard to partisan fealty, or without any regard even of upholding the executive power simply because the executive power is now democratic, to look at this matter squarely from the standpoint of what is the best thing to do under the circumstances.

Let me start by saying that the act of 1916, in my judgment at least, gives the president of the United States the power to fix rates. The act of 1916, by its provisions, in brief, says this:

PROVISION OF WAR ACT.

That the President in time of war is empowered, through the Secretary of War, to take possession and assume control of any system of transportation.

In looking at the legal definition of the word "control," I find that it is defined by an Illinois decision (185 Ill.) as this:

The words "manage" and "control" are held to be synonymous. Manage is defined to mean "direct, control, govern, administer, or oversee." That is a decision in 144 Pa., page 377.

Webster defines the word "manage" as follows:

Meaning "to have under control and direction, to conduct, to guide, to administer, or to handle."

I take it as a logical sequence of the wording of this act, which says "the President shall have possession and control," and in the following words, in the same section, "exclusive possession and control," that he has the right to administer. If he has the right to administer he has the right over the financial transactions of the company. If he has the right to administer the financial transactions of the company it follows as clearly as daylight follows the night that he must have the right to fix the charges for freight and passenger traffic. There can be no other logical conclusion. That is the act of 1916. Whether it be wise or unwise, you now have it on the statute books. The question now presents itself, will you, by implication or by direct legislation, by the adoption of the Sweet amendment, revoke what you did under the act of 1916?

Mr. SHALLENBERGER. That is the act under which we took the railroads over?

Mr. DEWALT. Yes; and the proclamation of the President followed. That is the war act. If that be true, then the question presents itself, what reason is there for maintaining the statute as it now is? I want to be brief and I shall try to present in a few words what those reasons are.

THE RIGHT JUSTIFIABLE.

Mr. SHALLENBERGER. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. SHALLENBERGER. I have listened to what the gentleman has said, and I have been trying to find a reason why the President should be given this power as a war measure. The intent is not, as I understand it, to lower the rates. The intent must be to give him authority to raise the rates. Why is it necessary as a war power to give him that authority when it is admitted that the income of the railroads since the war is the greatest since we had railroads in this country?

Mr. DEWALT. Right there I can not agree with the gentleman. I think the power should be given not only to lower the rates but to raise the rates. I think I can show why it should be so. In the first place, let us take this undoubted fact. There is now existing, and there will be in the future, a diversion of freight upon the railroads of this country.

We know now from the newspapers and from reports from the railroads themselves that there has been a diversion of passenger traffic to the Pennsylvania and of freight traffic to the Baltimore & Ohio—necessitated by what? By the emergency. In other words, certain lines have been devoted almost exclusively to freight traffic and others again have had diverted to them the passenger traffic. We know another thing, that passenger traffic is not the paying traffic on the railroads.

They do not make money out of the passenger traffic; they make money out of the freight rates. Therefore it may be necessary for the President of the United States to initiate rates by which he increases the passenger rates in order to equalize things and decrease freight rates in order to equalize these roads.

CURTAIL PASSENGER TRAFFIC.

Mr. SHALLENBERGER. He could not do that as between the railroads.

Mr. DEWALT. Why, yes; he could if he had financial control.

Mr. SHALLENBERGER. Give a higher passenger rate to one road than to another?

Mr. DEWALT. Certainly; under the provisions of this bill.

Mr. DENISON. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Not at this time. It may be necessary, as it was in England, to decrease the passenger traffic, and why? Because some of these roads are the main trunk lines and of necessity must be used for the transportation of foodstuffs and munitions of war. In England what did they do? They raised the passenger rates in order to prevent passenger traffic, and it may be necessary for the President of the United States to initiate high rates for passenger traffic in order to keep people at home from pleasure trips and unnecessary travel.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. MADDEN. There would be an easier way to do it than that, and that would be to cut off the trains.

Mr. DEWALT. Certainly; but you do not want to stop the flow of blood through the arteries. You might as well say that

the easiest way to do it would be to bury the individual by cutting off his head.

Mr. MADDEN. On the question of rates, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. MADDEN. Does the gentleman have any fear that the Interstate Commerce Commission would refuse to grant a just rate?

PROLONGED INVESTIGATION AVOIDED.

Mr. DEWALT. I have not the slightest fear of that.

Mr. MADDEN. Then why should we worry?

Mr. DEWALT. But I have this fear: Prolonged investigations will follow, and the necessities of the occasion demand speedy action. I am with the gentleman on the broad proposition.

Mr. MADDEN. Why?

Mr. DEWALT. Excuse me, but I do not want to be interrupted in the logical conclusions I want to present.

Mr. MADDEN. But this is in line with what the gentleman is presenting. I say, why would the necessity arise for an immediate occasion?

Mr. DEWALT. I will give the gentleman one instance. There are now 1,700,000 employees in the railroad service, according to figures. I understand—I do not know with authority—that these 1,700,000 employees are now demanding an increase in wages ranging from 20 to 40 per cent. Suppose that to-morrow morning a majority of these 1,700,000 employees, through the intervention or intercession of their chiefs, say, "We will stop work unless we are paid higher wages."

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. SIMS. Mr. Chairman, I yield the gentleman five minutes more.

THE WAGE QUESTION.

Mr. DEWALT. Suppose that to-morrow morning a majority of these men, through their labor organizations, should say, "We will cease work unless you pay us"; the President might by the necessities of the occasion say, "We will raise the wages." Under the Adamson bill the wages were raised for railroad employees \$60,000,000 in one year. How are you going to meet that emergency? By going to the Interstate Commerce Commission and asking for a raise of rates and waiting three or four or five months until a decision comes, or will you say that the President shall have the power to initiate rates—not to fix them, but to put them into operation?

Mr. MADDEN. Will the gentleman yield for one more question?

Mr. DEWALT. I will.

Mr. MADDEN. Is there any more reason why the President should have the right, without any delay or interference, to raise a rate because wages were raised than the railroad companies had?

Mr. DEWALT. I did not quite catch the gentleman's question.

Mr. MADDEN. Is there any more reason why we should give the President the right to raise rates because of increased compensation to the men than the railroad companies should have that right, which they did not get?

Mr. DEWALT. Why, at that time the railroad companies were not confronted with the condition of war.

Mr. MADDEN. They were confronted with the question of increased compensation to men by reason of legislation.

Mr. DEWALT. Exactly; that is the right given under the Adamson Act, and it cost the railroad companies \$60,000,000; and now you propose to legislate and take away this power from the President of the United States and refer it again to the Interstate Commerce Commission, and all this time the trouble has been going on and everything disorganized.

RAILROADS ASKED INCREASE.

Mr. SNYDER. Will the gentleman yield?

Mr. DEWALT. I will.

Mr. SNYDER. Is it not a fact that after the Adamson law went into effect the railroad companies did ask for an increased rate of the Interstate Commerce Commission? Did they get it?

Mr. DEWALT. They did not get it.

Mr. LENROOT and Mr. WINSLOW rose.

The CHAIRMAN. To whom does the gentleman yield?

Mr. DEWALT. I yield to my colleague on the committee first.

Mr. WINSLOW. I would like to ask if they ever did ask for an increase in rates after the Adamson Act went into effect?

Mr. DEWALT. My recollection is that they did, but I am not certain.

Mr. WINSLOW. Will the gentleman yield for a further question?

Mr. DEWALT. Certainly.

Mr. WINSLOW. Is there any more reason to think that the members of the Interstate Commerce Commission under the strain and exigency of war will not get a gait on themselves as much as the President?

Mr. DEWALT. Well, they are pretty speedy individuals at times.

Mr. WINSLOW. Does the gentleman think we would have any more reason to feel that the President would act any more promptly in this matter than he did in meeting the question of indebtedness?

THE JUST CLASSIFICATION.

Mr. DEWALT. I am frank to say I do not know that. Let me give another reason why I think the President should have this right. We have provided in this bill—and the gentlemen should clearly remember this—that the President would have the right to use a portion of the revolving fund for the purchase of bonds and also that he shall have the right to issue obligations for maturing obligations that might become due during the term of Federal control.

Now, the money is not provided for that, except in so far as the revolving fund is concerned, \$500,000,000. I take it that if he deems it necessary to purchase or to issue, if you please, new obligations for these maturing obligations there should be reposed in the President the power to initiate rates—not to fix them, if you please—because the right to review still remains. If this were an absolute grant to the President of the United States ultimately, conclusively, and definitely to fix rates without appeal, I would be unalterably opposed to it; but the right of appeal would still remain in the courts and the right of review in the Interstate Commerce Commission.

Mr. LENROOT. Will the gentleman yield?

Mr. DEWALT. I will.

Mr. LENROOT. I would like to ask the gentleman what right the President or any other authority has to raise rates for the purpose of paying the indebtedness of the railroads?

Mr. DEWALT. None whatever.

Mr. LENROOT. The gentleman so stated.

Mr. DEWALT. Except in the operation of the road.

Mr. LENROOT. The gentleman so stated.

RIGHT WAY TO ARGUE.

Mr. DEWALT. Oh, no. My friend from Wisconsin has a very delightful way of picking out one word in a sentence, or possibly one phrase in a sentence, and distorting the same to his own views or purposes, but that is not the way to argue a question. The way to argue a question is from the four points and four corners of it, just as you would construe a will. You do not construe a will by taking one phrase of it. You take the whole will together, and if you take this whole act together you find that the President is to have control of the financial department of these railroads, and if he has control of the financial department of them, he ought to have control of the initiative power with respect to rates.

Mr. LENROOT. Did not the gentleman state that in order to purchase these securities of railroads it might be necessary for the President to raise the rates?

Mr. DEWALT. I still say so. The gentleman asked me about the initial power.

THE TERMS DESCRIBED.

I recognize very fully the importance of this proposed amendment, and were it worded somewhat differently I would unhesitatingly support it. I grant that this bill does not in express terms provide for the payment of a judgment which may be obtained against the companies even during Federal control. And I also grant, for the purposes of the argument, that it nowhere in explicit terms provides for the payment of judgments, awards, and decrees which have been obtained prior to Federal control. Judgments, awards, or decrees for the payment of money against carriers are charged up primarily against operating expenses and income. All railroad accounting is based upon that theory and upon those facts. This bill does provide that out of the standard return obtained by operating the railroads and the calculation of the standard return all expenses and legal expenditures shall be provided for and taken out of that standard return. But even there the language is not quite explicit enough, because it says:

That for the purposes of providing funds requisite for maturing obligations—

Judgments obtained for personal injuries, we will say, would not be maturing obligations—

or for other legal and proper expenditures—

It might be included under that broad term, but it is followed by the words—

or for reorganizing railroads in receivership, carriers may, during the period of Federal control, issue such bonds and notes, equipment-trust certificates, stock, and other forms of securities.

But I doubt whether the courts would construe that general phraseology, "or for other legal and proper expenditures," as inclusive of judgments obtained for such character of cases as that in the mind of the proponent of this amendment.

But the objection—and permit me to address myself to my colleague on the committee, the gentleman from Ohio [Mr. COOPER]—the objection to this amendment is that you propose to take the payment of these judgments out of the revolving fund, because your amendment says that it shall be the payment out of the operating revenue derived from Federal control, or, if that is insufficient, out of the revolving fund.

Now, this revolving fund—

COMPENSATION AWARDS.

Mr. CARAWAY. May I ask the gentleman a question?

Mr. DEWALT. Certainly.

Mr. CARAWAY. If the Government takes over the carrier, and so operates it that the return will not pay all the legal liabilities of the company, why should it not pay it out of the revolving fund? Suppose a man is working for the company and he is injured. He is entitled to compensation. He obtains a judgment against it, but the Government so operates the road that there is no revenue out of which it can be paid. Now, then, why should he not be paid out of the revolving fund or any other revenue?

Mr. DEWALT. I do not object to the primary construction given by the gentleman from Arkansas [Mr. CARAWAY], but I am referring to section 6, in which the revolving fund of \$500,000,000, as already agreed to and passed by this House, is specifically devoted to certain purposes, and that is that, together with funds available from any funds of the carrier, it may be used by the President for the purpose of paying the expenses of the Federal control, and, so far as necessary, the amount of just compensation, and to provide for terminals, motive power, cars, and other necessary equipment. Now, that exclusively confines that \$500,000,000 to the purpose of paying expenses during Federal control. And what is no doubt in the mind of the gentleman from Arkansas [Mr. CARAWAY] and in the mind of the gentleman from Ohio [Mr. KEARNS] is to pay judgments which were obtained even before Federal control. Do I understand it correctly?

Mr. KEARNS. No; that was not my intention.

Mr. CARAWAY. Will the gentleman pardon me a minute?

Mr. DEWALT. Certainly.

Mr. CARAWAY. There is not anything in this bill that, in my opinion, authorizes judgments for injuries occurring before the Government took over the railroads, or, in express terms, for those that may occur during Government control.

STOCKHOLDERS PROTECTED.

Mr. DEWALT. I think I said so.

Mr. CARAWAY. I beg your pardon.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. DEWALT. Mr. Chairman, I ask for a minute more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. LITTLE. May I ask the gentleman one question?

Mr. DEWALT. Certainly.

Mr. LITTLE. Under your system, would the stockholders—

Mr. DEWALT. If the gentleman will permit me just one moment, I wish to say that if the gentleman from Ohio [Mr. COOPER] will reconstruct his amendment in the line of the thought I have tried to present, I will try to give it my support.

Mr. LITTLE. Under your system, would a stockholder of the road receive his compensation before a creditor of the road would receive his pay?

Mr. DEWALT. Oh, no.

Mr. KEARNS. Mr. Chairman, will the gentleman yield?

Mr. LITTLE. On the contrary, is not that the explicit result of it if you are going to pay him out of the \$500,000,000 and not pay the other fellow?

REASONING IN A CIRCLE.

Mr. DEWALT. No. The gentleman is either reasoning in a circle or he did not catch the right point and, therefore, he does not get the right conclusion. I yield to the gentleman from Ohio [Mr. KEARNS].

Mr. KEARNS. I think the statement of the gentleman from Pennsylvania is clear, but I was busy reading the bill part of the time. What is the gentleman's opinion on the payment of the judgment?

Mr. DEWALT. There is nothing in the bill that explicitly provides for that, but—

Mr. KEARNS. Would the gentleman be willing to amend the bill so that the prior judgments would be held on the pending judgments?

Mr. DEWALT. When the judgment is final.

The CHAIRMAN. The time of the gentleman from Pennsylvania has again expired.

Mr. SHERLEY. Mr. Chairman, I ask that the gentleman may proceed for five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. SHERLEY. Will the gentleman yield?

Mr. DEWALT. Yes; I yield to the gentleman.

Mr. SHERLEY. Here was the thought that I was trying to suggest to the gentleman: That any money that should be paid to the railroads for their use and occupancy by the Federal Government, when so paid, would be subject to the payment of any judgment that had been rendered in favor of any person or corporation against such railroad.

Mr. DEWALT. Certainly, sir. The gentleman from Kentucky is exactly right. If he buys a piece of property with a mortgage resting upon it, he buys the property subject to the mortgage, and this would be a lien—

Mr. SHERLEY. A man holding a judgment against the railroad could collect that judgment out of that fund as against any claim of any stockholder.

Mr. DEWALT. There is no question about that.

Mr. LITTLE. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

CARING FOR CREDITORS.

Mr. LITTLE. You now state that the creditors who were creditors before the road passed into the hands of the Government would be paid out of the \$500,000,000 fund.

Mr. DEWALT. No; I did not say that.

Mr. LITTLE. I think you did. You say the minute the money is due from the revolving fund it becomes liable for the railroad's debts. Now, you say the money due the railroads out of the revolving fund could not be liable to the debts of the road after it had passed into the hands of the Government.

Mr. DEWALT. No; the gentleman is mistaken. The gentleman did not start with the right premise. If he had started with the right premise he would have come to the right conclusion. The gentleman said I said this was to be paid out of the revolving fund. I did not say anything of the kind.

Mr. LITTLE. This money that the gentleman from Kentucky referred to comes out of the revolving fund.

Mr. DEWALT. No; he was not referring to that at all.

Mr. LITTLE. It comes out of the \$500,000,000.

Mr. DEWALT. No. If the gentleman had listened to him and to me, he would have understood.

Mr. LITTLE. It is the gentleman who is reasoning in a circle, not I. You say the compensation will be due from the Government to the railroads. From that you agree to pay, according to your theory, a deficit that accrued before the matter passed into the hands of the Government. Is that correct?

Mr. DEWALT. We do not agree to do it, but in all honesty we provide that the President shall make regulations by which those just debts should be paid, not by execution but by regulations of the President.

THE OPERATING EXPENSES.

Mr. LITTLE. Why not pay it out of the \$500,000,000?

Mr. DEWALT. There is no objection to that except that the \$500,000,000 fund is devoted to specific purposes.

Mr. PARKER of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. DEWALT. Yes.

Mr. PARKER of New Jersey. I think this matter has been confused by speaking of judgments recovered before the Government takes over the railroads. It should be judgments obtained after the Government had taken control of the roads.

Mr. DEWALT. Yes. That is stated by the gentleman from Ohio [Mr. COOPER].

Mr. PARKER of New Jersey. No. All operating expenses due on bills not rendered are expected to be paid out of the operating expenses in the ordinary course of accounts. Is not that a fact?

Mr. DEWALT. Yes. I have stated that in my remarks heretofore.

Mr. PARKER of New Jersey. Ought not that to be stated in the bill definitely?

Mr. DEWALT. Yes; I agree with the gentleman on that. I have stated to the gentleman from Ohio [Mr. COOPER] that if he

will re-form his amendment along the line indicated I will give it my support.

Mr. PARKER of New Jersey. Will you not aid in that way?

Mr. DEWALT. I will if I can.

Mr. CARAWAY. Answering the question before, the gentleman said that moneys paid out for injuries, in satisfaction for injuries, were part of the operating expenses?

Mr. DEWALT. Yes.

Mr. CARAWAY. Does not your bill provide that the carrier shall receive certain fixed compensation, which, of course, will pass to its stockholders? Now, if that comes by agreement with the carrier and is not a fund out of which this money can be paid and the judgment paid, will not the party with the judgment against the railroad lose it? I do not know that I am making myself clear.

HOW COMPANIES ARE PAID.

Mr. DEWALT. The bill provides that the company shall be paid according to the standard return. Do not forget that portion.

Mr. CARAWAY. I will remember that.

Mr. DEWALT. Now, the standard return is made up in a certain way. How is the standard return made up? It is made up by taking the "annual railway operating income, including therein such income of lines acquired by, leased to, or consolidated with it," and in addition to that the United States may, by deductions from the standard return, or by other proper means and charges, be reimbursed for the cost of any addition, repairs, renewals, and betterments, and so forth.

There are to be certain deductions made, and in the computation of such income, debits, and credits arising from the accounts called in the monthly reports to the Interstate Commerce Commission equipment rents and joint facility rents shall be included.

The standard return and the cost of such additions, betterments, or road extensions are to be ascertained by the Interstate Commerce Commission from the reports, books, and other pertinent data of such carrier and certified by it to the President. Its certificate shall, for the purpose of such agreement, be taken as conclusive of the amount of such average annual railway operating income and of such cost. Now, all that process is gone into, and these operating expenses are deducted from the income, and the net result makes the standard return.

WIN THE WAR OUR INTENT.

Mr. Chairman, after this very extended and thorough discussion of the merits of this great act, it becomes quite apparent that in the main the provisions thereof must in some form be enacted. It is no longer a question of policy, but rather one of mere method, and I am firmly convinced that the method suggested is at this time the best that can be recommended and adopted.

Private interests and local benefits must be subdued, and are overshadowed by the public weal and necessity. This great war must be won, but it can only be won by the concentration and mobilization of all our best efforts; food supplies of all kinds, munitions of war, and every other necessity for the successful prosecution of this great conflict must be shipped to where they are most required.

And in order that this may be done the transportation facilities of our country must be centralized and mobilized and placed under Federal control. Therefore it is most urgent that this great measure be speedily enacted, so that we may not only win the war, but hasten the termination thereof, and obtain a glorious and victorious result.

Increased Compensation to Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. WILLIAM B. MCKINLEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 22, 1918.

Mr. MCKINLEY. Mr. Speaker, for a year past this Congress has been called upon to provide fabulous sums for the equipment of the Army and Navy in order to prosecute to a successful conclusion the present war. I heartily favor what has been done in this connection, but at the same time I feel that we must not overlook the needs of the Government employees at home. Our Nation has developed by leaps and bounds through the intelligence and energy of the people. A

great deal of this prosperity is due to the Post Office Department through—

First, the dissemination of knowledge on account of the cheap postal rates; second, the extension of the letter-carrier system in the small cities, the Rural Delivery Service, and through the Parcel Post System. The people are more and more becoming accustomed to the larger use of the postal facilities, and the more demands the people make on the Post Office Department the greater the work required of the employees. The business of the department has increased much faster than the number of employees or their salaries. Even before the present large advance in the cost of living an injustice has been done to the postal employees in that their wages have not been increased.

I favor the present bill because it does attempt in part to meet the high cost of living by a moderate raise in wages.

The district I represent is a large agricultural area, in which are located some 200 fourth-class post offices. We also have a complete rural delivery service. Unfortunately, we are deficient as yet in hard roads. Therefore during the rainy season, when the roads are muddy, our rural carriers are subject to real hardship in their daily work. These men in order to promptly make their delivery are required to own and use three horses. With corn at \$1.25 a bushel, oats at 75 cents, and hay at \$20 a ton, they have been compelled to pay out nearly half of their salary for feed and for the maintenance of their equipment. This is a gross injustice.

I do not feel that this bill goes far enough in paying the rural carriers or the fourth-class postmasters. For instance, in many of the villages, where the postmaster's total pay is perhaps \$900 per year, out of that he is required to pay office rent, buy his own supplies, and hire a clerk, leaving him perhaps not more than \$400 or \$500 upon which to live and maintain a family.

I hope the amendment offered providing a reasonable sum for the rent and incidental expenses for fourth-class post offices will be incorporated in this bill.

Washington's Birthday.

EXTENSION OF REMARKS

OF

HON. WILLIAM R. WOOD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 23, 1918.

Mr. WOOD of Indiana. Mr. Speaker, under the leave granted me to extend my remarks in the Record I include an address of Hon. LOUIS W. FAIRFIELD, delivered at Gettysburg on February 22, 1918.

The address is as follows:

ADDRESS OF HON. LOUIS W. FAIRFIELD AT GETTYSBURG ON FEBRUARY 22, 1918.

Mr. Chairman, ladies, and gentlemen, for many years it has been your custom to celebrate Washington's Birthday. The present time lends added interest to that occasion. We are met when a mighty struggle is being waged to determine whether the principles for which he fought shall be permitted to live in any human government or whether the principles against which he fought shall at last prevail.

More than 140 years have come and gone since the Continental Congress called him to the command of that motley army besieging Boston. Since then many a difficult problem has arisen. In all these problems his course while living has been fully justified by succeeding events.

We are met, too, in a place that those who love the Republic call holy ground. Here the Rebellion, which strove to dissolve the Union that Washington had helped to form, reached its high tide. Here, too, the literature of that struggle towers above all other in Lincoln's speech at Gettysburg. "What they did here" and what he said here have made this spot known around the world.

These hills and valleys, this village, the silent monuments that mark the heroes dead, both the known and the unknown, are our heritage forevermore, and not ours alone, but the heritage of every struggling people who look longingly and hopefully toward liberty.

Recently on the floor of the House of Representatives a distinguished gentleman said that if the rebellion had succeeded the only difference would have been that there would have been two republics instead of one. Not so. At best, there could have been but one. The one on the south would have been a

republic in name only. One-half of its people would have remained in abject slavery. The landed gentry with their retainers were the governing class. The poor white man, despised because of his poverty, would have found himself subject to a slave oligarchy.

The northern republic would have been torn asunder by mutual jealousies and ever before the ambitious agitator would be the dream of another republic. The prediction of European statesmen that in time America would be rent asunder by jarring factions would inevitably have come true. The Civil War was not fought to determine whether there should be one of two republics on this continent rather was it fought to determine whether "A new nation, conceived in liberty, and dedicated to the proposition that all men are created equal" * * * whether that nation, or any nation, so conceived and so dedicated can long endure."

We know now that those who fought here fought not only for us and for our children, but that in this crisis of all human history they battled for all the free peoples of the earth.

What manner of men were these who "Put forth a new nation, conceived in liberty?" Who were they that should dedicate a nation to the proposition that "All men are created equal?" Were they the product of the time in which they lived? "Times do not make men." "Times have called loudly and no man came." "No dolorous age need ever to have gone down to wreck and ruin if times could make men."

History is the joint product of circumstances, principles, and personalities. The attending circumstances may be adventitious. The principles may be so evidently wise and righteous that their ultimate triumph is assured, and yet, if wise, strong, and honest leadership is not at hand, hope is doomed to have its settling and forced to wait for the rising of another sun.

It has been said that "George Washington was the Revolution." So fulsome are the eulogies pronounced upon his life that at times one is in doubt as to their merit. Men have set before them the task of drawing this superman from the skies. His public career is an open book. Every phase of his service to his State and the Nation may be studied in his letters, his public documents, and the writings of his contemporaries. The account of his childhood is meager. It abounds in moral stories that would make him appear to be abnormal. Not that he was immoral, but that he must have been a boy with red blood in his veins.

Washington eludes us as no other man in human history. Yet we know there were in him the elements of our common humanity. No man can lead who has not a large measure of human sympathy. Leadership must be wise first. It must have in mind ever the average man, his hopes, his fears, his strength, his weakness, his foibles, his failures—the common man, of whom Lincoln said God had made so many.

No stupid man, no heartless man, no ignorant man can long be the idol of any people. We reach our estimate of the common human qualities in the character of Washington through an inductive study of the individual instances in which his acts betray that he was neither free from the weaknesses nor the temptations of the common man, but at best the account is meager. For the most part we are driven to our conclusions from the strange power he ever retained over the men with whom he was closely associated through nearly 50 years.

In 1754 the event at Fort Necessity made him known throughout the Colonies and to France and England—in France denounced as the murderer of Jumonville; in England praised as the defender of the Crown. From that day to the day of his death, a period of 45 years, he was the foremost man in Virginia. And from the day he took charge of that crowd of patriots from the store, the shop, and the plow, besieging Gen. Gage in Boston, to the day when at loved Mount Vernon he breathed his life away he was the foremost man in America.

For a hundred years since his death he has ranked among the foremost men of the world. There is a strange spell about his life that can not be exorcised.

The eminent scholar and distinguished statesman, HENRY CABOT LODGE, in a two-volume work, expressly written to reveal whatever weaknesses he may have had and to rescue him from the myth of being "a blameless, priggish boy" and an equally "faultless and uninteresting man," concluded in the following words:

As I bring these volumes to a close, I am conscious that where they speak at all it is in a tone of almost unbroken praise of the great man whom they attempt to portray. If this be so, it is because I could come to no other conclusion.

We know next to nothing of his childhood. At 14 he wished to go to sea, but failed to get the consent of his mother, and went back to the study of mathematics for a period of two years. This was not his only school. His brother Lawrence lived at

Mount Vernon. He was 14 years the senior, had fought with Vernon at Carthage, had been educated in England.

In the autumn of 1747 Washington took up his work with his brother, to whose home came the most distinguished men of Virginia. Here Washington met Lord Fairfax, a man of wide experience, familiar with court and camps, versed in literature, and possessed of abundant wealth. The boy and the man became fast friends. They hunted and fished and rode together. This boy, a stripling of 16, won the confidence of this old man to the extent that he sent him into the wilderness to survey his vast estate. This at an age when most boys are but children.

That first journey into the wilderness was a rough but a wholesome experience. Walking by day through the stillness of the never-ending forest, sleeping by night under the silent stars, wet, cold, hungry, tired, but never discouraged, it was the school that should prepare him for the bitter experience at Valley Forge, the weary waiting time till the clouds should roll away at Yorktown.

Through it all he was thrown upon his own resources. This taught him self-reliance. He was never a student of books, though he read well and much more than he was given credit for doing. He was above all a student of things and of men, and, no doubt, learned much from the conversation of his elders.

Three years were spent in these surveys when the declining health of his brother Lawrence led to his going with him to the West Indies in 1751. The new and strange experiences were closely studied and stowed away in his mind to be used when he should stand before the world as the type that could found a free State. Thus once, and but once, did he leave the land of his birth. Travel in foreign lands contributed almost nothing to his knowledge of men and institutions.

When two converging armies, jealous and hostile, meet, a battle is inevitable. The French had gone up the St. Lawrence River and the Great Lakes, had penetrated the continent to the sources of the Mississippi and moved down that river to its mouth. Forts were built and settlements were formed. The soldier, the trapper, the trader, and the priest had taken possession of the heart of the continent for the King of France. The English settlements were confined to the narrow seaboard, ranging in width from 50 to 250 miles. Not until 1749 did the English look over the Blue Ridge into the rich valley of the Ohio. At the same time the French began to move south from the eastern end of Lake Erie. The struggle was inevitable. Lawrence Washington saw the impending war. He brought two old companions in arms to Mount Vernon, that they might teach his brother to become a soldier.

Muse instructed Washington in the art of war, tactics, and the manual of arms, while Jacob Van Braam, a Dutch soldier of fortune, instructed him in fencing and the sword exercise. At the same time, though Washington was but 19, his brother secured for him the appointment as one of the adjutant generals of Virginia with the rank of major. His military academy was two old soldiers. His diploma was a major's commission in the Virginia militia.

At 21 he made that diplomatic mission to the Indians whom he was to conciliate and to the French whom he was to warn. Van Braam and Christopher Gist were with him. At Logstown he was joined by the leaders of the Indians, who accompanied him to Venango, the first French outpost. Thence he pushed forward 70 miles to the fort on French Creek, where he delivered his letter from the governor of Virginia. At Venango, at French Creek, and at Vanango again on their return every means the wily French could employ was used to separate the Indian chiefs from the party. Rum was freely used, but not till on the return trip did the French prevail. So well had the work been done that the Half King remained true to allegiance with the English.

Washington and Gist returned on foot, exposed to hostile Indians, plunging through swollen streams filled with floating ice and sleeping on the ground with their clothes frozen to them.

On the return he encountered a company carrying materials for the building of a fort at the mouth of the Ohio. Settlers were being scalped on their little holdings, incited by the French. The war was on, and though started in the backwoods of America it was destined to extend to the Continent of Europe and involve the leading nations of the world.

Through that war came the decision as to whether the fairest portion of America was to receive the civilization of the Latin or the Anglo-Saxon, whether the settlement should be of the type of soldier, trader, trapper, and priest, or the English type—the town, the school, and the church. The future civilization of a continent was at stake. This boy of 21 was soldier and diplomat in the opening of that struggle.

Events crowd in his life Fort Necessity, Braddock Field, the defense of the frontier, Loudon's failure, the expedition under Forbes. Through the years there is activity always, sometimes a smarting sense of injustice, rebukes by Dinwiddie. He became harassed and discouraged, believing that his best endeavors failed of their just reward. He sickened under it all and was compelled to retire to Mount Vernon for four months.

Here, at least, he is human; stung by criticism, jealous of his good name, resenting the stories of misconduct, magnifying the little into the big. Here at least he walks with us of common mold. He was essentially human in another respect. His love affairs were numerous. If he was an intense fighter, he was also an intense lover. His love affairs began as early as 14. The lowland beauty of his diary is but one of many. That he should fall in love early and often until he finally married in 1759 makes him a man after the heart of us all.

The planter succeeded the soldier, but he was more than planter. He was legislator, business man, man of affairs, counselor, leader.

The effort to-day has been to hold your minds to the formative period of his life. And while we have thus spoken no doubt there has been within mind and heart another with him. No man can speak of either without thinking of the other. Washington and Lincoln are inseparably connected. Others may imitate; none can equal. They stand alone. "Modern degeneracy never reached them." Great men defy analysis. There is an indefinable element that eludes us. We can only refer them to their class. There is but one class, no subclass. Yet a study of the difficulties encountered enables us to place an estimate upon the degree in which we are willing to assign the element of greatness. Washington and Lincoln, "Like splendid temples, send their spires high and touch all other men at their highest." Through what quaking bogs did they dig the foundations of their fame? Through what mists did the spires of the splendid temple of their lives arise to the view of an admiring world? Washington was the founder of a Nation; Lincoln was its savior. Both faced ruin and achieved success.

Will you bear with me while we survey the circumstances under which these men wrought? Washington led in the struggle of 13 weak, unorganized colonies against the greatest military power in the world. There was no navy. There was no army. There were no arms. One-half of the people were Tories. Without ships, without soldiers, without munitions, without money, with the world of thought against the principles of democracy with no central government, it was his to hold the colonies together by the success of his arms, the wisdom of his judgment, and the integrity of his purpose.

When the war was over and there was imminent danger that the fabric, so loosely woven together, would be torn asunder, it was the weight of his name that determined whether the warp put into the fabric should be strong enough to hold the loose strands together. The Virginia convention would never have adopted the Constitution had it not been for the influence of Washington. The majority in its favor was only 10, 2 voted against instructions and 8 against the known feelings of their constituents. Washington wrote: "It is nearly impossible for anybody not on the spot to conceive what the danger and delicacy of our position have been."

The battle did not end there, for that wonderful confidence which the people ever showed toward Washington made him first President of the republic which he had founded.

His choice of men for his first Cabinet exhibits his masterly knowledge of the eternal fitness of things. No really great man is so blinded by partial judgments or partisan feeling as to choose incompetents, or retain them, under stress of great events.

Four men are responsible for our present form of government besides Washington. They are Hamilton, Marshall, Webster, and Lincoln. Time forbids that I should speak of Hamilton, "Who smote the rock of public credit and abundant streams of revenue gushed forth"; of Marshall, who gave strength to the superstructure of the Government by his decisions in harmony with the implied powers of the Constitution; or of Webster, the statesman, who took up the gantlet of debate thrown down by Hayne and fixed forever in the mind of the American people the strength and majesty of the Constitution—

Life's work well done,
Life's crown well won—

They passed on.

The struggle was not yet over. Lincoln came, the emancipator. He spoke to some of you on yonder hill "With malice toward none and with charity for all." He spoke. A listening world applauds.

What manner of man is this, so strong, so gentle, so honest, so true, that though he be dead, yet speaks to us to-day?

The formative years of Mr. Lincoln were spent in Indiana. It was my privilege a few years ago to visit Lincoln City. Here Thomas Lincoln brought a child of 3 years to live in a log cabin with one side open. He was so poor that it was many years before he was able to secure a deed for 40 acres at \$1.25 per acre. One day in early spring a boy of 10, bare-footed and in homespun, with broken heart followed his mother in a rude box down the hill, through the little valley, and up the knoll to the grave where she was hidden forever from his sight. Little promise here of greatness. The stubborn hills yielded scant return, yet he lived in that log cabin and toiled over those hills until he was 21.

It is related that when the family moved to Illinois Lincoln walked and drove the cattle. The first night they broke away, and it was Lincoln's task to return on foot and bring them back.

Time forbids that I should detail his life. He fought in the Black Hawk War. He waded streams, pushed his way through the tangled forests, and slept at night under the stars—safe hidden in the heart of a continent that no veneer of the schools should weaken him until his time had come. Flat boatman, surveyor, storekeeper, bankrupt. As flatboatman he saw human beings sold as chattels, and, turning to his companion, he said, "Let us get out. By God, if I ever have a chance to hit that thing, I'll hit hard."

"The accusing angel flew up to Heaven with the oath and blushed as he gave it in." "The recording angel dropped a tear as he wrote it down and blotted it out forever."

As surveyor he was appointed by a Democrat but would not accept the position until he was assured that he might act in accordance with his own political convictions. He failed as a storekeeper. He became a bankrupt. He paid not only his own part of the debt but that of his partner as well. Said he, "My name is on that note." He was so honest that they called him "Honest Abe." Tall, homely, big of limb, and strong, he compelled the admiration of those frontiersmen. Had he not possessed unusual strength it is not certain that he would have been able to make himself their intellectual leader. His feats of strength gave him audience and his intellect challenged admiration.

The attitude of the foreign countries, not only toward the issues between the North and South, but their attitude toward free government itself enables us to understand the difficulties under which Mr. Lincoln labored.

In 1857, more than 50 years after the death of Washington, Lord McCauley wrote a friend in America, "Your Constitution is all sail and no anchor. Either some Caesar or Napoleon will seize the reins of government with a strong hand or your Republic will be fearfully plundered and laid waste by the barbarians of the twentieth century as the Roman Empire was in the fifth; with this difference, that the Huns and Vandals will have been engendered within your own country by your own institutions." He further states, "I have long been convinced that institutions purely democratic will sooner or later destroy liberty or civilization, or both." Thus the foremost historian and statesman of England characterizes our experiment in government as doomed to failure. This judgment was held no doubt by the ruling class of England and the continental countries of Europe.

The revolution of 1848 had passed over France and had left a "despotism, a silent tribute, and an enslaved press." "Liberty was gone, but civilization was saved." The world did not hope for the triumph of democracy.

The verdict was in, so far as the judgment of those who ruled in Europe was concerned. They believed and taught that a free state has inherent weaknesses that will be its undoing. The world of diplomacy was against us in its inner thought. Majority rule, as guaranteed by our Constitution, was looked upon by every country of Europe as a dream of the well-meaning visionary, but as a certain cause of ultimate ruin when the time of testing should come.

I need not tell you here to-night of domestic conditions in this country on the 4th of March, 1861. The fleet scattered, the arsenals looted, the Treasury bankrupt, the people of the North divided, coercion denounced, the right under the Constitution to preserve the Union denied, peace conventions everywhere. Bitterly assailed by a partisan press, his life threatened, ridiculed, and caricatured, it was Lincoln's task to show that our Constitution has an anchor. That anchor is the power the Constitution has conferred upon the Federal Government. The great war governor of Indiana expressed it in these words: "The Constitution and laws of the United States operate directly upon the individual and not upon the State, and as if there were no States."

That was the issue upon which Oliver P. Morton was elected governor of the State of Indiana. A great political party denied

that statement. It is the anchor of our liberties and the safeguard of civilization on this continent. To-day our fleet at hand, our arsenals with all the munitions in them, the Treasury full and running over into the laps of our allies, our people united, the prosecution of the war urged by all, no constitutional right of the Government to reach out and lay its hands on the men of every State is raised, no peace conventions in any State, no partisan press assailing President Wilson, a large part of the world allied with us and dependent upon us, the press of the world praising and not cursing, all the parties united to help and not to hinder. If the problems of President Wilson are stupendous with a united people behind him, with three-fourths of the world in alliance with him, and with an almost inexhaustible supply of men and money available, what must have been the magnitude of the task set before Washington and Lincoln?

Service Being Rendered by the Citizens of New York.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to print in the RECORD a letter, with accompanying orders, just received from the adjutant general of New York, showing the service being rendered by the citizens of the Empire State.

Mr. Speaker, without any spirit of braggadocio or any desire to be considered obsessed with narrow State pride, I have thought, in justice to the efficient service rendered by the officers and the civilians who have generously contributed their time and their effort to the administration of the law, as well as to the splendid patriotism of the men of New York and the unquestioned loyalty of her citizens, that it was proper to set forth what they have accomplished and to show how steadfastly our boys are upholding the honor of the flag in foreign service, afloat and ashore, as well as protecting lives and property without our borders. Unmeasured credit is due them for their unselfishness, and unstinted praise for their noble purpose in serving both the Nation and the State.

The matter referred to is as follows:

STATE OF NEW YORK,
THE ADJUTANT GENERAL'S OFFICE,
Albany, March 23, 1918.

HON. FREDERICK C. HICKS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN HICKS: As a loyal New Yorker, you will be interested to read the inclosed two orders which I have just issued. We are very proud of the service which the New York Guard, now numbering 18,000 men, are doing in the State of New York to protect lives and property; but it is essential that we encourage as much as possible enlistments from it into the Federal Army, because the men whom we have trained are prepared to enter Federal service as noncommissioned officers, something very important to a new organization like our National Army.

It gives me great pleasure to report to you that over and above the 69,241 men whom we have drafted and sent into the Federal service, and the 100,000 volunteers who have also entered that service, we now have in this State, for the protection of lives and property, no less than 63,000 trained efficient, 18,000 of whom are in the New York Guard, 10,000 in the Home Defense Reserve, and 35,000 more who are youths between 16 and 18 years of age, whose military training is so far advanced that they are now taking part in regimental reviews.

We are glad to say that in this regard New York State can safely invite comparison with the other States of the Union, in many of which there has not even yet begun the organization of armed bodies of men to protect lives and property, which protection is now desirable, but which will become vitally necessary after the shipment to France of our Regular Army, our National Guard Army, and our conscripted army.

Very sincerely,

C. H. SHERRILL,
The Adjutant General, State of New York.

STATE OF NEW YORK,
THE ADJUTANT GENERAL'S OFFICE,
Albany, March 21, 1918.

General Orders, No. 13.

I. The New York Guard is not only performing a valuable and necessary service in training its members for State duty and in guarding the Barge Canals, the New York Aqueduct, railway bridges, and various public utilities and munition plants but also it is at the same time serving the Nation as a training school for the Federal Army. The value of the New York Guard as such a training school can not be overestimated, especially in the preparation of noncommissioned officers, so essential to a new force like the National Army. Many men after a period of training in the State service are enlisting in Federal service, the United States thus obtaining recruits with military experience, and the men thus enjoying a training in the New York Guard fitting

them for rapid advancement in Federal service. Men of draft age are also finding service in the New York Guard a useful preparation for their duties after being called to the Federal colors.

II. It is the desire of this office to facilitate in every way the enlistment in Federal service of members of the New York Guard who are willing to so enlist. With this end in view, commanding officers will afford every opportunity to members of their commands for such enlistment, granting them passes for not to exceed 24 hours for that purpose if on active duty. Discharges, however, will not be granted until the applicants are accepted for enlistment by a United States recruiting officer, and upon receipt of official notice of such acceptance action will be taken as set forth in paragraph III of this order. Commanding officers should also establish cordial relations with United States recruiting officers and should cooperate with them in obtaining recruits whenever requested to do so.

III. Upon receipt of official notice either from this office or from a United States recruiting officer that a member of the New York Guard has been accepted for enlistment in Federal service, his immediate commanding officer will at once apply to the proper officer for the discharge of the man from the New York Guard. If the man is on active duty, he will be relieved therefrom as promptly as possible. If the man is not on active duty, he will be considered as released from State service upon his turning in to his New York Guard company commander public property in his possession, and his discharge will be forwarded as hereinafter indicated. The discharge of an enlisted man accepted for Federal service will be forwarded to the United States Recruiting Officer who accepted the man, with request that same be returned for cancellation in the event of the man not completing his enlistment in the Federal service.

By command of the governor:

CHARLES H. SHERRILL,
The Adjutant General.

STATE OF NEW YORK,
THE ADJUTANT GENERAL'S OFFICE,
Albany, March 22, 1918.

General Orders, No. 14.

I. The Regulations for the Military Forces of the State prescribe that deliberations, discussions, statements, or remarks, with respect to military matters, whether oral, written, or printed, by officers or enlisted men of the State forces, criticizing or reflecting upon others in the military service of the United States, are prohibited.

II. While this prohibition is necessary at all times to proper military discipline, it assumes especial importance in time of war when the entire Nation is vitally concerned in military matters. At such a time any real or seeming disagreement or difference of opinion in the Military Establishment, or any criticism or reflection upon those engaged in the conduct of the war, which is given public expression, tends to embarrass the National Government in the exercise of its proper functions, and is used by those who would sow discord and dissension among the people as an evidence of weakness and mismanagement on the part of the Government.

III. It is evident that any violation of this prohibition should be promptly and severely punished during time of war. Under the Articles of War such an offense is punishable by dismissal from the service in the case of officers and dishonorable discharge in the case of enlisted men and such other punishment as a court-martial may direct.

IV. Members of the New York Guard are hereby directed to carefully observe the provisions of regulations in regard to this matter. Commanding officers will promptly report any violations thereof. This order will be posted on the bulletin boards of all organizations of the New York Guard during the period of the war.

By command of the governor:

CHARLES H. SHERRILL,
The Adjutant General.

The Letter Carrier and the Salary Question.

EXTENSION OF REMARKS

OF

HON. HENRY I. EMERSON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article written by Patrick J. McNabb, vice president of the National Association of Letter Carriers.

The article is as follows:

THE LETTER CARRIER AND THE SALARY QUESTION.

[By Patrick J. McNabb, vice president N. A. L. C.]

Thirty years ago before the rising tide of high prices had begun to eat into the substance of things, the letter carrier had what was generally considered a good position, and his salary of \$1,000 a year with steady work raised him above his fellows in many communities. Well do I remember the respect paid to one of these fortunate mortals who lived in the same street where I was brought up, and how "us kids" used to wish our father had a job like that; for he it understood that there seemed to be a vast difference between the lime-sprinkled clothes of the bricklayer or plasterer and the natty uniform of the letter carrier; and while the daily wage of the mechanic of that period compared favorably with that of the man in gray, the letter carriers' steady employment left him somewhat ahead at the end of the year, so there was a real difference in his favor also.

Yet even at that time we find that letter carriers having formed an organization to better their conditions had made an appeal to Congress for a higher salary, and while they were not without friends they worked until 1907 before they succeeded in securing a new classification ranging from \$600 up to \$1,200. Five years later the \$600 grade was eliminated, so that to-day letter carriers in first-class cities are appointed to the regular force after a period of substitution of about five

years, and begin at \$800 per year, being increased \$100 each year of service until the maximum \$1,200 is reached. Counting their years of substitution they will therefore average about \$750 for each of the first 10 years of service. To-day therefore the letter carrier is not the favored child of fortune that he seemed to be some years ago, for now no self-respecting mechanic would consider himself more than half paid if he in 10 years earned only \$7,500.

When it is considered that even this lowly wage is reduced still further by time lost through illness—for Uncle Sam only pays wages to employees when they are at work—and the employees are thus forced to insure their salaries through their own associations, just as they insure their lives, and when after long years of service and the illa consequent on old age overtake them there is no outlook but to lay aside the bag and make way for a younger man, it is not at all strange that the service is not now attracting the same quality of men that it has in the past, nor until these conditions are remedied will it be attractive to those who would make it their life work. Yet with all these drawbacks the men now in the service are loyal, efficient workers, whose dependability in all sorts of weather and under all conditions has been noted times without number.

Poorly paid as they are, yet they have responded manfully to every demand of their Government during the war—thousands of them having given up their positions and are now serving in the National Army and many more are ready to go. Nearly every local branch of letter carriers in the country has bought liberty bonds from its treasury, and the individual members have made a remarkable showing in purchasing these bonds on the installment plan.

The Post Office Department expects its employees to at all times conduct themselves so as to reflect credit on the department, and the standards of efficiency it has set for the performance of duty make it impossible for a man to continue long in the service if he misconducts himself. As a matter of fact, the discipline among such a large body of men is better than in any industry in this or any other country. During some seasons of the year it is simply marvelous how they pitch in and get rid of the enormous tasks laid out for them. In the Christmas season just passed, which set a new high-water mark for its volume of mail, we were commended by the officials from the Postmaster General down for our cooperation in the work, and we appreciate this courtesy on their part, but we must very respectfully, but still very firmly, urge that in return for the service we render the Government owes it to us to place our salaries on the same level as to purchasing power that they were in 1907, when the present classification went into effect. This is not asking anything in the nature of a special favor, but only giving us what the employees of every private corporation has already done for them. We want to continue to be loyal and efficient workers, but we must live, and our families must live, and our children must be educated properly if we and they are to help make this country what our forefathers destined it to be—the land of the free and the home of the brave.

Arms and Ammunition.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 26, 1918.

Mr. TILSON. Mr. Speaker, under leave to extend my remarks in the RECORD I insert the following:

[Speech delivered before the Union League Club, of New York City, on Thursday evening, March 14, 1918.]

Mr. President, members of the Union League Club, and guests, I am not unmindful of the privilege it is to address an audience of this character, a representative audience of the men in America who are doing things worth while. This privilege is the reason and excuse, if one were necessary, for stepping out, even for a few brief hours, from the busy, exacting life now being led by those of us who are trying to do things at Washington the best we can under the circumstances.

In fairness to you you should be warned in advance that I am not an orator and by no means an entertainer. I can not even tell a funny story. I tried it once. The story was funny enough, for I had heard it told several times with the effect of convulsing the audience with laughter. When I finished my attempt to tell it, the story was mangled beyond recognition and my audience was in tears, especially those of them who were my friends.

However, it should not be expected that a subject dealing exclusively with instruments of death and destruction be humorous or even entertaining. If I should be successful in further arousing your interest in this now most vital subject, and possibly adding something to your stock of information on the subject, I shall not have come to you in vain.

The subject of arms and ammunition is broad enough to require a long course of lectures to cover it thoroughly. I chose the subject for this occasion for much the same reason that the old minister chose the text. I do not think any of you have heard this story, for I think it had become obsolete in the metropolitan district and passed out to the provinces before any of you were born. At any rate, I heard it in the backwoods of Tennessee, where I lived when a boy. As it is not funny, is brief, and illustrative of my point I will tell it.

The board of deacons had taken to task the preacher for scattering all over the lot in his sermons instead of sticking to his text. The minister promised to do better in this regard for the future. He fulfilled his promise to the letter in the very next sermon, for his text, taken from the third chapter of Romans, read as follows: "Much every way." So as to what I shall say to-night, it will be difficult to get away from my subject.

It was my first thought to dwell exclusively on arms and ammunition used by our land forces, the subject in connection with the war with which I am most familiar. There is, however, one feature in connection with our Navy sufficiently analogous to weapons used on land to warrant me in referring to it in this connection. It is the torpedo.

I shall not attempt to consider its tactical use or its place in the naval program, for I am not a naval man and do not feel competent to discuss the subject from that angle. I shall treat it as ordnance—a weapon—a projectile. The fact that water is the medium through which it is directed on its deadly mission is only incidental so far as my purpose is concerned.

For many months after the outbreak of the present war in Europe the world was flooded with a stream of publications called Redbooks, Whitebooks, Bluebooks, Yellowbooks, Orangebooks, Graybooks—all sorts of books—telling the causes of the war and trying to locate the blame for it. After reading all of these different books different people came to different conclusions.

When the United States entered the war we issued a Red, White, and Blue book telling "How the war came to America," and several other books of like tenor and colors. There may be those so impervious to truth that even our books may not be accepted as conclusive; however, in my opinion, the cause of our being in the war was the unjustifiable use of the weapon, a beautiful sample of which you saw in the entrance hall of the club as you came in to-night.

It is with considerable hesitation and some trepidation that I attempt to speak of the torpedo in this presence or in this city. Within the limits of Greater New York are a number of men who have studied this subject for more years than I have days. There are men here to-night who have given freely of their time, their energy, and their means to the development of this weapon. It is not too much to say; in fact, it is well within the facts, and only simple justice to say that without the E. W. Bliss Co., and the patriotic, persevering, persistent efforts of the officials and representatives of that company the United States would not have had this highly developed, accurate, and effective weapon of national defense.

You must remember that through the earlier years of its development naval experts were by no means agreed as to the utility of the torpedo as a weapon. It is not unfair to say that probably a majority of them believed it to be little better than an interesting toy. In my judgment the chief credit for its evolution from a pretty toy to the most formidable weapon of the realm of the deep is due to the officials of the Bliss Co., who, through evil as well as good report, through discouragement and threatened loss, persisted in their purpose until success crowned their efforts.

It is through the courtesy of the Bliss Co. that this beautiful and instructive as well as destructive exhibit is in the clubhouse to-night. It was expected to have it in front of this platform, but it proved to be too heavy not only for bringing upstairs but also for the floor construction. After we have finished here, I shall be very glad to explain the torpedo downstairs.

There is a very interesting history of the development of the torpedo, and a large part of it has been written in Brooklyn. I am sorry I can not go into it to-night, for, as I have said, it reflects great credit upon American brains and enterprise. The most active men, possessing these brains and responsible for this enterprise, are residents of this city, and some of them are members of this club.

In a speech on the floor of the House about a month ago I went into the subject at some length, making very liberal use of historical and descriptive matter furnished me by Mr. Leavitt, of the E. W. Bliss Co., who is here to-night. If anyone should be sufficiently interested in the subject to desire a copy of that speech, my secretary will send him a copy upon request.

I shall not dwell at more length on the torpedo, first, because there are those here who can explain it better than I; second, for lack of time; and, third, because the problem of the torpedo is one of our few solved problems both as to character and quality and the capacity for producing it, while in other fields to which I shall ask your attention presently there are many problems—serious, difficult, and of vital import to our national safety—that are either unsolved or only in process of solution.

I wish it were possible to cover the entire arms and ammunition situation, but that is not possible; so I shall confine the

remainder of my remarks to small arms, including our shoulder rifles and machine guns.

Before taking up the details of the subject or explaining my exhibits, I wish to make a few observations on the general subject of national defense.

I hope you will agree with me that never again in the annals of our national history should it be permitted to come to pass that our property, our lives, our liberties, and our very existence as a Nation shall be dependent upon the naval force of another nation for protection. Yet such has been the fact.

When we went into this war we realized that with the navies and merchant marine of Great Britain and France at her disposal and the armies of those countries out of the way, Germany could land an army on American soil and march it to Chicago without serious opposition. Untrained men without arms in their hands can not stand before an army properly armed and disciplined, nor can brave and well-disciplined men, if not adequately armed, prevail against such an army.

We have never had sufficient rifles, machine guns, cannon, and ammunition or the facilities for quickly providing them to repel an invasion by any power able to control the seas. We are now on the road to better things and making some progress, as I shall show presently, but we should firmly resolve that never again will we lull ourselves to sleep under the sole protecting care of a foreign though friendly navy. Nothing short of adequate preparation to properly defend ourselves at all times should ever again be permitted.

Prophets and dreamers of all ages have foretold the time when wars shall cease. They are still at it, and I hope they are right. Perhaps no passage in the entire Bible is more familiar than that in Isaiah and Micah—I have often wondered which of these sage old prophets cribbed from the other—foretelling the day when men "shall beat their swords into plowshares and their spears into pruning hooks." Everybody remembers and quotes this beautiful Scripture.

I dare say that not so many recall that the prophet Joel, whose credentials are just as regular as those of Isaiah or Micah, brought in a minority report on this subject, in which he says:

Prepare war. Wake up the mighty men. * * * Beat your plowshares into swords and your pruning hooks into spears.

I never could understand why Isaiah's proposition should be accepted at face value while Joel's words should be almost forgotten, unless—in the vernacular of the famous baseball evangelist, who has just concluded at Washington an undecisive campaign against the devil and the Kaiser—it was because Isaiah was signed up with the major league of prophets, while Joel is assigned to the minor league.

Pardon me for seeming to dilate somewhat unduly upon this Scripture prophecy, but, in my judgment, a misinterpretation or misapplication of the beautiful visions of Isaiah and Micah has had an unfortunate effect upon the very vital matter of national defense.

I shall leave the subject of prophecy with this additional observation: If I remember my Bible history aright, Isaiah and Micah both lived in the reign of Hezekiah, King of Judah. Their prophecy referring to an ideal state in the far-off future unfortunately became in effect the governmental policy of that kingdom. Captivity in Babylon was the logical result. Joel probably lived after the exile. Those who returned from the captivity were a sadder but wiser people. They were subjects of the Persian Empire and paid tribute to a foreign master. Gone was the glory of Israel; gone her name and place among the nations; gone the liberties of her people. In the light of all that had transpired, if Joel had preached the pacifist doctrines of Isaiah and Micah, I dare say he would have been as popular in Judea as LA FOLLETTE now is in the United States Senate.

For a long time, even after the war broke out in Europe, the generally accepted idea here was that practically the only thing necessary for our national defense was men. Some people, like you here in New York, wished to have the men trained, while others, like the peerless leader from Nebraska, Mr. Bryan, were willing to entrust the safety of the Republic to the keeping of men untrained. As a natural result, New York became strong for universal military training and the selective-draft law, while Nebraska clung to the principle of raising an army of a million men between sunrise and sunset.

Of course, New York was right, but only to a degree. I, too, favor universal military training with all my heart, believing it to be the only safe and sensible way, and I hope you will continue to be for it until it shall become a fixed part of our national policy. However, if you follow me in what I have to say, I hope you will not leave here with the idea that you will have solved the problem of national defense when you have trained your man power.

Mr. Bryan was nearer right than he ever was in all his whole life before when he said a million men would spring to arms between sunup and sundown. Of course, like most theorists, he left out of his program the little matter of having arms to which they could spring. With that trifling exception, he was almost right.

On June 5 last, between the rising of the sun and the going down of the same, we enrolled for military service nearly 10,000,000 men. We could have enrolled as many more the day following without going beyond the normal age for military service. Plattsburg and other training camps have demonstrated that by a system of intensive training it does not require a very long period to turn these men into reasonably dependable soldiers.

No; the trouble is not with the men. We have the men—and I do not regard it as mere rhetoric when I say the best men in the world. They are patriotic, they are brave, they are capable. Patriotic as they are, brave as they are, capable as they are, they must of necessity be weak, impotent, helpless if not thoroughly armed and equipped with the essentials of modern warfare.

The progress of the war thus far has demonstrated beyond peradventure that a preponderance of metal wisely used will win the war. The problem is to prepare the metal in the proper shape for use, to provide it in sufficient quantities, and to get it ready in time. In this regard we were woefully unprepared at the beginning of the war. It is very difficult to fix the blame for this condition. There is, however, blame enough to go all around, for it is only the plain truth to say that we were all to blame.

A few weeks ago, by reference to the CONGRESSIONAL RECORD covering seven years of my service, I proved to the satisfaction of the House that I, at any rate, was not to blame. I was wrong, however. True, I had been pounding away on this subject for seven years. True, the speeches I have made on it in the House during the last three years are more numerous than the Epistles of St. Paul. True, I not only called attention to a general lack of preparedness, but I specified just what was most dangerously lacking and how to go about getting it. True, I warned the House against what would happen if war came without our having done those things, and, unfortunately, I have seen my prophecies fulfilled.

Still I was to blame. My voice in Congress was like the voice of one crying in the wilderness. I should have come to New York and secured the financial backing of some one who, unlike myself, is not under the painful necessity of supporting a family on a Congressman's salary in these inflated times. With his aid I should have hired a hall, hired an audience, hired a newspaper, if necessary, and compelled the people to rouse themselves and heed my warning. Having failed to do all this, I must shoulder my share of the blame.

My plan was as simple as it would have proved effective if it had been adopted. Carried out in time of peace, it would have been comparatively inexpensive. We are trying to do the same thing now in the midst of war, at a frightful cost, while the success of the allied arms awaits its doing.

I can best illustrate what I mean by a concrete example, and there can be no better or more appropriate example than the Army rifle.

Before proceeding with the rifle, however, I wish to invite you to ask questions freely at any point. I am accustomed to having this done, and shall feel that I have not succeeded in securing your interest if no one thinks it worth while to ask me a question. It will not disturb me in the least, but, on the contrary, will serve to stimulate and help me. The only limitation is that any question asked be pertinent to the particular point being considered.

Here are three military rifles from my own collection. This one [indicating] is our Army service rifle, model 1903, heretofore known as the new Springfield. To make this rifle requires something like 1,400 different machine operations, each requiring a special jig, die, templet, or tool and almost as many different gauges. Without these things rifles can be made only by hand, which is absolutely out of the question for the most obvious reasons.

With the dies, jigs, gauges, fixtures, and other special tools, the capacity for the production of rifles, as of almost any other article made of metal, may be increased almost indefinitely. Procuring these preliminary essentials has been and is the most difficult and delay-provoking problem confronting our War Department.

When the war came to us we had about 700,000 of the Springfield rifles, the best in the world; there was no question about the quality of them. We had only 700,000 of them; but even that was not the weakest point, although the number is very small, considering the millions that are being used in this

war. The supreme difficulty was that we were not prepared to make any more or only a comparatively small number. To a man who does not know anything about the manufacturing of rifles, that might not mean much. He would say, Why do not you go out and get them made? There was one of the best reasons in the world why we did not: It was because we could not do it. I told the House of Representatives over two years ago that it would take two years to get ready to make rifles; that it would take that long to make the jigs, dies, gauges, templates, tools, and various kinds of fixtures to fasten these different tools on the machines to make rifles. How did I know that? I did not pick it out of the air like we are going to get nitrogen. I watched the experience of Great Britain. War came to Great Britain and found her very much in the same shape we were in, so far as rifles were concerned. She was all at once confronted with the problem of sending a great army out of the country; she did not have the rifles, and could not make them; she did not have the jigs, the dies, the gauges, the tools. More than that, she was just preparing to change over from the old Lee-Enfield rifle to a new one, which was a very good gun, but still on paper when the war came. The caliber was slightly less, and it was to shoot a rimless cartridge like those used in our gun and in the German Mauser. When the war came on, the British wanted guns very badly. They came over here and brought their designs to our manufacturers, changed only in this respect, to shoot the .303 cartridge with the rim, so as not to have two kinds of ammunition. Our manufacturers set about getting ready to make the rifles. British representatives said, "Make them as fast as you can and hurry up about it; we can raise 10 men for every rifle we can get hold of." Months went by, and I began to inquire how many guns we were shipping to Great Britain. None! A year went by. Still none; not a gun! Why not? I asked. "We are getting ready to make them," was the invariable reply. Thirteen, fourteen months went by, and only a few rifles delivered, and these partly hand finished; at any rate, they were not in full production.

Eighteen months had gone by before we were sending any quantity of rifles, much as Great Britain needed them, and it was two years from the time those contracts were placed in this country before we were shipping rifles to Great Britain in sufficient quantities. By that time we were turning them out at a great rate—possibly as high as 15,000 a day. This rifle, called the modified Enfield, combined many qualities of the best rifles made up to that time, 1914, when this rifle was designed. Just as our manufacturers came in sight of the end of their contracts with Great Britain we came into the war, and then we needed the rifles. There was some controversy in the newspapers—not among people who knew—as to whether we should use the Springfield or the Enfield. There was never any question about the point in the minds of people who knew—we would use the Enfield. Why? Because we did not have the Springfields and could not make them in time. There was quite a little discussion as to whether we should chamber the Enfield for the British ammunition or for our own. Finally it was decided to chamber it for our own, and I think wisely, as it prevented confusion in the use of ammunition for it and for our Springfields, as well as for other good reasons.

I hold in my left hand the modified Enfield, made in this country, chambered for British ammunition, and in my right hand the same rifle modified to shoot American ammunition. See, they are almost exactly alike. You can not tell them apart. We prepared to make this rifle with that slight modification, and it took at least three months to do it. After the change was made we were soon turning out rifles very fast. Some of the manufacturers, knowing what was coming, because they saw what must come, went ahead and made a part of their changed tools and gauges before they even got a contract. They gambled on it. Within a month after they received their contract they were turning out rifles that otherwise would have taken them at least three months. The Winchester Repeating Arms Co. was one of them.

Question. Why did they change the caliber?

Mr. TILSON. Because otherwise we should have had to scrap or render obsolete our 700,000 Springfields, with which the Regular Army and the National Guard were armed, as well as such production capacity as we had, which was about 1,000 a day. It is more now. That is what would have happened if we had gone over to the British ammunition, or else we would have had two kinds of ammunition, which is confusing, as you can see.

Question. How far will that rifle carry?

Mr. TILSON. It will carry farther than you can see to aim it. It is sighted up to something like 2,400 or 2,600 yards. It shoots far enough and accurate enough. I think the sights on the Enfield rifle are better, however.

I will speak just one word about another reason why we changed the caliber. We think our cartridge is very much superior to the British. I do not have any doubt about it. I have samples here of the cartridges of the different countries. This one is the British .303, made by Winchester. It has a rim, a little heavier bullet, and not quite as much powder as ours. This is a Russian cartridge. This is a German—said to be a dum dum—and this is a German airplane cartridge. You see the American cartridge is rimless; a rim cartridge tends to jam.

Another point perhaps few realize unless they cut the bullet into pieces. Here is one of our own bullets cut apart so that you can see it. Here is a British bullet sectionalized. Do you notice that bright piece at the forward end of the core of the British bullet? That is aluminum. That came about in this way: When we changed the old lead bullet for a steel-jacket bullet, which we had to do as soon as we used smokeless powder, we adopted the steel jacket but retained the round-nose bullet. Then some fellow—I think he was a German—discovered that if we lengthen the bullet and make it pointed, we get a longer range. Germany sharpened the bullet, and, of course, everybody else followed suit. When Great Britain attempted it, ballistic trouble was encountered. The bullet lost its balance and with it its effectiveness. A piece of aluminum was placed here in order to restore the balance. All British bullets have this little piece of aluminum. It is not a great deal of trouble to put it in, but it requires one additional operation and an additional material. It is preferable to get along without it, and in the United States cartridge we have done so. This is the French cartridge. You will notice that it is a rim cartridge and has a solid copper bullet. I have here an incendiary bullet, and here is the design of a tracer bullet which we are to use.

Question. Are these bullets made with the sharp noses so they can shoot straighter?

Mr. TILSON. They give less resistance to the air.

Question. What is the reason that the torpedo has a blunt nose?

Mr. TILSON. It goes through the waters and I do not believe that the round nose impedes the progress materially. As a matter of fact, I do not know why that particular shape was adopted in the development of the torpedo. Mr. Leavitt informs me that I am right as to the progress of the torpedo not being seriously impeded. It is also of even greater importance to have the bulk of the charge as close as possible to the target at the instant of explosion. The bullet, at any rate, was made with a sharpened nose, because it was found on trial that it offered less resistance to the air.

Question. How do these rifles compare in weight?

Mr. TILSON. The Springfield is a little lighter—not very much. You will see that it is shorter and it is a trifle lighter, but not a great deal.

Question. Has it a longer range than the Enfield?

Mr. TILSON. The British Enfield, with British ammunition, doesn't have quite as long a range as the Springfield on account of the cartridge. You will see that our cartridge has a little less metal and a little more powder. Here are the two cartridges, side by side. See the different amount of powder in the American cartridge. It has a muzzle velocity some 300 feet greater, I believe, per second, than the British. So far as any of the fighting now being done is concerned, the question of a few feet difference in muzzle velocity or of a few hundred yards in range, is not going to make very much difference in effectiveness.

There is one other problem that has been worrying us a great deal more than the rifle and that is the machine gun. As to the rifle we were, indeed, fortunate. Great Britain had come over here and paid us to get ready—yes, actually paid us to get ourselves in shape to manufacture rifles against the day when we should need them badly. We were not quite so lucky with regard to machine guns. A machine gun shoots exactly the same ammunition as a rifle. It is not artillery. It is just glorified infantry. Our situation in regard to the production of machine guns at the time of our entry into the war was discreditable. I am sure that is not too strong a word.

You will remember the hasty mobilization of our National Guard down at the Mexican border in 1916, after Villa's raid and the machine gun had jammed. I went down with my regiment, and we happened to have machine guns—four of them for an entire regiment. That number seems ridiculous now, as we think of the number now required for a regiment in the world war. Some of the other regiments did not have any, and the Ordnance Department did not have any to give them. Some one hustled about and bought 300 Lewis guns chambered for British ammunition, and sent them down there.

There has been a great deal said about the Lewis gun—a great deal pro and con. Some people seem to think that there is

some sort of an Ethiopian in the woodpile in regard to the Lewis gun. Some think we ought to have discarded all other guns, while others insist that we should discard it. I do not fall into either the pros or the cons. The truth to tell, the Lewis gun was a developed gun, thoroughly tested and tried under service conditions, and, most important of all, was in actual production. We should have supplied ourselves with it. We did not, and as a result are to-day buying it in large quantities, many thousands of them, at an increased price. We are going to use it in airplane work. You know that in an airplane of the two-seater type, having at least two guns, one gun is on the fuselage—the body of the machine. It is made fast to the machine, so that the pilot does not aim the gun, but takes aim by maneuvering the machine. It is pointed in the right direction, thus aiming the gun at the enemy, and by pulling the trigger the pilot lets him have it just as fast as possible. In order to do that it is often necessary to shoot through the propeller blades. To do this the firing of the gun must synchronize with the propeller. This is impossible with some guns; it is not possible with the Lewis gun. Col. Lewis, I believe, does not think this of great importance, but I disagree with him. In my judgment it is more important than he thinks. It is, however, a splendid flexible gun for airplane work.

This gun [taking up another] is made by the Marlin people at New Haven, called the Marlin aircraft gun. It is readily synchronized with the propeller, and will work perfectly with any number of revolutions from zero up to 2,000 per minute. The Marlin people are also synchronizing the heavy Browning gun, which I have here. It is to be used for a fuselage gun, taking off the water jacket. There are something like 40,000 Marlin aircraft guns ordered for fuselage guns in airplanes and at least that number of Lewis guns for flexible guns. Both these guns are in production. Any necessary quantity of them can be turned out. The men who make these guns had the courage of their convictions. They made the guns and made the tools to turn them out in wholesale quantities.

The Lewis gun, as you see, has a metal drum magazine. The Marlin gun feeds from a belt. These belts are sometimes plain web, sometimes strengthened with strips of brass on the web belt, and sometimes like this one, made of metal links, which detach themselves and fall off as it runs through the gun. This is called a disintegrating belt, the links drop off and disappear, preventing any possibility of the belt getting caught in the propeller.

The Lewis gun occupies a place between the two Browning guns. Here is the heavy Browning, and there on the floor is the light Browning. The Lewis weighs about 26 pounds, the light Browning weighs 15 pounds 8 ounces empty.

This one—heavy Browning—weighs something in the neighborhood of 38 pounds, so that the Lewis gun falls right in between the two; there is nothing else that quite takes its place. There is an objection often made to the magazine—that it is easily put out of commission if dropped on the ground—this tin-pan arrangement—then it does not function properly. That is probably its weakest feature, but it is a good gun just the same. Any of you who have seen moving pictures of any machine gun work on the western front in Europe have seen the Lewis gun, for it is very generally in use and in evidence. With these two guns—the Marlin and the Lewis—available and in production, there was no excuse for us being without machine guns. The only criticism I have to make is that we ought to have had more for training purposes.

Here is the light Browning; it weighs 15 pounds 8 ounces. It gives evidence of being a wonder for shooting. I have tried it myself. It is fired from the shoulder or from the hip. It is a couple of pounds or more lighter than the French Chauchat gun, which is fired from the hip in this way, by aiming as you step forward.

Question. How many shots?

Mr. TILSON. It has two magazines, 20 and 40 cartridges each. You can have either one you wish. Of course, the 40 magazine is much heavier. The Lewis gun has a magazine of 47 cartridges. It also has a double-deck affair that doubles that number, and which is very helpful when they use it as a flexible gun in an airplane.

Would anyone like to ask any questions about the Browning?

Question. How long before it heats up?

Mr. TILSON. It heats up very quickly, the same as these other rifles. It can be fired 200 or 300 shots before it gets so hot that it can not be used at all. In 30 seconds I once fired 250 cartridges from the heavy Browning. Five hundred cartridges will make the water boil in this water jacket and come out as steam.

Question. How do you get aim when shooting from the hip?

Mr. TILSON. Something like playing a hose. You get a general aim just by feel, I suppose. I have seen men shoot it that

way, and they get wonderfully good results. Of course, you are discharging so many shots that you shoot all around your target.

Question. Is the light Browning gun being produced in large quantities, and what is the rate of production now?

Mr. TILSON. You are coming to the weak point in the whole story. It is an unfortunate fact that this gun is not yet in full production, but it is coming on rapidly.

Question. Of the two guns, which shoots the greater number of shots in a given time, the light Browning or the Lewis?

Mr. TILSON. Well, they shoot at about the same rate; and it really does not matter so much about the number of shots per minute; that is usually not so important. There is just one time when it counts, and that is in an airplane when you get a line on the enemy. Then you wish to turn loose the greatest possible number of bullets in the least possible time.

There is one other point about this gun, before I answer the question of the gentleman over there—this gun is either semi-automatic or full automatic. If you see one of the enemy—only one—and you have time to take aim, by just shifting the lever you make it semiautomatic; that is, you have to pull the trigger for each shot. The same applies when ammunition is scarce. If there is a whole bunch of the enemy, and you wish to play a shower on him, you just pull this lever over, then pull the trigger and keep pulling. They will all go. That is a great advantage in this gun.

I said that this gun is not yet fully in production. That is true, but the outlook is very promising. I got an official report the day before yesterday. We then had 595 of these guns, of which Winchester in New Haven had built 484, which shows that they are getting along.

Question. How long does it take to put in a new web?

Mr. TILSON. This doesn't shoot from a belt. It uses a magazine.

Question. How long does that take?

Mr. TILSON. Oh, a very short time. You can change it very quickly indeed.

Question. What is that on the muzzle—a silencer?

Mr. TILSON. No; that is not a silencer. It is to mask the blaze of fire that comes out.

Question. Is that larger than the bore?

Mr. TILSON. Yes; you can put your finger in it.

Good as it doubtless is, this heavy Browning gun is not yet in production. It is going to be used for the heavy gun on the ground, like the Vickers. By the way, it seems very difficult to put the Vickers heavy gun in production. Although a comparatively small number of them have been ordered for two or three years, they have been turned out very slowly. This heavy Browning gun is marvelously simple. I have seen it taken apart. I expected to have a man here to do this for us to-night, but he has not come. We hope now that this gun will soon be in production. The tools, jigs, gauges, dies, templates, and fixtures are being made. As soon as it is being turned out in quantities it is going to be a wonderful help to our Army.

Question. Can it be used without the tripod?

Mr. TILSON. It is too heavy to use without the tripod, unless it be used in airplanes. Of course, if it is put into airplanes it will be stripped down, the water jacket removed, and it made fast to the fuselage.

Question. What does that one weigh?

Mr. TILSON. Somewhere between 35 and 38 pounds.

Question. Loaded?

Mr. TILSON. Oh, no. A belt containing 250 of these cartridges would weigh like the mischief.

Question. What is the caliber?

Mr. TILSON. They are all .30. Machine guns and rifles all have the same caliber. This must be so in order to prevent confusion in ammunition.

Question. Have the British or French a similar gun to the Browning light gun?

Mr. TILSON. The British are using a large number of Lewis guns. The French have the famous Chauchat gun, which is but a couple of pounds heavier than the light Browning. That is the one our soldiers are now using in Europe. For the heavy type of gun, we are using "over there" the old Hotchkiss gun. Both are chambered for French ammunition.

Question. What have the Germans?

Mr. TILSON. They have a Vickers type, simplified in some way. I don't know just what they have developed, as I have not been able to get hold of their guns so easily, and, consequently, unable to study them.

Question. Do I understand that the Government has confidence in the light Browning gun, and has given orders for a great many, but haven't discarded the others?

Mr. TILSON. That is correct. My criticism has been that we ought to have pressed ahead with what we had; and the

fact that we have now ordered 40,000 each of the Marlin and Lewis guns for the air service bears me out. When those in charge of the air service went into this thing, they were not going to build their program on any paper gun.

Question. How many machine guns to a regiment?

Mr. TILSON. They are increasing right along. There were four in my regiment at the Mexican border. I can not tell you how many there are now. I haven't seen the last cable from Gen. Pershing. Some think we should have about one for every tenth man in the command. The more we have the better, as you will see.

Question. Those steel bullets have a coating of brass. Why is that?

Mr. TILSON. No; that is just cupro-nickel. That is its color. The Germans use a steel jacket. Here is one taken from a German airplane driven down inside the allied lines. It is the regular steel jacket bullet, plated with copper, which serves for a lubricant to penetrate the armor around the seat of the pilot.

Question. Is the light Browning an expensive gun?

Mr. TILSON. No; it is simple and is going to be very reasonable. When we realize that we are paying something like \$2,750 for the Vickers gun, and that we are going to be able to make this large one for something like \$800; that is quite a difference.

Question. What is the difference in cost between the large and the small?

Mr. TILSON. Not so much as you would think. It is largely a question of material. At a guess I should say it would probably cost about half as much for the light one as for the heavy one. I haven't gone into the matter of cost very thoroughly, because the materials we are putting into the guns are so much changed in price that it is unsatisfactory to attempt to ascertain relative cost. The only thing to do is to get the best weapons possible at the most reasonable price possible, which has been my theory from the beginning, since we must have them.

Gentlemen, I am very much indebted to you for the marked interest you have shown in what I have had to say to-night.

Increased Compensation to the Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. RICHARD OLNEY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. OLNEY. Mr. Speaker, I am strongly in favor of House bill 9414, granting increased compensation to certain officials and employees in the Post Office Department and the Postal Service, and all amendments thereto providing increased pay to these men whose salaries have not been commensurately increased within the past 10 years in proportion to the advanced cost of living, subsistence, and maintenance. I am personally acquainted with instances where employees of the Federal Post Office are maintaining rural equipment at so considerable expense in upkeep that their positions are maintained through actual financial sacrifice to themselves and their families resulting in some cases in a consequent detriment to the Postal Service.

Nowadays when large corporations and employers in busy industries are pensioning old employees and recognizing thrift by increased wages or the bonus system, it is eminently fair that the Federal Government should take the initiative steps, acknowledge the constantly decreasing purchasing power of the dollar, and accept the constantly increasing cost of living by paying its employees a fair, just, and living wage.

High wages prevail to-day, prevail in all private industries, including the plants engaged in manufacturing war products, and many of the most efficient Government employees are leaving the public service constantly to avail themselves of the more attractive opportunities existing in private plants. Congress should increase the wages of the Post Office employees, not only from a business standpoint but also for the best reason of all, from a humanitarian standpoint. Therefore, I trust that the bill under consideration and all amendments thereto increasing wages to the highest standpoint will unanimously pass the House.

Motor-Truck Service.

EXTENSION OF REMARKS

OF

HON. THOMAS M. BELL,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 26, 1918.

Mr. BELL. Mr. Speaker, the proposed motor-truck service is in reality intended as a war measure, and if it should prove profitable to the Government, as well as profitable and convenient to the farmers, may and should be continued. The farmers of the country have been put to a very great disadvantage in marketing their products on account of congestion of the railroads and express companies, due to war conditions. Again, this service will benefit those who are not fortunate enough to live on or near by a railroad line over which they could transport their farm and garden products. It will connect the rural section directly with the markets in the cities, and the farmers and gardeners will be able to supply their customers direct, rather than depending upon the commission merchants in the cities to dispose of their products.

I have in every way I could advocated this service, because I feel that it will be a great convenience to the people living in the rural sections as well as those in small towns and cities. It will not, so far as the experiment shows, cost the Government an extra penny to operate the service nor will it be an expense to the people who take advantage of the service, but will be a great convenience, as I have already stated. Six of the routes have already been established and proven to be profitable to the department and to the patrons of the service. Routes have been established from Baltimore to Washington; Philadelphia to Atlantic City; Baltimore to Lancaster, Pa.; Columbus to Zanesville, Ohio; Baltimore to Hagerstown, Md.; and from Savannah, Ga., to Statesboro. These routes range in length from 75 to 125 miles and all show excess profits to the Government. Farmers have written to the Post Office Department making inquiry about the service, so as to know how to plant their crops so as to get the best results from their farms and gardens.

Personally I wish the appropriation was twice the amount contained in the bill, because I am constrained to believe the service is going to be everything expected by the advocates of the measure, and I trust the amendment will be adopted at this time and become the law of the country.

Walter Camp's "Daily Dozen Set-Up."

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 28, 1918.

Mr. TILSON. Mr. Speaker, as a preface to a general order on the subject of field physical training of the soldier issued a short time ago by one of our most competent major generals there appeared the following forceful, timely statement:

"That the efficiency of a military establishment is in a direct ratio to the physical fitness of its individual units has never been demonstrated so forcibly as it has been during the present war.

"The demands made upon those engaged in this conflict are so far in excess of what was thought to be the limit of human endurance, judged by a before-the-war standard, that it is almost impossible to conjecture even what that limit really is.

"While modern warfare has not hesitated to impress almost every known science into its service for the purpose of overcoming man, the trained man has up to the present time demonstrated his ability to hold his own against the most terrible odds successfully; and in the end it will be discovered that it is the man, the carefully trained and conditioned man, who alone can make victory possible.

"With these facts before us it follows logically that the physical training, development, and conditioning of those re-

cruited for the military service must be the first and most important concern of a nation at war."

Nearly a year ago I called the attention of the House to the fact that the weight of burdens about to be brought upon our people through the war would make it necessary to conserve every possible resource. This has proven a prophecy verified in a more than marked degree. At that time I stated that the most important of all our resources would prove to be man power. I urged in no uncertain terms the fact that unless we prepared for this in a definite and scientific way we should find the burdens greater than we could bear. I referred to the fact that too little attention was being given to the conservation of the maturer men of the Nation, in whom lay the financial and executive strength of the country. That the strength and powers of these men must be conserved is now only too apparent to all. Many have already dropped under the increasing burden.

The occasion and purpose of my previous remarks was to call attention to the work of Mr. Walter Camp, a gentleman who has for many years followed in a scientific manner the development of our athletic sports and who has done much for the better physical condition of maturer men. I then referred to what he had accomplished with a company formed of business and professional men in New Haven and to his suggestion that our Cabinet members and other important officials here in Washington should take such a course.

At the time it seemed that it might prove a passing suggestion, one of the kind that is good if acted upon but rarely eventuating in anything. It turned out differently with this one. Our former colleague in this House, Mr. Kent, of California, now a member of the Tariff Commission, took up the suggestion and, with a number of others high in Government circles, made it a most gratifying reality.

Mr. Camp came to Washington, and the following gentlemen signed themselves up to take a 60-day course to carry them safely through the trying summer, with its ever increasing burdens:

Don Ignacio Calderon, Bolivian minister; J. Harry Covington, chief Justice District Supreme Court; Oscar T. Crosby, Assistant Secretary of the Treasury; F. A. Delano, member Federal Reserve Board; Joseph E. Davies, Trade Commission; John W. Davis, Solicitor General, Department of Justice; Thomas W. Gregory, Attorney General; William Hitz, associate Justice District Supreme Court; John C. Koons, First Assistant Postmaster General; Franklin K. Lane, Secretary of the Interior; Eustace Percy, British Embassy; William G. McAdoo, Secretary of the Treasury; Van H. Manning, Bureau of Mines; Byron R. Newton, collector of port; Louis F. Post, Assistant Secretary of Labor; Daniel C. Roper, Commissioner of Internal Revenue, Treasury Department; Franklin D. Roosevelt, Assistant Secretary of Navy; G. O. Smith, Director Geological Survey; Edwin F. Sweet, Assistant Secretary of Commerce; George C. Todd, assistant to Attorney General; Alex. T. Vogelsang, Assistant Secretary of Interior; Paul M. Warburg, member Federal Reserve Board; William B. Wilson, Secretary of Labor; John Skelton Williams, Comptroller of the Currency.

This distinguished group of officials assembled each morning at the home of Mr. Kent, where they took with a will the "daily dozen set-up," under the personal direction of Mr. Camp. At the end of the 60 days a number of these gentlemen expressed themselves in personal letters to Mr. Camp, as follows:

From the Secretary of the Treasury:

DEAR MR. CAMP: I was very much interested in your diagnosis of the molecule bearing my name and feel quite confident I will get benefit from your admirable instruction and training. I am getting just as much of it as I possibly can, although I find it difficult to get there every day. There is so much to do, such prodigious problems to surmount, that I need every energy unimpaired, and even then I shall not be equal to the demand. So I must prepare for the work that is already on my hands and ahead of me.

With warm regards, I am,
Cordially, yours,

W. G. MCADOO.

From the Secretary of the Treasury a little later:

MY DEAR MR. CAMP: I want you to know how delighted I was to have been a member of your training club. I feel that the work has been of great benefit to me, and with a clear conscience I can recommend your course for universal use. With warm regards, I am,

Very sincerely, yours,

W. G. MCADOO.

From vice governor Federal Reserve Board:

MY DEAR MR. CAMP: In regard to the morning exercise class, except for the three weeks of my absence, I never "missed a trick," and I can assure you that I feel you rendered us all a very real service. It has been, like last summer, a pretty intense period, and what you did had much to do in keeping me fit and able to do our bit. I have worked my old machine pretty hard these 32 years and I appreciated the wisdom and philosophy of your suggestions, and I think it will do me some permanent good, even if we can not arrange to continue the "class."

Very truly, yours,

FREDERIC A. DELANO.

From Assistant Secretary of the Treasury:

MY DEAR MR. CAMP: You have organized a group here not only of men who are better for your initiative but who recognize it and are grateful to you. Good gentleman, your health!

Sincerely, yours,

OSCAR T. CROSBY.

From the Secretary of the Interior:

MY DEAR MR. CAMP: The work you have done for all of us is only to be measured in kilowatts of joyousness and good cheer (if such a figure is possible). I hope that your spirit may be far-reaching and that your apostles may spread the gospel throughout the land. You are doing a very real work for which you will have a lot of unexpressed gratitude.

Sincerely and cordially,

FRANKLIN K. LANE.

From vice chairman United States Tariff Commission:

DEAR MR. CAMP: Never before in my life have I spent two hours a day more profitably than in the exercises at the Kent residence during the last eight weeks. I am better physically and mentally, and feel worth more to my friends, to my Government, and to my country. For all of this I am due the credit to yourself and Hon. William Kent and to the members of the club, who, through your training, have become more congenial and helpful to each other.

Cordially, yours,

DANIEL C. ROPER.

From Comptroller of the Currency:

MY DEAR MR. CAMP: It has been both a pleasure and a distinct benefit to have had the advantages of the several weeks of training and exercise in the athletic or calisthenics class organized this summer in Washington by you and Congressman Kent. It has always been my experience that to be in condition for the greatest efficiency a man should take a certain amount of physical exercise daily, and the plan pursued here under your supervision has been very satisfactory to me. I never felt more fit than now, and think I could again, if required, walk or march 45 miles in a day, as I have done in times gone by.

There have been geniuses in the past, and doubtless will be again, whose brilliant minds have contrasted sharply with their weak or sickly bodies, but for the average man the old Latin maxim "Mens sana in corpore sano" still holds good and, I believe, always will.

I trust you will be successful in arousing before it is too late the men of middle age in our country whose bodies have been neglected in their too eager pursuit of fame or fortune to the importance of preserving with greater care these tabernacles of the soul. They can do this by emulating the examples of such men as Mr. Gladstone, William Cullen Bryant, and a host of other distinguished and successful men, who largely owed their splendid vitality and power in old age to the systematic exercise which was a regular part of their daily lives.

With cordial best wishes, I am,

Faithfully, yours,

JOHN SKELTON WILLIAMS.

From the Bolivian minister:

MY DEAR MR. CAMP: I am almost tempted to write an eulogistic essay on the great benefit I derived from the exercises to which I was so kindly invited. I feel happy and ready for any emergency, and my only regret is that in these war times of scarcity of food my appetite has increased almost in the same ratio as the cost of living; but I do not complain when I think of the most enjoyable time I have had in the company of the distinguished gentlemen of the club. I know by the way they do honor to their breakfast that all of them derived great benefit from the exercises.

I am glad to have the opportunity of expressing to you and all the members of the club my sincere appreciation for the courtesy and good will received, and with my best wishes, I remain, in good fellowship,

Yours, sincerely,

I. CALDERON.

From Director of the Geological Survey:

Official exercise is sorely needed by the office man to revive muscle memories. My own experience in these past few weeks has been one of rediscovery and relocation of muscles I had forgotten, and, indeed, almost lost title to. I am profiting by my sense of possession, being that much enriched.

What better use can be made of the morning hour if such exercise gives more tang to the fresh air, more snap to the cold bath, and more flavor to the breakfast, especially if the feeling of physical benefit continues through the working-day.

We owe a vote of thanks to Walter Camp for the renewal of youth that has come to us in these weeks.

GEO. OTIS SMITH.

From William Kent, member of United States Tariff Commission:

Mr. Walter Camp's régime has been of great benefit. Like other outdoor men, I was disposed to consider such moderate doses of exercise as futile. The work proved a tonic and brought unexpected benefit. The schooling was both profitable and delightful.

From the First Assistant Postmaster General:

DEAR MR. CAMP: The beneficial results derived from the physical exercises taken under your direction have been highly gratifying. The increased energy and vigor enjoyed after indulging in such training more than repays one for the effort. Because of the arduous work required at this time of men occupying important positions, both in public and private life, it becomes their duty to indulge in proper physical exercise and thereby increase their energy, vigor, and period of usefulness, thus enabling them to do not only more but better work.

The work you have undertaken, that of proper physical training for men who have reached the middle age of life, deserves the highest commendation.

With my very best wishes for your continued success, I am,

Sincerely, yours,

J. C. KOONS.

From the Assistant Secretary of the Treasury:

DEAR MR. CAMP: The paunches are contracting and the smiles of good health expanding all along the line.

You have performed a fine service in Washington. I say this in all seriousness, and I believe that your propaganda ought to be extended throughout the country. America is wasteful, and I often think that

its greatest waste is the sacrifice of strong men in the midst of what ought to be their period of most useful achievement.

Personally, my sincere thanks and warmest regards ever.

Sincerely, yours,

BYRON R. NEWTON.

From the Assistant to the Attorney General:

DEAR MR. CAMP: Permit me to join in the expressions of appreciation of the benefits derived from the system of physical exercise inaugurated by you this summer among Government officials in Washington. It has been the means of assuring during the hot season undiminished physical and mental energy. I will be glad to do all I can to spread the idea.

With renewed expressions of debt to you for your initiative in this matter, I remain,

Sincerely, yours,

G. CARROLL TODD.

From the office of the Solicitor General:

MY DEAR MR. CAMP: I am sorry I was out of town and could not be present at the graduating exercises. I desire, however, to tender my renewed thanks for the benefit derived. There is no doubt in my mind that it was a good thing for all of us and that we should keep it up.

You are certainly very good to take so much interest in us down here, and I for one am deeply grateful. Believe me, with kindest regards,

Yours, sincerely,

JNO. W. DAVIS.

From Paul M. Warburg:

DEAR MR. CAMP: I appreciate very much what you have done for the poor and hard-working Washington group, and it may be a source of satisfaction to you to know that every one of them is deriving great benefit from the training that you have so thoughtfully inaugurated.

Looking forward to seeing you soon again, I am with kind regards,

Very truly, yours,

PAUL M. WARBURG.

From Department of Commerce, office of the Assistant Secretary:

MY DEAR MR. CAMP: As an enthusiastic member of your official physical-culture class, I congratulate you upon the success of your inspired project. My work during the months of July and August has been unusually exacting on account of the war, but your scheme of morning exercise has carried me through without the loss of an hour. The 1st of September finds me physically more fit than the 1st of July. I can see that it has also had a good effect upon the others. I wish that the same plan could be put into execution in every bureau in every department, in both Houses of Congress, and among the business men of every city in the United States.

In my case, and I think the same is true of most of the others, the habit of physical exercise is a permanent asset. We have learned how much better the profuse perspiration, the deep breathing, and the morning baths make us feel.

When I was weighed in I pulled down the scales at 153 pounds. The same scales informed me this morning that I had lost exactly 3 pounds. This is nearly all abdominal, and can well be spared. During the entire two months I have only missed attendance one morning and that was unpreventable.

We feel under the deepest obligation to you and to our mutual friend Bill Kent for getting this official physical-development class started. It has made us all more fit, both mentally and physically, and enabled us to cope more successfully with the perplexing problems and the extra work occasioned by the war.

During my two years in Congress and four years in the Department of Commerce I have often felt the great need of a better understanding between the legislative and executive branches of the Government, and also the need of more opportunities for social contact among the personnel of the same branches of the Government. This applies with especial force to those engaged in administrative work. Needless friction, petty misunderstanding, and useless and expensive duplication would be prevented or minimized by such personal contact.

The experience of the past two months has given an object lesson which ought to convince everyone of the material value of daily meetings such as we have enjoyed, and in summing up the many advantages I am by no means inclined to give the last place to the features which may be considered strictly social.

With all good wishes for yourself and your son, who has also been so helpful to us, and with a keen sense of gratitude which I find it impossible to adequately express, I am,

Sincerely, yours,

EDWIN F. SWEET.

From Department of Labor, office of Assistant Secretary:

DEAR MR. CAMP: I would not trade the experience of the past eight weeks at Billie Kent's on four mornings of every week for anything that I have experienced nor for anything that I have hoped for (except the end of the war with a victory for democracy) in a very long time.

It has been with some difficulty that I have attended all these exercises. I did not miss a morning nor a single movement in the exercising. This regularity was not easy for me, for I had to get up much earlier than my usual hour, and on one occasion I had to come from New York, and, of course, to start the night before in order to get here in time. But I have felt the good effects of the experience almost from the first. My chest has got pretty nearly shipshape with reference to my abdomen; my stride, it is swifter and steadier, and I walk from my house to my office, a distance of 2 miles, in from 5 to 10 minutes less time than before and without any of the sense of weariness I used to feel. Although two or three instances have made me suspect that my irritability is not as completely gone as you prophesied, yet I find myself able to control it much better if I have a second or two to recognize the spasm before it grips me. I won't go any further into details. That is unnecessary. But I can furnish all the details that may be necessary to prove that I am physically and nervously in vastly better condition than I have ever been before, barring, of course, the greater agility and physical strength that one naturally should have in his younger than his older life.

Sincerely, yours,

LOUIS F. POST.

A number of those participating in the first-trial athletic class were so pleased with the results that, after Mr. Camp was called by Secretary Daniels to take under his care, through the commission on training camp activities, the athletics and physical

condition of the men in our naval stations, they continued to work as a class for a second period of some 60 days.

Meantime there was such a flow of demands for its development in other places that at one time Mr. Camp was receiving as many as 300 or 400 requests a week from other communities asking him to establish in those places units of this work. Several of the departments here in Washington were desirous of establishing such classes, the Department of the Interior alone reporting over 300 who wished to avail themselves of the opportunity of being made and kept fit and well. Had Mr. Camp not been engaged upon this Navy work I do not doubt that he could before this time have organized all the departments along this line and produced the same results that he accomplished with the members of the Cabinet, Federal reserve officers, and others in his summer class.

With the assistance of Secretary Daniels, Assistant Secretary Roosevelt, Admiral Palmer, Chief of the Bureau of Navigation, and Commander Overstreet he is now standardizing and perfecting a system for physical condition in the Navy. With Dr. Raycroft, of the War Department commission, and under Col. Bingham and Col. Jones, he has assisted in placing trainers in the aviation camps. Hence his time has been more than occupied.

Having found out by actual test what can be done in increased health and efficiency, first for all our men of maturer years—and there are 8,000,000 of these men between the ages of 45 and 64 in this country—and having seen what can be done with men of 18 to 25, with such a small expenditure of time, it seems that it is time to consider very seriously some plan to utilize this knowledge.

Recently we have been rudely awakened to the fact that in many cases it required a quota of 2,000 draft men to secure 200 for the service.

Mr. Camp is of opinion that our system of setting-up exercises, if it can be truthfully said that we ever had a system, is about as antique as were some of our boats and aeroplanes four years ago. He believes, and has proven in numerous cases, that any man's endurance, vitality, and resistive powers can be increased immensely at the expenditure of even so small a time as 10 minutes a day. He has done this by the elimination of waste effort, and in doing so seems to have exploded the theory that big muscles or ability to do special athletic stunts have any particular value. His contention is that a man's legs and arms are usually good enough for his calling, whatever it may be, and that, after all, what is of the most vital importance with man, as with a motor car, is the "engine"; that is, the part that is "under the hood." In other words, that his heart, lungs, and trunk are what count. Given true power there and true suppleness, we find that the efficiency and ability to stand work—hard work—mentally and physically, is enormously increased. He has shown that physical fitness is possible and practicable for the boy and for the man and that we need not have, if we begin at the root of the matter and follow out a successful program, anything like the wholesale rejection of men from 21 to 31 or the premature breakdown of men of 50.

Such a system should be adopted and kept in force in our public schools and made a daily feature of the work, so that when these boys reach the age of 21 they shall be better specimens of physical manhood and more representative of what the youth of this Nation ought to be. We have spent millions of dollars, and quite wisely, in the development of vegetable and animal life. Meantime we have allowed the very essence of the strength of our Nation, its man power, to go prodigally to waste. We have relied upon sports and games, most admirable in themselves, to take care of the greater portion of our physical development. We have seen our youth, coming out of school or college, practically abandon all their athletics at 21 or earlier for the pursuit of the dollar.

It needed something like the selective-draft law to awaken us to what such a course means.

Mr. Camp thinks that even such effort as has been expended in this country along physical-training lines has not been spent to the best advantage. Let him speak for himself on this subject:

"We have let foreign leaders with fads and fashions fill us with the thought that a huge biceps or great knots of muscle are the goal toward which we are to strive through daily struggles. Almost all of us have at one time or another, in certain admiration of these Sandow proportions or in fear lest we were growing old, gone through a period when we, too, endeavored to become like these pictures. Many of us listened to the tale of how if we breathed deeply so many times a day, forced our lungs full, we should acquire the habit, and when sitting in our office chairs would continue unconsciously this same deep

breathing. But we all eventually learned that this was quite untrue and that those deep inhalations speedily ceased when at our desks we busied our brains with the work of the day.

"Now our visions have subsided. We no longer aspire to be Sandows. We understand a little more the theories of the trainers of athletics, that it isn't the big-muscled man they are looking for, that it isn't the great lifter of weight, that it isn't the muscle-bound giant or the gymnasium-fad youth, but it is the supple, the enduring, the facile, and dexterous man with good heart, good lungs, and quick coordination. It is the man who can do the work of the day and do it every day that we are looking for."

The golden opportunity, when we are aroused and see clearly what we need, should be utilized to take the necessary steps to supply that want, to build up physically sound men for the service of the Nation and by daily small doses, not by occasional heroic treatment or orgies of fat-reducing efforts, keep them fit and well.

Under leave granted to extend my remarks I insert here a statement by Mr. Camp, which I believe will be found instructive and helpful.

Mr. Camp says:

"The war in which we are engaged has brought to our people some all-compelling truths of a startling nature, not the least of which is that we as a Nation were frightfully unprepared, and the greatest of all these truths forced so suddenly upon us is that our men, the flower of our stock, are almost, as a race, deficient physically when put to the test before examining boards. Long before we were face to face with this situation I urged that we should train our men to make them physically fit before this crisis was upon us. In the beginning of last year I demonstrated with a group of a hundred men over 45 years of age that men even of those years could by a specially devised system of training be brought into a rejuvenated state. When one sees some 2,000 men examined by draft boards to secure 200 men for our Army; when one reads that in a physical examination for the sanitary police force in Cleveland 37 out of 42 women passed and only 22 men out of 72, one is ready, indeed, to believe that we have failed to produce men who can be called upon when the need arises to defend our country. Our athletic sports have produced the right spirit, for the rush of all these athletes to the service has shown this. But our calisthenics, our general building-up exercises, have failed entirely in the building up of our youth. They are antique. These Swedish or other imported methods have been useless. Why? Because of shirking or slacking, or because they did not appeal to us as an eager, hustling Nation, to whom time was of the greatest importance? It is because we have never had it forced home upon us as it is in these days of emergency, these days when men and time are a premium. Permit me to illustrate: Only recently Prof. Bolin, the authority on Swedish exercises, died and left behind him the record that after 25 years of study he had decided that setting-up exercises were unnecessary in the case of a man's legs or arms or pectoral muscles, but that the attention should be devoted to the trunk; that is, to the engine itself. We have wasted time or we have taught slacking, because a man will shirk what he does not need, and when a man learns to shirk it is a bad business.

"It is poor gymnastics when the main object is to expend a certain number of foot-pounds of energy to secure increase in cardiac and pulmonary activity, without care being taken that these organs are put under the most favorable conditions to meet the increased demand upon them. It is poor gymnastics if we desire to astound the world by nicely finished and smoothly gliding combinations of complex movements fit to be put into the repertoire of a juggler, or by exhibitions of strength vying with those of a Sandow, if we do not take into consideration the effects on the vital functions.

"Look at those fellows," said the physician, 'built like giants and rotten inside!' True, he was speaking of a lot of big negroes, but he found the same thing in others—men with stiff muscles and slow movements, men with shoulders pulled forward and no chest expansion, breathing almost wholly with their abdomens. As he put it, 'These men will to-morrow be the recruits for another army, the one which fills the tuberculosis hospitals.' What we want is suppleness, chest expansion, resistive force, and endurance, and these do not come from great bulging knots of muscle nor from extraordinary feats of strength. Rapid shifts from severe training to a life of ease and indulgence is not what nature believes in. It is not the way she carries on her work. Every step she makes is a little one. She seems never to reckon time as an essential in her economy. We should take the lesson. The man who eats, drinks, and neglects all care of himself for a year and then rushes madly into a violent period of severe physical exercise and reduction

may at the end of a month, if he has vitality, come out 'feeling fine.' But if he repeats the process of letting himself go again, nature puts on the fat more and more and a second severe reduction becomes necessary. And it is only a question of time as to the exhaustion of any man's vitality through these extremes.

"Anyone who has had the opportunity of talking with those in authority who in our sister countries, as well as in our own, are bearing the burden of preparation of men can not fail to be impressed with the fact that time is the great element. We must prepare our men; we must make them fit in the shortest space of time that will accomplish the result. And we must conserve that man power. It is no longer a question of putting on such severe work as shall weed out all men not especially strong; it is not, as it might have been in our first Plattsburg camps before the war, to make the going hard enough to leave us only 50 per cent of hardened men. We want every man who can be brought along rapidly into condition, and not the strongest only. Hence the problem takes on a new phase.

"We all recognize that the quality and previous training of the men this country is sending into service has a very potent bearing upon the length of time required to make fighters of them. For after all the man whose training and discipline has been along a kindred line becomes serviceable much earlier than the man who has to acquire the spirit and quality. No one who has listened to the coaches of our various college teams, or who has read either the preliminary prospects of a game or the account of it afterwards, but must have been impressed with the continual repetition of emphasis upon the 'fighting spirit.'

"Hence, when our athletes enlist almost en masse for the service it means that we are throwing in a large number of picked men, who have been in training both mentally and physically and under discipline to make obedient, courageous, and enthusiastic fighters. But a large number of these have been out of college a year or two, some more, and they need physical conditioning to get back, for as a Nation we are terribly in earnest, as soon as we finish our school days, to immediately make a home or a fortune, and we forget all physical exercise in the mad rush to accomplish this.

"There is thus a new idea of considerable importance relative to setting-up exercises, for the world does move, and those who thought themselves up to date on boats, aeroplanes, drill, and the like have found even within a year that they must be prepared to believe that we can improve upon so-called advanced theories of the previous 12 months.

"Probably the most vital point is that the setting-up exercises should not 'take it out of the men.' If we find a man exhilarated and made eager to work at the end of his setting-up exercises we have accomplished far more than if we tire him out or exhaust any of his store of vitality in this kind of work, which is, after all, and should be merely preparatory. If in addition to this we can reduce the amount of time occupied in these setting-up exercises and yet obtain results, we have saved that much more time for other work. Because they took it out of men, even the most modern of these setting-up exercises were shirked, and the leaders were unable to detect this shirking; men went through the motions, but slacked the real work.

"Furthermore, all these systems tended to take a longer period of time than was necessary to accomplish desired results, and made 'muscle bound' the men who practiced them, as Bolin, the authority on Swedish movements for years, has finally determined that certain of the exercises were almost waste of time because they gave exercise to certain parts that were pretty thoroughly exercised in the ordinary daily work of the men.

"It has been found in the sports and games that overdeveloped biceps, startling pectoral muscles, and a great many times tremendously muscled legs are a disadvantage rather than an advantage. The real essential is, after all, the engine, the part under the hood, as it were—lungs, heart, and trunk. If we give a man endurance and suppleness, he becomes more available in time of need.

"Another point of equal importance is that the setting-up exercises should be rendered as simple as possible, and to spend a considerable period of time in teaching the leader, so that he can handle setting-up exercises, extension of the number of leaders is rendered increasingly difficult. If, therefore, we can make this leadership so simple that a longer course of instruction in it is not necessary, we save here, in these days of necessarily rapid preparation, a very material amount of time.

"Still further, it is found that some of the present setting-up exercises made an extraordinarily wide variation between heavy and light men. The light men in some of these cases would get only a small amount of muscular effort, where a heavy man would get, in the same length of time under the same exercise, far more than he could comfortably stand. Again, in the point of age there was a similar variation, and this militated so

strongly against officers of mature age taking the same form of setting-up exercises as to practically render it impossible. Naturally it is out of the question to say that the youth from 18 to 25 and the man of 55 to 60 can take the same amount and the same kind of exercise. On the other hand, if we consider the work each is required to do in his daily routine we can, so far as the setting-up exercises are concerned, bring the two points nearer together and that to a very great degree, and especially if we regard these setting-up exercises in the proper light, a mere preparation for the tasks that are to follow.

"If, then, bearing all these points in mind, we test out the setting-up exercises, we are able to put in practice a set that very nearly answers the requirements.

"First. We can reduce them to a period of 8 or 10 minutes once or twice a day.

"Second. We can make them simple for leaders to learn.

"Third. We can eliminate those that on account of the daily work are unnecessary.

"Fourth. We can render them more difficult of evasion or shirking.

"Fifth. We can direct them quite specifically to endurance and suppleness.

"Sixth. We can make them of value in coordination, in muscular control, and in more prompt response to command.

"Seventh. We can make them more nearly equal for heavy and light men.

"Eighth. We can render the same set very nearly equal in value to both enlisted men and officers as well as to executives behind the lines.

"Many of us have seen setting-up drill of many kinds. Moving pictures have been taken of it and then the movies repeated on the screen, showing in a very striking way how much of the work not only could be slacked but was being slacked right along. In fact, high officers in our service have recently become disgusted with the setting-up exercises and considered abandoning them altogether as of no value. In some stations or cantonments a great many men were tired out with the setting-up exercises; so much so that they had neither life nor vitality for some little time for other work. For the sake of illustration, one exercise illustrates the above criticism. It consisted of the men lying flat on the ground or floor, and then, with straight back, lifting themselves by the arms, and then giving a jump with the arms and clapping the hands together once and coming back to this position. The noncommissioned officer who was leading this weighed about 128 pounds. It is easy to imagine the contrast between his doing this and a heavy man of 180 or 190 pounds attempting it. It is unnecessary to describe in detail the parts of the setting-up exercises which tend to develop members which are thoroughly exercised in the daily routine of work and drill of Army or Navy. As an illustration, the average man of the service needs expansion of chest capacity, a stronger, better developed back, suppleness and quickness, and mobility of trunk more than anything else; exercises which, with both the men and officers, may be continued on board ship or near the front and without apparatus, and which can, by exercises of the trunk, keep down the tendency to increased flesh among the more mature, those are the most vital.

"Setting-up exercises had some time ago convinced many trainers of athletes of the uselessness of many of those which had been regarded as cardinal points. It was this that made men, in the matter of sports and games, look with considerable suspicion upon the gymnasium-made candidate with big biceps and large knots of muscles. It was also found that, outside of weight lifting or immoderate 'chinning' or apparent great strength on the parallel bars, these men were not as valuable as the less muscled, more supple men. To put it briefly, it was found in actual practice that it was what was under the ribs rather than what lay over them which was of value.

"It is, perhaps, proper to add that we are now working under conditions that should especially emphasize the fact of time saving with the men who are going into the fighting. It is an equally serious matter whether we are in the lines or behind the lines. There are 8,000,000 men in this country between the ages of 45 and 64, and in that group are, of necessity, the greatest executives and financiers, the men upon whom the strain inevitably falls. While we are making and keeping fit the men in the service and the officers in the service we must also conserve the strength and vigor of these men behind the lines as well. We can no longer give these executives and financiers two months in the South in the winter and a long summer vacation. We can no longer let a Plattsburg camp be a sifting out or a survival of the fittest. We need every man whom we can make available, and we need him with the greatest amount of his vitality preserved and his endurance heightened. Some are

stronger naturally than others. In football parlance, we are no longer trying to pick a team out of a squad of 200 men; we are trying to get 175 out of the 200 that can stand a fair pace and have enough left to fight with when they get there. That is the problem with men and officers to-day, and anyone who has been in Washington and anyone who has been in our munition plants and in our factories, anyone who worked upon liberty bond drives or Red Cross fund raising, knows that if we are to support these boys of ours on land and sea, these—the men who are trying to solve the problems of executive management, to raise funds in thousandfold increased volume—must be also carefully conserved. For, after all, even though we spell 'Patriotism' with a capital 'P' and 'Government' with a capital 'G,' even though Army and Navy orders take precedence, there is one great mistress of all—Dame Nature. When she taps a man on the shoulder and says, 'Quit!' that man stops; and when he offers the excuse that he has done it out of patriotism and loyalty she merely says, 'I don't care why you did it; you have finished!' and there is no appeal to Washington from her verdict.

"We shall soon hear the call for more men—men to fight and men to support the men who fight. The game is on. We are all in it now, either on the field or on the side lines. We need to train for it fast and we have no time to waste. For, after all, it is condition that tells. It is the man who can stay, who can work at highest efficiency, and who can hold out the longest who is going to be most valuable. If we save even 10 minutes a day in training, we save, with a hundred thousand men, 16,666 hours daily toward perfecting their other knowledge. If we can make an able officer or a competent executive last a year longer, or even six months, under the increased strain, it gives us a year or six months more in which his understudy can gather necessary experience to take up the task.

"Millions of our youths are going out to fight, but disease and exhaustion will kill more of them than will the guns of the enemy. Thousands of men of the best brain power in this country are going into committee rooms and conferences from 9 in the morning till 12 at night to devise better and more efficacious means of fighting to win. If these men's brains are of value along that line, and we know they are, then the more clearly they act and the longer they last the better.

"I have demonstrated with groups of busy executives and professional men the possibility of physical fitness at a small expenditure of time. This idea has spread and many units of the Senior Service Corps were developed. Since then my services have been drafted into that of the country at the call of the Secretary of the Navy to take a position on the naval commission to develop athletic sports and games and physical fitness in our men at the various naval stations. In one week I have had requests from over 400 communities to establish units of this work among business and professional men. Finding that it was impossible to answer all these calls, I devoted myself personally to a class in Washington consisting of several of our Cabinet members, Federal Reserve Board, and others, and these men profited extremely from the work; but this should be done on a far larger scale.

"This and the demands from so many communities throughout the country show that we are all now awake to the necessity of this cardinal feature of the Nation's welfare—the physical fitness and stamina of its youth and men. This new gospel can not be spread by one individual missionary, although there is little doubt but that wherever the story is told thousands of our overworked and underexercised men would be glad to avail themselves of the opportunity. I have therefore devised a set of exercises as well as general hygienic hints that can be put in small compass, both of instructions and of the time required to be devoted to this work. I am offering a brief syllabus of this plan, in the hope of placing it within reach of men who can afford to expend in these days so little time upon anything except office duties. We all know that nature's law was that 'man should earn his bread by the sweat of his brow'—that so far as he departs from this law he must make every attempt to make up for it. We can no longer take delightful vacations of indefinite length to restore waning vitality. The country needs every man, and needs him at the best of his power. No matter how driven a man may be, it seems only reasonable to think that he should be able to spend 10 minutes twice a day in a shorthand method of setting-up exercises and to add to it an outdoor walk of half an hour. By this means he can keep himself physically fit to bear the burdens which are closing more and more heavily upon the shoulders of us all. The men who are going to the front should have every chance of conserving their vitality and increasing their resistive forces. Those of us who must do work behind the lines should be kept equally fit for that larger work, without which

the machine must inevitably break down. A scientific method, tested out upon men of all ages, from 18 to 70, which, by the elimination of all wasted effort and the concentration upon those points which are put to the strongest strain, is unessential; and it is as much a man's duty to make himself fit and to keep himself in that condition as it is to carry on any other part of his work. This method should be adopted not only in every department at Washington but throughout the country, and it should be taught in our schools and colleges, and should lead us to a point where never again will we find ourselves so physically unprepared as at this juncture."

In substantial accord with the ideas of Mr. Camp as set out in the preceding statement, I insert here a few extracts taken from the recently published book of Jacob Bolin, late dean of Chautauqua gymnastics, said to be the most up-to-date student of modern physical culture:

Generally speaking, the necessary muscular strength is gained incidentally, and we need not devise special exercises for the purpose of gaining it.

Especially may we consider it a superfluous, useless, and even detrimental labor to strengthen the muscles of the arms, the legs, and the pectoral groups. The arms and legs are usually sufficiently well developed muscularly to carry on their duties.

The pectoral groups are habitually employed in daily activities. They are commonly as strong as the individual needs. To devise special exercises solely for their further development in strength is not only unnecessary and time robbing, it brings on actual injuries, of which more anon.

Gymnastics, such as we have to consider, is primarily for the hygienic purpose of creating correct habits of posture and movement, in order that vigor may be maintained at the highest possible level, and of preventing the evils of any one-sided activity.

Among these exercises may well be classified bending and inclining the body sideways and twisting. At the same time that they strengthen the abdomen they are most important in maintaining and increasing the mobility of the thorax.

The enlargement of the chest causes the ascent of the abdominal viscera by an increase in the thoracic aspiration, and, the ribs being lifted, the abdominal wall itself is made to serve in its natural rôle as a support for the viscera, but it needs also strengthening.

We thereby cause a permanent enlargement of the thoracic cage. This effect should be further emphasized by exercises causing mechanical elevation of the ribs, such as raising of the arms.

It is poor gymnastics when the main object is to expand a certain number of foot-pounds of energy to secure increase in cardiac and pulmonary activity, without care being taken that these organs are put under the most favorable conditions to meet the increased demand upon them. It is poor gymnastics if we strive to astound the world by nicely finished combinations of complex movements fit to be put into the repertoire of a juggler, or by exhibitions of strength vying with those of a Sandow, if we do not take into consideration the effects on the vital functions.

Have we any basis for an opinion that the larger the muscles the better the general health, the greater the general efficiency?

Are we not responsible for the spreading of erroneous ideas when men, whose names are household words among us, and to whom the public looks up as leaders in physical training, arrange annual strength tests, in which the students are encouraged not only to partake but for which they are urged specially to prepare themselves by piling up the muscular masses necessary to break the records?

The principle of suitable selection is of prime importance to the gymnast. An immense number of possible movements, either because of their direct injuriousness or because of the lack of direct usefulness, must be weeded out.

The method of using voluntary antagonistic resistance is contrary to the laws of nature, inasmuch as it strives, consciously or unconsciously, to make permanent the stage of diffusion, to nurse rigidity of motion which we should, in the interest of economy of energy and grace, do everything possible to counteract and eradicate.

It behooves us well to go slow and not encourage exercises tending to develop abnormal volume and strength of muscle.

Unnecessarily large muscles sap the energy of the individual. They direct to themselves an undue share of the nutriment, leaving less to carry on the functions of other organs.

"THE DAILY DOZEN SET-UP."

The 12 exercises specially recommended by Mr. Camp are as follows:

"HANDS, HIPS, HEAD."

The leader says: "The command is Speed Test; Ready, Cross!" at which the men assume the "Cross" position.

He then says: "Order, Hips!" or "Order, Hands!" or "Order, Head!" putting the men through with snap and vigor. Then he instructs them that when the word "Order" is omitted from the command, they are to remain motionless. He then tests them in this way at speed.

"Order, Rest!"

This test is like our childhood game of "Simon says, 'Thumbs up,'" and produces coordination.

"GRIND, GRATE, GRASP."

The leader says: "The command is Shoulder Grind; Ready, Cross!" at which the men assume the Cross position. He then says, "Order, Grind!" at which the men turn the palms up and with the arms thus extended make 6-inch circle with the hands as the leader counts, "One, Two, One, Two," etc., ten times.

"Order, Rest."

The turning up of the palms forces the shoulder action.

The leader says: "The command is Shoulder Grate; Ready, Cross," at which the men assume the Cross position. He then says: "Order, Grate!" and then begins to count, "One, Two, One, Two," etc., at which the men lift the arms slowly with the palms down, up to an angle of 45 degrees, and down again level with the shoulder, ten times.

"Order, Rest."

This is far superior to the ordinary method of lifting the arms up above the head, as this keeps the dead weight of the arms on the shoulder muscles and thus accomplishes the result in one-tenth the time.

The leader says: "The command is Head Grasp; Ready, Cross," at which the men assume the Cross position.

He then says, "Order, Grasp," and the men place the hands behind the head.

He then counts, "One, Two, Three, Four," at which the men bend slowly forward from the waist, keeping the head up and the eyes looking forward, neck bent back and at four coming up to the perpendicular again. Five times.

He then says: "Order, Grasp Backward," and counts, "One, Two, One, Two," as the motion for the backward bend should be much less than for forward. Five times.

"Order, Rest."

"CRAWL, CURL, CROUCH."

The leader then says: "The command is Crawl; Ready, Cross." The men assume the Cross position.

The leader then says, "Order, Bend," and begins the count. "One," at which the right hand goes up and the left hand down to the side. "Two," at which the right arm begins to bend over the head and the left hand to slide down the thigh. "Three," slides a little farther, and at "Four" the men return to the Cross position. Five times.

The leader then says, "Reverse," and begins to count, at which the left hand is put up and the right hand slides down the side, counting as before. Five times.

"Order, Rest."

This very gradually increases the suppleness of the trunk without any violent effort.

The leader says: "The command is Curl; Ready, Cross," at which the men assume the Cross position.

The leader says, "Order, Curl," and begins to count, "One," at which the men commence to lower the arms, clenching the fists tightly and inhaling. "Two," commence to bend arms up; "Three," place fists in the armpits; and, "Four," bend the head and shoulders backward.

The leader then continues the count, "One, Two, Three, Four." At "One" the men release the hands and begin to extend them straight forward, at the same time bringing the head up and exhaling. At "Two," begin to bend at the waist, letting the arms come back across the hips. At "Three," the body is nearly at right angles to the hips and the hands are raised in the wing position; and at "Four," the men come back to erect position. Five times.

"Order, Rest."

This lifts up the thorax by muscular pull and increases more nearly permanently the chest capacity.

The leader says: "The command is Crouch; Ready, Cross," at which the men assume the Cross position.

The leader says: "Order, Crouch," and begins to count. "One," at which the men bend their knees and go down nearly to the heels; "Two," come up into erect Cross position once more. Five times.

"Order, Rest."

This produces poise and balance and helps coordination.

"WAVE, WEAVE, WING."

The leader says: "The order is Wave; Ready, Cross," at which the men assume the Cross position.

The leader then says: "Order, Wave," at which the men raise their hands straight up above their heads, clasping the fingers and bending the wrists and bringing the arms against the ears.

The leader then counts, "One, Two, Three, Four," slowly, while the men make a complete circle with the hands of about 2 feet in diameter, bending only at the waist. Five times.

The leader then says at any time after the count of "Four": "Reverse," and the men turn, "One, Two Three, Four," in the reverse direction.

"Order, Rest."

This not only lifts the chest and supplies the trunk but also has a good effect upon the intestines.

The leader says: "The command is Weave, Ready, Cross," and the men assume the Cross position.

The leader then says: "Order, Weave," "One, Two, Three, Four." At "One" the men begin to turn at the waist, bringing the right hand down and left hand up and bending the right knee slightly until the fingers at "Two" touch the ground; and at "Three" they commence to come up again, and at "Four" reach the original Cross position. The arms and shoulders should always be in a straight line. Five times. "Reverse," then repeat this with the left hand down and the right hand up. Five times.

"Order, Rest."

This renders the turn of trunk at the hips more easy and also helps the shoulders and chest.

The leader then says: "The command is Wing, Ready, Cross," and the men assume the Cross position.

The leader then says, "Order, Wing," and counts "One, Two, Three, Four." At "One" the men bring the hands straight out in front of them, palms in; at "Two" swing the hands down past the hips; at "Three" raise them up behind the shoulders, body bent at right angles at the waist, head up, eyes forward; at "Four" come back to Cross position, ready for a continuance of the same movement.

"Order, Rest."

This is a breathing exercise and crowds out some of the residual air, at the same time bringing in the shoulder blades.

Impressed by the fact that so large a per cent of the young men called to the colors in the draft were rejected for physical disability, the National Security League has inaugurated a nation-wide movement to promote physical development through the organization by communities of branches of a committee on physical reserve, of which Walter Camp is chairman. The other members of the committee are William G. Anderson, director of physical education at Yale University; Joseph E. Rayeroff, of the War Department commission on training-camp activities; James W. Gerard, former United States ambassador to Germany; Francis S. Bangs, of New York City; Prof. Frank W. Nicholson, Wesleyan University; Prof. Irving Fisher, Yale University; Paul D. Williams, Julian S. Myrick, and Edwin Fuller Torrey, of the United States National Lawn Tennis Association; Dr. Harry Pratt Judson, president University of Chicago; Dr. Dudley A. Sargent, Harvard University; Dr. A. A. Stagg, University of Chicago; and Dr. L. B. Briggs, Harvard University.

The league's idea is said to be to have organized in every city, town, and hamlet in the country local committees appointed by the mayor or board of selectmen, who will form clubs in which men and women, both young and old, will be instructed in physical exercises designed by Mr. Camp and his associates. Over 300 branches of Mr. Camp's committee have been appointed already by the mayors of important cities in all parts of the country.

Increased Compensation to Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. CARY. Mr. Speaker, over the entrances of the city post office at Washington, D. C., are found these two inscriptions:

Carrier of news and knowledge, instrument of trade and industry, promoter of mutual acquaintance, of peace and good will among nations. Messenger of sympathy and love, servant of parted friends, consoler of the lonely, bond of the scattered family, enlarger of common life.

These two sentences summarize briefly yet eloquently the magnificent functions of the Postal System. It is the one branch of the Federal Government that comes into personal contact with every individual in the country, the one national service that touches directly every phase of human life, commercial and industrial, political and devotional, social and individual. The

highest Government official and the humblest employee, the industrial magnate and his poorest day laborer the dweller in the city and the isolated inhabitants of the country, each and every one is reached by the postman at some time and each can use with equal privilege this wonderful system that is so familiar to us all; we scarcely realize its magnitude or appreciate its achievements.

To carry on the stupendous operations of this great system an army of faithful servants work every hour of the day. In the silent watches of the night the clerks are still busy, assorting, selecting, and dispatching; on the fast-speeding trains, night and day, the railway clerks are routing and separating mail matter; in the crowded cities the letter carrier is staggering under his heavy burden of letters; on the country roads, in storm or sunshine, the rural carrier makes his rounds as punctually as the rising and setting of the sun; in the farthest snow-bound reaches of the North and through the tropic heat of the South, everywhere that the Stars and Stripes fly.

Uncle Sam's postal messengers do their daily task, and how well they do it was proven a few years ago when a comparison was made with the postal employees of the United States, England, France, and Germany, and it was conclusively established that in the United States the average number of pieces of mail handled by each employee was 51,000; in Germany, 25,000; in France, 38,000; in England, 31,000.

Now, Mr. Speaker, there are about 270,000 employees in the Postal Service, each of them doing his or her part of the work faithfully, efficiently, and industriously. It is a department that does not admit of any slackening in the pace; there is less time, less sick leave, less holidays, and less privileges than in any other department, and yet in the face of all this, it has been extremely difficult to secure a just compensation for these faithful servants of the people, and even to-day we find some Members of the House protesting against paying them a just and equitable wage.

The worker in every industry in the country has been getting an increased wage each year; the cost of living has jumped enormously, and living conditions have become more and more onerous to every salaried man. Let me insert here some interesting comparisons:

INCREASE GRANTED TO OTHER EMPLOYEES.

The postal employees were the only large group of Government employees excluded from the wage increases voted to other Government employees by the Sixty-fourth Congress. In a number of declarations various governmental agencies, particularly the Council of National Defense, has urged private employers to take into consideration increased living costs in fixing wages. It is incongruous, to say the least, for the Government to advise private employers to adopt such a policy and then fail to follow an equally enlightened policy in conducting its own establishments.

I invite your attention to the ruling made by the shipyard labor adjustment board in settling labor disputes between the employers and the shipbuilders. This covers all wooden-ship yards south of Baltimore and all steel-ship yards south of Newport News on both the Atlantic and Gulf coasts:

(1) Eight hours shall constitute a day's work from Monday to Saturday, inclusive: *Provided*, That during the months of June, July, and August the working-day on Saturdays shall be four hours.

(2) Work in excess of these periods on any week day shall be counted as overtime and paid for at the rate of time and one-half.

(3) Work in excess of 60 hours a week for any employee shall not be permitted, except on repair work or when ordered by the Navy Department or the Emergency Fleet Corporation or to protect life or property from imminent danger.

(4) Work on Sundays and the following holidays shall be paid for at the rate of double time: New Year's Day, Washington's Birthday, Decoration Day or Memorial Day, Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day.

(5) Men employed on the night shift shall receive compensation 5 per cent higher than is paid to those employed on the day shift.

(6) Employees engaged on repair work in or upon vessels undergoing repair shall receive double time for all overtime on week days as defined above, as well as on Sundays and the specified holidays.

Assuming that the above award is a fair standard, it is significant to note that the Government in its conduct of its post offices does not even approach this standard. For instance, post-office clerks do not receive Saturday half holidays at any time during the year. Neither do they receive time and a half for overtime. It is true they are paid for overtime, but only at the prevailing rate of pay, and because of this it is difficult to make the department properly administer the eight-hour law, and excessive overtime service is imposed on distributors. Neither is there any weekly maximum number of hours set for a post-office clerk. Many of them are forced to work in excess of 60 hours weekly. As before stated, there is no wage differential for the men employed at night.

The following resolution, adopted at the convention of the American Federation of Labor held in Buffalo last November, is an expression from the organized workers of the country favorable to an increase in pay for post-office clerks and city letter carriers of not less than 25 per cent:

Resolution No. 110—By Edward J. Gainer, president of the National Association of Letter Carriers, and Thomas F. Flaherty, secretary-treasurer of the National Association of Postal Employees.

Whereas the salary standard of letter carriers and post-office clerks fixed by Congress more than 10 years ago still remains the same; and Whereas the cost of living during this period has advanced an average of approximately 100 per cent; and

Whereas this increase in the cost of living has operated to all intents and purposes exactly the same as a 50 per cent reduction in wages; and

Whereas the postal employees were the only class excluded from the horizontal wage increase granted to Government employees by the last Congress, notwithstanding the fact that the Post Office is the only governmental department operated upon a self-sustaining basis, its most recent audit showing an annual surplus in excess of \$9,000,000; and

Whereas postal employees are highly specialized workers functioning in a Government monopoly, performing a service which gradually unfits them for employment elsewhere, with no hope of selling their skill to a competing private industrial establishment; and

Whereas despite this fact there have been resignations from the service in such numbers as to seriously cripple its efficiency, delaying the dispatch and delivery of all classes of mail, imperiling the business efficiency of the country at a time when such business efficiency is most needed; and

Whereas because of its oppressive labor policy the Post Office Department has been unable to keep its working force recruited to a proper standard: Therefore be it

Resolved, That the American Federation of Labor, in convention assembled, deeply deplores this self-evident injustice to a deserving class of public employees, and it urges upon Congress the immediate enactment of a law increasing the pay of these employees not less than 25 per cent; and be it further

Resolved, That the executive council be instructed to cooperate with the officers of all affiliated postal organizations to have the justice of this case brought forcibly to the attention of Congress; and be it further

Resolved, That a copy of this resolution be mailed to each Congressman and Senator by the secretary of the American Federation of Labor.

With regard to other wage increases that have been granted, page 122 of the December Monthly Review of the United States Bureau of Labor Statistics shows that the average increase of wages in 13 classes of industries during the year from October, 1916, to October, 1917, was 18.1 per cent, and the December, 1916, Monthly Review shows that between October, 1915, and October, 1916, there was an average increase of 20.2 per cent. Similar reports for every month in the last two years have shown constantly increasing wages. The report of the New York State department of labor for November, 1917, shows that wages have increased from a ratio of 100 in August, 1915, to a ratio of 170 in November, 1917, with a ratio of increase in the number of employees from 100 to 120, or nearly 50 per cent increase within the last two and a half years.

Latest statistics of the Department of Labor are borne out with regard to food and other items of cost of living by Bradstreets reports. These reports show the cost of living, based on 100 different items, has advanced from a ratio figure of 12.08 in December, 1916, to 16.91 in November, 1917, or 32 per cent in 11 months. This is probably the best estimate that can be made of the exact increase in the cost of living.

About one-half—or 50 per cent—of the pay check is spent for food, which has advanced 86½ per cent in three years.

Assuming that all other items in the family budget have remained stationary in price, it would require pay increase of 43 per cent to break even as against the cost of living in 1914.

What has happened to the cost of coal, shoes, clothing, and about everything else is only too well known.

Conservatively figured, the cost of living has advanced in the past three years about 75 per cent.

Were it not for the wise and energetic work of the United States Food Administration many of these prices would now be very much higher than they are. This is particularly true of flour, bread, sugar, and all canned goods.

The United States Bureau of Labor Statistics, in its report of the cost of living in the District of Columbia, shows that \$1,082.80 is the least possible amount on which a family could live decently in 1916. This necessarily means that with an increase of more than 30 per cent since 1916 the majority of the Government employees have lowered the standard of living greatly, they are not living decently, that they are piling up debts which they have not any hope of paying, and that literally thousands are working nights and Sundays to make ends meet.

Mr. Speaker, various Members in the course of the debate on this bill have contended that some branches of the service are more onerous and more entitled to consideration than others. There may be some slight differences, but I have traveled around and have seen postal employees at work in both city and country and my judgment is that there are no sinecures in the

Post Office Department. The clerk in the city office must work at a heart-breaking pace in the most uncomfortable quarters and at the most unseasonable hours; the city carrier is beset by the complexities that exist in constantly shifting populations that require infinite patience, untiring vigilance, and undeviating attention; the railway mail clerk must work under nerve-wrecking conditions in constant danger of collisions and railroad accidents; the rural carrier must stand the heat of summer and the rigors of winter, and each and all of them must give the best part of their lives to an avocation that offers small financial returns, no future advancement, and absolute rectitude of conduct. Let us, then, give them at least a little more adequate pay promptly and permanently, not for the period of the war, but for all time. There is no need to worry that they will ever get too rich on the increase this bill will give. It is a simple act of justice that should have been done long ago.

Increase of Pay to Employees of Post Office Department.

EXTENSION OF REMARKS

OF

HON. EARL H. BESH LIN,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 22, 1918,

On the bill (H. R. 9414) granting increased compensation to certain officials, employees, and laborers in the Post Office Department and Postal Service and for other purposes.

Mr. BESH LIN. Mr. Speaker, I am in favor of the general purpose of this bill as a matter of delayed justice to the faithful employees of the Postal Service. In my opinion we would have been confronted with a measure to increase their compensation even though the war had not intervened, because the salaries paid many classes of employees are too low. For this reason I favor making the provisions of this bill permanent law, and not limiting their operation for and during the period of the war and for 90 days after the proclamation of peace.

It is not necessary to submit evidence to prove that the cost of living has increased by leaps and bounds since the war began; in fact, the increase since we entered the conflict one year ago has been most startling. There has been no change in the salary of postal employees since that provided by the law of 1907. Since that time the purchasing power of the dollar has greatly decreased. In other words, the retail prices of food and other necessities of life have enormously increased and the salaries paid have remained the same.

In order to meet this increased cost private employers of labor have from time to time increased the wages and salaries of their employees. The postal employees have been obliged to bear the burden and hardship incident to the increased cost of living until such time as their condition would appeal to the Congress to grant them relief.

In these trying times, when there are extremely heavy demands upon the resources of the Government, the expenditure of public moneys should be carefully safeguarded, and while the Government in determining the amount of the salary or wage it will pay employees in its various departments ought not to enter into competition with private employers, it should nevertheless set the standard high enough to enable those serving it to properly support themselves and families and educate their children. Efficiency in the Postal Service, as well as in other branches of Government service, can not be secured and maintained unless those entering it remain.

Frequent changes in the personnel militate against efficiency, and one of the chief causes for the changes is inadequate compensation. The Government ought to be a model employer, and the same reasons which demand increased compensation for postal employees apply with equal force to all governmental employees.

Mr. Speaker, information has come to me from various parts of the district I have the honor to represent that the service is suffering from men resigning and taking up other lines of employment. Those who have resigned have not done so willingly; but, on the contrary, they have left reluctantly, being compelled to do so in order to provide for themselves and those dependent upon them. The fact that more have not resigned when, without doubt, they could secure more lucrative employment elsewhere is a tribute to their patriotism and loyalty to the service.

Those employed in the gathering, transportation, and distribution of mail, as a matter of justice, are entitled to more pay

than they are now receiving. The rural carrier, without for the moment forgetting the claims of the city carrier and those employed within the post offices, has a particular and emphatic claim for increased compensation. His equipment consists usually of one or two horses and wagon, and in many cases an automobile. The estimated cost per annum of keeping a team is about \$300 and of an automobile about \$350. Without considering depreciation, which it must be admitted is considerable, he has left at the end of the year less than \$600, or less than \$50 per month on which to live and support and educate his family—a wholly inadequate amount.

I am convinced many postmasters in my district are not receiving sufficient compensation for the work they do, and that it is inadequate for them to maintain their station in life.

If relief is not afforded soon there is grave danger of the service in many parts of the country becoming demoralized. Every effort should be made to improve the Postal Service and bring it up to the highest possible state of efficiency. For the reasons stated, and many others which might be given, I favor the passage of this measure.

Increased Pay to Certain Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. C. WILLIAM RAMSEYER,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 29, 1918.

Mr. RAMSEYER. Mr. Speaker, for the convenience of Members of Congress and others who are interested, I herewith submit a brief of existing law governing the pay of rural carriers, of clerks and carriers in first and second class post offices, of railway mail clerks, and of fourth-class postmasters, and also the provisions of H. R. 9414 as passed by the House of Representatives, March 26, 1918, showing the increase of pay and classification for those carriers, clerks, and postmasters:

EXISTING LAW.

First pay of rural carriers.

The salaries of rural carriers are fixed by the joint resolution of Congress, No. 440, approved March 4, 1915, as follows:

On and after July 1, 1915, the compensation of each rural letter carrier for serving a rural route of 24 miles and over, six days in the week, shall be \$1,200 per annum, payable monthly; on routes 22 miles and less than 24 miles, \$1,152; on routes 20 miles and less than 22 miles, \$1,080; on routes 18 miles and less than 20 miles, \$960; on routes 16 miles and less than 18 miles, \$840; on routes 14 miles and less than 16 miles, \$720; on routes 12 miles and less than 14 miles, \$672; on routes 10 miles and less than 12 miles, \$624; on routes 8 miles and less than 10 miles, \$576; on routes 6 miles and less than 8 miles, \$528; on routes 4 miles and less than 6 miles, \$480. A rural letter carrier serving one triweekly route shall be paid on the basis of a route one-half the length of the route served by him, and a carrier serving two triweekly routes shall be paid on the basis for a route one-half of the combined length of the two routes: *Provided*, That, in the discretion of the Postmaster General, the pay of carriers who furnish and maintain their own motor vehicles and who serve routes not less than 50 miles in length, may be fixed at not exceeding \$1,800 per annum.

In the act approved July 28, 1916, making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1917, the following was included:

Provided, That if, in the discretion of the Postmaster General, in order to render more complete service it should be necessary to do so, the Postmaster General is hereby authorized to increase the lengths of routes not to exceed 50 per cent above the standards herein prescribed, and in such cases the compensation of the carrier on such horse-drawn vehicle routes shall be increased above the maximum pay heretofore fixed by law for rural carriers at the rate of \$24 per annum for each mile of said route in excess of 30 miles, and any major fraction of a mile shall be counted as a mile.

In section 3 of the act approved March 3, 1917, making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1918, the following was incorporated:

That to provide during the fiscal year 1918 for increased compensation at the rate of 15 per cent per annum to employees who receive salaries at a rate per annum of \$480 or less, and for increase compensation at the rate of 10 per cent per annum to employees who receive salaries at a rate of more than \$480 per annum and not exceeding \$1,000 per annum, so much as may be necessary is appropriated: *Provided*, That the increases shall not apply to employees in the classified service now receiving salaries at the rate of \$800 or more per annum.

Second. Classification and pay of clerks and carriers in first and second class post offices.

The classification act of March 2, 1907, fixed the grades for clerks and carriers as follows: First grade, salary \$600; second grade, \$800; third grade, \$900; fourth grade, \$1,000; fifth grade,

\$1,100; sixth grade, \$1,200. By the act of March 4, 1913, the first grade—\$600—was abolished and appointments are now made at a salary of \$800. Under the act approved June 12, 1917—public, No. 380—carriers and clerks appointed during the fiscal year ending June 30, 1918, receive an additional compensation of 10 per cent. In other words, the entrance salary during the present fiscal year is equal to \$880.

Clerks and carriers at first-class offices are promoted successively to the fifth grade, and at second-class offices successively to the fourth grade. The act of June 12, 1917, provides:

* * * for the promotion of 85 per cent of the clerks in first-class post offices from the fifth to the sixth grade, and for the promotion of 15 per cent of the clerks in the sixth grade to the designation of "special clerk" in the \$1,800 grade, and for the promotion of 15 per cent of the designated "special clerks" in the \$1,300 grade to the designation of "special clerk" in the \$1,400 grade, and to provide for the promotion of 85 per cent of the clerks in second-class post offices from the fourth to the fifth grade, and for the promotion of 15 per cent of the clerks in second-class post offices from the fifth to the sixth grade.

And also provides:

* * * the promotion of 85 per cent of the letter carriers in first-class post offices from the fifth to the sixth grade and for the promotion of 85 per cent of the letter carriers in second-class post offices from the fourth to the fifth grade and for the promotion of 15 per cent of the letter carriers in second-class post offices from the fifth to the sixth grade.

Third. Classification and pay of railway mail clerks.

The act of August 24, 1912, provides that railway postal clerks shall be divided into the following grades, with corresponding salaries per annum at the following rates: Grade 1, not exceeding \$900; grade 2, not exceeding \$1,000; grade 3, not exceeding \$1,100; grade 4, not exceeding \$1,200; grade 5, not exceeding \$1,300; grade 6, not exceeding \$1,400; grade 7, not exceeding \$1,500; grade 8, not exceeding \$1,600; grade 9, not exceeding \$1,700; grade 10, not exceeding \$1,800.

Under this reclassification law the Postmaster General is authorized to classify lines, terminals, and transfer offices, with reference to their character and importance, into classes A, B, and C, with promotions within the grades shown above. During the fiscal year 1919 it is estimated that 3,362 automatic promotions will be made. The average salary of railway postal clerks on the rolls on March 1, 1918, was \$1,355.35.

Fourth. Pay of postmasters in fourth-class post offices.

The compensation of fourth-class postmasters is provided for in section 272 of the Postal Laws and Regulations, as follows:

The compensation of postmasters of the fourth class shall be fixed upon the basis of the whole of the box rents collected at their offices and commissions upon the amount of canceled postage-due stamps and on postage stamps, * * * stamped envelopes, postal cards, * * * canceled, on matter actually mailed at their offices, and on amounts received from waste paper, dead newspapers, printed matter, and twine sold, at the following rates, namely,

On the first \$50 or less per quarter, 100 per cent; on the next \$100 or less per quarter, 60 per cent; on the next \$200 or less per quarter, 50 per cent; and on all the balance, 40 per cent, the same to be ascertained and allowed by the Auditor for the Post Office Department in the settlement of the accounts of such postmasters upon their sworn quarterly returns:

Provided, That * * * when the total compensation of any postmaster at a post office of the fourth class for four consecutive quarters shall amount to \$1,000, exclusive of commissions on money orders issued, and the receipts of such post office for the same period shall aggregate as much as \$1,900, the Auditor for the Post Office Department shall so report to the Postmaster General, who shall, in pursuance of such report, assign such post office to its proper class, to become effective at the beginning of the next succeeding quarterly period, and fix the salary of the postmaster accordingly.

PROVISIONS OF H. R. 9414.

First. Pay of rural carriers:

That each carrier in the Rural Free Delivery Service now receiving a compensation of \$1,200 or less per annum, exclusive of mileage allowance, shall receive in addition thereto 20 per cent of the amount of such compensation and \$24 per mile per annum for each mile or major fraction thereof, based on actual mileage, by which his route shall exceed in length 24 miles: *Provided*, That those who are performing service as motor carriers shall receive a 10 per cent increase of salary on the amount they are now receiving.

Second. Classification and pay of clerks and carriers in first and second class post offices:

That after the passage of this act clerks in first and second class post offices and letter carriers in the City Delivery Service shall be divided into six grades, as follows: First grade, salary \$1,000; second grade, salary \$1,100; third grade, salary \$1,200; fourth grade, salary \$1,300; fifth grade, salary \$1,400; sixth grade, salary \$1,500. Clerks and carriers shall be promoted successively to the sixth grade: *Provided*, That upon the passage of this act clerks in first and second class post offices and letter carriers in the City Delivery Service who are in grades 2, 3, 4, 5, and 6, under the act of March 2, 1907, as amended, shall pass automatically from such grades and the salaries they receive thereunder to the new grades 1, 2, 3, 4, and 5, respectively, with the salaries provided for such grades in this act: *Provided further*, That all promotions of both clerks and carriers shall be made at the beginning of the quarter following the expiration of one year's service in the next lower grade.

Third. Classification and pay of railway mail clerks:

That hereafter the salaries of railway postal clerks shall be graded as follows: Grade 1 at \$1,100; grade 2 at \$1,200; grade 3 at \$1,300; grade 4 at \$1,400; grade 5 at \$1,500; grade 6 at \$1,600; grade 7 at \$1,700; grade 8 at \$1,800; grade 9 at \$1,900; grade 10 at \$2,000.

The Postmaster General shall classify and fix the salaries of railway postal clerks, under such regulations as he may prescribe, in the grades provided by law; and for the purpose of organization and of establishing maximum grades to which promotions may be made successively, as hereinafter provided, he shall classify railway post offices, terminal railway post offices, and transfer offices with reference to their character and importance in three classes, with salary grades as follows:

Class A, \$1,100 to \$1,400; class B, \$1,100 to \$1,500; and class C, \$1,100 to \$1,700. He may assign to the offices of division superintendents and chief clerks such railway postal clerks as may be necessary, and fix their salaries within the grades provided by law without regard to the classification of railway post offices: *Provided*, That upon the passage of this act railway postal clerks shall pass automatically from the grades they are in and the salaries they receive under the act of August 24, 1912, to the corresponding grade, with salaries provided for in this act.

Fourth. Pay of postmasters in fourth-class post offices:

That postmasters of the fourth class shall receive the same compensation as provided by law prior to the passage of the act of Congress, "An act to provide revenue to defray war expenses, and for other purposes," approved October 3, 1917, except that they shall receive 100 per cent of the cancellations on the first \$100 or less per quarter instead of on the first \$50 or less per quarter.

This bill is now in the Senate awaiting the action of that body.

Increased Compensation for Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 29, 1918.

Mr. SLOAN. Mr. Speaker, the purposes of this measure are good and in the amended form there is much just relief granted to the bearers of information and intelligence throughout the land. Never in the history of the Republic have those at home looked for tidings from abroad with such keen expectancy as in this fateful year of 1918. It is therefore fitting and proper that those who dispatch the messages or those who bear them may have fair reward for their exertion and risk.

The several carriers, who bear tidings to 27,000,000 souls through summer's burning sun and drenching rains, and who, tarrying not when snow and storm stifle breath and winter's frosts threaten suffering and death, go and into the hand of wife, parent, and sweetheart place the message of cheer; mayhap the dark-bordered message may be delivered; but whatever it may be, it is the tribute of duty which the carrier pays.

I have often thought of the service the carrier is called upon to render in addition to those I have mentioned. He brings the buyer and the seller together, through the daily market papers. He weekly conveys the best thought of author and scientist in weekly and monthly periodicals. He brings and returns in the parcel post the choicest merchandise and the most desired farm products. Beyond these, selected for his known integrity and his good reputation, his daily journey through the rural community serves well the part of volunteer police, contributing much to the peace and tranquillity of the territory he daily traverses.

It has been well that this bill has been amended to make the temporary increase permanent, and the terms of salary have been advanced above that provided in the original bill.

The railway mail clerks constitute a class who in recent years have not received merited consideration. In the first place, they must be men of approved physique and mentality. A special preparation must be theirs. A memory of names and places almost phenomenal must be developed. They must work at night, when light, in the nature of things, can not be the best. They must ride in a train, the control of which they have not the remotest. They must do their work in a closed car near the engine, with all avenues of escape cut off in case of collision or derailment. They are the victims of the wrecks and the quarry of the highwaymen.

The long rides are wearing on their nervous systems. They are usually distant from home, and their hours keep them from the delights of home association much of the time. Their continued work in this line unfits them for other service when their discharge comes or age or sickness prompts resignation. Yet of them are required by the Government strict punctuality, unerring memory, unqualified honesty. A lapse in any of these means separation from the service with reinstatement a remote possibility.

Hence for their public service I have a keen interest in their lives, duties, and well being. I am pleased that the Post Office and Post Roads Committee, charged with a special duty, have seen fit to recommend for our consideration and support an increase in compensation. I can support it ungrudgingly. I would have been willing to have gone further, but I know that Congressman MADDEN and others on the committee did the best they could under all the circumstances. With that our colleagues, as well as the beneficiaries under the bill, will be content.

I am further pleased to support this measure and the amendments which have been made, because it provides for an increase of compensation to various classes of postal employees, including carriers, in city and village, whose lots have not been most favored, but who are entitled to consideration for staying by the service when higher compensation in other lines of employment might lure them away. It is a further illustration of the fidelity and loyalty of Americans generally to the duties which they owe the Government at a time when all are being put to the test.

What I have said of the special classes applies equally to others coming under the favoring conditions of the bill. "The laborer is worthy of his hire." This is true when the Government is taskmaster as well as when a private employer must meet the reasonable demands of those whom he would have serve him.

Increased Pay to Certain Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. DANIEL C. OLIVER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 28, 1918.

Mr. OLIVER of New York. Mr. Speaker, recently I have been appointed a member of the Committee on the Post Office and Post Roads. This bill (H. R. 1654) to regulate the salaries of post-office clerks and letter carriers, known as the Madden bill, was referred to the Post Office Committee and has received my very thoughtful consideration.

I favor the successful passage of this measure and strongly urge its enactment into law for the following reasons:

First. To secure the most efficient postal service for the public;

Second. To act in accordance with the true spirit and lofty ideals of civil-service reform, thereby steadily increasing, if possible, the efficiency of the Postal Service, whose watchword should be "Rapid delivery";

Third. To attract to the Post Office Department the sufficient and essential number of competent and upright men to perform its duties, who otherwise would seek employment in some other occupation; and

Fourth. As a matter of justice and a measure of appreciation—a matter of justice, for this bill provides an equitable adjustment of salaries to meet the increased cost of living; a measure of appreciation for meritorious services rendered under the most trying conditions by a splendid body of men, the postal clerks and the letter carriers, noted for their uniform courtesy, energy, sobriety, and the magnificent performance of every civic duty.

The Post Office Department is better known and renders more service to the people than any other Federal department. This department has four functions: (1) To deliver letters, cards, newspapers, and so forth; (2) to deliver parcels and packages, familiarly referred to as "parcel post"; (3) to transmit money through money orders and registered letters; and (4) to conduct the postal savings banks.

The Post Office Department is more than a public utility, it is a primal public necessity, for it assists the business man, it comforts the traveler and the sick away from home, it unites the family whose members are located in various parts of the country; in brief, it is one of the greatest moral uplifts that our Government has at its command. The Madden bill will secure employees for the Post Office Department who will take an honest pride in its efficiency. Therefore, Mr. Speaker and gentlemen of the House, I appeal to you to contribute to the success and to the happiness of the people of the United States by passing the Madden bill.

Delay of the Mails.

EXTENSION OF REMARKS

OF

HON. HENRY I. EMERSON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 26, 1918.

Mr. EMERSON. Mr. Speaker and Members of the House, I have observed a great difference in the time it takes to transport mail from Cleveland to Washington from what it used to a year ago.

Up to one year ago I received letters from Cleveland dated the day previous to the day of receiving the same. For several months back I have not received a single letter from Cleveland dated the day previous to the time of receiving the same. All my letters from Cleveland for several months have been dated the second day previous to the time of receiving the same.

What is the reason for this? It can not be the railroads. It must be some trouble in the post office itself. Is it not true that hundreds of postal employees are leaving the service because they can get better pay in other occupations? The faithful letter carrier on my own route in Cleveland is going to night school preparatory to entering some other employment because he can not earn enough in the Postal Service to keep his family.

Does not the present low wages of the postal employees cripple the service, as I have suggested in the first part of my speech?

I believe justice should be done the postal employees. I believe they should be paid sufficient wages to properly compensate them for the services rendered. They certainly are not getting it now.

Increased Pay for Certain Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 26, 1918.

On the bill (H. R. 9414) granting increased compensation to certain officials, employees, and laborers in the Post Office Department and Postal Service, and for other purposes.

Mr. JOHNSON of Washington. Mr. Speaker, I have listened to the principal arguments for and against the increase and readjustment of wages of employees in the Post Office Department and shall vote for the bill as amended. The opponents claim that now is not the time for the increase; that the Treasury of the United States can not stand it. But the fact remains that the bulk of the post-office employees are and have been for a long time underpaid. For years they have been entitled to an increase, and it might just as well be permanent. I have on file a great mass of statistics concerning payment of the various grades of postal employees in Tacoma and southwestern Washington, their house rents, costs of living, and so forth, all compiled before this great war came on, and clearly showing the necessity for an increase. A great many years ago the famous western railroad man, the empire builder, James J. Hill, predicted that we would not again see cheap wheat. When he made his prediction he had no thought of a world war, but he showed clearly all the conditions then existing, pointed out the lack of balance between farm population and city population, and solemnly warned the people of the result that must follow. That result is here—accentuated by a great world war, during which the United States must feed not only its people but a great part of the world's population. With the expansion of credits and inflation of values which have come with the war, and which will continue, it is not fair to leave the postal employees to be paid on a scale which was too low 10 years ago. Here and there may be an overpaid man, but not one in a thousand. I congratulate the gentleman from Illinois [Mr. MADDEN] upon his work.

Increased Compensation for Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

On the bill (H. R. 9414) granting increased compensation to certain officials, employees, and laborers in the Postal Service.

Mr. FREAR. Mr. Speaker, for several years I have opposed extravagance and waste in locality expenditures that were being urged upon Congress by selfish interests for selfish purposes. I believe that proper expenditures should be made by the Government for all public needs, and that reasonable pay should be given Government employees. Any other course is shortsighted and unbusinesslike.

We are advised that approximately 95 per cent of all the men in the Postal Service—clerks and carriers—are receiving the same pay that was given 10 years ago, although it will not be disputed that living expenses have increased nearly 50 per cent within the same period. A bare statement of facts is sufficient to show the injustice that has resulted.

Many thousands of deserving employees will be benefited by a raise in pay with which to partially meet the high cost of living and the benefit will reach into the home life of those who are carrying on one of the most important and most efficient functions of Government. I wish it might be possible to relieve directly many star-route carriers who are compelled to meet greatly increased expenditures for teams, feed, and repairs required in carrying out Government contracts entered into before the war. One case I have in mind leaves a margin of barely \$30 a month over expenses for the support of a carrier and his family, because of the unexpected increase in expenses.

Under this bill the Postmaster General is directed to investigate and adjust such contracts in order to relieve from hardship men who have executed bonds to the Government for faithful performance of the work. In all kinds of weather, sick or well, the carrier's work must be executed to the letter, and our Government can perform no more worthy or just act than to grant the increases contained in this bill.

It is difficult to adjust pay of different employees on an equitable basis, but this bill proposes an increase of from 15 to 20 per cent for pay of post-office employees, which in the aggregate is little more in amount than what has been stricken out of the 1918 pending river and harbor bill in committee when compared with old-fashioned bills. Public extravagance should be prevented, and, on the other hand, justice should always be done; and I am glad the Government is about to do justice to those affected by the provisions of this bill.

Division of Time.

EXTENSION OF REMARKS

OF

HON. JOHN M. C. SMITH,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 30, 1918.

Mr. SMITH of Michigan. Mr. Speaker, recently we enacted into law a provision to change the time of day by turning our clocks and watches ahead one hour and beginning it one hour earlier in the morning. Under the leave granted me to print and extend my remarks in the Record I wish to present an article recently published in the Chicago Daily Tribune, of March 21, 1918. This ingenious, interesting, and entirely practical rearrangement of the calendar year was invented by a prominent and highly respected gentleman living in the city of Coldwater in my district:

NOVEL AND ORIGINAL—THINK IT OVER.

COLDWATER, MICH., March 18.

EDITOR OF THE TRIBUNE: Now that we are about to gain an hour of daylight by setting the clocks ahead, why not make another much needed reform by simplifying the calendar?

We now have 12 months of varying length with continual changes of the days of the week as compared with the days of the months. I think all will agree that the week is the fundamental unit, but it is highly

desirable to have all the months the same length for the reason that salaries, wages, rents, and many other ordinary affairs are counted in months. It must be apparent to all that it would be a marked advantage to have the months of uniform length. Therefore give the years 13 months of four weeks, or 28 days each. That would take 364 days. Call the extra day "New Year's Day" and place it between Sunday, December 28, and Monday, January 1, making it the first day of the new year, but not a part of January. It might be made a legal holiday, as it is now, but in any case people would soon understand a record, as "New Year's Day, 1918," etc.

Let Monday be the first day of the week and month and Sunday be the seventh day of every week and month. Then every day of the week would always be the same day of every month. You can readily see how convenient this would be for reckoning time by the week or month.

Call the added month "Sol" (from solstice), and place it between June and July. Then every fourth year add a "leap day," and place it between June and Sol, but not to be a part of either month. A record or legal document dated "leap day, 1918," would be readily understood. This leap day would be omitted in every century not divisible by 4, as is the custom at present, thus keeping the calendar corrected as at present.

Such a calendar would be good for all time, as there would be no changes except "leap-day" years, when that day is added, but that would not change the days of the month.

Changes in the calendar have been advocated many times in the past, but the changes suggested seemed to be too complicated to meet general approval. The changes here suggested are the most simple possible, and I invite your readers and scientific societies to impartially consider them.

C. W. BENNETT.

The Star-Spangled Banner.

EXTENSION OF REMARKS

OF

HON. L. C. DYER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 30, 1918.

Mr. DYER. Mr. Speaker, I include in the extension of remarks leave granted to me a copy of the bill H. R. 10956, a petition of the Children of America Loyalty League, and a letter from Mr. Cornelius H. Fauntleroy, of St. Louis, Mo., all with reference to making the Star-Spangled Banner the national anthem, as follows:

A bill (H. R. 10956) to make "The Star-Spangled Banner" the national anthem of the United States of America.

Be it enacted, etc., That the poem written by Francis Scott Key, entitled "The Star-Spangled Banner," be, and the same is hereby, declared to be the national anthem of the United States of America, as follows:

"Oh, say, can you see by the dawn's early light

What so proudly we hail'd at the twilight's last gleaming,

Whose broad stripes and bright stars through the perilous fight

O'er the ramparts we watch'd were so gallantly streaming?

And the rocket's red glare, the bomb bursting in air,

Gave proof through the night that our flag was still there,

Oh, say, does that Star-Spangled Banner yet wave

O'er the land of the free and the home of the brave?

"On the shore dimly seen through the mists of the deep,

Where the foe's haughty host in dread silence reposes,

What is that which the breeze, o'er the towering steep,

As it fitfully blows, half conceals, half discloses?

Now it catches the gleam of the morning's first beam,

In full glory reflected now shines in the stream,

'Tis the Star-Spangled Banner, oh long may it wave

O'er the land of the free and the home of the brave!

"And where is that band who so vauntingly swore

That the havoc of war and the battle's confusion

A home and a country should leave us no more?

Their blood has wash'd out their foul footsteps' pollution.

No refuge could save the hireling and slave

From the terror of flight or the gloom of the grave;

And the Star-Spangled Banner in triumph doth wave

O'er the land of the free and the home of the brave.

"Oh, thus be it ever when freemen shall stand

Between their lov'd home and the war's desolation!

Blest with vict'ry and peace, may the heav'n rescued land

Praise the power that hath made and preserv'd us a Nation!

Then conquer we must, when our cause it is just,

And this be our motto, 'In God is our trust';

And the Star-Spangled Banner in triumph shall wave

O'er the land of the free and the home of the brave."

CHILDREN OF AMERICA LOYALTY LEAGUE,
St. Louis, Mo., March 12, 1918.

To the Senate and House of Representatives:

We, the Children of America Loyalty League, an organization of children have signed this pledge—

"I hereby pledge loyalty to our flag, loyalty to our country, loyalty to the President of the United States as Commander in Chief, support to the Red Cross of America and the military and naval branches of the Federal Government"—

come and ask that you grant our wish and petition that the Star-Spangled Banner, written by Francis Scott Key, may be made the national hymn of our country.

On the 14th day of September, 1917, at our request, the Secretary of the Navy and Secretary of War issued a general order to the soldiers and sailors of our United States for a special salute at reveille in honor of the one hundred and third birthday of the Star-Spangled Banner, and throughout the United States it was generally observed by all of us children, who at 9 o'clock stood and sang this beloved hymn. The soldiers, sailors, and the children of America by the deference and respect they pay this song have made it our national hymn. It forms a trinity that represents America.

FLAG—CHILDREN—SOLDIERS.

"The Star-Spangled Banner in triumph shall wave"—the flag.

"O'er the land of the free"—the children.

"And the home of the brave"—our soldiers.

Our soldier and sailor boys are going over with the Star-Spangled Banner unfurled for the world. Won't you let them carry with them the Star-Spangled Banner as the authorized hymn of their dear United States?

(Signed by Mrs. Nat S. Brown, national president, and 40,000 school children.)

St. Louis, Mo., March 26, 1918.

Hon. L. C. DYER,

Washington, D. C.

DEAR SIR: I read in the Globe-Democrat newspaper a day or two ago that you had recently introduced in the Federal House of Representatives a bill to make the Star-Spangled Banner our national anthem. I wish to congratulate you for so doing.

No national anthem, not even the brilliant and majestic Marseillaise, was ever written under such dramatic and inspiring circumstances as the Star-Spangled Banner. The Congress of the United States should erect in Washington City a monument to its author, Francis Scott Key. He was a brilliant lawyer and the United States attorney for the District of Columbia. He was also a lay reader of the Protestant Episcopal Church of the United States of America. He was also a man of exquisite poetic ability. He is the author of hymn No. 443 in the Hymnal of the Episcopal Church. It is a poem of wonderful beauty and melody.

In 1823, he with the Rt. Rev. William Meade, Episcopal bishop of the Commonwealth of Virginia, and several other persons founded 3 miles west of Alexandria and about 5 miles southwest of Washington City the Protestant Episcopal Theological Seminary of Virginia. It is still there and is a beautiful place. Visit it.

Yours, truly,

C. H. FAUNTLEROY.

Reasonable Compensation for Post Office Employees. Extension of Rural Routes.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. BROWNE. Mr. Speaker, I take pleasure in supporting this bill increasing the salaries of the post-office employees. No other department of our Government, or no private business, is conducted as economically and efficiently as our Post Office Department. With the billions of pieces of mail, and packages sent by parcel post, handled each year by our post offices throughout the land, mistakes and losses are so infrequent as to be negligible. So efficiently is the business of the Post Office Department conducted that proof in our courts that a letter has been duly addressed, stamped, and posted is prima facie evidence that it has been received by the person to whom it was addressed.

To whom can we attribute this wonderful efficiency of our Post Office Department? I answer, to the post-office employees. Postmaster Generals come and go, most of them efficient, painstaking public officials. The post-office clerks, the mail carriers, and other post-office employees remain, and the business of the Post Office Department, which has grown in efficiency and usefulness year after year, until it has the complete confidence of the American people, has established its splendid reputation by reason of the intelligence, honesty, and efficiency of the post-office employees.

POSTAL SAVINGS.

A few years ago we added the Postal Savings Department to the United States Post Office. Many were skeptical about the success of this venture, and predicted that if the Government tried to go into the wholesale banking business Uncle Sam would be the loser; that there would be defalcations and losses. Did the prediction of these people who always fear dire results when the Government goes into anything new prove true? No. The post offices of the United States have on deposit \$145,650,000, and no post-office employee has ever had to go to Canada to escape answering for his defalcations. There have been no defalcations. The Government has not lost a penny, and the books of every post office in the land balance every night.

PARCEL POST.

When the Post Office Department began competing with the privately owned express companies after the passage by Congress

of the parcel-post law, the same pessimists of all Government activities prophesied the Government would make a dismal failure of the business. Result: The express companies at the time were handling approximately 400,000,000 packages. The Post Office Department the first year handled over 700,000,000 packages, compelling the express companies to lower their rates very materially to meet the Government competition. The express companies carried 300,000,000 packages that same year, their business falling off 100,000,000 packages. The total number of packages carried by both the post office and the express companies amounted to 1,000,000,000 packages. Thus 600,000,000 more packages were carried by parcel post and express than the express companies had formerly carried. In other words, the Post Office Department by the popularity of the parcel post created more new business than the total business of all the express companies, and they had been establishing their business for over a hundred years.

FINANCIAL RETURNS.

Did the Government lose money by the parcel post? No. Besides increasing business greatly and facilitating the exchange of commodities between a hundred million people and lowering the rates it made last year net above all expenses over \$50,000,000. How did it do this? Through the efficiency of the post-office employees. The post-office employees again showed their great intelligence and adaptability. They simply added another shelf to their business, the same as they did when the postal-savings law was passed, and are to-day handling packages at an average cost of 14 cents apiece, while it costs the express companies 24 cents apiece, or pretty nearly double the cost per package handled.

THIS EFFICIENCY SHOULD BE REWARDED.

Mr. Speaker, such efficiency should be rewarded. The Government has made a net profit of over \$50,000,000 in a year in a competitive business and has saved much more than this amount to the people of the United States. I submit, Mr. Speaker, that a corporation in business only for dividends would reward the efficiency, faithfulness, and honesty of its employees upon this showing by raising their wages. I have always maintained that the United States should be the model employer and should set an example to all other employers by itself exemplifying "that the laborer is worthy of his hire."

HIGH COST OF LIVING.

Another compelling reason for the passage of this bill is the high cost of living. The cost of living has increased many times what the increase of wages given by this bill will amount to. The purchasing power of a dollar has diminished at least one-half in the last two years, as compared with the cost of the necessities of life. This needs no argument. Everyone who supports a family knows it.

POSTALIZATION OF TELEGRAPH AND TELEPHONE.

I believe the recommendation of the Postmaster General that the main telephone and telegraph lines of the country should be owned by the Government and operated by the Post Office Department is practical and before many years will be a realization. The employees of the Post Office Department will have the intelligence to conduct the business the same as they have the other activities of the Post Office Department. In order to keep these employees and make it an incentive for young men to go into the business, we should pay wages commensurate with the value of the services rendered the Government.

RETIREMENT BILL.

While I am on the subject I want to say that I am heartily in favor of the retirement bill, providing for these men who have spent the best part of their lives in the Government service, and I would propose an amendment to this bill providing for the same, but it would be subject to a point of order. I am informed that such a bill is before the committee and I will be glad of a chance to vote for it. There is no other business where the duties are the same as those prescribed by the Government Post Office, and when a man has spent the best part of his life working as a post-office employee, and because of his years becomes less efficient, so that it becomes impracticable for him to hold his job, he should be provided for by the Government.

THE MAIL CARRIER.

The duty of carrying the mail in all kinds of weather and under all conditions is an exacting and arduous task that no one can fully realize who has not had the actual experience. There are very few holidays for the mail carrier. His work is constantly increasing and the parcel post has greatly increased his burdens, yet he accepts his new duties cheerfully and without complaint, and one comes in contact with few people who are more courteous than Uncle Sam's mail carriers. In a cold climate, like Wisconsin, the winter months are especially trying to

the rural carrier. Every morning, in sunshine or rain, snow, hail, or blizzard, an army of 43,404 rural mail carriers start on their journey over the rural highways of this country carrying messages of love and sympathy to 6,000,000 families, representing 30,000,000 people. When these carriers return at nightfall they have traversed 1,103,662 miles of rural highway. Representing the great Post Office Department, they have truthfully been called "carriers of news and knowledge, agents of trade and industry, promoters of mutual acquaintance."

COMPENSATION.

The average compensation of the rural carrier is \$1,174 per annum. Out of this salary he must pay for his equipment, horses, buggies, harness, and so forth. With the cost of hay, oats, and other feed, and the increased expense of equipment, the carrier has not sufficient money left from his salary to support himself and family. I have had statements written to me that I know are accurate from carriers who were expending in maintaining their equipment almost as much as they were receiving from the Government. It is a significant fact that from July 1, 1917, to December 30 of the same year, there were 3,705 resignations in the Rural Free Delivery Service.

THERE SHOULD BE A MAIL BOX IN FRONT OF EVERY HOME.

I believe that the Rural Free Delivery Service should be extended so that eventually there will be a mail box in front of every home in this land and the daily delivery of mail to every citizen. The most remote inhabitant of the large cities has his mail delivered at his door 8 or 10 miles from the post office. In some resident districts in large cities they have as high as seven deliveries a day of mail. In some of the large cities mail is shot through pneumatic tubes at an expense to the Government of \$976,000 per year. No question is raised about the expense or should be for giving the most perfect service to the inhabitant of the city, whether he be a taxpayer or not. When we ask for the extension of rural routes and the establishment of new ones to accommodate tax-paying farmers that are obliged to travel from 1 to 3 miles for their mail we are met by the cry of economy—the same cry that we hear when we ask for national aid for our rural highways. Our farmers work the hardest and longest hours per day of any of our citizens. The eight hours per day observed by most of our farming population means eight hours in the forenoon and eight hours in the afternoon, at the end of which time they ought not to be obliged to go a couple of miles to get their mail.

In conclusion, Mr. Speaker, I believe that the rural mail carrier should receive a sufficient salary to enable him to keep up his equipment so that he can render the very best of service and have a reasonable amount of money left to support himself and family. I also believe in the extension of our rural free delivery.

Increasing the Pay of Rural Carriers.

EXTENSION OF REMARKS

OF

HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. HEFLIN. Mr. Speaker, these are war times, and on account of the increase in price that the rural carriers have to pay for the necessities of life and for the necessary equipment for carrying the mail I favored granting them the 15 per cent increase in salary asked for by them at this time. There were other increases asked for in the bill by other employees, and some of them were meritorious. They were asked for on the same grounds as those presented by the rural carriers—because of extraordinary conditions produced by the war. In other words, emergency legislation was sought to meet an emergency caused by the war.

In voting to recommit the bill I voted for the increase asked for by the rural carriers upon the grounds presented by them. There ought to have been some changes made in certain other features of the bill; but after the House declined to recommit it for that purpose, favoring certain other good and satisfactory provisions, as I did, I voted for the bill as reported by the Committee of the Whole House. The Government does not and should not want these faithful employees to serve the public upon a salary insufficient to enable them to live decently and provide well for those dependent upon them.

Increased Compensation of Employees of the Post Office Department.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GREENE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 1, 1918.

Mr. GREENE of Massachusetts. Mr. Speaker, I have had considerable knowledge of post-office business. My father was the postmaster at Fall River from 1875 to 1881, and in 1881 I succeeded him, he having retired on account of ill health. Outside of that, I have been an active man in my own city ever since I was old enough to leave school. That was at the age of 15. I have been active in the interest of the Postal Service. I have known about the efficiency of the Postal Service. I have known something, by virtue of being a business man, of the efficiency of the Postal Service. I wish to say now that the condition of the railway mail clerks throughout the country is such that we have a very inefficient Postal Service. I find it in my mail while I am here, and I find it in my business mail at home. I happened to open a package of mail which was received in my office to-day, and I found in there newspapers from my home city, from which I wished to get information. They had just arrived this morning. I can leave home at 6 o'clock at night and arrive here at 7 o'clock the next morning, but I can not get mail in that time. Sometimes it is three or four days from the time it is mailed in my home city before it arrives here. That is, I think, because of the men being overworked in the business, especially the men who have to sort and care for the mails that come through the Railway Mail Service.

So far as I have been able to discover, the mail service has been cut so much, the number of employees reduced so much, that the men can not do the work. The same is true with regard to the clerks in the offices. I find that the same is true with regard to the carriers.

A carrier starts from the office—since I was the postmaster my office is and has been within a stone's throw of the post office in my city and I am in and out there a great deal. I see the men start with their mail and they have to hustle for dear life to get the mail ready to go out in time, and then to go at a pace which no man would be able to do except a letter carrier with long experience, and because that is the healthiest business in the world for a man to take up; as he is in the open air all the time, he is able to do strenuous work. When they ascertain that he has the ability to do a certain amount of work, if the officials discover he is not doing work enough, they increase it because he has the power, ability, and strength to get more speed. Any private business concern pays according to the ability of the man, but the Postal Service, as it is to-day, makes no allowance for ability. These men have to be good students in their work; they have to study it when they go in as new men to prepare themselves for the work they have to do, and when trained they must perform that work almost to perfection. It is a constant drain upon a man's resources. It is only now and then that you can find a man who can work all day and half the night. I have done that all my life. I rarely go to bed before midnight and get out in the morning earlier than most men, but I have been blessed with a good constitution and I can do it. Everybody can not do it. Everybody can not grasp the situation so as to get ahead. I have been able to grasp all kinds of situations. When I was postmaster I also carried on more business than I have carried on since I came here, because my business has suffered on account of my being in the public service; I have lost it practically. I want to say that these men are not largely paid; they are poorly paid for the service they render, and with the increased cost of living I do not see how any man can think of denying the increase that is called for by the bill which is now being considered by this House.

I have no commission to represent any particular postal employee, but I do feel an interest in the Federal postal employees. They are the life of the Nation, absolutely the life of the Nation. I am interested in them because I was instrumental in securing the passage of the classification law in 1907. It so happened that I had a conference with the men in the letter-carrier service in regard to procuring that law and had an agreement with the leaders of the party who were then in power that if they were returned to power they would provide that classification scheme

for the increase of their salaries. It was carried out to the letter, even to putting James S. Sherman, afterwards the Vice President of the United States, into the chair, and he allowed the motion to be in order. When a point of order was raised against it that it was not proper legislation to be brought up in the House that way he overruled the point of order, as he agreed to when the arrangements were made. It was arranged as it had to be because it was the only way that we could get consideration, and the arrangement was carried out in a true and honest way.

I want to speak about the substitutes—and you will understand, of course, that I speak without preparation and am in a hurry to finish. Why, it is a crime the way the substitutes are treated to-day. It is more criminal than anything I ever knew of. These men who are employed as substitutes are obliged to report to the office, and they must report every day to see whether there is any place for them. What man with a family can hope to go into the Postal Service when he either has to give up one job or the other, and if he gives up the job he has, where he is getting a partial living, and says, "I will take my chance and go into the Postal Service," he then starves to death, because he can not secure employment. He has to be there every morning to be sure to get the chance and the pay he gets when he starts is absolutely a crime to offer a man with a family. Everybody in business who employs talented men, everybody that wants his business to succeed has to raise the pay of his employees time and time again so as to give them a chance to live. We come to this great Government of ours, where we shovel money out just as you shovel gravel out of a car, without investigation as to where it goes or anything else, but when it comes to the hard-working employees of the Government, the valued employees of the Government, the men who put their thought and their brains and their ability into the work to accomplish something, everybody cuts down to a fine point and says, "Why do you increase their salaries so much?"

I was talking to a gentleman, a member of the Committee on Post Offices and Post Roads, a short time ago, and he said to me, "Why is it that so many men are anxious to go into the service?" I said, "I can not find very many anxious to go into the service." He says, "Why are so many men anxious to go into the service—and they remain there—if it is not satisfactory?" It is because a great many of them are men who, if they go out of the service, have no place to go. They have not a chance to go into anything else, because young and efficient men take all the places. They are young men who can live on a small sum until they get built up. Take the case of myself. If I was thrown out of employment I could not get anything to do. Nobody would have me; they would say my days of usefulness have gone by. The same with the old men in the Postal Service. Therefore we ought to go further than the question of increased pay and take up the question of retirement. I know one carrier in my city who is as old as I am. He never has failed to come back to the office on time; he has never failed. He does not carry letters now, but he collects the mail. He was subjected to a reduction in salary because he was nothing but a collector. Great God, a man to be a collector and to be on time and to carry the mail back to the office, why is he not entitled to pay? There is no reason in the world why he should be cut down, and Congress decided so, because they put the pay back, the pay wrongfully taken from him. These postal employees are the real life of the Nation. We as a Government could not live without them.

Look at the receipts of the post office and how these receipts have grown. What a wonderful thing it is. I can look back into my life and remember when the people had to pay 5 cents when they received a letter. The man who sent the letter did not pay anything. If a man had the letter carried to him the clerk in the office got 2 cents for carrying it. When we came to pay salaries to the carriers people said, "How can we do it? We will become bankrupt." We have not become bankrupt. The service has grown more efficient and receipts have been greater; the improvements have been greater. Take the rural free delivery; it was a wonderful conception. It was not a success when it started, but it made life for everything else and it helped everything else connected with the Postal Service. If the Rural Free Delivery Service had been improved instead of being hampered, it would have been a great deal better. I speak advisedly, because my district was hampered; it was terribly cut to pieces. Men were dropped right and left. The service was changed without knowledge of myself or postmasters in my district. It was established with such knowledge as I had, for I accompanied the inspector who went around when the routes were established. We planned to have the Rural Free Delivery Service so that when letters were picked up by the rural free-delivery carrier they would get back to the city in time to go out with the city mails without any loss of time. Now there is

usually 48 hours, and sometimes 60 hours, between the time that a letter is picked up by the rural free-delivery carrier and the time it gets back to the office, because the service has been so demoralized by lack of information in laying out the routes. The men who do the work are practical experts, and they should be paid. I am in favor of anything that can be done to put these people on a proper basis. I think the Postal Service needs all the benefits we can possibly give it. I indorse the Madden bill with all my heart. My people want more than that. They think they should have more than the Madden bill provides. It has been a great pleasure to note the unanimity that seems to prevail in this body in the expression of Members on this floor regarding the caliber of the employees in the Postal Service, and the necessity which demands the increased compensation. The bill originally provided for increased compensation for the year ending June 30, 1919. This body very wisely provided by amendment to make the provision for increases permanent law.

It only remains for the body at the other end of the Capitol to accept the provisions embodied in this bill and the approval of the President to make a large number of Government employees and their families have some measure of enjoyment and happiness as they face the future.

Housing of Industrial Workers.

EXTENSION OF REMARKS

HON. WILLIAM F. WALDOW,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 30, 1918.

Mr. WALDOW. Mr. Speaker, I desire to submit a few observations upon this bill and urge its immediate passage. In fact, I believe this or a bill of similar purport should have been acted upon 10 months ago; had that been done we would not be using labor and effort at this time for the constructing of houses that may be needed in our shipyards and other munition plants.

The main object of this bill is to provide for the housing of industrial workers who are engaged in industries connected with and essential to the national defense during the continuation of the existing war. I submit, however, the opinion that the only justification for the proposed legislation is a condition confronting the manufacturing centers in many of our cities, including the city of Buffalo.

This bill authorizes the Secretary of Labor to expend the sum of \$5,000,000 in such a manner as he may determine that will aid in providing housing facilities by loans of money to persons to erect same, and also gives the Secretary of Labor the power to build, manage, maintain, and equip such houses as he may determine necessary to assist the manufacturers in securing an adequate supply of labor.

It will also be noted that this bill gives to the Secretary of Labor the power to acquire by purchase or otherwise such local transportation facilities or parts thereof as in his judgment may become necessary. This provision is of great importance to the city of Buffalo, as we employ more than 60,000 men in the manufacture of aeroplanes, autotrucks, ships, and all kinds of munitions of war.

A large percentage of these factories are located in one section of my city, and it is impossible for the workers to find housing accommodations in the immediate vicinity of these factories, and up to the present time it has been impossible for our railway companies to meet the demands for the necessary transportation. The condition at Buffalo has become so bad that our mayor took occasion to visit Washington and conferred with the Government officials, seeking relief for our workmen and their transportation problems. The Ordnance Department and the Signal Corps have been engaged in a systematic investigation of the housing conditions and requirements of my city, and while they have been unable to give an estimate of the amount that must be expended they all agree that the demands for housing and better transportation conditions must be taken care of if the maximum efficiency in production is obtained by these manufacturing plants.

Being aware of the true state of affairs in the city of Buffalo, I believe the only permanent solution is to erect substantial and permanent homes, and afford an opportunity for the worker to purchase these homes upon the easy-payment

plan. And, gentlemen of the Congress, the contracts for building these homes must be given to contractors now engaged in that business in the city of Buffalo, for the men of the building trades in my city have been badly handicapped during the past winter in trying to secure employment at their trades, and the passage of this act will not only relieve an acute housing situation but will also furnish employment to thousands of the citizens of my city, providing, however, Buffalo is allotted some of this fund, and the contracts for this work are granted to local contractors who are organized and equipped, and can perform this work better and more economically than any out-of-town or foreign contractor could hope to do.

Section 1, providing that no contract be let under the cost-plus or percentage basis, is one that should be strictly adhered to, and if Buffalo contractors are employed I can assure this Congress that we will not have a repetition of the Hog Island scandal.

Rate on Second-Class Mail.

EXTENSION OF REMARKS

OF

HON. JOHN M. C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 30, 1918.

Mr. SMITH of Michigan. Mr. Speaker, I wish to extend my remarks by inserting the following letter in relation to the rate on second-class mail matter by request:

MOUNT PLEASANT, IOWA, March 27, 1918.

Hon. J. M. C. SMITH,

House of Representatives, Washington, D. C.

MY DEAR MR. SMITH: I am in favor of the Government carrying second-class mail in some more equitable fashion than now arranged, even if it costs \$90,000,000 per year. Personally (also the faculty whom I represent) I am absolutely opposed to the division and sectionalism likely to be occasioned by the enormities of the new arrangement for circulating the periodical literature of the country.

I should be happy to have you give this letter the widest publicity.

Very cordially,

EDWIN A. SCHELL,

President Wesleyan College, Iowa.

Increased Compensation for Post-Office Employees.

EXTENSION OF REMARKS

OF

HON. HARRY E. HULL,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 1, 1918.

Mr. HULL of Iowa. Mr. Speaker, there should be no delay in the passage of this act. Its principal objection is that it does not allow an increase of salary commensurate with the increased cost of living and the increased amount of labor the men it will affect are compelled to perform.

I have often marveled at the quality of labor the Government is able to procure when I have considered the miserable wage it pays to its employees. The larger portion of them could command much higher salaries if they would devote the same time and the same energy to a like enterprise in private life. The only tie that binds them to their present positions is that of allegiance to their Government and their intense loyalty and patriotism. You can not expect men to do this always, and I still contend, as I have contended in the past, that, aside from giving these men what is their due, the Government should look at it from a purely selfish standpoint and realize that this question of wage scale is a matter of dollars and cents to the Government. It is a question of retaining our efficiency, and the United States can not expect always to secure the class of labor it is now securing unless it gives its employees salaries that are at least partly commensurate with the salaries they might obtain in private life. This bill, therefore, while it is not all that we might hope or expect it to be, is a very long stride in the right direction, and it seems to me that anyone who has not only the interests of the men but the interests and the future efficiency of the Government at heart should stand solidly for it.

Take, for instance, the first section of the act, which deals with the Rural Delivery Service. Heretofore our rural carriers

have been compelled to work for a salary of \$100 per month, of which 25 or more per cent expenditure was necessary in the upkeep of their equipage. I have often wondered how the rural carrier managed to exist on the meager salary that he received. This bill will give him an increase of 20 per cent, or approximately \$240 a year. No less important is that provision which allows him \$24 per mile per annum for each major fraction of a mile over 24. I have long contended that a 24-mile rural route was sufficiently long for any rural carrier, and that when it was made longer it was placing an impossible burden on both the carrier and his horses. Heretofore the post office has seen fit, as a matter of economy, to make some of these routes from 28 to 30, and sometimes 32, miles in length. This extra burden has been placed on the rural carrier without any added compensation. Under the provisions of this bill, if he is compelled to do this added work, he at least will receive compensation for the same. However, I think the effect will really be the curtailment of the length of these routes, and thus we will receive much more efficient service.

Another section of the bill which should receive your hearty commendation and support is that which provides an increase for the clerks and letter carriers in the City Mail Service. The bill provides for six grades—the first grade to receive \$1,000; second grade, \$1,100; third grade, \$1,200; fourth grade, \$1,300; fifth grade, \$1,400; and sixth grade, \$1,500. This means that every clerk and city letter carrier will receive an increase of approximately \$200 per year. There is no more underpaid class of employees in the United States Government than the clerks and letter carriers. Their duties are very arduous, and especially the letter carriers, and they are compelled to go no matter what the climatic conditions. Many times they are compelled to work from 10 to 12 hours per day, and up to the present time their compensation has been hardly more than that of a common laborer. This increase will give them some incentive to continue their labors, and will go a long way to retain the high efficiency that this department of the post office has attained.

No less important is the increase that has been allowed for the railway postal clerks. The bill provides that class 1 shall receive \$1,100; class 2, \$1,200; class 3, \$1,300; class 4, \$1,400; class 5, \$1,500; class 6, \$1,600; class 7, \$1,700; class 8, \$1,800; class 9, \$1,900; class 10, \$2,000. As with the letter carriers and clerks this provides for an approximate increase of \$200 per annum per man.

The railway postal clerks have been requesting an increase in wages for a long time and this is the first substantial one they have received for several years. The life of a postal clerk is anything but a bed of roses. He has to be efficient to hold his position. Examinations are held at stated periods, and if he is not 99 per cent efficient he is demoted. In order to retain this efficiency he must put in long hours of study outside of his regular duties, and this must be done after working hours. The railway postal clerk is constantly moved from place to place. He may establish a permanent residence in some city, purchase a home, and be prepared to save a little money, when he will be directed to move to another place, and either his home must go on the market or he and his family must change their abode, at considerable expense to himself. With all of these difficulties it is surprising that we have retained the class of postal clerks that we have, and we are not yet giving them their just dues when we vote in favor of the passage of this act.

You will notice also that this bill provides for an increase of salary for assistant postmasters in first and second class post offices, and clerks and other employees. Those whose rate of compensation is \$800 or less shall receive 20 per cent increase; those whose rate of compensation is in excess of \$800 and not more than \$1,200 per annum shall receive 15 per cent increase; and those receiving salaries from \$1,200 to \$1,800 shall receive an increase of 10 per cent. These increases have long been imperative, and under the present high cost of living these employees have hardly been able to exist on the salaries they have been receiving. It should receive the approval of everyone in this House. Provisions have been made for substitute letter carriers and for other classes of labor employed by the Post Office Department.

The section which provides for increased revenues for fourth-class postmasters is, in my mind, inadequate. It provides that they shall receive 100 per cent of the cancellations on the first \$100 or less per quarter instead of on the first \$50 or less per quarter. The condition of the fourth-class postmasters of the United States is deplorable. Many of them are barely eking out an existence, and in most of these instances if they had to depend upon the compensation they receive from the Government they would starve. In most every instance the fourth-class postmasters are required to keep an extra employee in order

to carry on the Government business, and for this they receive in many instances salaries that amount to less than \$200 or \$300 per year. This bill goes only a short way toward providing compensation that they really should receive, but, as I have stated before, it is a step in the right direction, and if we can not see fit to increase their compensation we should at least give hearty support to this measure.

The bill is aimed to provide an increase of salary to practically every one of the employees in the Postal Service, however humble or responsible his position may be, and these same employees have long been considered underpaid, and in my opinion the bill is one of the most meritorious that has been presented to the House during the present session of Congress.

Third Liberty Loan.

EXTENSION OF REMARKS

HON. CORDELL HULL,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 30, 1918.

Mr. HULL of Tennessee. Mr. Speaker, the American people now face the third long-term liberty loan. War financing is a constantly recurring and pressing problem. There are many extremely important angles which should be considered in determining the safest, soundest, and most satisfactory policy of financing a great war. In my remarks on the first and second liberty loans I submitted certain facts and views on these questions; but, although they are equally pertinent to this loan, I shall not take the time to repeat them here. Each country at war is now desperately grappling with these serious questions. Since the war began England has floated three long-term loans; France, three; Austria, three; Italy, five; and Germany, seven. Each of these countries, at the same time, has large amounts of outstanding floating indebtedness in various forms. The war has produced artificial conditions in the finance, commerce, and trade of most countries at war to a large extent. The ablest financiers, the most reputable economic writers, and business men generally have found it necessary to revise, modify, and in some instances entirely abandon the theories and laws of finance and commerce which they had been accustomed to advance prior to the war. There has been more or less upsetting of their views and theories. Most of them, for example, were of the fixed opinion that it would be utterly impossible for even the most important commercial nations to finance a war of the present magnitude for but a very brief time. Yet, despite this general prediction, the war has progressed through a period of nearly four years, entailing expenditures aggregating far in excess of \$100,000,000,000—a cost to every man, woman, and child on the globe of more than \$60 each. The situation, therefore, is that each government at war must strive and struggle with its own financial difficulties as best it can, mindful at the same time that the judgment of the ablest financiers as to what are the soundest and wisest methods may occasionally prove erroneous because of so many artificial war conditions. I can see no possible danger to this country from unsound financing.

While each government should thus formulate its own financial policies in the light of its domestic resources, limitations, and conditions, it is nevertheless important that close observation of similar policies adopted by other governments should be made, both for whatever benefit might be derived therefrom in determining its own, and for the effect which those of other governments might have on our internal affairs through the operation of international finance, trade, and commerce. The modern economic conditions of the nations of the world are more closely related and interwoven than ever before. The war has produced a considerable economic strain on Europe. The position of the United States, financially, industrially, and commercially, is far stronger, sounder, and more stable than that of any other country at this time. In these essential respects the country could scarcely be better equipped to weather the storms of even a protracted war than it now is. A comparatively new and growing country, with boundless undeveloped natural resources, the greatest banking power, the highest skilled labor, unrivaled productive capacity in mine, factory, field, and workshop, and with an intensely patriotic citizenship, this Nation is far more able than any other to bear the burdens of war, and it will bear them unflinchingly until German militarism is curbed and crushed. I shall not repeat the

detailed statements I made in this House some days ago relative to the ability of the United States to prosecute the war, although they are very pertinent here.

Mr. Speaker, when nations, as in the case of the United States, find themselves compelled to enter a war, the first step necessary is the organization of their fighting force—the army and the navy. The second step, just as essential and urgent, involves the organization and mobilization of all needful war supplies. The Army and Navy must at all times be supplied with foodstuffs, equipments, and munitions. The Government, standing behind our fighting forces, must procure, pay for, and deliver these supplies. To this end vast moneys and credits must be made constantly available to the Government. Money and credit, however, would be of no efficacy unless sufficient war supplies should be produced and forthcoming. The great paramount necessity, therefore, is to organize, mobilize, and concentrate upon the war, not only our man power in the Army and Navy, but money and credit, war industries from the raw material to the finished products, and the labor necessary to operate them.

Transportation also becomes an equally vital factor. We are making great military and naval preparations; we have already floated large bond issues; we have made huge loans to our allies; many industries have been commandeered; many others are being operated under Government control or supervision; price regulation, price supervision, restriction of capital issues, embargoes on exports and imports, increase of production for all war purposes, conservation, savings—these and many similar steps have been taken in rapid succession by the Government and the American people in their efforts to concentrate the maximum power and strength of our manhood and resources in support of the war. To accomplish these necessary war purposes requires close application, untiring industry, and some self-sacrifice on the part of the American people. They may have to learn anew the practice of self-denial as to many non-essentials; they may have to suspend for the time some of the broad latitude, some of the practically unlimited privileges, and some of the opportunities for personal gain which a democracy or a representative government like ours offers and affords to every citizen in time of peace. There can be no organization of the forces of the Nation without an authorized and responsible head in whom powers vaster than those of peace times must be vested. Otherwise there could be no system, no direction, no control, and no intelligent operation of these forces. Any other course would present a cumbersome, unwieldy, unorganized, and confused mass of men, money, and supplies, scattered, with no concert of action, working at cross-purposes, and incapable and helpless to render full or effective aid in the prosecution of the war. There must be temporary concentration of power in the Government for war purposes if there is to be effective concentration and use of men, money, and supplies. Unless that power were abused, no citizen who is loyally and earnestly doing his duty in cooperating with the Government would suffer from its interference with a single right or privilege that he should exercise or a single duty that he should perform while war exists.

I have always most strongly condemned any governmental interference with the fullest exercise of individual freedom in every respect contemplated by our free institutions in time of peace. But we are at war. The ability of a democracy effectively to wage a defensive war against autocracy is on serious trial. It must not fail. The duties of civilians to produce and furnish adequate war supplies at every stage are just as necessary as those of the soldiers on the battle line, except that the former are not called upon to offer or hazard their lives. Teamwork, concert of action, and united effort are absolutely indispensable if we are to produce the maximum amount of necessary war supplies. To secure this requires the promulgation of uniform rules as to the joint and cooperative activities of different classes of industry, as well as the enforcement of such rules, not against the overwhelming number who are ready and glad thus to coordinate their activities, but only against that limited few who might fail or refuse to do so. I would only tolerate this centralization and exercise of war power as an unavoidable war necessity, which, of course, should be abandoned the moment our war exigencies have been met and overcome. I go this far, too, because the ultimate fate of the Nation is hanging in the balance, as is shown by hourly dispatches from the battle fields of Europe. If any citizen can not see that world conquest and world dominion are and have long been the deliberate plan and purpose of German militarism, such citizen is indeed living his life to little purpose and will later realize when it is too late his utter failure to grasp and understand the certain objects and inevitable trend of this world-wide war.

Only disloyal persons or those derelict in the discharge of their war duties would feel the hand of concentrated war power. No Government official intrusted with these temporary war powers, even if strangely disposed to do so, would dare incur the wrath and vengeance of the people or commit an act of self-destruction by abusing the power thus vested in him. Both experience and common sense teach that war can not be waged and won under any other policy. The people of the Nation must trust their property and their safety to the courage and the patriotism of the soldiers at the front. The soldiers have never failed that trust. To the same great end can, should, and must we not trust the fairness, integrity, and patriotism of those at the head of the Government, charged with the fullest responsibility for the wise, efficient, and successful prosecution of the war, and who are under solemn oath to support and defend the Constitution and to well and faithfully discharge the duties of their respective offices? If not, pray tell me what is the alternative, except delay and possible defeat? Point out a single precedent to the contrary in all past wars here and elsewhere. Only shirkers, some who fail to see the real extent of our task, an occasional politician, a few profiteers, and those of the bolshevik persuasion should be expected to offer criticism in this extreme crisis. The slogan of those who would profit out of the war is "business as usual," whereas the moving, animating sentiment of every patriotic American now is "war business as usual," until the terrible German menace is forever removed. "Business as usual" is chiefly responsible for 4½ per cent interest on all Government war bonds heretofore issued and those to be issued under the authorization of this bill. The money market should be at the disposal of the Government in time of war. This can not be the case when our banking power is more or less divided, when our nonessential industries insist on expanding far beyond normal volume of business and capital, thereby diverting immense amounts of labor, materials, and money from the Government and its essential war industries; when people of wealth persist in all forms of extravagant and useless expenditures; when building-construction work proceeds at or above normal capacity, regardless of the fact that much of it could be deferred until the end of the war; when many public works could, without serious injury or impediment, be likewise delayed; when, in short, there is a general scattering and diversion of a large portion of money, credit, materials, and labor, as stated, it is plain that when war bonds are offered there is a scarcity of capital available for investment; when the navy and shipbuilding yards, the farms, and war factories clamor for additional labor they find much of it engaged in nonessential industries; and when war plants generally are in sore need of more materials they find them being likewise consumed.

The point I make is that the Government and those industries contributing to the prosecution of the war have first call on the money, credit, the labor, and the war material. Non-essential industries, such as the pleasure-auto manufacturer, the chewing-gum manufacturer, the manufacturer of luxuries and other nonnecessities, should be content to proceed at normal capacity, or, as in England and other countries, convert their businesses into the production of various kinds of war supplies. To their credit be it said that many have done so. Labor in no event will be in any danger of unemployment. Our war industries, including the farms, can utilize all the labor that can be drawn from nonessential businesses, and at good wages.

Mr. Speaker, our estimated receipts for the fiscal year ending June 30, 1918, are \$8,220,470,312, which added to the balance in the Treasury June 30, 1917, aggregates \$9,287,390,673. Our total estimated disbursements are \$16,116,591,347. The estimated receipts for this fiscal year embrace tax revenues to the amount of \$3,856,800,000. The ordinary expenditures are only \$9,568,029,726. The tax revenues will be greater than the foregoing estimate, and hence their percentage to the total ordinary disbursements will probably be between 40 and 50 per cent. The most satisfactory showing in this respect for the present fiscal year is already assured. The total estimated disbursements of more than \$16,000,000,000 includes \$6,115,000,000 loan to our allies and to be loaned to them during the remainder of the fiscal year, also \$100,000,000 for the purchase of farm-loan bonds. It will thus be seen that these latter amounts, aggregating \$6,190,000,000 of disbursements, will not become a loss to the Government and a consequent burden to the taxpayers. Other like items of expenditures or disbursements which will not be lost to the Government appear in the estimates, such as \$200,000,000 for the Director General of Railroads, \$200,000,000 for the War Finance Corporation, near \$1,000,000,000 for the Shipping Board to construct merchant vessels, also numerous other items aggregating several

hundred million dollars, including cost of nitrate plants, cost of many additional or new war-industry plants paid for by the Government and title taken, the sum appropriated for the purchase and sale of nitrate of soda, the cost of the Alaskan railway, and other miscellaneous items. All these temporary outlays which the Government is not expected to lose will aggregate \$7,500,000,000.

The amount of bonds issued in connection with the first war loan, act of April 24, 1917, was, in round numbers, \$2,000,000,000; the amount sold in connection with the second war loan, act of September 24, 1917, was \$3,808,000,000, or a total of over \$5,800,000,000. The total amount of bonds authorized to be issued under the act of September 24, 1917, was \$7,538,000,000. The pending third war-loan bill would add an additional bond-issue authorization of \$4,461,000,000, making a total amount of bonds authorized under the three measures of \$14,000,000,000. When this bill passes, the amount of bonds available to be issued will be \$8,204,459,000, less \$77,000,000 which is specially applied by the authorizing statutes. The estimated amount of new bond issues for the fiscal year 1918 is \$4,509,069,000.

It will be seen that whereas the total expenditures or disbursements of every kind have during the past few months been estimated at as high as \$21,500,000,000, the best estimate of the Treasury now is \$16,116,591,000. The Government therefore finds itself in the happy position of seeing estimated expenditures fall off several billions and the estimated revenues increase to probably near a billion dollars as the end of the fiscal year approaches. This greatly strengthens our financial position and should afford a strong impetus to the ready sale of Government war securities of all kinds.

The old question as to the relative amount of money that should be raised by taxes and by bonds, which arises in every war, again presents itself. I have expressed my views at some length on this subject in discussing previous war measures. My judgment is that the large percentage of taxes to bonds which this Government has utilized during the first year of the war will prove to be far higher than the percentage levied at a similar stage of any important war by any nation, past or present. Certainly, our Government in this respect has far outstripped other countries engaged in the present war.

May I be pardoned while I repeat the statement recently made in the House relative to new taxation, to the effect that production of war supplies can be increased by curtailing non-essential industries and savings effected by putting a curb on personal expenditures. Such course would set free an immense amount of labor, tonnage, coal, and other materials strictly required for war purposes. The most effective means of curbing individual expenditure is by taxation. Taxation either prevents it or provides revenue for the Treasury. A good purpose is served in either event. Our existing war-tax laws go a considerable distance in restraining individual expenditures, but in view of the financial exigencies of the Government they do not go far enough. The immense amount of unnecessary, not to say entirely useless, private expenditures being made throughout the country is open and notorious. The income and excess-profits tax laws, which accomplish most in this respect, should, during the present session, have their rates readjusted and in some respects tightened up; and a tax on sales of luxuries or a stamp tax on the order of that in France and certain other countries should be directly imposed on private expenditures for luxuries and other nonnecessities. Upward readjustments and extensions of the estate tax should be made. A stamp tax on the receipt of money paid for diamonds, pearls, furs, and many other articles of ornament and luxury would be most timely. A special tax on gifts during the war would likewise serve a most useful end in more ways than one. Nothing is more vital than that these powers of useless expenditure should be transferred to the Government to the fullest possible extent to aid in meeting its sore financial needs. To this end the people of Europe are practicing all kinds of self-denial.

Mr. Speaker, England has imposed a higher percentage of taxes than any other foreign country at war. That percentage has usually been around 25 and well below 30 as to total receipts and expenditures, but has constantly remained below 20 per cent as to actual war receipts and expenditures. The financial statement of England shows that from August 1, 1914, to February 23, 1918, the amount raised by revenue was \$8,344,000,000, and the amount of the net borrowings was \$24,962,000,000, or a total of \$33,306,000,000. The national debt of England shows an increase of total liabilities from \$3,550,000,000 on August 1, 1914, to \$28,520,000,000 on February 23, 1918. The normal receipts and expenditures of England prior to the war

were about \$900,000,000. There is more or less general insistence in England that the Government this spring should levy additional war taxes, in the light of growing inflation due largely to credit expansion, and also upon the theory that the country can and should meet a larger share of war expenses by taxation.

The industrial section of France having been overrun by the Germans, that unfortunate country has been unable to increase its taxes above the normal yield prior to the war. Several new levies were made during last year, however, which were designed to secure a considerable increase. The Government estimates that the whole of the new taxation proposed during the war will yield \$460,000,000 annually. The three long-term war loans of France have yielded amounts as follows: That of 1915, \$2,372,000,000; that of 1916, \$1,960,000,000; and that of 1917, \$2,055,000,000. The total national expenditures of France from August 1, 1914, to the end of the fiscal year 1917 were \$21,105,000,000. The public debt on August 1, 1914, was \$4,400,000,000. It was \$23,000,000,000 at the end of 1917.

Until the past year Germany made no tax levies for war purposes. After borrowing money to pay interest on her war securities for some time she made certain tax levies during 1917, the yield of which is a matter of speculation. Germany has financed herself and her allies chiefly through short and long term loans and the issue of fiat paper money. The total funded and unfunded debt of Germany is over \$25,500,000,000. Count Von Preysing, a German financial expert, in a speech about February 1, estimated the cost of the war to Germany to date at \$32,500,000,000. He evidently includes the many State war debts.

Mr. Speaker, this bill proposes a long-term bond issue. It is interesting to view the respective policies of different countries toward long and short term loans. Germany pursues the fixed policy of offering a long-term loan at the end of every six months. England and France have each floated three long-term loans—France one during each of the years 1915, 1916, and 1917, and England one in each of the years 1914, 1915, and 1917. Each of these countries carries a large floating indebtedness. These different loan policies have their good and bad features. One objection offered to the long-term-loan policy is that it requires the banks either to subscribe largely themselves or make large advances or loans to enable others to subscribe, and that such course creates purchasing power for the Government without the compensating reduction in the purchasing power of the individual citizen, which results in inflation. This objection can also be offered against similar purchases of short-term paper. These criticisms are based on the view that the individual who has savings should make direct purchases of bonds from the Government, thereby avoiding the creation of the situation of inflation. England has bent every effort to induce the citizens to lend their money direct to the Government instead of depositing in banks. To accomplish this result most effectively the Government puts on daily sale through every available local agency several kinds of short-term paper, differing more or less as to interest rates and terms of maturity. The purpose is to sweep into the Treasury all savings available for investment as they are realized. Some persons desire to purchase Government paper maturing in 3 or 6 months; others 12-month paper; others 2 or 3 year paper; and still others longer term paper. The Government offers daily invitation to every class of investors according to their convenience and desires. In this connection it is very interesting to note that England has abandoned her former war policy of issuing long-term loans at distant intervals and has substituted what is called national war bonds, which are placed on daily sale throughout the United Kingdom, just as her short-term paper. These sales commenced about October 6, 1917. To date the sales of these bonds have aggregated a little over \$2,000,000,000.

Speaking relative to these national war bonds in the House of Commons on February 14, 1918, Mr. Bonar Law, chancellor of the exchequer, said:

This system of continuous borrowing was adopted by me as a substitute for the loan (meaning the long-term loan method), and I now have every hope that it will be successful.

He added that this method had effected a reduction of the floating debt to the amount of \$140,000,000 since January 1, and that further reduction was looked for during the quarter.

Mr. Speaker, these national war bonds were placed on the market in four different forms, which I shall later describe, maturing, respectively, within 5, 7, and 10 years. England is the only important nation which has adopted the comparatively short term loan policy. She has tried both. It is plain that the long-term method, if the bonds are made redeemable within a suitable time, has the advantage of enabling the Government later to adjust its interest rates on a lower basis,

thereby avoiding any embarrassment in fixing new interest rates during the war and at the same time utilizing its privilege of keeping the rates of interest on long-term bonds near the level of the money market following the war. It is also plain that in financing a great war of indefinite duration the greater amount of money available for investment in Government securities the more satisfactory will be the interest rates. To avail itself of the investment market to the fullest extent the Government should put out as many different kinds of paper as may be necessary to meet the conditions of the short, the intermediate, and the long term money markets and likewise to offer opportunities and invitations to each of the different classes of investors, large and small, according to the time at which their savings or profits become available for investment. Under this combined policy of financing there is a constant flow of savings from all available sources directly into the Treasury, with little or no disturbance of business or security markets. England has developed this policy more fully than any other nation. She daily offers about six different kinds of paper to the public.

Mr. Speaker, this bill would discontinue the conversion privilege which was offered to the investor in connection with our two previous loans. This is based on both sound policy and experience. England has tried each method at different times, and she, in common with other countries abroad, discovered that conversion rights are a serious drawback to the further financing of the war, with the result that in connection with her last long-term loan in 1917 this was not offered. Other nations practicing it find themselves always facing gradually ascending interest rates. This privilege offered in advance is an invitation to all investors, consciously or unconsciously, to exercise more or less influence in favor of higher interest for the loan to follow.

It is interesting to observe that with one exception no nation has thus far offered a loan made compulsory by statute, notwithstanding the great financial stress of many of them. True, compulsory loans have been openly threatened in some cases unless the people voluntarily subscribed. New Zealand, however, has provided for a compulsory war loan by requiring income-tax payers whose income is over \$3,500 to subscribe for an amount of bonds equal to three times the total amount of land and income tax—exclusive of excess-profits tax—for which he is liable. There was a further provision that if such person has already subscribed for an amount exceeding one and one-half times the amount of such tax for which he was liable, the excess would be deducted from the amount imposed on him in connection with the war loan.

Mr. Speaker, the pending bill would subject the proposed new liberty loan to the same superincome, estate, and excess-profits taxes as were imposed on the second liberty loan issue. These superincome rates can later be applied to corporations, if necessary. This tax policy is wise, as is strikingly shown by the sad plight in which Italy, Canada, France, New Zealand, and most other countries at war now find themselves as a result of having adopted and continued a tax-free-bond policy. They have already gone too far with it to turn back. Interest rates have almost gotten beyond their control. The inevitable effects of this policy on the taxpayers in these countries after the war will be exceedingly disastrous. The bonds will then gravitate into the hands of the rich and wealthy classes. They will not only retain the war rates of interest but they will carry largely appreciated capital values, with the result that the war will cost the taxpayers from 50 to 100 per cent more than the actual war expenditures incurred. Another serious injury that will occur is well illustrated by Spain and certain other countries, where tax-free bonds have been issued and bought by the rich classes, who decline to invest their wealth in industries for the purpose of developing the business and resources of the country, but spend their lives in idleness, with the result that the country is woefully behind in its commercial and industrial development. Tax exemptions, while as a rule of little or no benefit to the small investors, offer great money-making advantages to the wealthy classes, and in case of huge public debts, such as all nations will have following this war, will prove most handicapping to the industrial and commercial development of the country. A tax-exemption policy under present war conditions would result not only in giving an amount of capital corresponding to the increase of Government loans immunity from all taxation, even for the most pressing war purposes, but would protect the holders of such securities against their just and fair contributions to the payment of the war debt in the future. Both public opinion and experience in England strongly support the policy of the Government in persistently refusing to make its immense war debt exempt from taxation, while the other countries pursuing the tax-exempt policy would now gladly

retrace their steps if they could. It may be noted that the United States and England have adopted similar tax methods in this respect, except that England offers an alternative bond subject to both normal and super income tax at a correspondingly higher rate of interest.

The interest on our war bonds is to be increased from the present rate of 4 per cent to 4½ per cent under the terms of this bill. No more difficult and perplexing problem arises in connection with war financing than that of determining rates of interest just and fair to the investor, to the Government, and to present and future taxpayers liable for the payment of the public debt. Many important factors enter into the question of interest rates in time of war. I have pointed out the manner in which the carrying of the conversion privilege into successive loans operates to raise interest rates above a proper level and how tax exemptions work injury and also render the Government more helpless at the hands of the public in its efforts to keep interest rates on a fair basis. It has been my opinion that if the American people could have realized more fully and promptly the full extent and nature of the war and the consequent magnitude of the financing required, so that more general and close cooperation and coordination could have been had in the work of organizing and concentrating our financial and material resources at an earlier stage, including restrictions on capital issues, the amount of capital thus made available for investment in Government securities would have justified and supported a third liberty loan interest rate of 4 per cent. It has been impossible, however, to bring about this highly developed system of organization and concentration to the extent necessary to accomplish this result thus far. The fault is not with any class of persons or officials. The country as a whole just could not move rapidly enough in this direction.

It is highly interesting to observe the course of interest rates fixed for loans of other countries at war. The yield on the bonds of the new French long-term loan of 1917 is a little over 5½ per cent. French treasury bills due during 1918 were accepted at the rate of 5½ per cent in payment of subscriptions to this loan. The first long-term loan of France was issued at 88 and bore 5 per cent interest; the second loan was issued at 87.50 at 5 per cent; while the third loan comprised a bond issue at 68.60 and carried an interest rate of 4 per cent. Poor, unfortunate France loaned Russia near \$2,500,000,000 in a vain effort to keep her in the war and to stay the collapse which finally came. We see that France, in common with virtually every other country at war except the United States, bases its rate of interest on the rate of yield on the bonds below par. Under this method fluctuations are much more slight than under our method. Our changes are in the rate of interest from 4 per cent to 4½ per cent, for example, whereas if the rate should be reckoned by discount on the principal the alteration would be by decimals of a per cent. Our people are not accustomed to this latter method, which has found such general favor elsewhere. France's interest charge before the war was \$207,000,000, whereas it is now \$945,000,000. It is thought that, being unable to pay off all her temporary loans, including all floating debt, France will be obliged to convert them into longer loans at a higher rate on account of her present state of partial economic exhaustion. The United States Government has loaned France about \$1,500,000,000 and England has loaned her \$2,000,000,000.

Germany, as stated, has piled credit on credit, issued fiat money, and so inflated both credit and currency that she does not now receive from her bond issues a net amount of real money equal to more than one-half of the subscriptions on account of currency depreciation. Germany allows no open trading in bonds, in order to keep secret their real, depreciated values. Both Germany and Austria are vainly striving to detect large numbers of persons smuggling gold out of the respective countries, and inflicting the severest penalties. The German interest rate ranged from 3 per cent at the beginning of the war to 3½ per cent, then to 4 per cent, and finally to 5 per cent and over as the war has progressed. Reference must be had to the discount at which her loans have been floated in order to ascertain the exact interest yield. Germany's interest difficulties have not given serious concern under her methods of war finance, which involve wholesale fiat money issues for all needed purposes. Austria carries an interest rate of virtually 6 per cent on nearly her entire indebtedness, which has now risen from \$95 per capita before the war to \$520 per capita at present. The Austrian Government authorized the Austro-Hungarian Bank to increase its note circulation from \$600,000,000 before the war to \$3,540,000,000 in December, 1917. This note credit was placed at the disposal of the Government, with the result that the Government has deposited treasury bills bearing 5 per cent interest with the bank, receiving the bank's note issue and other money therefor until the amount

thus derived by the Government aggregated \$2,640,000,000 in December last. It is most difficult to reckon actual net values of paper in Germany and Austria on account of inflation and their abandonment of the gold standard.

Italy paid 5 per cent for her last long-term loan of December, 1917, which was exempt from any tax. The interest yield is 5.78 per cent. Her nominal rate of interest during the past three years has been around 5 per cent. Italy has utilized a considerable amount of five-year treasury bonds at 4 per cent, three-year treasury bonds at 5 per cent, and 3 to 12 months exchequer bills at 3½ per cent.

Canada's last long-term internal war loan consisted of an issue of 5, 10, and 20 year securities bearing 5½ per cent, issued at par, and with a substantial bonus of interest in the first coupon. There was no bond market in Canada prior to the war. Her loan difficulties, since being cut off from the United States and English markets, are obvious. The recent New Zealand loan carried 4½ per cent, tax free.

Mr. Speaker, in financing the war the Government of the United States can profit most by observing the good and bad features of the English methods of war finance, in view of the existence of a greater number of similar conditions in the two countries. It is important, however, to keep in mind at the same time those which are dissimilar. The old and stabilized condition of English finance, commerce, and industry has naturally resulted in a lower normal interest level there than here. At the same time it has been generally agreed that in order to maintain her foreign-exchange situation England until recently paid a higher rate of interest than the money market otherwise entailed. England having made her first long-term loan at 3½ per cent and her second long-term loan at 4½ per cent, both subject to tax, the treasury during 1916 observed that the Government was on a steady ascending scale of interest rates. During the latter part of 1916 treasury bills of less than one year were selling at 5 per cent and 5½ per cent, and exchequer bonds at as high as 6 per cent. British credit was thus about to be placed on a 6 per cent basis.

The outstanding 3½ per cent and 4½ per cent war loans went to a very considerable discount. Representative English securities depreciated to an amount of near \$4,000,000,000. An immense floating debt had piled up. A long-term loan was considered necessary. At this stage, while the public was generally proclaiming and anticipating an interest rate of around 6 per cent on the forthcoming loan, the Government, under a new ministry, decided to make itself a factor in the money market. The first step was to discontinue the issuance of these high interest bearing treasury bills and exchequer bonds. Money, credit, and war materials through every feasible method of Government regulation, control, and restriction were organized and concentrated for the use of the Government and essential war industries. Most nonessential industries were required to convert themselves into the production of some kind of war supplies. Labor was likewise diverted. Let me illustrate. The manufacture and purchase by the wealthy classes of luxuries was generally discontinued; also expenditures for pleasure; gasoline and drivers of pleasure autos were utilized for war purposes; a general shifting of nonessential businesses to those producing necessities and war supplies was had. According to one publication—

Phonograph factories are now turning out shell parts; jewelry makers are producing periscopes; watchmakers are adjusting fuses; music-roll makers are making gauges; many baking-machinery plants are manufacturing high-explosive shells; numerous cream-separator factories are making shell primers; glaziers are making cartridge clips; some baby-food factories are producing plugs for shells; a number of textile-machinery plants are turning out field kitchens; advertising agencies are making shell adapters,

And so on.

Labor has been accordingly diverted to the production of these war necessities. Few individuals or businesses have materially suffered, but most all are extremely busy producing war necessities with larger profits both to capital and labor than ever before. After these industrial adjustments were thus effected the Treasury announced that it would offer a large long-term loan at 4 per cent subject to superincome tax, or, in the alternative, another form of bond with both normal and super income tax included, which would make an interest yield of near 5½ per cent, and that a stabilizing provision designed to keep the bonds at or near par would be placed in operation. The result was that this huge loan was oversubscribed, the country settled back to a lower interest level, and three and six month treasury bills gradually fell in their interest rates through 1917 until during most of the present year they have continued steady at 3½ per cent. We have been obliged to place our corresponding Treasury certificates of indebtedness at 4

per cent and 4½ per cent. Our financial position is far stronger than that of England, but England has concentrated all her available resources upon the war, with the result that capital available to the Government is more plentiful there than here. While the British treasury took a rather firm hand in shaping the course of the money market, it did not abuse its power. It simply stopped an unreasonable and artificial rise in interest rates and aided in restoring them to a sounder level fair to all. No criticism from the public, but the highest commendation, was heard. With our resources as fully organized in support of the war I see no such dissimilar conditions here and in England as would warrant an interest basis materially, if any, higher than that in England. European experience has already proven that Government loans can be made at a lower rate than strict money-market estimates would suggest.

This English achievement has occurred in the face of great credit inflation and high cost of commodities. She has also maintained her productive capacity. In this connection it is noticeable that her security market with this adjusted interest level remained stabilized during 1917, there being but very slight depreciation. In October, 1917, as I have stated, England commenced the daily offering of her national war bonds in lieu of long-term loan. The five-year form of this issue was offered at an interest yield of 5½ per cent, subject to all income tax, or a bond with the normal income tax deducted, which left a rate of slightly under 4½ per cent. The sales of these bonds have averaged over \$400,000,000 per month from the beginning. It is generally agreed that this latest combined method of English financing, if possible to be continued, will result in general advantage to the country. The only note of criticism is to the effect that the interest rates are too attractive. General sentiment now favors this plan as against a long-term loan. The long and short term money markets of England have presented contradictory aspects at different times. When one of the long-term loans was floated treasury bills and exchequer bonds were selling at substantially higher rates of interest than the long-term bonds being offered, but when another long-term loan was floated the interest rates of treasury bills and exchequer bonds were substantially lower than the rates of the proposed long-term loan. Short loans are now lower than the long-term offerings as compared with the reverse situation in the United States. There appears to be an ample amount of money in Europe, not only in the nations at war but in neutral countries as well. Some people in this country oppose any Government suggestions which would even beneficially interfere with existing money-market conditions. These persons should take a leaf out of the English book of experience. The theory there is that most kinds of financial, industrial, and commercial conditions are more or less abnormal and artificial under the effects of the war, and that the Government, having made itself a strong factor in the general financial and business affairs of the country, has at the same time assumed responsibility of exercising its power to see that interest rates are neither too high nor too low, but that they be kept on a sensible, practical basis, in the light of conflicting conditions, which will be just and fair to all. In other words, when it will serve a beneficial public purpose the Government should to that extent interfere, but it should be extremely careful not to take any step in this respect that would be calculated to result in injury or injustice. A general view in England during the past 12 or 14 months has been that the money market should be cheaper and that only the Government could, as it should, take such action as would reduce the value of money in the market. Germany and one or two other countries have virtually assumed control and direction of their respective money markets, not only for war purposes but to insure their sounder and more stable operation following the war.

The Government does not thus arbitrarily and directly interfere with the money market, but it brings about this rather natural condition by conducting the financial and business affairs with which it has to deal, including restrictions on capital issues and nonessential industries, in such way, among others, that investment opportunities are curtailed and the public turns to Government securities. Under the effects of this policy the Government has a far larger amount of capital available for investment either in long or short term securities at its disposal. To discourage such investments in its already large and burdensome volume of short-term securities, the English Government drops its interests rates below the rate prescribed for the long-term national war bonds, with the result that the public is buying these latter bonds in constantly increasing quantities, thereby enabling the Government to reduce and control its short-term securities. The amount of treasury bills alone, which correspond to our Treasury certificates of indebtedness, outstanding

in England on February 23, 1918, was \$5,273,000,000, war-savings certificates over \$600,000,000, and war-expenditure certificates \$116,000,000.

The offer of our third liberty loan at 4½ per cent presents to the people the best, soundest, and most desirable investment to be found in the world to-day. The interest is exempt from all State and local taxes, and all Federal taxes save practically the superincome tax. In addition to this feature these bonds will be purchased by the people at a time when prices of commodities are virtually double those of normal times, with the result that the capital values of these bonds will considerably appreciate as normal conditions approach after the war. One bushel of wheat will now pay for more than \$2 of bonds, whereas when normal conditions return 2 bushels of wheat will be required to pay off the same amount. The same is largely true as to the proceeds of a day's labor. This latter feature of the bond issue should not be overlooked either by the bond purchaser or by the Government. The purchaser should consider this trade advantage in making his purchase. The Government should protect taxpayers by making the bonds redeemable within a reasonable time after the war.

It is most unfortunate that the general public has received the impression that the outstanding liberty fours are apparently not worth par. Two or three conditions, more or less local, have served to create this impression. In the first place, many persons patriotically purchased more bonds than they could pay for, with the result that during the past few months they have been unloaded on the market at forced sales in the absence of any agency for their secondary distribution. In the second place, certain wealthy purchasers naturally saw opportunities to make short-term commercial loans at higher rates of interest than they could derive from these bonds, because of the high income-tax rates to which their large incomes are subject. They, too, have unloaded on unprepared local markets substantial amounts of liberty fours. In the third place, many nonessential and other industries making large profits under war conditions have, in the absence of sufficient Government restrictions, bid up interest rates so high as to divert immense amounts of capital that would otherwise have been available for investment in Government bonds.

While the high rates these concerns have been paying are only short-term commercial rates and not investment rates, their action has nevertheless resulted in greatly scattering and diverting capital available for investment in war bonds. While it is true that the Nation only has an amount available for investment not exceeding what it saves after meeting normal and war industry requirements, it is equally true, according to all estimates of our annual savings, that we have an ample amount to absorb all our Government war securities thus far. It is neither wise, justifiable, nor practicable that these splendid Government securities with their tax exemptions, offered as an investment, should compete or be expected to compete with abnormally high short-term commercial rates paid for a few months by a business concern making war profits of from 15 to 200 per cent.

Mr. Speaker, it is but natural and inevitable that all securities of whatever kind bearing a fixed rate of interest and intended to apply more to normal than war conditions can not maintain the same market situation they occupy during peace times, for the reason that when prices of commodities double the purchasing power of the interest rates remains fixed and this affects the value of the security during abnormal war times. It has been observed that some such securities have not even been favorably affected by large earnings of the corporation issuing them under war conditions. All sound industrial and other securities, however, will naturally and inevitably rise to their former price levels when the war closes and normal conditions return. In this connection it is interesting to note the course of the Liberty 3½ per cents. Evidently the wealthy investor, subject to high income-tax rates, prefers the 3½ per cent tax free to the Liberty fours, subject to supertax. The result is that only \$560,000,000 of the former have been converted into the latter during past months. The unavoidable situation with respect to the purchase even of the new 4½ per cent issue by extremely wealthy individuals will continue, in a measure, as it has in connection with like purchases of Liberty fours. They will naturally unload more or less amounts of them from time to time, at a small discount and without regard to their real and true value, for the sake of realizing higher interest rates from short-term commercial loans or corresponding dividends from industrial investments. Patriotism, however, forbids.

The Treasury's method of short-term financing has thus far been admirable and worthy of highest praise. Certificates of indebtedness have been put on the market for three purposes. One object has been to secure to the Treasury current savings ready and available for investment; another purpose has been to anticipate and make more easy the payment of taxes. One bil-

lion three hundred million dollars of certificates have been purchased by taxpayers who will turn them into the Treasury on June 25 in payment of their taxes. A third useful function of these certificates is to aid in effecting long-term bond sales, which the Treasury brings about by selling them in advance to prospective bond purchasers, who in turn make payment with them. I am of opinion that the Treasury will soon find it advisable to offer these certificates in larger quantities and perhaps bearing different terms as to maturity and even interest rates, with a view of reaching each class of investors as their savings accrue and thereby draining such moneys into the Treasury for general financing purposes. I had thought that it might be wise and feasible to enlarge the volume of our short-term offerings and thereby finance the war into the new fiscal year without a long-term loan.

This action, however, would contemplate the sale of more certificates to the public and less to the banks.

The bill contains a stabilizing provision very similar to that in operation in England and France, which has served a useful purpose there. For the reasons I have already stated, the operation of this provision will not necessarily assure the retention of these bonds at par at all times during the war. Conditions are too unsettled, artificial, and abnormal to expect that this could or should be arbitrarily done. This method will, however, go a considerable distance in stabilizing our loans. It would go much further, however, if we could secure adequate restrictions on capital and security issues and prevent the expansion of nonessential industries above normal while the war continues. This latter step is really a most essential part of an effective stabilizing plan. I have been urging both proposals for some months. Another provision helpful to the loan relates to the privilege given individuals to pay war bonds in settlement of estate taxes. This is an English provision to which I had the privilege of calling attention several weeks ago. This will not only encourage the purchase of liberty bonds, but will avoid forced sales by executors and administrators for the purpose of paying estate taxes.

I do not think the injurious effects of successive Government loans on savings banks will occur, at least to the extent predicted or feared by some. I recently pointed out the facts as to the effect of Government loans on savings institutions in several other countries. Withdrawals elsewhere have been both comparatively small and temporary, without regard to rates of interest the Government was paying.

England has found that the special-investment departments of savings banks have incurred serious risk of temporary disability in time of money stringency by borrowing their money from the people short and lending the money on long terms. To guard against this class of financial troubles, a law is in course of enactment there designed to authorize a board to impose restrictions on the former policies of these banks both with respect to character and length of the loans they make. Other salutary provisions, including one to furnish relief to a bank in case of crisis, are contained in the bill.

The banks of the country, as they have heretofore, will continue in many ways to afford great and invaluable aid to Government financing. Their services are naturally indispensable. At the same time it is exceedingly important, in guarding against inflation of credit by multiplying purchasing power, that the individual depositors should themselves directly invest their deposits in Government bonds to the fullest possible extent. Bank purchases out of their own resources produce no inflation tendencies, nor do any other kind of bank purchases which are promptly redistributed and passed on to the individual investor seriously hurt.

Some express the fear that the proposed sale of liberty bonds and the payment of a huge amount of income, excess-profit, and other taxes, both coming near the close of the fiscal year, may cause some disturbance of the business and economic situation. It will be noted in this connection that of the \$3,854,000,000 of estimated revenue receipts for this fiscal year more than \$900,000,000 have already been paid into the Treasury, and Treasury certificates of indebtedness to anticipate additional payments to the extent of more than \$1,300,000,000 have been purchased. These amounts comprise more than one-half of this year's estimated annual revenue, and a large amount in addition will be paid into the Treasury in the usual daily course between now and June 30. At the same time slightly over \$2,000,000,000 of Treasury certificates of indebtedness have been purchased in anticipation of forthcoming liberty-loan payments. While I have until recently been of opinion that it would be found necessary to provide for the payment of a substantial portion of this year's taxes by installments after June 25, it may now be possible, through the facilities since provided for the anticipation of tax and bond payments, to avoid this step. Later developments will best indicate.

Mr. Speaker, the piling up of huge and unprecedented war debts throughout the world creates an after-war problem only secondary to that of raising money for the prosecution of the war. The financiers and economists in several countries are already speculating on the possible methods that may be adopted to meet war indebtedness incurred. Europe will be faced with the double problem of dealing with inflation and gradually getting back to the gold standard, and also meeting her war-debt requirements. Most of this aggregate debt will have immunity from any kind of taxation, and this will further complicate the situation. It is clear that if this war should result in world disarmament the various countries would be able to utilize an aggregate amount of more than \$2,000,000,000 heretofore annually spent on navies for the payment of their respective war debts. The expenditures for large standing armies and extensive coast fortifications would also be available. Large periodical capital levies have been proposed, but this plan has not as yet been very generally accepted.

The creation of Government monopolies with respect to tobacco and certain other staple products or materials has found favor in some nations. Certain it is that high tax levies for the payment of war obligations can be made and maintained far easier in time of war than in normal times following the war.

Mr. Speaker, the proposed bond issue should, and I know will, meet a hearty response throughout the country. Considering the tax exemptions, the interest return is attractive and should be entirely acceptable. True, certain short-term loans more attractive may be found here and there, but it is better for the people to make fixed investments in these high-grade Government securities than to be hawking and peddling their money here and there in an effort to pick up a short and higher interest return. The former policy is wiser in the end. Considerations of patriotism also should encourage and enlist the heartiest cooperation of the people in maintaining the financial strength and credit of the Government during the war. No citizen should disturb or complicate our Government-security situation in time of crisis by reselling his bonds except in case of real necessity. He can doubtless sell them at a substantial premium after the war. By continuing to organize and marshal the resources of the country the Government will be able to so finance the war as both to conserve and promote the economic staying power of the Nation—a condition so necessary not only in the successful prosecution of the war, but in the maintenance of international credit and the international financing which will be expected of this Nation following the war. The war is still on. With right and justice on our side success can not fail us. Every personal or other consideration should be subordinated to one grand, hurried, united effort to win, and to win at the earliest possible moment. Time is of the essence of a wise war policy now; it means everything, while delay in preparation or in lending the maximum amount of aid on the part of every citizen means the loss of additional lives, the crippling of additional soldiers, the increase of expenditures, and less certainty as to a favorable outcome. We know that every man in uniform on land, on sea, in the air, and under the sea will perform his fullest duty, will add honor to his country and glory to the flag. It is to be hoped and believed that every civilian at home will in the same full measure rise to the emergency by performing every war duty, equally necessary though less dangerous. The length and in a measure the outcome of the war largely depend on the speed, the effectiveness, and the extent to which the American people, rising as one man, throw the resources of the Nation into the war.

Plea for the New Liberty Loan.

EXTENSION OF REMARKS
OF
HON. WALTER M. CHANDLER,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, April 4, 1918.

Mr. CHANDLER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD I insert the following speech to be delivered by me at Utica, N. Y., on the evening of April 8, 1918:

Ladies and gentlemen, in the very beginning of my speech I wish to make a plea for the new liberty loan. I have come from Washington for that purpose.

A sacred and solemn obligation rests upon each and every one of us to aid this loan to the full extent of his ability. Every

adult person in this Republic should buy at least one bond, of small or large denomination. No one should plead poverty or be guilty of neglect in this hour of national peril.

Two great considerations should stimulate enormously the sale of the new issue of liberty bonds. The first is personal and selfish; the second is purely patriotic. In the first place, the liberty loan is the best and safest financial investment that can be made. Backed as it is by the wealth of the richest country in the world, the liberty loan stands without a peer. It is the premier bond of the world. Based on reliable statistics, the wealth of the United States is estimated at \$230,000,000,000, with an annual estimated income of \$40,000,000,000.

In 47 years the population of our country has increased 72,000,000 and for the same period its wealth has increased \$200,000,000,000, equivalent to over \$2,800 for each of the 72,000,000 increased population.

To put the figures in another form—in 1870:

Wealth of United States (estimated)	\$30,000,000,000
Total debt of United States	\$2,330,000,000
Wealth of United States per capita	\$780
Debt of United States per capita	\$60
Population of United States	38,000,000

At the present time:

Wealth of United States (estimated)	\$230,000,000,000
Total debt of United States, including liberty loans of 1917 (approximately)	\$9,500,000,000
Wealth of United States per capita	\$2,250
Debt of United States per capita	\$86.50
Population of United States (estimated)	110,000,000

The increase from 1870 to date:

Total wealth	\$200,000,000,000
Wealth per capita	\$1,470
Population	72,000,000

The wealth is now about seven and two-thirds times greater than in 1870, and the national debt has increased only about four times. In comparison to the wealth the debt is quite small, and would be comparatively small if doubled, tripled, or quadrupled. Even if the present debt were quadrupled it would then amount to only just the income of our country in one year. This income, be it remembered, is about \$40,000,000,000, representing a net annual increase in the national wealth of several billions of dollars.

How much more fortunate we are financially than are our enemies, the Germans, is indicated by the fact that the German national wealth is \$76,000,000,000, while the German national debt is \$36,000,000,000, or 47 per cent of the entire wealth. In their arrogance and desperation, the German rulers deceive the German people by telling them that the greater part of this national debt will be wiped out by indemnities collected from their conquered enemies and by favored commercial treaties after the close of hostilities. But the result is certain to be an overwhelming and appalling defeat for Germany with consequent impoverishment of her people bordering upon bankruptcy.

The figures that I have given you, relating to the wealth of our country and its annual income, should convince you that a liberty-bond investment is the safest and soundest in the world. A war of 20 years would not destroy its value as a security. It is the premier bond of the world—a direct obligation—a first mortgage on the resources of the wealthiest country on the earth, and is, moreover, almost free from taxation, State or Federal.

The first great consideration, heretofore referred to, which should stimulate and sustain the sale of liberty bonds, has been discussed and figures have been given. The personal and selfish motives of the purchasers of these bonds have been considered, and it has been shown that no safer, sounder investment can be made than that offered by the liberty loan.

A second great consideration ignores the selfish and materialistic point of view, and appeals direct to the conscience and to the patriotism of all of our people. In the final analysis this is the supreme consideration. It scorns all mercenary feelings and appeals to the noblest and grandest in our natures. It places the man above the dollar, humanity above wealth, and our country above our pocketbooks. It subjects all vulgar passions at once to the great principle of love.

Love for the Republic and patriotic devotion to its highest interests should prompt all our actions in public and in private life. Every Member of the House and of the Senate, every officer of the Government, State and Federal, and, indeed, every American everywhere, should love America as Macaulay says Pitt loved England, as an Athenian loved the "City of the Violet Crown," as a Roman loved the "City of Seven Hills."

This should be the proud and patriotic sentiment of every citizen of our great Republic: He who loves his country loves all things, and all things saved will love him; he who loves

his country die lets all things die, and all things dying curse him.

No cowardly impulse, no sectional selfishness, no narrow view of patriotism, no partisan prejudice, no sordid stinginess should ever remotely influence our conduct in private or public life when providing for the common defense and promoting the general welfare of our country. Rather let us invoke at all times the lofty and patriotic spirit of the Revolutionary fathers and of the saviors of the later Republic, who held no cost too heavy and no sacrifice too great when the sacred rights of humanity were to be proclaimed and the great cause of liberty was to be defended and maintained.

I repeat that no other considerations should be urged and no other inducements offered than the desire for private gain and the great love of the Republic to cause speedy and enormous sales of the third liberty loan bonds. Let us oversubscribe this issue a hundredfold, if need be, as a message to Germany and to the world that America is patriotic to the core and that a most perfect unity in intention and high resolve animates our people.

CAUSES OF THE WAR.

As I understand the meaning of this war, it is not a mere conflict of physical forces, of millions of men contending in deadly combat on battle fields and in battle trenches. It is a mighty conflict between contending principles in government, between modes of thought, and forms of philosophy. It is, in the main, a gigantic contest between democracy and free institutions on the one hand and monarchy and military despotism on the other hand. It is even more than this. It is a colossal struggle in which world freedom and the rights of small States to exist are fundamentally involved.

The assassination of an Austrian grand duke by a simple-minded, fanatical Serbian youth was the beginning, but not the cause, of the great world war. It was simply the match that lit the flame that threw the world into conflagration. The elemental causes of the war are to be found deeply imbedded in German military philosophy, in Prussian despotism and desire for world dominion, in a false and fraudulent diplomacy handed down from the days of Frederick the Great, and in the belief of the German Kaiser that he is the anointed of God and that the German people are the chosen seed. These intellectual principles, these spiritual elements, formed the fertile soil in which was germinated the world catastrophe and from which it received its budding and its blossoming.

While a student at the University of Berlin some 20 years ago I heard Heinrich von Treitschke lecture. Treitschke, was professor of history in the University of Berlin, and used his position to propagate his political principles. His style was elegant and beautiful and the war philosophy that he proclaimed was at once brilliant and bitter. The substance of this philosophy was that war is a biological necessity and an ordinance of God. Among the more striking statements in his works are these:

War is both justifiable and moral, and the ideal of perpetual peace is not only impossible but immoral as well.

The living God will take care that war shall always return as a terrible medicine for the human race.

Among all political sins the sin of feebleness is the most contemptible; it is the political sin against the Holy Ghost.

Treitschke was called by the Kaiser "our national historian," and it is not inaccurate or unfair to describe him as the real founder of the world war, for his radical war philosophy, proclaimed in his lectures and in his writings, permeated all German intellectual life and gave strength and impetus to all the war movements of Germany. "His works," says one writer, "became cyclopedias of patriotism, and, being vigorously and entertainingly written, were and are widely read. Their aphorisms have become a part of German political scripture, their philosophy the creed of German statesmen."

My recollections of Treitschke are as fresh and vivid as if I had heard him but yesterday, and I remember the surprise and horror with which I listened to the unfolding of his brilliant and bitter war philosophy in which he proclaimed the doctrine of biological necessity and of the immorality of seeking to abolish that which God had ordained. On all the war fronts of Europe, America and the allies are fighting the teachings of Treitschke embodied in the armies of the Kaiser.

The teachings of Treitschke are founded upon the thoughts and sayings as well as the deeds and acts of Frederick the Great and of Bismarck, the arch progenitors of Prussian militarism and despotism. Treitschke boldly proclaimed that public and private morality were not the same, and that States were justified in doing things that would be considered immoral in individuals. He justified this contention by the statement in a

letter from Frederick the Great to his minister, Radziwill, in which occurs this sentence:

If there is anything to be gained by it, we will be honest; if deception is necessary, let us be cheats.

Frederick the Great told Voltaire, who taught him French and good manners, that truth and honesty were things for priests and ministers but not for warriors and statesmen. We are fighting this ignoble doctrine on all the battle fields and in all the battle trenches of Europe to-day.

In his first inaugural address, in 1789, Washington made this declaration:

The foundation of our national policy will be laid in the pure and immutable principles of private morality.

In this war we are pitting George Washington against Frederick the Great, and—you will excuse me for saying it—I have bet all my money on George Washington.

The fine sentiment of Washington was reflected in this sentence from the address of President Wilson in his message to Congress of April 2, 1917:

We are at the beginning of an age in which it will be insisted that the same standards of conduct and of responsibility for wrong done shall be observed among nations and their governments that are observed among the individual citizens of civilized States.

One of the great purposes of this war is to justify Washington and Wilson and brand with eternal condemnation Frederick the Great of Prussia by establishing the doctrine that there is no difference between public and private morality, and that States are not justified in doing what is immoral among individual citizens.

Treitschke taught and Germany believes that a war waged for the purpose of destroying small States and "molding separate fragments into one great political unit," even if a war of conquest, is justifiable. America and the allies deny this and are fighting for the rights of small States to continue to exist and to be happy. The American doctrine is illustrated by the existence of Cuba at our very doors, a Lilliputian Republic, not larger than a Texas county, but as independent and happy as any empire or commonwealth on earth. The German doctrine is illustrated by outraged and mutilated Belgium, whose international rights Germany had pledged herself to protect, but whose treaty was converted into "a scrap of paper," because Germany did not believe that Belgium had a real right to exist if it pleased Germany to destroy her.

Treitschke's cruel theory of war is approved and echoed in the literature of Germany by his contemporaries, as well as by those who followed him.

Bernhardt, in his work entitled *Germany and the Next War*, says:

War is a biological necessity of the first importance, a regulative element in the life of mankind which can not be dispensed with, since without it an unhealthy development will follow which excludes every advancement of the race, and therefore all civilization.

Again, he says:

Efforts directed toward the abolition of war must not only be termed foolish but absolutely immoral, and must be stigmatized as absolutely unworthy of the human race.

Numerous other German writers, warriors, and statesmen teach the same cruel and merciless philosophy.

Haeckle taught that "force takes priority over right."

Clausman says:

All idea of philanthropy in war is a pernicious error.

Gen. Hartman said:

When the national war breaks forth terrorism becomes a necessary military principle.

Erzberger is quoted as saying in the Reichstag:

This war ought to be as pitiless as possible.

Again, one of the great causes of this war is Pan-Germanism, that would acquire the territories and destroy the political independence of smaller States by force of arms. Many German writers and statesmen are bold in their assertion of this right as a matter of supreme necessity in the inevitable growth of great central States.

Gen. Wrochem, at a meeting of the German Defense League at Danzig, March, 1913, said:

A developing, onward-striving people like ourselves requires new land for its energies; and if peace will not secure it, then war only remains.

J. L. Reimer, in a work entitled "Ein Pangermanisches Deutschland" (A Pan-German Germany), writes in 1905:

It is precisely our craving for expansion that drives us into the paths of conquest, and in view of which all chatter about peace and humanity can and must remain nothing but chatter.

Klaus Wagner, in his work *Krieg or War*, in 1906 writes:

Let us bravely organize great forced migrations of the inferior peoples. Posterity will be grateful to us. We must coerce them. This is one of the tasks of war; the means must be superiority of armed force.

Superficially such forced migrations and the penning up of inconvenienced peoples in narrow "reserves" may appear hard, but it is the only solution of the race question that is worthy of humanity. . . . Thus alone can the overpopulation of the earth be controlled; the efficient peoples must secure themselves elbow room by means of war, and the inefficient must be hemmed in and at last driven into reserves where they have no room to grow . . . and where, discouraged and rendered indifferent to the future by the spectacle of the superior energy of their conquerors, they may crawl slowly toward the peaceful death of weary and hopeless senility.

This merciless philosophy and ambition of Pan-Germanism is one of the great causes of this war. We may assert it with truth to be the great paramount cause, for Pan-Germanism is the great comprehensive principle that includes all minor causes.

Again, we are fighting the theory of the divine right of kings to rule the peoples of the earth. Cromwell and his Ironsides thought they had destroyed this theory forever when they beheaded a Stuart king—Charles the First of England. But we have the doctrine more boldly and brazenly proclaimed than ever in the wild and insane pretensions of William of Germany. The following is a passage from the proclamation of the Kaiser to the Army of the East in 1914, after the beginning of the great war:

Remember that you are the chosen people! The Spirit of the Lord has descended upon me, because I am the Emperor of the Germans! I am the instrument of the Almighty. I am his sword, his agent. Woe and death to all those who shall oppose my will! Woe and death to those who do not believe in my mission! Woe and death to the cowards!

Let them perish, all the enemies of the German people! God demands their destruction; God, who, by my mouth, bids you to do His will!

This sounds like Mohammed and the Koran. No wonder the Germans could conclude so easily a treaty with the Turks. Place this passage in the middle of the Koran and it would require the genius and learning of an oriental scholar to tell where Mahomet ended and William began.

The principles asserted in this proclamation of the Kaiser are in complete antagonism to the principles proclaimed in the Declaration of Independence when it is said that "all just powers of government are derived from the consent of the governed." In this war we are pitting the Declaration of Independence against the proclamation of the Kaiser, and, again, I have my money on the Declaration of Independence.

The German Kaiser and German statesmen deny that Germany desired this war or began it, but the facts of history completely refute their contention. Besides, a secret official document filed at Berlin, in the German war office, in 1913, reads in part as follows:

Neither ridiculous shriekings for revenge by French Chauvinists nor the Englishman's gnashing of teeth nor the wild gestures of the Slav will turn us from our aim of protecting and extending German influence all over the world. It is our sacred duty to sharpen the sword that has been put into our hands and to hold it ready for offense as well as for defense. . . . We must accustom them (our people) to think that an offensive war on our part is a necessity. We must stir up troubles in the north of Africa and in Russia. In the next European war it will also be necessary that the small States shall be forced to follow us or be subdued. In certain conditions their armies and their fortified places can be rapidly conquered or neutralized. This would probably be the case with Belgium and Holland.

This official document, filed a year before the war began, speaks of stirring up trouble in Africa and in Russia. The whole tone and tenor of the report indicates a spirit of aggression and a willingness to begin war upon the slightest provocation or upon no provocation whatever.

HOW THE WAR CAME TO AMERICA.

I have been discussing the meaning of the war as it relates to European nations. I have outlined briefly the underlying principles that caused Germany to declare war upon her neighbors and to tear up her treaty with Belgium like a scrap of paper. I have tried to show that Pan-Germanism, rabid and rampant, availed itself of the simple pretext of the killing of an Austrian grand duke, and of the consequent troubles of her ally, Austria, with Serbia, troubles that could have been easily settled by fair and impartial statesmanship, to throw the world into convulsions.

I now come to a brief discussion of how the war came to America. After all, this phase of the discussion will interest us most keenly. Intelligent people everywhere are already thoroughly familiar with the causes of our participation in the world conflict and a detailed analysis and discussion of these causes are not necessary. Suffice it to say that the submarine policy of the German Government, resulting in the violation of our international rights and in the murder of our citizens upon the high seas, brought America into the conflict.

The chronological order of events as relates to the U-boat campaign, leading up to a declaration of war by America against Germany, is as follows:

1. December 24, 1914: Admiral von Tirpitz threw out hints in a newspaper interview of a wholesale torpedoing policy.

2. February 4, 1915: The German Government proclaimed a war zone, within which any ship might be sunk unwarned.

3. February 10, 1915: Mr. Wilson told the German Government that it would be held to a "strict accountability" if any American rights were violated in that way.

4. April 22, 1915: The German Embassy published in New York newspapers a warning against taking passage on ships which our Government had told our people that they had a perfect right to take.

5. May 7, 1915: The *Lusitania* was sunk.

6. May 13, 1915: Mr. Wilson wrote his "first *Lusitania*" note.

7. May 28, 1915: Germany made reply, defending the sinking of the *Lusitania*.

8. June 9, 1915: Mr. Wilson wrote his "second *Lusitania*" note.

9. July 21, 1915: Mr. Wilson wrote his "third *Lusitania*" note, following more unsatisfactory German rejoinders.

10. August 19, 1915: The *Arabic* was sunk, whereupon Von Bernstorff gave an oral pledge for his Government that thereafter German submarines would not sink "liners" without warning.

11. March 24, 1916: The *Sussex* was sunk, a passenger vessel with Americans on board.

12. April 10, 1916: Germany cynically told the United States that she could not be sure whether she sunk the *Sussex* or not, although admitting that one of her submarines was active close to the place of disaster.

13. April 18, 1916: President Wilson threatened Germany with breach of diplomatic relations if *Sussex* and similar incidents were repeated.

14. May 4, 1916: Germany grudgingly made the promise that ships would not be sunk without warning.

15. January 31, 1917: Germany tore up her promise and notified Mr. Wilson that she would begin "unrestricted submarine warfare."

16. February 3, 1917: Mr. Wilson gave Count Bernstorff his passport and recalled Ambassador Gerard from Berlin.

Diplomatic relations had now been broken, and we were in a state of armed neutrality. War might still have been avoided if still other American ships had not been sunk, as follows:

17. March 16, 1917: The *Vigilancia*, an American vessel, was sunk and five Americans were lost.

18. March 21, 1917: The *Healdton*, an American vessel, was sunk and seven Americans were lost.

19. April 1, 1917: The *Aztec*, an American vessel, was sunk and 28 Americans were lost.

Some of these vessels were outside the prohibited German war zone. Some of them were coming home, were without cargoes of any kind, and were sunk in a spirit of pure wantonness and frightfulness.

In all, up to our declaration of war against Germany, 226 American citizens, many of them women and children, lost their lives by the action of German submarines, and in most cases without the faintest color of international right.

Nothing remained for a red-blooded Congress, representing a brave and self-respecting people, to do but declare war upon an outlaw nation that was unwilling to respect the binding obligations of international law, and that had shown an utter disregard for the simplest rights of humanity and for the plainest precepts of civilization.

If the direct and immediate cause of our declaration of war against Germany be asked, answer may be given that Germany murdered our citizens upon the high seas, in violation of our well-defined international rights.

It is the primary duty, the sacred and solemn obligation, of any nation to protect the lives of its citizens, and the nation that will not perform this duty and fulfill this obligation is not entitled to the respect and support of its citizens.

Once, at a Grand Army of the Republic celebration, Col. Ingersoll used this strikingly beautiful and brilliant sentence:

A country that will not protect its citizens is a disgrace to the map of the world. A flag that will not defend its defenders is no better than a dirty rag, is an insult to the skies, and contaminates the very air in which it floats.

This has been the sentiment of every brave and masterful race of this earth. It was the sentiment of ancient Rome. It is the sentiment of modern England, modern France, modern Germany, modern America. It will be the sentiment of every brave and self-respecting nation until its citizens become degenerates and cowards.

In ancient times, when a Roman citizen was captured by barbarians or pirates, it was only necessary for him to pick up the hem of his toga, the peculiar dress of a Roman and the symbol of his Roman citizenship, and shake it at the barbarians, using

three words, "Civis romanus sum"—I am a Roman citizen—to guarantee his safe escort to Rome. I want the time to come soon in the history of my country when an American captured by bandits in Mexico will only have to throw his head back proudly and defiantly and say "I am an American citizen" to guarantee his safe escort to the Rio Grande.

Aside from the murder of our citizens we were justified in declaring war against Germany upon the ground of national self-defense. In recent years Germany has not hesitated to express her contempt for America and to throw out hints of defiance and use expressions equivalent to threats. She has derided our civilization, mocked our national pretensions, and refused to acknowledge the Monroe doctrine; and, as an official defiance, the Kaiser recently told Ambassador Gerard that after this war Germany would stand no nonsense from America. This itself was equivalent to an imperial threat against our country.

On the 24th of September, 1917, in the United States Senate, Senator LEWIS quoted Admiral Dewey as reporting the following statement as made by the German admiral, Von Goetzen, to him at Manila in 1898:

About 15 years from now (1913) my country will start a great war. She will be in Paris about two months after the commencement of hostilities. Her move on Paris will be but a step to her real object—the crushing of England. Some months after we finish our work in Europe we will take New York, and probably Washington, and hold them for some time. We will put your country in its place with reference to Germany. We do not purpose to take any of your territory, but we do intend to take a billion or so of your dollars from New York and other places. The Monroe doctrine will be taken charge of by us, and we will dispose of South America as we wish. Don't forget this—about 15 years from now.

It was very kind and generous of the German admiral to let us know so long in advance of the intended invasion of America by Germany. It gave us time for preparation, and we are now rapidly preparing for a warm reception to the Hun when he decides to come.

But the law of national self-defense does not require that we wait for the Germans to attack us after their intentions have been clearly expressed and it is well established that they intend to attack us. I am in favor of teaching the arrogant German Kaiser that if he or any of his descendants insults our flag or threatens the invasion of our territory, it will not be necessary for Germans to come here. If they will wait a month and France will give us standing room, we will go over there after them. If they do not care to meet us at the Hudson or the Mississippi, we will meet them at the Rhine. The sooner they learn this the greater respect they will have for us and the better it will be for all concerned.

In conclusion let me say that in this great world war we are fighting not only for principles but for peoples as well.

We are fighting for innocent, outraged, brave, and bleeding Belgium, whose heroic King merits apotheosis, and whose martyred people and their sufferings will remain enshrined forever in the memory and affections of mankind.

We are fighting for France, the brilliant and beautiful among the nations, whose chivalric sympathies sent Rochambeau and Lafayette as ambassadors of freedom to our shores. One hundred and forty years ago we were "bled white" and stood at death's door. France sent us men and money and enabled us to live. To-day France is bled white and stands at death's door. As a grateful, self-respecting Nation it is our sacred duty to send France men and money in order that she may live. And I say to you, knowing the full meaning of my words, that if with this history in front of us, with this debt of national gratitude hanging over us, we, a powerful Republic, fabulously rich in men and in money, should stand silently by and watch the Imperial German Government with a mailed fist drive a deathblow to the heart of this brave and brilliant and beautiful Republic, our former friend and benefactor, throughout all the ages yet to come we would not only deserve, we would receive, the scorn and contempt, the hatred and execration, of mankind.

My friends, we have declared war against the Imperial German Government, and Germany must and will be whipped. She must be conquered if it takes 20 years to do it.

We have a registered man power of 10,000,000 men. We have a possible man power of 20,000,000 men. We have a conservatively estimated national wealth of \$230,000,000,000. And before I will consent that our flag shall be hauled down in dishonor and disgrace, before I will consent that the brave boys that we are sending to the trenches of Europe shall be ordered back in humiliation and shame, I will vote in Congress to send every man of the twenty millions to the field and cast every dollar of the two hundred and thirty billions into the scales.

This spirit of supreme determination is not born of any hatred of Germany or the Germans. I was educated at Berlin. I learned to like the Germans when I was a student at their

great university. I have not ceased to like them since, and it would be a matter of base ingratitude if I should heap upon them scurrilous abuse as a race after having received from them a generous treatment and a magnificent hospitality for two long years. I hate Prussian militarism and autocracy, but I do not hate the Germans.

The President of the Republic has projected the conduct of the war upon a noble and lofty plane, and we would do well to conform our views to his. He declared to the Congress that we are fighting the German Government, not the German people. This is a complicated, complex notion, and upon its face seemingly absurd, when we consider that the German people are death-devoted in their loyalty to their Kaiser and his Government. But from the point of view of the President in making this statement, from the angle of vision of the Congress in declaring war, the distinction is perfect that we are fighting German military despotism and not the masses of the men and women of the brave and splendid race that inhabits the German Fatherland. We are not fighting Hans and Fritz; we are fighting the Kaiser and Von Hindenburg. We are fighting the house of Hohenzollern and the house of Hapsburg, whose princes are the proudest and haughtiest political despots in the world. We are not fighting the Reichstag, the German people's national parliament; we are fighting the Bundesrath, the star chamber of German princes, whose meetings are held in secret to plot against the liberties of Europe and of the world. We are fighting German autocracy and Prussian militarism, that would destroy democracy upon the earth and substitute the power of might for the rule of right in the government of the affairs of men. We are fighting the blight of German imperial kultur, not the splendid products of German democratic genius.

The world loves what is good and beautiful and true in the creations of the heart and intellect of Germany.

The world loves the poetry of Goethe, of Schiller, and of Heine; the philosophy of Spinoza and of Kant; the historical writings of Ranke and of Mommsen; the scientific discoveries of Helmholtz and Humboldt; the music of Wagner and Beethoven.

The world loves the German Rhine, with its castles and its vineyards, with its history and its traditions, and with the poetry and chivalry of the ages rolling in its rushing waters, from its cradle in the snows of the Alps to its grave in the sands of Holland. The world loves all these things and will fight to save, not to destroy them.

But the world does not love Prussian militarism and autocracy and will not tolerate them. The world does not love the political philosophy of Frederick the Great and of Bismarck, of Treitschke, of Bernhardt, and of Nietzsche, and will not endure it. The world loves liberty, and that liberty may be permanent and secure forever upon the earth for all men the hosts of freedom are to-day shaking the planet with solemn and awful tread and millions of the world's best and bravest are falling into the arms of death as leaves fall in autumn upon the earth. And that liberty, as a priceless heritage to all the children of men, may be forever secure, that democracy may be forever safe upon the earth, America, the mother of republics, the protagonist of republican virtue in the world, has declared war and has dedicated to its successful and victorious conclusion the lives, the fortunes, and the sacred honor of all her sons.

My friends and my countrymen, the war that we have declared is the most just and righteous in the history of the world. The dearest rights and the most sacred meaning of liberty, humanity, and civilization are at stake. Let us see to it that America plays a sovereign and illustrious rôle in the great concert of the nations. Let there be no division in our own ranks. Let every brain think and every heart beat for America and her allies. Let this be the prayer to ascend to Heaven each day from every patriot lip:

Great God, who rules the destinies of nations, who sees at once the fall of a sparrow and the flight of worlds, preserve forever to us, and to our posterity, and to all mankind, the country of Washington, the Republic of Jefferson, and the Union of Abraham Lincoln.

Go with our brave boys, O God, into the trenches of Europe, and guide and protect them with Thy loving care. Fill their minds with patriotism, their hearts with heroic courage, and their souls with pious love for Thee.

Crown their standards with victory, O God, and if it please Thee return them in health and happiness to their country and their countrymen, where their names shall be inscribed forever in the annals of the Republic as the veterans of an army that crossed the high seas to unite with the free armies of other free peoples that liberty, humanity, and civilization might endure forever upon the earth! We beseech Thee, O God!

Housing, Local Transportation, and Other Community
Facilities for War Needs.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 2, 1918,

On the bill (H. R. 10265) to authorize the Secretary of Labor to provide housing, local transportation, and other community facilities for war needs.

Mr. JOHNSON of Washington. Mr. Speaker, in addition to the statements made by me as to mixing two propositions in one bill—one proposition for providing houses for clerks in the District of Columbia and the other for housing, providing local transportation and other "community facilities" for employees engaged in war work all over the United States—I desire to affirm that I am neither opposing nor delaying the bill or the housing plan. I well know the need of immediate housing at many places.

BROAD POWERS, GENERAL TERMS.

I think it a serious mistake to combine the two schemes; that is, to tack the District of Columbia plan on to the regularly reported bill, as a last-minute amendment, with a \$10,000,000 additional authorization. I have asked and I continue to ask as to the meaning of "community facilities." We know what it may mean, but no living soul can say how broadly the meaning may be construed. When Congress gives broad powers in general terms, how can we complain when these powers are stretched beyond what we thought them to mean?

The chairman of the committee, the gentleman from Florida [Mr. CLARK], quoted to me from the hearings and read to me the testimony of Mr. Eldlitz, who is to be at the head of the governmental housing, as follows:

We are investigating the Puget Sound now for the Navy, and Mare Island. Seattle is complaining bitterly, and of course we will have to give attention to it.

Mr. Speaker, I have further testimony from other places on the Pacific coast. A letter from C. D. McClure, Hoquiam, Wash., says:

The housing situation is a very serious one on the Pacific coast, and I suppose in every other city where there is any war work going on. In Hoquiam, as an example, there is not a vacant house to be had, and new people are arriving every day and inquiring for houses or any place to live. Aberdeen is even worse off. Seattle is strictly up against it, and so it goes.

Why, of course, one war-working city is as bad off as another. The big city of Seattle is no worse off than the little city of Hoquiam. And, as I pointed out before, nothing is gained in taking wooden ship hulls from South Bend to Seattle for installation of machinery. The congestion is made worse at Seattle, which means, of course, more demand for Government houses in Seattle, while the movement of the hulls may become an excuse for not giving South Bend any housing, either permanent or temporary.

ALL WILL DEMAND PERMANENT HOUSING.

Mr. Meyer Bloomfield, representing the housing section of the Shipping Board, is now on the Pacific coast, and I understand that his department has expressed a preference for permanent rather than temporary houses.

So, probably, will the chief in charge of housing under this bill, and there will be a general clamor from all hands against temporary structures, except at a few places where the work in hand is clearly temporary. So, all Members of Congress from war-activity centers will be called up to urge the best, and more of it, for his particular locality, and this first \$50,000,000 will not be even a starter. The committee might just as well have asked for \$300,000,000, or \$400,000,000 (which the hearings disclose will be needed), or not having done so could get along with \$20,000,000 or \$25,000,000, or any other smaller sum, to start the thing for the purpose of seeing how far the public would like to go in housing, permanent or otherwise, providing "community facilities" and the like. I have already stated that the hearings disclose the fact that the witnesses say that \$50,000,000 is as much as it is thought Congress can be tapped for at this time.

WHAT ONE ASKS, ALL WILL ASK.

I note that the gentleman from New York [Mr. WALDOW], on page 265 of the Appendix, says:

Being aware of the true state of affairs in the city of Buffalo, I believe the only permanent solution is to erect substantial and permanent homes, and afford an opportunity for the workers to purchase these homes upon the easy-payment plan.

There you have it. Other Congressmen have made similar statements in this debate. The gentleman's request is quite natural and if his constituents ask for and receive permanent homes on the easy-payment plan my constituents will ask for and be entitled to receive the same. And the constituents of many other Congressmen as well. Where is the limit? Does Congress side-step its responsibility? Does Congress indicate its desire for temporary housing which it knows is needed, and permit words which will mean permanent housing in nine cases out of ten?

WHERE IS THE BOTTOM OF UNCLE SAM'S POCKETBOOK?

It is pretty hard to draw the line between actual necessities for pushing the war and between doing things to help those who help to push the war. When are we going to find the bottom of Uncle Sam's pocket? Billions for winning the war but not a cent for side lines should be our policy. Every man with an idea for helping to win the war is an enthusiast. His own services are free, but the execution of his ideas costs money, and frequently big money. Many of these side ideas are good, splendid, but most of them should wait. A great plan is coming to us for the education of the illiterate in the United States. I have advocated that in the past, but is not it a pity that we had to wait until we are in the midst of a world war, and pouring out our treasure by millions upon millions, to find now that we should pay from the Federal Treasury for the education of the illiterate in some of our States?

SAMPLE PETTY EXTRAVAGANCE.

I see that some governmental publicity expert has put out an article entitled "Eat snails and help win the war." Yes; a serious article; has the Hoover indorsement; tells how to cook them in wine. A more economical plan and a good war plan would be to cut out all the wine. And yet the Government actually pays for preparing, printing, and circulating that sort of stuff.

TO THE TRILLIONTH DEGREE.

I have a letter from a Tacoma constituent, C. F. Hall, who reads the CONGRESSIONAL RECORD, and who says:

I read the House and Senate proceedings. I read the merry round of "two millions" and "four billions" and other millions, ranging almost from units to decillions, until my head spins. I wonder how soon the present academicians will teach the Members of Congress to manipulate the nine digits in the three spaces on the trillionth period.

Mr. Speaker, in the declaration of war all the resources of the United States were pledged. That meant what it said—all the resources of the United States. But that should not mean that everything from a "community necessity" to a fourth reader for the alien citizen should be given an appropriation under the guise of a war necessity.

Excluding Certain Subjects of Austria-Hungary from
Classification as Alien Enemies.

SPEECH

OF

HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 4, 1918.

The House had under consideration the bill (H. R. 9159) to authorize the President of the United States to exclude certain subjects of Austria-Hungary and Germany from the classification of alien enemies and to naturalize certain members of the Army, Navy, and Marine Corps.

Mr. SLOAN. Mr. Speaker, I hope that this amendment will pass. The purpose of the bill is good. I think that the amendment or the law itself should be more liberal than as it is now printed in this bill. I believe that when an alien presents himself and voluntarily enters the service of the United States Army or Navy, or when the Government of the United States seizes upon an alien and places him in the ranks of our Army or Navy, that from that very fact he may become a citizen of the United States. I would rather have the pledge that he makes to become a supporter of our Government at the risk of his own life than the mere lip service we often have in our courts, when men declare their allegiance to this Government and renounce their allegiance to other governments.

There are many aliens heretofore residents of the United States who have either voluntarily enlisted in our Army or have organized foreign legions to battle with us and our friends and against the Hohenzollerns, the scourge of civilization and the common enemy of mankind.

These have shown their valor on every battle front of Europe. Many of them are Czechs and Slovaks. They came from that

part of the Austrian Empire which, persecuted under the Hapsburgs for centuries, still keeps alive the spirit of nationality, the aspirations for independence, pride of race, and adherence to mother tongue.

Bohemia during this war has been almost Belgianized, with this difference, that the powers which should have protected her and her people have been a pillaging and persecuting force. Her sons and daughters, numbering millions, came to America and became imbued with the genius of American institutions and most loyally devoted to the country of their adoption. They have appreciated the blessings of liberty and independence here and looked with wistful vision for the same blessings to come to their people in their mountain-girt Bohemian homeland.

To Bohemians not regularly naturalized Americans now in our Army there is an added danger beyond that of the native or naturalized Americans. Should the fortunes of war be unfavorable and they should be captured, the fate ordinarily meted out to traitors might be inflicted upon them, instead of being accorded the treatment accorded under the rules of civilized warfare, although it should be said that little need be expected under rules or sentiments of civilization from either house of Hapsburg or of Hohenzollern, who will select the holy week as the period for drowning their adversaries in a sea of German-Austrian blood. I would therefore bestow upon every soldier in the American Army and of a race capable of acquiring citizenship that boon. This I would do with the same confidence and zeal that I would deprive those of their citizenship of whatever nationality who after war was declared by this country refused to meet their duty as clearly defined by the Constitution and national law.

I quote the following from an able and interesting article written by Hon. Charles Pergler, of Iowa. The article is entitled, "Should Austria-Hungary exist?" He says among other things:

"The Bohemians now claim complete independence. As early as November 14, 1915, the Bohemian Foreign Committee, representing Czecho-Slovaks, issued in Paris a manifesto demanding an independent Bohemian-Slovak State. During the recent session of the Austrian Parliament the club of Czech deputies openly demanded independence for Bohemia, the new State to include the Slovaks. Bohemians living in France, England, and Russia are fighting in the armies of the allies. There has been a Bohemian-Slovak army cooperating with the Russians; it consisted of former Austrian prisoners of war, who surrendered voluntarily in order to reenlist with the Russians and fight against Austria for the independence of their native land. Moreover, the Bohemian-Slovak brigade has been mentioned as having won special distinction on Galician battle fields.

"A small group of English pacifists and well-meaning American theorists who do not understand that no comparison whatever is possible between the United States and Austria-Hungary still seem to think that the latter can become a federal state. This might have been possible prior to the rise of the present spirit of nationalism had Austrian statesmen been far-sighted enough to realize that the only salvation for Austria was to be sought in making of her a union of free nationalities. But now it is too late.

"A glance at a few figures will sufficiently demonstrate this. The whole population of the empire is 52,000,000—28,000,000 in the Austrian half of the monarchy, 22,000,000 in the Hungarian part, and 2,000,000 in Bosnia-Herzegovina. According to the latest census, that of 1910, the population of Austria is divided as follows: Germans, 9,950,225; Czechs, 6,435,983; Poles 4,967,084; Ruthenians, 3,518,854; Slovenes, 1,252,940; Serbo-Croats, 783,394; Italians, 768,422. The Germans, although numbering not quite 10,000,000, control the destinies of the 18,000,000 of non-Germans. In Hungary, according to the same census, there are 10,050,575 Magyars, 3,949,032 Roumanians, 2,937,435 Germans, 1,967,979 Slovaks, 2,939,638 Serbo-Croats, 472,587 Ruthenians. It should be remembered, of course, that the official census is grossly inaccurate and misrepresents matters in favor of the Germans and Magyars. There is little doubt that there are in the empire almost 8,000,000 Czechs and almost 3,000,000 Slovaks. In any event, the Germans and Magyars together do not exceed 20,000,000 and rule over 32,000,000 Slavs and Latins, who in this war are forced to fight the battles of their oppressors."

When a state of war was declared by Congress to exist between this Nation and Germany I called attention of the House of Representatives to the aggravated case of Austria, the oppressor of weaker peoples, as proper for inclusion in our martial declaration. Eight months later war against Austria-Hungary was declared. I trust that the American and allied powers from without, striking in time and season with Czech and Slovak from within, will answer the question of Pergler, saying,

"Austria, as the oppressive national handmaid of Germany and the persecutor of smaller nations and weaker peoples, shall not exist." Then will the independence declaration of the Prague constituent assembly convened on January 6, 1918, be a world-recognized fact.

Some years ago, on the floor of this House, I criticized a bill and report because it complained of the large number of immigrants coming from Austria-Hungary. I then said in part:

Many thousands of these have come from the mountain-girt Province of Bohemia to my State and district. They came to toil, to learn, to advance and become worthy citizens of the Nation. They brought their genius for farming as well as their thrift. Our rich soils pay no higher tribute to husbandry's efforts than to our Bohemian farmers. They support our schools, their youths attend our universities, their sons serve in our Armies. They establish and maintain good homes and adorn our professions.

Events of this great world war would prompt me to amplify rather than take from what was then said. But sufficient. Sufficient honor be it. I am convinced that the fathers, sons, and brothers of the American Czechs, once having their nationality restored, will govern themselves with wisdom, moderation, liberality, and freedom. [Applause.]

Desk Officers.

EXTENSION OF REMARKS

OF

HON. JACOB E. MEEKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 8, 1918.

Mr. MEEKER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I print the following article, in order that both sides of this question may have a fair hearing.

The article is as follows:

[From the New York Times Magazine, Apr. 7, 1918.]

"DESK OFFICERS" TARGETS FOR UNJUST GIBES—MANY HAVE MADE GREAT SACRIFICES TO SERVE THEIR COUNTRY WHERE THEY WILL DO THE MOST GOOD, AND THERE ARE VERY FEW SLACKERS AMONG THEM.

A joke accredited to JOE CANNON that is going the rounds in Washington is: "Do you know why those swivel-chair officers at the War Department all wear spurs? It's to keep their feet from sliding off their desks." A comment often drawn out by this gibe as it circulates is, "They ought to be sent to the front to-morrow."

The joke made its appearance when a few days ago Congress took up charges that there were many slackers among the officers at the War Department; that hundreds of these men, of draft age, and with only clerical qualifications, had received commissions through political influence. Inevitably something of suspicion was cast over the whole body of these appointees. It is a suspicion not easily borne by men who, in many instances, have made exceptional personal sacrifice in order to serve their country. Among these are especially those who, beyond the draft age or otherwise disqualified from active Army service, resigned large-salaried positions to accept commissions at one-third or one-fifth of the pay which they were receiving, because the Government was in sore need of the special technical or business training which they possessed.

Wearing the uniform of an officer of the United States Army was, it is true, a prized recompense for the sacrifices made. But if "desk officer" were to become a term of reproach, the Government would be deprived of the one thing it has to offer to induce these men to come to its aid—that is, the khaki uniform as the badge of honorable and patriotic service. It is, therefore, considered of prime importance for the successful prosecution of the war that the term "desk officer" be saved from any lasting stigma, for many more technical, scientific, and administrative experts are needed at the War Department than are now working there. In order to clear up misunderstandings as soon as possible, Maj. Gen. March, Chief of Staff, has started an investigation to show how many, if any, of the appointees belong to the duty-dodging class; that is, how many are men under 31 who have intrigued to obtain appointments for the purpose of escaping the draft.

Gen. March's understanding of the service rendered by many of the men who have received officers' commissions since the war began was shown when, in answer to the proposal of a member of the House Committee on Military Affairs that some distinguishing mark be placed on the uniforms of those who belonged to the "fightless" classification, he dissented.

"That," said Gen. March, "would be an unfair reflection on the trained men who are serving the United States in the capacities for which their scientific or other technical training has fitted them."

There are now about 5,000 officers on what might be termed bureau and desk duty at the War Department. It would be surprising if there were not some loafers and slackers among them. The investigation will reveal the facts and thus, by eliminating any unworthy ones, bestow due credit on the large body of officers who are serving their country just as effectively as the officers at the front; in many instances more effectively.

Officers of draft age qualified to serve at the front whose services at the War Department can be spared will be sent to France or on active field duty in this country as fast as their places can be filled by older officers incapacitated for such service or by capable civilians willing to accept the positions at the salaries provided by law. Questionnaires are being circulated now for information in detail about the officers. Two of the questions are:

Do you desire over-seas service?

If not, why not?

The officers, according to reports, hail the questionnaire with delight and thank Congress for giving them an opportunity to express officially what a large majority of them most desire—service overseas against Germany.

"The policy of the War Department with regard to the appointment of men of draft age," said an officer on duty at the War Department in Washington the other day, "is represented by two resolutions passed by the War Council. The first was, in effect, that no one in class 1 of the draft could receive a commission. The second was a modification of the first one and was, in effect, that nobody in class 1 of the draft could be commissioned unless his number was so far down on the list that the chance of his being called was very remote, and that, in addition, he was specially fitted for some work, and, further, that his services were requested by some bureau head.

"This change is explained by the urgent and growing need of the department for specially trained men; it is an expression of the belief that technically trained men can serve their country best by putting their training to use. Our needs are such that we can't afford to put such men in the field. England made the mistake at the beginning of the war not making any discrimination as to the special qualifications of her men. So many of these were killed or crippled as a result that it was two years before the first mistake could be repaired.

"What we need in order to organize to win the war is the recognition of the absolute unimportance of the individual and the supreme importance of the country in assigning a man to the work that he can best do. I know officers on the General Staff here who are fairly sick because they can not get away to the front. They have petitioned and petitioned to be relieved and sent to France. But they can be of more service, and so must stay.

"The expression 'noncombatant officer' in reference to civilians who have received commissions is in no sense true; as a matter of fact, any of these men could be ordered to France tomorrow if by the transfer they could serve their country better. But it would be highly unwise to disrupt the production organization here in order that somebody might undergo the experience of being shot at in France.

"Even on entering the second year of our participation in the war there are many who do not yet realize that the Army—and Navy—means not only those in uniform engaged in service at the front but the entire population of the country. The man or woman who is doing his duty to his or her country at any post or in any work is a soldier.

"One out of many illustrations of the need at this time of such men may be taken from a certain class of inspection work. To do it right, the inspector must have a thorough technical training. The salary of an Army lieutenant is not large enough to attract qualified men who are over 31 years of age. Consequently, where they could be found, it was necessary to take inspectors from classes 2, 3, and 4 of the draft. But not one-third of the officers necessary for the expeditious handling of this work could be obtained even in this way. What is a likely consequence? That the manufacturers will complain that slow inspection is delaying delivery and pay and point to this as a new instance of inefficiency.

"Most of the men who have been appointed officers from civilian life are either above the draft age or otherwise disqualified for service. They have come here, most of them, at great personal sacrifice, and they are paying the penalty at the present time of an unjust public sentiment on the subject of 'desk officers.'

The services some of these men are giving to the country can hardly be measured in money. They consist of original investigations for the technical needs of the war. One is in optical glass, another in gas poisoning, another in steel testing. Battles may turn on the skill of these experts. The man who has probably been of the greatest assistance in the study of poison gases for offensive and defensive work resigned a position paying more than \$50,000 a year to accept his present appointment.

One of the "desk officers" was an expert in steel testing, having been thoroughly trained for that work by his father, from whom he recently inherited a fortune of several millions. He was especially qualified by his knowledge of ordnance steel, but the criticism and gibes about "desk officers" so rankled in him that he made up his mind to get to the front and was so persistent in this determination that he succeeded in obtaining a transfer to field duty as a lieutenant of artillery. He will soon be in France, but it is nearly certain that his services there will be of less value to his country than they would have been had he remained at desk duty.

Another "swivel-chair" officer who has obtained a transfer that will soon put him on the battle front in France, and who will undoubtedly be of much less use to the United States there than he was in Washington, is the son of a wealthy soap manufacturer. At the beginning of the war he went to Washington and volunteered to serve as a clerk for the national defense committee. Some one in the War Department learned of his ability as a cleansing expert and he was offered an appointment as a lieutenant. He was set to work on the problem of cleaning rifles in the best manner and later was detailed to reorganize the whole soap purchasing department of the Government. It is estimated that his work saved the Government \$5,000,000.

With the vast expansion of the War Department there has been a strong demand for men experienced in administrative work, and some of those appointed as officers from civilian life belong to this class. When Congress, in the war measure passed in October, 1917, provided for an addition of 10,000 civilian employees in the War Department, two of the restrictions were that none of these appointees should receive a salary above \$2,400 a year and that only 30 of the list of 10,000 should receive an annual salary in excess of \$1,800 a year. This practically was fixing the condition that 30 men, none of them being above the \$2,400 a year caliber, should supply the executive or supervisory material for nearly 12,000 employees. It was a condition in direct conflict with the practice of large private corporations, which act on the principle that able administrators and executives in plentiful numbers constitute the primary requirement of the efficient conduct of business.

There was only one way to overcome, or seek to overcome, this lack of supervisors, it was stated, and that was to find men in civil life qualified for such work and give them appointments as officers. Even then the pay would have been too low to attract first-class men for the more responsible positions had not the opportunity to serve the country in an officer's uniform been an added inducement. The present bill under consideration by Congress contains practically the same limitation as to salaries.

Another criticism heard is: "They are appointing telegraph operators officers. What do you think of that?"

Some expert telegraphers have been appointed. The reason was that no other way was provided by which these men could be put under oath and made amenable to military discipline. The operators were handling

messages, upon which many lives or large national interests depended, and a tight rein was deemed necessary. On the need of this a blunt-spoken officer said:

"If we caught a man playing false then, we could take him out and shoot him if the offense was grave enough."

The same explanation holds for the appointment of expert munition inspectors as officers. They are placed under rigid military control. At once their sense of responsibility is heightened in a work of first importance to the successful prosecution of the war.

So it goes. A sound reason is usually found for what appears to be an act of mere arbitrary favoritism. This does not mean, of course, that there have been no abuses in the giving of commissions to civilians, but it does indicate that in the great majority of cases the appointments were governed by thought of the country's best interest, not of the individual.

Oil and Coal Land Leasing Bill.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 9, 1918.

Mr. MONDELL. Mr. Speaker, under leave to extend my remarks on the subject of pending legislation providing for the leasing of public lands valuable for oil and coal, and particularly H. R. 3232 and S. 2812, I shall place in the Record a statement made by me on the subject of the proposed legislation before the Committee on the Public Lands of the House of Representatives, as follows:

"Mr. MONDELL. Mr. Chairman and gentlemen of the committee, I appear for and on behalf of the people whom I represent, the people of the State of Wyoming, and the discussion as it has proceeded has made it very clear to you how great our interest in this bill is, so far, at least, as oil is concerned. Our interest is quite as great from the standpoint of coal and phosphate. We have enormous coal and phosphate deposits in Wyoming, and eventually, as the country settles around us, we will have a great coal and, we hope, a great phosphate development.

"Our interest in oil legislation is greater, from the standpoint of the territory involved, than, perhaps, that of all of the balance of the country put together.

"We have a map here, the oil-withdrawal map of the Geological Survey. The withdrawn areas appear in red—that is, the areas withdrawn prior to January 15, 1916, and in force then. I have blue penciled in the withdrawals made since that time, indicating the partial withdrawals by dottings and the solid withdrawals by solid marking.

"Mr. TAYLOR. For the purpose of the record, can you tell from memory the quantity of withdrawals there were prior to 1916 and subsequent?"

"Mr. MONDELL. I do not have the exact acreage in mind. It is approximately a million acres.

"Mr. TAYLOR. The total withdrawals in Wyoming are 934,000 acres of oil, according to the report of the Secretary of the Interior, and I think something like 100,000 of that has been within the past year or so.

"Mr. MONDELL. Those withdrawals are particularly interesting from the standpoint of discussion as showing the wide area of our oil-bearing lands, but we have many oil fields, or prospective oil fields, or hoped-for oil fields, in which no withdrawals have been made. I have marked with a circle in black in the eastern part of the State some dozen or so very considerable fields, most of which have produced some oil, practically all of which are still hopeful, where no withdrawals have been made. Some of those are the oldest known fields in the State.

"There are many more places in the State than those indicated by withdrawals, or these circles, where prospecting for oil has been carried on, where drilling has been done, where drilling is going on, or where they are proposing to drill, and lands have been located for oil.

"The State is 280 miles by 360; and from Rocky Ford, within a few miles of the eastern boundary of the State and about 50 miles from the north line, to Spring Valley, near the southwest corner of the State, most of the intervening territory, except the mountain uplifts, is in the mind of the hopeful and optimistic possible oil territory. The oil territory extends from north to south, from the Montana line up here [indicating on map] at the Elk Basin, clear down to and beyond Laramie, near our southern border.

"The prospector has traversed practically the entire area of that State seeking oil. He has spent an enormous sum of money. He has secured some fine results. They are there in very great

numbers—the prospector, the locator, the expert, the capitalist—and if we were to have no oil legislation at all and were free from withdrawals, Wyoming would develop very rapidly under the placer act and, in my opinion, develop in a very satisfactory way, everything considered.

"So much for Wyoming's interest in the law. I shall not attempt to qualify as an expert, but perhaps what I have to say may have a little more weight if those of you who don't know it are made aware of the fact that I had something to do with oil and oil location and development at one time. I went to Wyoming, driving overland 140 miles, over a country without roads or bridges, in late October, 1887—that is, a little over 30 years ago. I went there for the purpose of finding coal, if possible, that could be burned in a locomotive, with a view of encouraging railroad building through Wyoming. I pitched my camp in the snow banks of an early October winter and proceeded to prospecting. For something over two years I prospected from the Cheyenne River to Powder River and covered the entire territory before I found the coal that we wanted in a vein thick enough and of quality good enough to pay to mine. We had invested about \$85,000 before we knew we had coal that would pay to mine. We brought our machinery 140 miles overland to begin the coal development. That operation still continues. It has been a large going mine ever since. I have had no interest in it for many years.

"In the section where I located oil had been discovered several years before. There were several large oil springs, water and oil flowing out together. A pool formed in front of the springs and the oil gathered on top of the water. That entire section had been located under the oil-placer act. We became interested in the oil land partly because we had to have some of it to operate our railroad over and because we wanted to build up an oil production as a part of the general development of the country.

"We purchased some of those oil rights, and in the course of several years of drilling with machinery hauled 140 miles, not a bridge on the road and the road nothing but a track—and I emphasize that, because it is the experience of the beginner everywhere, even to-day, even if the distance from the railroad may not in all cases be as great—at the end of three years of development we discovered oil on three quarter sections and patented some of the first land containing oil ever patented in the United States as oil lands under the placer act. That is the Newcastle field. There has scarcely been a full 12 months since that time, 30 years ago, that there has not been some drilling in that field. No oil in commercial quantities has been found there up to this time, although the drill penetrates oil whenever it reaches the oil sand.

"In the same general locality is the Thornton field, the Morecroft field, and the Rocky Ford field. The Geological Survey has evidently been under the impression that these fields are of so doubtful a character that it is not worth while to withdraw the land. That is one reason why withdrawals have not been more general in some parts of our State. Our 'wildcaters' and prospectors have gone into many sections that the geologist has refused to consider as likely oil lands; they have not thought it was worth while to withdraw them.

"They are still drilling up there, and recently have found oil in commercial quantities in several sections. In 30 years, however, with all the world open to them, with boundless opportunity to locate, with many thousands of acres located at one time or another, there has been patented and alienated from the Government under the oil-placer act in that section not to exceed three or four sections of land.

"I mention that in order to call your attention to the difficulties in the way and to be overcome by the oil-placer locator before he can satisfy the Government that he has found oil, spent \$500 or \$5,000 or \$50,000, as the case may be, complied with the law in all respects, and is willing to pay the placer price. The idea that under the privileges of the placer locator there is danger of a man getting a patent to all creation is not founded on any experience in any oil section of the West.

"How much oil land has been patented in the Salt Creek field?

"Mr. CURTIS. About a section and a half.

"Mr. MONDELL. And when I first went to Wyoming old 'Cy' Iby was an old-timer in the oil-prospecting business on Salt Creek and Poison Creek and thereabouts. The old man and others like him had been carrying their pack of meal and bacon for years up and down that country trying to develop oil; trying to get somebody to come in and invest capital; trying to get wells down; putting down spring-pole wells; doing everything possible to develop oil; and it was 25 years after these men started before the first real commercial production came. Most of them passed to their heavenly reward before they got any reward in this world.

"Mr. RAKER. Tell us what a spring-pole well is.

"Mr. MONDELL. A spring-pole well is one where you place firmly in the ground a pole of some material that has more or less spring in it, like ash or hickory, and then pull the small end of it down, attach a rope and a drill, and, churning on the spring of the pole, you sink your well.

"Mr. RAKER. Is it worked by hand?

"Mr. MONDELL. Yes; by hand. When you can not do any better you sometimes use a spring pole for prospecting work. On the wells we drilled we used diamond drills; we used star and standard rigs that cost us \$10,000 to set up—and they cost more than that now—and we hauled them all 140 miles.

"I held some oil interests in that section when I first came to Congress. I gradually oozed out of them and have not had an oil claim or an oil interest of any kind for many years, but I have located oil claims and staked and recorded them. I have done the assessment work, made discoveries and failed to make discoveries and have gone through all the experiences that people go through in new oil development.

"PASSAGE OF OIL PLACER ACT.

"Soon after this work that I have spoken of, and the patenting of these claims, the Interior Department decided, in what is known as the Union Oil Co. case, that lands valuable for oil could not be patented under the placer acts. I think that decision was made during my first term in Congress. We tried to draft an act that we thought would fairly fit the oil situation, but we could find no two people that agreed on the details of the legislation, so just before the close of my first term I introduced a bill applying the placer acts to lands of this character. It became a law, and under that law oil lands have been held and patented since that time.

"I am not inclined to go into a discussion of the placer act as applied to oil lands. Though I am the author of the bill, I have never felt personally offended by the flings that have been thrown at the placer act as it relates to oil lands, and yet this is true, that if the act remained on the statute books and the Government kept its hands off and made no withdrawals we would have a thorough, rapid, and, in my opinion, a very satisfactory development of our oil territory, both from the standpoint of the public and of the individual—more satisfactory from the standpoint of the public perhaps than of the individual, because the placer act, while it apparently is the most liberal in its practical working, has the oil locator on his tiptoes all the time, because if he does not make a discovery—and it is difficult for him to do it in many cases—some one is liable to come in and try to make one before he does. An association can not hold large acreages for long, because they can not do the necessary work and make the necessary discoveries. If they do make a discovery they must hustle to hold surrounding claims, with the result that no one has ever gotten any great amount of oil land under the placer act, although the opportunities have been seemingly unlimited. An association may begin with large acreages, though the ordinary locations are from a section to two or three or four sections. Large acreages are not located with any idea that all the lands so located contain oil. The locations are spread over a great deal of wildcat territory in order that some of them may be found to cover the area where the oil has accumulated. If he can find oil on a few tracts in considerable quantities the prospector hopes to be rewarded for his efforts.

"Mr. RAKER. Before your bill was enacted into law, could you give the committee about how many acres were actually patented under the placer-mining law that were oil lands?

"Mr. MONDELL. I think there were a very few. I think there were not over 8 or 10 claims, at the outside.

"Mr. RAKER. Well, since that law became effective and was made applicable to oil lands—the placer law—have you got an idea of the quantity?

"Mr. MONDELL. I thought some one might have looked that up. It occurred to me that some of the gentlemen had gone over that.

"Mr. RAKER. I do not think it has been presented yet.

"Mr. MONDELL. It is a comparatively small acreage. I have never been able to learn the exact amount, because the Land Office people tell me they have never kept oil-placer claims and patents separate and distinct from other placer mineral patents, but my understanding is that a comparatively small acreage has been so patented, only a few thousand acres in the entire country. Yet there has been this wonderful opportunity to file on lands all over the West, to exploit and develop, and yet the acreage that has been patented is very small. I am sorry I can not give you the exact amount; it is surprisingly small.

"Now, our people have gone out and made these locations. That has all been gone over. You know how it is done. The fellow with the pioneer spirit—and most everybody in the West has it—is glad to take a gambler's chance; rather enjoys going

out and roughing it; gets his friends and neighbors to grub-stake him or join with him; starts out over the hills to find a likely location. Some fellow in every community gets a rule-of-thumb knowledge of formations and structures, and gets to talking as learnedly, and I have thought sometimes just as intelligently, as the high-priced gentlemen that we have out there to tell us whether a structure is likely or not. The prospector finally makes his location, plants a stake at the corner of each claim, marks it, digs a prospecting hole, and files in the office of the county clerk a record of his location, with his name and that of his fellow locators.

"A placer claim is 20 acres; but an association of eight people may locate a combination placer claim of 160 acres; and oil placers are generally these combination claims. A 160-acre claim is held by eight people and is treated as a single claim—the matter of discovery, the assessment work, and so forth. That is the way those lands are taken and held.

"Mr. RAKER. The difference, now, between the one locating the 20 acres and the eight locating the 160 acres is that they can combine and dig one well and that will apply to the 160 acres?

"Mr. MONDELL. They make one discovery, do one assessment work, and make one proof.

"Mr. RAKER. Where the individual alone would have to dig a well on 20 acres?

"Mr. MONDELL. He would have to sink a well on 20 acres; do the assessment work on 20 acres; spend \$500 on 20 acres; and make his proof on 20 acres, containing many different kinds of affidavits. There are not quite as many affidavits in a placer proof as there are kinds of Heinz's pickles, but almost an equal number. [Laughter.]

"Now it is proposed to do away with the placer act; to change the law under which we have been operating and under which we have been developing; under which a large amount of money has been invested; under which men and women have endured great hardships, and to enact a leasing law. It will probably be done and we must accept it, but I am sure that no one in doing that wants to do an injustice. I am sure of that. Why have a leasing law? Well, for many reasons, from the standpoint of those who advocate that sort of thing, which it is not necessary for me to recount. But the principal 'why' for a leasing law now is the fact of the withdrawals. Why the withdrawals? To compel a leasing law. There has been no other apparent purpose. That has been frankly avowed, and I am mentioning it only because it is necessary to know that in order to understand the situation. Why are our coal lands withdrawn? They are withdrawn in order that they may be examined and the character of the coal, the depth and thickness of the vein, determined and a price fixed per acre. That being done, they are restored to entry and sale. The only reason for the coal withdrawal is for classification and pricing.

"On the other hand, oil lands are withdrawn from entry to prevent development, and to prevent development in order to compel a change of law. That has been frankly admitted—privately, at least—and those who are familiar with the situation know it. How are they made? Are they made after careful and conscientious and earnest and intelligent original investigation in new regions by the agents of the Government with a view of developing structures favorable to an accumulation of oil or gas? Never, in any case I have heard of. No lands have ever been withdrawn save and except as they had been previously located to some extent, at least; investigated to a very considerable extent; expeted more or less; more or less work done upon them; and noised about in the community. I said an unkind thing once about that on the floor of the House, and I feel like apologizing to the chief and the men of the bureau who do these things, when I said that his men sat like harpies around the water tanks at desert stations watching some fellow, with his pick and pack, going out to locate, or the same fellow, after he had gone and gotten a drill, bringing it in for the purpose of setting it up on the land. Perhaps I should not have called them harpies, for personally they are good fellows; but the fact remains, as I stated it, they withdrew the land after the pioneer had found the field and before he had made his discoveries; sometimes before he set up his drill rig.

"The withdrawals are generally timed after there has been enough examination and development so that the agents of the department may get a very good knowledge of the geological structure without too much personal investigation. If the outlook is favorable and the experienced local experts, who are always glad to discuss these matters with their brother geologists, feel hopeful about it, and the prospector or driller has gone in and is getting started with his development, the withdrawal comes. The only likely lands that are not withdrawn are either those where the development is not known to the

Geological Survey, where they have not learned what is going on, or where they consider the chance so desperate that they refuse to pay any attention to it. In fact, it is rather discouraging if, as a locator, you are proceeding to drill to have the Geological Survey come and make an examination and fall and withdraw some of your land. It is their verdict; you will get no oil. It is a mighty good thing for one of those stock-selling companies. It is a very good thing sometimes for them to be able to advertise the fact that they are in or near a withdrawal. That shows Uncle Sam has taken favorable notice of their particular section.

"Now, withdrawals were made for the purpose of compelling a change of law. I say that not in criticism. I say it as the fact—the unquestioned fact. The change of law, if there were no other reason for it on earth, if there were no argument for it on earth, must come because of the withdrawals. They have taken in so much promising oil territory that something must be done to get rid of the withdrawals. If the authorities felt it were necessary to make further withdrawals to force a change of law, I presume they would be made.

"RELIEF NECESSARY.

"Now, this being the condition, what relief is needed? I think it was said here yesterday, or the day before, by some one, that we were seeking relief in order that we might accomplish something that, without change of law, could not be accomplished. Not at all. Not at all in the majority of cases. Make no more withdrawals, and Mrs. Harnsberger, who sits here, will not ask you for any legislation or any relief. She will go on and develop her lands. Mr. Stone, here, and scores and hundreds of people in our State, where there are no withdrawals, are not asking anything in the way of relief if there is no change of law. Of course, they will not find paying oil on all of their lands. They do not expect to. But they are trying to cover territory enough so that somewhere within their lands they will get a goodly quantity of oil. Such people need relief not because they are not lawfully on the lands, not because they can not under the law secure a patent eventually—at least where they do find oil in such quantities that even an unwilling or hesitating department can not withhold a patent. If there was to be no change of law, most of our people wouldn't be asking any relief. If there had been no withdrawals lately in the vicinity of Rock Springs and on the Lost Soldier, in the Powder River and Rawlins fields and up here, north, and there was to be no change of law, those people would not be asking relief, because they would go on and do their development work; they would find oil where they could and get their patents as they found it.

"If it had not been for these withdrawals, these people would none of them have been before Congress for relief. They received some relief in the withdrawal act. Now comes proposed legislation operating on the unwithdrawn as well as the withdrawn lands as an intervening adverse claim. And that is why we need relief. You may say, 'If there can be an intervening adverse right asserted in these cases, there might have been such an intervening adverse right without action of the Government.' That is true. Some other equally optimistic and more active or better endowed citizen might come in and find oil on some of these claims before the original locator. But that sort of thing has been rare in our country, has very seldom happened where the locator was going on in good faith and making progress. Our people have been willing to take that chance. That is what has spurred the locator, compelled him to act, because if he did not some one else might come in and assert a right which became superior if he made the first discovery.

"Now, if these were gold-bearing lands, if they were copper lands, if they were iron lands, if they were anything but oil lands, as to nine-tenths of them no one would be asking for legislative relief, even in the face of this bill. Why? Because in the case of the metalliferous lands the Interior Department and the courts have held that any discovery of mineral under circumstances and conditions holding out a reasonable hope of the existence of mineral in paying quantities and warranting an ordinarily prudent man in investing his money in the hope of finding and developing it constitutes a discovery within the meaning of the law and establishes a right in the locator which the courts and the Congress are bound to respect. That ought to be the rule in oil placers.

"Mr. RAKER. Would you allow just one question?

"Mr. MONDELL. I just want to say one more word before that, Judge, because I want to refer to a matter that the gentleman from Colorado is much interested in. You take this matter of oil shales. Now, just imagine that those oil-shale banks contained copper. You can color a mountain with a

copper penny, and a man who has found the trace or color of copper in a rock has a discovery and a claim that nobody can take away from him. Now, you can take that oil shale, place it into a retort, and extract the oil from it, and yet I think there are people who will say that doesn't constitute a discovery.

"Now, Judge, I will be glad to have your question.

"Mr. RAKER. There is quite an important question that has not been developed yet, but I will withhold it for the present.

"NO ADEQUATE JUDICIAL RELIEF.

"Mr. MONDELL. Now, there is another reason why relief is needed: There is no adequate judicial relief. The courts will not—they never have mandamus the Secretary of the Interior to decide anything. He may linger and hesitate and hold back indefinitely. The only writs of mandamus that have ever been issued that I have heard of were to compel the performance of a purely ministerial act. A patent having been issued, if laid in the files and arbitrarily held up or overlooked or forgotten, the Secretary of the Interior may be compelled to hand it out. But as to compelling him to act either one way or the other, if there is a case in which that has been done I don't know of it, and I have tried to keep track of that sort of thing.

"Furthermore, if the Secretary of the Interior does act—and the question is one solely between the Government and the locator or claimant—there is no court that will review his act. You can not bring any one of these cases into court unless you create a situation under which there is a third party asserting a claim. It is true that if these lands that are being held and claimed were leased you would not have production, but litigation, because you would then create a situation in which I think the locator or claimant could get into the courts by asserting that the Secretary of the Interior had assumed to give another land that belonged to him or to which he had a good and lawful claim.

"I know something about this matter of appeals, for I have been trying for 10 years to get a bill through the House that will allow an appeal from the final decisions of the Secretary of the Interior in land cases, and I have not found a Secretary of the Interior that entirely favored it. Apparently they do not want such an appeal. That is the only reason why such a bill is not the law. I have introduced the bill in two forms. One to take these cases to the courts here, one to the courts at home on questions of law and fact or on law alone. The present Secretary of the Interior is said to be opposed to it in any form, and I have not troubled this committee for that reason. A former Secretary did send a semifavorable report to a modified bill, but it failed in the closing days of Congress.

"Some relief is necessary, first, because it is proposed to set up by statute an intervening adverse right; second, because there is no relief in the courts. Now, what should the character and measure of the relief be?

"Having filed on a very considerable acreage of oil lands at one time many years ago myself, having seen other people who did, having watched this development for 30 years, I have no fear—and I say it not as representing people who want to get quantities of land, but conscientiously in the view of the general public interests—of the effect of granting people the opportunity to develop a considerable acreage which they have already located. The fears that have been expressed with regard to extensive locations are groundless, because nowhere in that country will any location of considerable area be found to contain oil as to all the major portion of the area located. My own opinion is that if you gave every bona fide locator now on the public domain in good faith the right to proceed to patent there would not be 1 out of 10—and I think I might say not 1 out of 20—of the claims patented.

"Granting the right to proceed in the effort to secure patent does not find oil, does not develop structures, does not create conditions favorable to the accumulation of oil, does not do anything but give the opportunity to find here and there the comparatively small areas where oil may be found in paying quantities.

"You gentlemen will have to decide. But let us remember that there are a large number of these locators that are not on withdrawals. Their lands have never been withdrawn. The Government is not at this time asserting any right or claim, adverse or otherwise. They are on lands that people believe are favorable to the development of oil, and they are there in good faith. They certainly have no cloud over their claim or right of any sort. And that is equally true with all of these folks who, having gone on the public lands in the same way, having gotten along in their development all the way from first staking and the first prospect hole clear up to the drilling of a well, have wakened up some fine morning to find that

Uncle Sam had drawn a blanket of withdrawal across their claims.

"There are a few cases where parties did go on oil lands in violation of withdrawals. They are comparatively few; and in the majority of such cases one who knows all the facts surrounding them can scarcely say those people were not justified in what they did, or that the ordinary prudent, law-abiding man would not have done the same under the circumstances.

"The withdrawal act itself gave a certain measure of relief; and unless you place provisions in this bill other than are contained in what is known as the Attorney General's amendment, as I understand it, you do not even give the relief that the withdrawal act gives, for the withdrawal act, when it asserts the adverse right of the Government by withdrawal, reserves the right of him who is in possession and in diligent prosecution of work looking to discovery of oil or gas. That is not broad enough, it is true; but even that provision is lacking in this bill, unless it is inserted as an amendment.

"How are you to grant the necessary protection and relief? Shall it be in the form of an opportunity to secure a patent or in the form of a lease? From some viewpoints it might be held that the committee was justified in granting quite liberal relief, in the form of a lease, in certain classes of cases in which it might not be warranted in affording relief in the way of a patent. There may be something in that view of it.

"And yet where the locator has made his validation, as he calls it, to an extent that constitutes what most people in our section hold to be a discovery, there ought to be no question whatever about giving that locator the right to proceed to patent. We ought to be liberal about it. There is this difficulty about giving no relief other than a lease. In quite a good many cases, on both unwithdrawn lands and withdrawn lands, the original locator has entered into lease or contract with some one to drill. In the majority of cases those leases have been made on one-eighth royalty. If you now give the locators only such relief as is to be secured through a lease at not less than one-eighth royalty, either the locator or his lessee may suffer great loss. The question as to the validity of the contract—the lease entered into—would arise. In all such cases something more than a lease is required if the original locator or his lessee is to be rewarded at all for his expenditure of time and money and effort.

"There has been some talk about the good faith of these people. I do not know of anybody who has located oil lands who has not done so in good faith. The people that I have known and had to do with, both in the olden times and more recently, are folks that have gotten their neighbors and friends to join them and gone out and made these locations. Nothing that is done in our country is done in more perfect good faith than the location of oil lands. The locator may be over-optimistic, but he is honest.

"Of course, it is very easy for Government departments to draw fine distinctions and set up all sorts of claims of lack of good faith, but cases of bad faith in locations are rare.

"Mr. Chairman, there are these several classes of cases. The committee ought to be very liberal to those outside of withdrawals. They ought to be very liberal to those inside of withdrawals, where the withdrawals were placed over them after they had located in good faith and still remain in possession. The committee will make no mistake and create no monopolies if it makes the maximum acreage high. The maximum acreage which you have in leases in your State, Mr. Chairman, of 4,800 acres is none too high. But a small proportion of the land located will ever be patented in any event. On a comparatively small proportion of it will oil be discovered in paying quantities.

"RELIEF PROPOSED NOT ADEQUATE.

"My attention has been called to an amendment which I referred to a moment ago as the Attorney General's amendment. Some one suggested that it had been offered or proposed or suggested as the only relief that should be granted under the bill. I can not believe that anyone has that in mind. That can not have been the thought of the Attorney General, who is familiar only with lands in litigation; it could not have been the thought of the Secretary of the Navy, who, I assume, is mostly interested in and familiar with the naval reserves. It could not have been the thought of the Secretary of the Interior that this proposed relief was to be exclusive, for he has heretofore recommended relief in a much broader way, and has not withdrawn his recommendation, so far as I know. Surely none of these gentlemen could have intended the proposed departmental substitute which appears in the pamphlet I hold in my hand as the only and the exclusive measure of relief, for it applies only to comparatively few cases, and those cases in which it is claimed the parties pro-

ceeded in the face of, if not in contempt of, withdrawal orders. The proposal does not apply in any way to the great majority of cases, including all those with regard to which the Government has never raised a question.

"Mr. TAYLOR. Tell the committee why.

"Mr. MONDELL. My thought is that they could only have had in mind the relief necessary in a certain limited class of cases, because it applies only to the case of a withdrawal and to certain conditions where a well has been drilled to oil. There are comparatively few such cases as that. If that were the only relief granted, the locators on the unwithdrawn public domain would have no relief at all, even though no one has questioned their good faith, has questioned their right to relief. The locator in a withdrawal who had not time to make his discovery before withdrawal and did not drill after the withdrawal would have no relief whatever. The locator who at time of withdrawal was there doing business and has continued and may have expended \$100,000, and has not been able to get down to oil, would have no relief.

"The Attorney General could not have had any of those cases in mind; he could have only had in mind that very limited class of cases where, under certain circumstances and conditions set forth, there had been a well drilled to oil. And then the relief is of a character that I hope no one will want to defend after they have more carefully considered it.

"The Government endeavoring to increase production certainly does not want to cut up an oil field into little segments and circles, a few hundred feet in diameter, scattered here and there about over the public domain. That is what is proposed. I can think of nothing more wicked or wasteful than that would be. It would be as much against the public as it would be unfair to private interests. We never have disposed of our public lands heretofore in any way except by legal subdivisions, and they should only be handled in legal subdivisions now. The proposition of giving a man the opportunity to lease one well—who is going to determine the territory it will drain, and when is it to be drained? Are all surrounding lands to be held undrilled until this is determined, and what is going to happen in the courts in the meantime? What about the man who was a co-owner in a claim where there had been a separation of the interests, and one owner has produced oil and the other has not, though he may have spent more money, and what are you going to do with him? I think that after careful consideration it will appear to everybody that such so-called relief is impracticable, grossly unjust, and not in the public interest. Why is a leasing law proposed? Because men believe that we will have better protection of the public domain and better development of its products. They believe that they can prevent wasteful drilling, such as we have in Wyoming in the Big Muddy field. They believe that general control, if it is wise, will be fair to the individual and helpful to the community, but it will not be either if proposals as I have just referred to are enacted into law. And we hope also that we will get some benefits out of this leasing in the way of moneys to build our roads and maintain our schools. And that leads me to a matter I want to discuss in just a minute.

"Gentlemen who are here from Wyoming will present concrete amendments covering these propositions of relief. I want to say in regard to them that what I understand they propose to offer is in my opinion very moderate. They are reasonable. If I were drawing them I would—believing I was doing it in the public interest—draw those amendments more liberally. If they have erred at all, it is on the side of conservatism in order to present something to your committee so clearly within the limits of justice and equity and so evidently purposed to create a condition under which the public interests will be served without undue hardship on the individual that there should be no doubt of their acceptance.

"GENERAL PROVISIONS.

"Now, Mr. Chairman, so much for the relief measures. May I talk to you just a little time in regard to some of the general measures in the bill?

"Mr. TAYLOR. You do not care to go into these proposed amendments?

"Mr. MONDELL. Well, I do not think I will have time to take them up one by one. Furthermore, the Wyoming gentlemen have not, I understand, fully agreed as yet on the exact form of the amendments.

"I wish you would change that first coal section and cut out that blocking-out provision. I prospected for coal a number of years. I know how much it costs to get out and find the proper location for a coal mine, and I know no one can well do it for you. Instead of providing this method, whereby the Geological Survey must go over the millions of acres of coal lands and

survey and separate them into blocks and then lease a block here and there, provide that coal lands may be leased in certain areas; have a prospecting permit which shall ripen into a lease after prospecting and development by the party having the prospecting permit. That will make a much better coal provision.

"I want to talk a little about competitive bidding for leases. In my mind it is wrong in all of these bills. I do not know whether the committee will be disposed to depart from it, but I do not think it is a good practice in a leasing bill either as to coal or oil. It gives all the advantage to the big fellow, individual or corporation. Leave it in your bill and you have served notice on the man of limited means you do not expect him to mine coal or develop oil. Leave it in your bill and you not only invite, you encourage, monopoly.

"You have a provision in your coal sections which authorizes the Secretary under certain conditions to allow mines to lie idle on the payment of an annual rental. That is a very dangerous proposition and entirely unnecessary. If the provision relative to running the mine provides that the mine must be run as steadily and to as great a capacity as the market conditions will warrant, you have covered the whole thing. Lacking a provision that the output must be such as the market will warrant, the other provision for shutting down perhaps seems logical, but it is a very dangerous provision and entirely unnecessary.

"Mr. TAYLOR. Are you talking now about the House bill or the Senate coal provision?

"Mr. MONDELL. I am talking about the House bill. The Senate bill is very different, because the Senate bill allows the purchase of a very large acreage of coal land. There is, however, a paragraph in the Senate bill somewhat along the lines I have suggested.

"Now, on the question of how many coal leases should be granted, I have offered amendments on that subject when coal-leasing bills were before the House. My own belief is that, whatever you do now, eventually Congress will provide—and can not well do otherwise—that the same individual or corporation may hold coal leases in any number so long as no two of them are in the same field. There is no reason why a man should not have a coal mine in Wyoming and one in California, or one in Montana and one in Colorado, or one in the Sheridan field in Wyoming and one in the Kemmerer field in Wyoming. They are entirely noncompetitive. At least three coal leases could be granted in my State without in any direct way competing one with the other.

"Now, when you come to the question of the number of oil leases one should be allowed—the Wyoming people have, I believe, suggested not to exceed four—I suppose I shall shock some folks in saying there should not be any limitation as to the number of leases one may take. You gentlemen all supported a water-power bill in the last Congress, with the water-power octopus staring us squarely in the face, in the opinion of some people, and likely, it was said, to get hold of that tremendously valuable asset of the country, and, under that bill, the Secretary of the Interior could lease every drop of undeveloped water capable of turning a wheel in the United States to one man. There was no limit to the number of water powers that might be leased by a single individual or corporation. I am not questioning that now. I am not criticizing it, but I had some doubt about it. As a good conservationist, it startled me. But when I find that in this bill it is proposed to limit an individual or corporation to one lease I fail to see consistency in the committee's attitude. There are people that make a business—a profession—of developing wildcat oil fields. They take chances, with the gambling spirit largely developed. They go from one field to another, testing out here and trying out there. If you are to attempt to put those people all out of business in a legitimate way, let me tell you what you will develop out of that condition. You talk about the dummy entryman; you will develop a condition of dummy entrymen that will, by comparison, put into the pale shadows of forgetfulness all the dummy entries you ever heard about. If you were one of these oil operators and wanted to go on with your business, but could get only one lease or an interest in one lease, what would you do?

"You would go out and get people to make application. You would get people to apply for a prospecting permit; apply for a lease, and then you would do business under it. That would be legal. It would not be wise to encourage it. Now, the Wyoming people suggest four in a State, I believe, not to exceed four leases in a State. Certainly there could not be objection from the standpoint of public interest if the same people had, for illustration, one lease in the northern part of the State, one in the eastern, one in the western, and one in the central or southern. As a matter of fact, there would be no harm to the public interest if the same people had them scattered all over, providing you limited your aggregate acreage.

"ASSOCIATIONS OF EIGHT PEOPLE.

"Practically all of these locations in Wyoming are made by eight people. There are few individual locations, and so when you limit in acreage you do not limit an individual; you limit eight people. Under your leasing provision you give an individual a maximum of 2,560 acres, but it is suggested that in granting patenting or leasing relief you limit these people who have filed in an association of eight to the same number of acres. As a matter of fact, that would be giving them one-eighth, each one of them, of the amount the bill would give an individual under its lease provisions. It seems to me that ought to be carefully worked out in any provision of limitation, because the fact that people have associated themselves in these organizations ought not to deprive them of rights that they would have as individuals. If you said to the locators in all these fields that are outside of withdrawals or have been brought within withdrawals, 'You may take to patent or lease an interest or an acreage not more than 2,560 acres to the individual,' you would do no more for those people, at least for the lessees, than you propose to do for any one of them if they came forward as an original lessee under the bill.

"A LEASE, NOT A PATENT.

"There is a provision in the bill, Mr. Chairman, I feel very earnestly about, and I have discussed it before this committee and on the floor of the House twice at length. I have never believed it was wise under a leasing bill to have a prospecting permit ripen into patent. I do not think it is good legislation. I am quite sure that the people expecting to work under this legislation do not generally ask for it or believe it necessary. It seems to have been in the minds of some gentlemen that such a provision would be necessary in order to make a leasing bill palatable, but the folks in my State have taken an entirely different view of it. If they can have a goodly acreage under lease, they prefer it to a small acreage under patent.

"Mr. TAYLOR. Do you make any distinction between coal and oil?

"Mr. MONDELL. The bill retains the present coal-land laws on the statute books. That is perfectly safe. Any coal land that is worth while is valued at more than what anybody wants to pay for it. That provision in your coal bill is all right, so far as it goes, because it gives the man who has an operating mine an opportunity to get 80 acres or 160 acres to round out his holdings. In the course of his operations his entries may approach a piece of public land, and perhaps he would rather buy even at that high price than to lease, because his is not a leasing operation. That is in the main what the purchase provision in the coal portion of the bill will be utilized for. In case one wanted to start a new mine on coal land classified at a low price, he could utilize those provisions for that purpose as well as for rounding out his holdings. The man who goes into the really good coal regions of the country is not likely to purchase at the present high classified prices enough land for a large operation. He couldn't afford to do it.

No prospecting permit for coal is provided in the bill before us. I think you ought to have such a provision. I think you ought to have a prospecting permit and let the prospector find his coal and block out his lease, rather than this provision under which you are proposing to have the Director of the Geological Survey go out and do the prospecting and divide the coal land into leasing blocks, as he has in Alaska. We are reminded that with all the expenditures of effort in trying to get a coal-leasing bill through for Alaska three years ago there hasn't been a successful lease made yet. Of course, the conditions are different, but it proves how difficult it is to get a good law, even with our best efforts, that will work well in these cases.

"The Wyoming people will, I understand, recommend that instead of the oil-prospecting permit provided for in the bill ripening into a patent it ripen into a lease.

"The CHAIRMAN. Are they all agreed about that?

"Mr. MONDELL. I understand so. And I hope after you have thought that over the committee will be unanimous on that. Certainly, if the oil people do not insist on patents no one else ought to; under such a provision there would be uniformity of condition and control.

"The CHAIRMAN. Of course, you understand that even with a patent they are still qualified to lease.

"Mr. MONDELL. Yes; I understand that. But they do not want to bid against all the world to get it. When they get a prospecting permit in wildcat country, they want it to ripen into a lease, either at a royalty you fix in the bill or to be fixed by the Secretary of the Interior in advance. They do not want to have to go up against the fellow that will get the persimmon because he has the longest pole—the fellow who bids the biggest

bonus because he has got the most ready money. Give the little fellow a chance.

"FUNDS FOR THE STATES.

"Now, in conclusion I want to talk to you about the provision of your bill which relates to the disposition of the rents and royalties, the fund growing out of the operation of the act. I have tried to become reconciled to leasing, because I believed it to be inevitable, not because I was specially enamored of it. I believed, however, there were some benefits that might be secured under the right kind of a leasing law. Whether we like it or not, we will have to adopt a leasing system, because, in my opinion, the withdrawals will never be wiped out or rescinded except as a leasing bill comes to take their place. We have never received quite as much for public purposes as we ought to out of the depletion of our mineral resources. We have built up splendid cities, have made some millionaires, but have not gotten as much for the benefit of the country generally as we should out of the development of our mineral resources. A leasing bill affords the State and community an opportunity to benefit to a larger extent by the development, providing the community gets the rents and royalties.

"Now, you propose in your bill that the royalty and rents shall go into the reclamation fund. No one, therefore, is interested in this question directly except the people of the 17 States to which the reclamation law applies. The eastern folks therefore have no direct interest in it. We are anxious to build up the reclamation fund, but we do not want all of the royalties of Wyoming, for instance, to go to either Oregon or Texas, even for so good a purpose as reclamation. It would not help the folks in the central part of the State very much if the royalties from all that territory went to the North Platte Irrigation project or the Shoshone project in our own State.

"There is only one class of lands in this country now permanently withdrawn, and from those lands we receive 45 per cent of the returns. Those are the national forest lands. In the first place, we get 25 per cent of all forest receipts, which goes to the counties for schools and roads. We get the benefit of 10 per cent of the receipts for the building of roads under the direction of the Secretary of Agriculture on and near the reserve to connect with the local roads. We get the benefit of 10 per cent more of the receipts for the building of roads in cooperation with the localities under section 8 of the recent good-roads act. An appropriation of \$1,000,000 a year is made for this purpose, which is reimbursed out of a new 10 per cent fund. So that 45 per cent of these receipts now go to the community, and we ask to have that rule of giving the States and localities a part of the receipts—the rule that has been established with regard to the only lands that have been permanently withdrawn from disposition—followed in the case of these lands.

"Our people are now spending several hundred thousand dollars for a road from Casper to Salt Creek, and we need these funds. If the placer law remains on the statute books and the oil lands are patented eventually, we will tax all these great values. You are proposing to take all of the land values of these States in coal and oil permanently from the reach of the assessor. Those lands would in time constitute the bulk of our values in real property, and yet it is suggested that we are to be permanently deprived of the benefit of taxing those enormous estates and values and get nothing to compensate us for the loss. We must, however, build the roads traversed in the development of these properties; we must school the children whose parents develop these enterprises; and yet we are to be deprived of revenue obtained from them. There is not a community in the country that would not go bankrupt under that sort of thing. Take from the State of Pennsylvania to-day the right to tax all of her coal lands and oil lands, and where would that great State be in her development? She would be bankrupt, of course. She could not survive it. It will be said, 'You will have the opportunity to tax improvements, and it may be you can tax the mine output.'

"I am not so sure about that under the sort of constitution that we have in some of our States. But assuming we do, we lose the right to tax the land values, and those are the principal values. One of these great coal mines with its 10-foot seam of coal—\$500 an acre, its classified price, a section of it running into several hundreds of thousands of dollars—might have on it mine improvements that would be assessed at but a few thousand dollars. The community built up there, with all of its children, its need for roads and other improvements, the necessity of maintaining order, would be deprived of all the larger sources of taxation.

"The Senate has provided that 50 per cent of these funds shall go directly to the States, to be apportioned as the legislature shall provide. Your bill does provide that while the fund

in the first instance goes into the reclamation fund, after it has been used and repaid 50 per cent of it shall go to the States.

"Mr. TIMBERLAKE. When would it go to the States?"

"Mr. MONDELL. You are young and charming, my friend, and you might live to see it accomplished, but, while I expect to live long, I would not expect any of it would ever come back while I am on earth. [Laughter.] Your country would be developed and oil fields worked out and abandoned before you would get funds out of the receipts through that process for the building up of your communities.

"The representatives of our Wyoming people will have some amendments to offer. Some one of them will present them. As soon as the form of these amendments is agreed upon some one of the gentlemen will ask to come before your committee for the purpose of presenting them.

"Now, I do not know that I have anything more to say, Mr. Chairman. There are a lot of things in the bill that I would like to discuss, and I would like to elaborate a little more on the matters that I have discussed, but unless the members of the committee wish to ask me some questions I do not care to take up your time any further.

"Mr. RAKER. I would like to ask Mr. MONDELL a few questions.

"Mr. MONDELL, supposing you take that California map there (Naval Reserve No. 2), the sections in yellow, sections 22, 28, and 30, just as an illustration; suppose claimants filed on those three claims in your State—the corresponding sections—in October, 1916. They would have to do development work by the end of the 31st of December, 1917, to hold the three claims. That is right, isn't it?"

"Mr. MONDELL. Yes. You say they filed when?"

"Mr. RAKER. In October, 1916.

"Mr. MONDELL. They would have to do assessment before the expiration of the year beginning the following January.

"Mr. RAKER. I say, they would have to do their assessment work on the three claims.

"Mr. MONDELL. Whatever your State law provides for as discovery work would have to be made at the time the location is made.

"Mr. RAKER. All right. We will take the ordinary placer claim to start with and get to the oil later. They would have until the 31st of December, 1917, to finish their assessment work.

"Mr. MONDELL. Yes.

"Mr. LENROOT. That is, after discovery.

"Mr. RAKER. After discovery. I am taking the ordinary placer claim. If they did no work on 20 and 28 at all, but they did proper work on 22, and anybody came in on the 1st of January, 1918, they would lose all of sections 20 and 28, wouldn't they, and other parties would come in and jump the claims?"

"Mr. MONDELL. They could come in and jump the claims at the end of the year if the assessment work was not done.

"Mr. RAKER. That is what I say.

"Mr. MONDELL. Yes.

"Mr. RAKER. Clearly, they would have no right to hold it. First claimants would have no right to hold unless they had actually done their assessment work on the claim.

"Mr. MONDELL. That is true.

"Mr. RAKER. Now, take the same for oil. Suppose one group has three full sections properly located. That would be 16 claims, wouldn't it, not contiguous, and we will say they actually worked and developed and found an oil well on section 22 within the proper time, but they did no work on sections 20 and 28 during that year, and they let it expire the 1st of January, 1918. It is relocatable, and they have no chance or claim to get any of the lands in 20 or 28 by virtue of their discovery or getting their well on 22. Is that a fact?"

"Mr. MONDELL. Yes. They lose their rights by failure to do assessment work.

"Mr. RAKER. What I am trying to get at, it makes no difference how many claims you have—supposing you have got eight claims.

"Mr. MONDELL. Do I understand you want to illustrate how difficult it is to hold land under the placer act?"

"Mr. RAKER. I didn't say that, but I wanted you to tell the facts.

"Mr. MONDELL. I think I said that some people have located large acreages; but the placer act compels, particularly on oil lands—it applies better to oil lands than it does to lands of any other character in that regard, in that it compels constant occupation and constant effort, under the penalty of having an adverse right cut you out, on pain of losing all you have.

"Mr. RAKER. Just let me put this to you now: Supposing you had sections 20, 22, and 28 properly located in your State. You have a group of four claims, and you are drilling there, and spent, say, \$100,000, and actually discovered oil during 1917. You did no work on 20 and 28. You would be absolutely

down and out on the 31st of December of that year, wouldn't you?"

"Mr. MONDELL. Yes; if you don't do your assessment work, and thus comply with the law on a placer claim, you lose it, if an adverse claim is asserted.

"Mr. RAKER. Yes.

"Mr. MONDELL. That is what guards against the land hog in placers, and particularly in oil placers, in view of the difficulty of making discovery. And I think the committee can not have it too clearly in mind, can not have too often reiterated the fact that the department does make it exceedingly difficult for the oil-placer claimant to prove up by challenging his discovery. He must make a discovery such as is not required in connection with any other class of mineral, both to hold and to patent, under recent decisions. And that is why we want the court to review decisions of the department.

"DEPARTMENTAL V. JUDICIAL DECISIONS.

"I think the chairman suggested the other day we must not call in question the good faith of the department. We don't want to call in question the good faith of the department, but we do call in question their judgment, and we know that when a man or a department is investigator, prosecutor, and judge there is liable to be some doubt of the existence of a frame of mind conducive of a just decision. And that is particularly true when there is a public sentiment—as there has been in regard to certain classes of land claims—hostile to claimants.

"Mr. LENROOT. May I ask this: Do you know any case where the courts have more liberally construed the laws in favor of the claimant than the Secretary of the Interior has? You are implying that the Secretary of the Interior is not giving claimants as favorable consideration as are the courts.

"Mr. MONDELL. I am sure the Secretary of the Interior has never made a decision as favorable to the claimant as Judge Riner's decision in the Grass Creek cases.

"Mr. LENROOT. Can you point to any other case in the court of appeals or other district courts, except Judge Riner in a recent oil decision, where the court has construed the law more favorably to the claimant than the Secretary of the Interior has?"

"Mr. MONDELL. There are very few cases in which it is possible to get to the courts.

"Mr. LENROOT. A number of them?"

"Mr. MONDELL. There are a few of them. Most of them are hard cases, and hard cases make hard laws, and not always just laws when you come to apply them to other classes of cases. Many of our people have been anxious to get to the courts because they have had a notion that they would get nearer what they believe to be justice. That view and opinion is very general in the West in regard to cases of this kind.

"Mr. LENROOT. You do not agree, then, with the Department of Justice, do you, that instead of the Secretary proceeding to the decision of these oil cases, the Department of Justice is justified in the position it takes that the Secretary should not decide these cases, but they should go to the courts? Is that true?"

"Mr. MONDELL. I did not get that, Mr. LENROOT.

"Mr. LENROOT. I say, then, do you agree with the Department of Justice in the position that it takes, when they are objecting to the Secretary of the Interior deciding these applications for those patents? They are making the same claim that you now make, that the courts should decide them; and hence the Secretary has suspended practically, actually, all these cases, and they are now in the courts just as fast as the Department of Justice can get them there. The Secretary should decide therein and there should be an appeal to the court.

"Mr. MONDELL. The Department of Justice is taking an extraordinary position if it is trying to rob the Secretary of his jurisdiction and have the cases tried contrary to law. There are a few cases in the courts, it is true; the great majority of cases are not in the courts and can only get into the courts after an involved process, after withdrawals, if the Government attempts to oust claimants or transfer the land to some one else.

"Mr. LENROOT. No; you do not mean that. The Government can get into the courts.

"Mr. MONDELL. The Government can get into court to appoint a receiver or to punish or expel trespassers, and so forth. What is the public interest in an oil-leasing law? It is interested in development. I have not an interest, either in an acre of oil land or in any oil company, not a penny, but I think I do know the situation and if you pass this bill as it stands, without relief, you would practically suspend all development in Wyoming.

"Mr. LENROOT. When you speak of the alleged injustice of the Secretary of the Interior being the final authority in deciding these cases, if claimants were permitted to appeal from

his decision, I take it you would also be willing to have the Government appeal from his decision where he granted an application?

"Mr. MONDELL. Certainly.

"Mr. LENROOT. Where do you think the claimants would be in having their titles adjudicated, if either side could go into court at will?

"Mr. MONDELL. We seek the opportunity of appeal from the final decisions of the Secretary of the Interior and the bills I have introduced on that subject would grant the right of appeal to any party in interest; that includes the Government. We might have a captious Attorney General, who is jealous of the Secretary of the Interior, and some claimants might suffer thereby. We would hope to be rid of that kind of an Attorney General in time. We do not anticipate that any considerable number of cases would be appealed by one side or the other. A comparatively few decisions would establish the practice and appeals would occur ordinarily only when there arose new questions of law or fact.

"Mr. LENROOT. Take the situation that now exists, where the Department of Justice does not agree with the Secretary.

"Mr. MONDELL. Well, you would have cases of that kind in the courts, of course.

"Mr. LENROOT. You would have all your cases in court and dragging on for years and years.

"Mr. MONDELL. Well, our people have been wanting and are anxious to just try that out.

"Mr. LENROOT. What your people want is this, is it not: They would like an opportunity to go into court, where the Secretary denies application for patent, but they would not want to go into court where he granted it? Is not that, frankly, the situation?

"Mr. MONDELL. No; not by any means; the bills I have introduced provide for appeals by any party in interest, that includes the Government. The chairman said the other day, 'Is it possible there is anyone under the flag that has not his day in court?' Yea, verily, practically nobody that has business with the Interior Department has his day in court. The Secretary of the Interior has a special agent who is the sleuth, who gathers the testimony. He has his appointees who make up the case. He has his other appointees who pass upon it, and he himself finally decides it. Assuming that he wants to do justice, and that in the great majority of cases he does do justice, there are many cases where we would like to have a judicial decision of these matters.

"The bill you are considering asserts by wholesale adverse governmental claims over lands held in good faith by individuals and corporations with a view of developing them. You are framing a bill intended, I assume, to encourage oil development. Frankly, it could not do that in Wyoming if there was no protection or relief to present claimants, because if the Secretary sought to lease their lands to others these claimants could then get into courts. It would tie our country up with lawsuits. But our people are not all, or even a majority of them, in a position to law with the Government with its unlimited resources, with its splendid array of counsel, with its command of every resource that can possibly be utilized to strengthen a case. The ordinary claimant could not get into court. He would not have the money to get into court. I am confident you do not want to create a condition of that kind. You do not want to fill the courts with these cases; you do want to do justice; to be fair and equitable. Doing that you will not only increase development, which is what we are aiming at, but will retain the respect and confidence of people in a Congress that is disposed to protect them in their rights.

"There will be no monopoly in oil because some individual or corporation gets a few thousand acres of oil land under patent or under lease.

"Monopoly in the oil business never came and never will come out of oil-land ownership or oil production. Monopoly in oil has been created through control of refining and distribution. That has been the source of monopoly in oil always. In the nature of things it must be. There never can be many organizations in this country equipped to distribute oil. And there are only a few who have distributing systems. Refining as a monopoly, so far as there is any, does not come out of any ownership of oil wells. If all of any one field was in one ownership it would not have the slightest effect on the creation of monopoly anywhere. When you think how small the largest proposed maximum acreage is, compared with the vast aggregate acreage, the highest maximum proposed is small.

"In conclusion let me again remind you that taking advantage of the invitation of the laws to locate lands and enter upon the highly hazardous enterprise of locating and developing deposits of oil, many of our citizens, largely people of limited

means, have made their locations in accordance with law and courageously spent their time and money. It is now proposed to radically change the law in a way to put in jeopardy the holdings and investments of these people. Are they asking too much when they ask that the new policy shall not be founded on the wreck of their hopes and property? The Congress must protect them in their rights or stand charged with bad faith and repudiation of the pledges of the Nation."

Patriotism of the American People.

EXTENSION OF REMARKS

OF

HON. HERBERT J. DRANE,
OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 6, 1918.

Mr. DRANE. Mr. Speaker, in this hour when the patriotism of American people is aroused to the highest pitch, it is a pleasure to watch the friendly rivalry between the communities of the United States, from the Gulf to the Pacific and from Maine to Mexico, each striving with the other as to who best can serve.

It is with peculiar pride, therefore, that I am able to present the name of one of the very small communities of my State, whose people, notwithstanding the small population, have been among those who have done big things in the name of and for love of country.

At the hour of 12, midnight (eastern time), of April 5, these patriotic people had in hand and at one second after that hour placed in bank as their investment in the third liberty loan the sum of \$22,300. The proof of this magnificent effort is shown in the telegram, which I ask to be entered in the RECORD, reading as follows:

HAINES CITY, FLA., April 5, 1918.

HON. HERBERT J. DRANE, M. C.,
Washington, D. C.:

We are pleased to report to you, one second after 12 o'clock a. m., eastern time, that 70 citizens of Haines City, Polk County, Fla., have subscribed to the third liberty loan \$22,300, which is over three times our allotted quota.

STATE BANK OF HAINES CITY.

[Applause.]

Housing for War Workers.

EXTENSION OF REMARKS

OF

HON. TOM D. McKEOWN,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 12, 1918.

Mr. McKEOWN. Mr. Speaker, under the necessity imposed by the war Congress is called upon to provide proper housing conditions for the men who are called to build ships and manufacture war munitions and war materials. Early in the war England found it necessary to make provision for her workmen and has spent several hundred millions for this purpose. Every person who has witnessed the congregating of great numbers of workers at the plants engaged in war work will agree that in order to "speed up" it is absolutely necessary to provide proper housing for them.

It is not the purpose of this legislation to give free housing, but to provide places of abode where the workers may reside within a reasonable distance of their employment and secure their homes at a reasonable rental. While this is a war measure and for war purposes only, yet I am constrained to believe that the loss to the Government will be greatly minimized and the Nation immensely benefited if in enacting this legislation we would look forward to peace times. Wherever practical the houses should be constructed so as to be attractive for permanent homes to workmen who desire to own their own homes. Of course, I know this will meet opposition in many conservative minds and some will charge that it has socialistic tendencies. This I emphatically deny. Does any Member of this body contend that the distribution of free homesteads out of the public domain by the Government is socialistic? Certainly not. The homestead policy of the Government was and is one of the

most beneficent acts of legislation and has resulted in the building of the Nation. If the free homestead is good for the farmers of our country, which no one will deny, why would not an opportunity to buy a home be good for the workingmen of the Republic?

The log cabins of the pioneer homesteaders have been the cradles of liberty in America, but, unfortunately, in many instances many tenant homes of workingmen have been the generators of sedition and anarchy.

To-day home ownership is the crying need of the Nation. It is among the homeless where dissatisfaction with conditions is more easily fanned into a flame of unrest. It is among the tenant farmers and the tenant workingmen that the enemies of free government more easily propagate their nefarious schemes against our Government. An opportunity to own a home should be given to every farmer and to every workingman within the Republic. Every citizen that you tie to the soil of your country by the ownership of a home you tie to the flag of the Nation. Of course, there are many who pretend to be engaged in the farming industry who will never own homes, no matter how attractive the opportunities may be, and the same is true of many who call themselves workingmen. For the thriftless and the lazy there is no relief from the standpoint of government. This class becomes a menace to the Government and on an equal with the spoiled, pampered, and lazy millionaire.

Before the war Congress, realizing the evil results that would come to the Nation by reason of the enormous increase in tenant farmers due to a lack of sufficient fertile public lands for homestead purposes, wisely made provision for relieving the situation in the passage of the farm-loan act. This piece of legislation, in my judgment, will be of vastly more benefit to this Republic than was ever dreamed by those who enacted it into law. This war has brought to the attention of the American people the condition of that other vast class of our citizens, namely, those who work for salaries and wages throughout the country, who not only are hard pressed to provide the necessities of life for themselves and families, but have been compelled to give up the small homes that they were able to rent and take less comfortable places to live in order to make ends meet.

Owing to the scarcity of labor and the terrific demands for war materials, wages for war-industry workers have greatly increased. This condition, in my judgment, makes it the more imperative that Congress in providing for emergency housing should endeavor wherever it is possible to provide an opportunity for the workmen to secure a permanent place to live. There will of course be many places where it will not be possible, because many factories now employing thousands of men will no doubt be abandoned during peace times, and the workmen will not desire to own permanent homes near such factories.

Now, as to the amendment appropriating \$10,000,000, to be used in securing housing for the employees of the Government in the District of Columbia, I am heartily in favor of this amendment. On the 4th day of December last I introduced in this House a bill providing for an appropriation of \$5,000,000 to construct apartment houses to be rented to the employees of the Government at a reasonable rental, which, I am informed, was the first bill introduced in the House on this subject. The condition at that time was distressing; and, as the months go by, this condition will necessarily grow worse on account of the thousands of employees called to Washington from all over the United States to perform services for the various bureaus during this emergency. I feel now, as I felt when I introduced that bill, that it was the duty of the United States to see that the employees who are leaving their homes and coming to the Capital to do work for the Government during the war should have fair treatment and proper places to live. My attention was especially directed to the anxiety felt by the many good women of Washington as to the care of the hundreds of young women who were called to fill the various clerkships in the departments. The Young Woman's Christian Association and other kindred organizations were doing everything possible to see that proper environments were thrown around these girls and that they had proper places to live, but the rush had become so great that it is practically impossible for them to handle the situation, and I feel that Congress could do no better act than to see that the young girls are provided with proper homes and care while doing their bit for the war. I am informed that many persons who have come to Washington to accept employment from the Government have been forced to return to their homes for the lack of suitable places to live. I hope that whatever funds are eventually appropriated to carry on this work will be spent without waste, and that the loss,

which must be a war loss, will be reduced as much as possible under the administration of the Department of Labor. I am confident that when this war is over that this is one war measure that will lead to the development of the policy looking to the providing of a home for the man with a small salary or daily wage.

America will emerge from this great struggle a more united and patriotic Nation, and when more of her people become home owners rather than tenants patriotism will have first place in the hearts of her citizens and the Republic will be safe for all time.

The American's Creed.

I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable, established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. SEARS,
OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 6, 1918.

Mr. SEARS. Mr. Speaker, under the leave granted by the House, as chairman of the Committee on Education, I insert in the CONGRESSIONAL RECORD the stenographic report of the proceedings in connection with the official announcement by the Commissioner of Education, on behalf of the Government, of the award for the best creed of an American citizen. The award was made to Mr. William Tyler Page, a veteran employee of the House, and "The American's Creed," of which he is the author, was accepted in appropriate remarks by Speaker CLARK and former Speaker CANNON.

I desire to say, Mr. Speaker, that this creed is brief, but it expresses the sentiments of every loyal American citizen. I sincerely trust it will be taught in every school and that it will be committed to memory by every man, woman, and child in the United States. I am sure, when I say I want to sincerely and heartily congratulate this efficient employee upon his success, not so much in winning the \$1,000 but for the heritage which he can leave to his relatives and children, that I but express the sentiment of each and every Member of this House, and I trust my request will not only be granted but that the Committee on Printing may deem it appropriate to make the proceedings a public document.

The proceedings were as follows:

"AT THE HOUSE OFFICE BUILDING.

"Chairman CLAXTON. Ladies and gentlemen, some time ago there was begun a movement for the formulation of a citizen's creed which might embody in it the essence of our democratic ideals. Those who inaugurated that movement did me the honor of asking me to serve as chairman of their advisory committee, and it is by virtue of that fact that I have the honor of presiding this afternoon. If I could preside as well as the gentleman on my right [Speaker CLARK] or the gentleman on my left [ex-Speaker CANNON] it would be done with great dignity.

"The creeds have been written and submitted, and one has been selected, and after being selected I understand it was re-submitted to certain persons to pass on every part of it. They have commended it highly for its merit as to substance and form. I am going to ask Mr. Matthew Page Andrews, representative of the Vigilantes and chairman of the committee of award, to explain briefly the origin of the idea.

"REMARKS OF MATTHEW PAGE ANDREWS.

"Mr. ANDREWS. Mr. Chairman, ladies, and gentlemen, what I have to say is a message from the Vigilantes, representing a large body of American authors, editors, and artists who have for the last two years been giving their services freely to the Government and to patriotic purposes of all kinds.

"The idea of laying greater emphasis on the duties and obligations of American citizenship in a national creed was announced by Henry S. Chapin in Educational Foundations in September, 1916. The contest there inaugurated was to have closed in

December of that year, but patriotic societies, among which the newly-organized Vigilantes figured most prominently, asked that the closing be postponed until a prize should be announced and nation-wide publicity be secured.

"In March, 1917, the city of Baltimore, through Mayor James H. Preston, offered a prize of \$1,000 for the best creed. Committees were then appointed to pass upon the creeds submitted. These committees were (1) a committee on manuscripts, consisting of Porter Emerson Browne, Henry S. Chapin, Hermann Hagedorn, and representatives from leading American magazines; (2) a committee on award, consisting of Matthew Page Andrews, Irvin S. Cobb, Hamlin Garland, Ellen Glasgow, Julian Street, Booth Tarkington, and Charles Hanson Towne; (3) an advisory committee, consisting of Dr. P. P. Claxton, United States Commissioner of Education, and other national and State officials.

"Several thousand creeds were submitted to the committee on manuscripts prior to the closing of the contest on September 14, 1917. Fifty of these were turned over to the committee on award, and 'creed No. 384' was selected as the best. The envelope containing the author's name was opened in New York City, March 6, 1918.

"It was then disclosed that the author of No. 384 was William Tyler Page, of Friendship Heights, Md. [Applause.] His creed was selected because it was not only brief and simple but remarkably comprehensive of the best in American ideals, history, and tradition, as expressed by the founders of the Republic and its greatest statesmen and writers. This creed will be read for the first time by Dr. Claxton, United States Commissioner of Education, to whom I now present it on behalf of the national committee on award. [Applause.]

"Chairman CLAXTON. The creed is as follows:

"THE AMERICAN'S CREED.

"I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a Republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable, established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

"This is a creed very fitting to be announced at this time, and the good thing about it is that it is not new, but it sums up the fundamental faith of all of the greatest of our leaders from the beginning until now; a creed that can be recommended not only to those who may come from the shores of Europe or Asia to make their home among us and become of us, but to those of our own flesh and blood who come from the shores of eternity to grow up among us and to take our places and to carry on our institutional life and to support and defend the country.

"I am asked to make this explanation, that the first clause—

"I believe in the United States of America"—

"Is from the preamble to the Constitution of the United States; that the second clause—

"A government of the people, by the people, for the people"—

"Is from the preamble to the Constitution of the United States, Daniel Webster's speech in the Senate of January 26, 1830, and Abraham Lincoln's Gettysburg speech.

"Whose just powers are derived from the consent of the governed"—

"Is from the Declaration of Independence.

"A democracy in a republic"—

"Is in substance from No. 10 of the Federalist, by Madison, and Article X of the amendments to the Constitution of the United States.

"A sovereign Nation of many sovereign States"—

"from 'E pluribus unum,' the great seal of the United States, and Article IV of the Constitution of the United States.

"A perfect Union"—

"goes back to the preamble to the Constitution.

"One and inseparable"—

"Webster's speech in the Senate of January 26, 1830.

"Established upon those principles of freedom, equality, justice, and humanity"—

"from the Declaration of Independence.

"For which American patriots sacrificed their lives and fortunes"—

"from the Declaration of Independence, and Lincoln's Gettysburg Address.

"I therefore believe it is my duty to my country to love it"—

"in substance from Edward Everett Hale, The Man Without a Country.

"To support its Constitution"—

"from the oath of allegiance, section 1757 of the Revised Statutes of the United States.

"To obey its laws"—

"from Washington's Farewell Address and from Article VI of the Constitution of the United States.

"To respect its flag"—

"the national anthem, the Star-Spangled Banner; Army and Navy Regulations; War Department circular on Flag Etiquette, April 14, 1917.

"And to defend it against all enemies"—

"from the oath of allegiance, section 1757 of the Revised Statutes of the United States.

"So that you will see there is nothing new in this. As in all things that are most constructive, that which is best of the old is brought together in appropriate form.

"For myself and for the department which I represent, and for the educational interests of the United States, I wish to commend the author for the excellence of his selections and for the form in which he has put them together, and to congratulate him. [Applause.]

"And now it is my pleasure to hand this creed to the mayor of the city of Baltimore, Mayor Preston, for keeping in the city records. [Applause.]

"Mayor PRESTON. Although it would have been easy to have obtained large sums of money from any of a number of individuals for such an object as a national creed, those interested in furthering the idea were particularly pleased with the unusual appropriateness of the offer of \$1,000 by the city of Baltimore as the birthplace of the Star-Spangled Banner, which offer was accordingly accepted.

"It is a series of remarkable coincidences, therefore, that when the envelope containing the name of the winner was opened it was disclosed that the writer was a native of Frederick, Md., the birthplace of Francis Scott Key; that he attended the public schools of Baltimore, where Key composed our national anthem; that his present home is Maryland; and that his work takes him to the National Capital, where no doubt he drew his inspiration from the great authorities of the past for his truly wonderful summary of our civic beliefs, our basic principles, and best traditions. [Applause.]

"Added to this, it seems most fitting that the author of our national creed should be a lineal descendant of a signer of the Declaration of Independence, Carter Braxton, and of John Tyler, former President of the United States, who did so much to secure for the Union the Republic of Texas and our subsequent expansion to the Pacific coast. [Applause.]

"Chairman CLAXTON. I am now going to ask Mr. Speaker CLARK to say a few words. [Applause.]

"REMARKS OF SPEAKER CLARK.

"Speaker CLARK. Mr. Chairman, ladies, and gentlemen, my understanding was that I was simply to be ornamental on this occasion, and that Vice President Marshall was to do the oratorical honors.

"I am not certain that Tyler Page was actually born in the Capitol Building, but I am rather inclined to think he was. [Laughter.] When I came here 25 years ago he was a venerable functionary in the Capitol, and has been ever since.

"The power of condensation of language is one of the most valuable in writing or speaking. That is the reason why this creed that he has written will be popular. It contains everything that is necessary, and there are no waste words in it. He has Lincoln's most famous phrase, one that will live forever, that can not be amended. And it is strange to remember how close Daniel Webster came to getting that phrase. Two other men expressed the same idea, but Webster said this was a government of all the people, by all the people, for all the people, and all that Lincoln did to it was to leave out the superfluous word 'all,' thereby making it immortal.

"The essence of American institutions is found in two documents, the Declaration of Independence and the Constitution of the United States. I have always believed that the literary excellence of the Declaration of Independence helped us to gain our freedom. If Thomas Jefferson had never lived, somebody would have written a declaration of independence that would have sufficed. That was inevitable in the evolution of things; but it would not have had the majestic sweep of Jefferson's declaration. The only two propositions in it that are new are—first, that all men are created equal. That does not mean that all men are of the same size, of the same height, or that all are blondes or brunettes, or that all have the financial brain of John D. Rockefeller or the oratorical gifts of Daniel Webster. The statement has been assailed by unthinking people for that reason. But what Jefferson meant was that every child is born

into this world with precisely the same political rights as every other child, and that is as true as the gospel, and it is the glory of our institutions that the son of a ditch digger is as liable to achieve the honors of the Republic as the son of a President, and a little more so. [Applause.] Because the son of the ditch digger is not handicapped by his father's reputation. [Laughter.] When Fletcher Webster, the son of Daniel Webster, was elected a colonel of Infantry at the beginning of the Civil War, he thanked God fervently that Daniel Webster had never been a colonel of Infantry. He said that it was claimed everything else he did he had done because he was his father's son.

"The second proposition, that governments derive their just powers from the consent of the governed, is a great philosophical proposition and absolutely true.

"The summing up of our principles is found in the preamble to the Constitution of the United States, one of the finest sentences ever written, one of the most gorgeous, one of the most comprehensive. Nobody except myself ever quotes it, although everybody ought to commit it to memory, and everybody ought to quote it:

"We the people of the United States, in order—

"To do what?—

"In order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

"There it all is, the whole thing. All that Congress does, all that the President does, all that the taxpayers do, all that the Army and Navy do, all that all of us do, our chart and creed for it is found in that one comprehensive sentence.

"I think anything that has a tendency to increase the patriotic feeling of the American people at any time is a good thing, and especially at this time.

"I congratulate Tyler Page on getting this \$1,000. It is a nice thing to have in the family. [Laughter.] The Members of the House will rejoice to know that he is that much ahead. I also congratulate him on becoming a historical personage.

"I am the ranking official here to-day, and if this creed needs acceptance on the part of the American people, I accept it for them and in their name. [Applause.]

"Chairman CLAXTON. Though we are conserving daylight now, I am sure you will agree with me that it is entirely fitting and appropriate that I should ask Mr. Speaker CANNON to say just a word." [Applause.]

"REMARKS OF EX-SPEAKER CANNON.

"Ex-Speaker CANNON. Mr. Chairman, as I listened to the reading of that creed I could not see how it could be made any shorter or why it should be made any longer. It seems to me it hits the center. I congratulate my friend of many years, Mr. Page. Yes; a thousand dollars is a comfortable thing to have; but if I could have gotten together the sentiments expressed in that creed, if I had the money I would give \$100,000 to have been able to do that. [Applause.]

"Tyler Page was born in Maryland. Maryland is one of the greatest of the great States in the Union. Not greatest in population, but she was born free, as Rhode Island was born free—free by law—one under the grant to the Calverts and the other under the grant to Roger Williams. In these grants religious freedom was guaranteed by law for the first time in the history of the human race. In the earlier days Maryland was called 'the sanctuary,' and properly so.

"You can not improve the lily by painting it. Again I congratulate Mr. Page. I have known him these many years, and in all those years he never had a duty to perform but what he performed it. Courteous, a gentleman, a man of learning and industry; if I was to talk for an hour I do not know that I could say anything in addition to what I have said touching him and touching the creed. [Applause.]

"Chairman CLAXTON. Mr. Page has been congratulated on winning the \$1,000 prize. I wish to congratulate the Nation on winning this formulation of a creed. By virtue of the act establishing the office which I hold, it is my duty to do whatever I may to assist the States in establishing and maintaining better systems of education. With the consent of those who have these proceedings in charge, I consider it my duty to see that every schoolhouse in the United States is furnished with a copy of this creed, to be learned by the 20,000,000 people now in those schoolhouses and the scores and hundreds of millions who will follow. [Applause.]

"The following letter has been received from Hon. CLAUDE KITCHIN, chairman of the Committee on Ways and Means of the House of Representatives:

"COMMITTEE ON WAYS AND MEANS.
"HOUSE OF REPRESENTATIVES,
"Washington, D. C., April 3, 1918.

"MR. WILLIAM TYLER PAGE,
"House of Representatives.

"MY DEAR MR. PAGE: I exceedingly regret that it will be impossible for me to enjoy the privilege and pleasure of being present this afternoon when the Commissioner of Education presents you with the prize offered by the city of Baltimore.

"I congratulate you most heartily upon your victory in the great and unique contest and wish to assure you that not one of your friends rejoices with you more than I do.

"The splendid thought and sentiment expressed in your 'American's Creed' is an inspiration to every American patriot.

"With best of wishes, I am,

"Cordially, yours,

"CLAUDE KITCHIN.

"PROCEEDINGS ON THE CAPITOL STEPS.

"Chairman POOLE. The Speaker of the House of Representatives will say a few words to us. [Applause.]

"Speaker CLARK. Ladies and gentlemen, as I understand it, the great object of this meeting and this parade is to give a good start in this third liberty loan drive. [Applause.] I congratulate Mr. Poole and his coadjutors on the success of the occasion, on the size of the crowd, and the quality of the weather. [Applause.] I hope when it is all over they can be congratulated on the size of the contribution. [Applause.] Miss Pickford says this looks like a California day. I suppose that is the highest compliment that she knows how to give to the weather of Washington. [Applause.]

"Arguments as to why we got into this war or how we got in are obsolete. The great fact is that we are in; and being in we want to get out successfully. Victory is the habit of the American people, and they will not be satisfied without closing this war victoriously. [Applause.]

"President Wilson has discharged his full duty manfully and well. Congress has discharged its full duty manfully and well. [Applause.]

"In the beginning we pledged all of our resources in men and money. There is no disposition either in the administration or in Congress to turn back, having put their hands to the plow.

"The two great essentials in war are men and money. We have 110,000,000 people. We have more property than any other nation that exists or ever existed. While no sensible man would be in favor of the slightest extravagance or the wasting of a single dollar, this country is pledged solemnly in the eyes of the world to fight this thing through to the desired end. [Applause.]

"Congress has appropriated more money than any other body of men that ever met since the world began. Now we are to have the third liberty loan. It is essential that it be subscribed for and subscribed for promptly. Its failure, or even great sluggishness in subscribing for it, would have as bad effect on our fortunes as the loss of a great battle.

"When Napoleon was about to enter the Battle of the Pyramids, he addressed his troops and told them, among other things, that the spirits of forty centuries were looking down on them from the tops of the Pyramids.

"The whole world is looking at us to see if we are going to keep our pledges. If we do not, it will wound our honor past all surgery.

"Those of us who are barred from fighting for any reason surely can pay, and it is our duty to do so. Once when Dean Swift made a speech in favor of some great charity he wound up by saying:

"This is God's work; God is back of this; and if you like the security, come down with the dust."

[Applause.]

"So the Nation is back of this liberty loan; and if the American citizens like the security they should subscribe to these bonds. [Applause.]

"Chairman POOLE. Ladies and gentlemen, we are going to have just a very brief meeting here. We have got to go down the Avenue, where a large mass meeting is going to be held for the next hour or so. I want to talk just a minute to tell you a couple of things: First of all, Mr. Tyler Page, who has just been awarded a check of \$1,000 as a prize in the national-creed contest—the creed being published day before yesterday in the local papers and in other papers—has just indorsed that check over to Miss Pickford, Miss Dressler, Douglas Fairbanks, and Charlie Chaplin, and they have indorsed it so that it now becomes negotiable, and Mr. Page has subscribed for a \$1,000 liberty bond. [Applause.] To what better purpose could money be put than that? [Applause.]

"By way of explanation, I want to say that I am just going to present these four people to you individually. I am not going to ask them to talk unless they want to. This job of looking after Miss Pickford to-day is a delightful one, and I am tickled

to death to introduce Miss Mary Pickford, America's sweetheart. [Applause.]

"Miss PICKFORD. Charlie, Dug, and I have come 3,500 miles across the country to help Uncle Sam raise as many billions as we can get, and we hope you are going to help us. [Applause.]

"Chairman Poole then presented Miss Dressler.

"Miss MARIE DRESSLER. Mr. Speaker, Mr. Poole, and ladies and gentlemen, I did not come across the continent. I am here all the time. [Applause.] But I am going to do the best I can, and I want you to say a little prayer for me every night. [Applause.]

"Chairman Poole then presented Douglas Fairbanks.

"Mr. FAIRBANKS. Mr. Speaker CLARK just said that the American people are in the habit of being victorious. Let us be victorious to-day, and let us subscribe to the full quota of liberty bonds, \$3,000,000,000, to-day and not wait until next week. This is the time for action, not speeches. So I vote that we go right to the various booths and begin selling bonds and not talking. Thank you very much. [Applause.]

"Chairman Poole then presented Charlie Chaplin.

"Mr. CHAPLIN. You know it is only moving-picture actors and royalty that can do this sort of thing. [Laughter.] But being serious, we must make this drive a tremendous success. Never mind what the schedule is, or anything about that. We want to make it as big as possible; because, remember, those boys are over there sacrificing their lives, and the least we can do is to sacrifice our money. But we do not ask that. We ask you to invest, and you get a per cent and we get the results for this third liberty drive. [Applause.]

"Chairman Poole then presented Mr. Tyler Page, author of the national creed.

"Mr. PAGE. I will recite the creed:

"I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a Republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable, established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

"[Applause.]"

Vital Statistics.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 12, 1918.

Mr. WEBB. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include references and authorities in connection with the address by Louis I. Dublin before the social and economic section of the American Association for the Advancement of Science, delivered at the University of Pittsburgh, December 29, 1917.

The matter above referred to is as follows:

References and authorities in connection with the address by Louis I. Dublin before the social and economic section of the American Association for the Advancement of Science, delivered at the University of Pittsburgh, December 29, 1917, and printed in the CONGRESSIONAL RECORD, January 11, 1918.

War-Time Prohibition in the Hawaiian Islands.

EXTENSION OF REMARKS

OF

HON. C. F. REAVIS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 12, 1918.

Mr. REAVIS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by the Hawaiian Delegate [Mr. KALANIANA'OLE] on war-time prohibition in the Hawaiian Islands.

The address is as follows:

"Mr. KALANIANA'OLE. Mr. Speaker and gentlemen of the House, the legislation before the House is a war-emergency measure. It provides "bone-dry" prohibition for the Territory of Hawaii during the period of the war. It further provides that the people of the Territory, when peace has again come to the world, shall decide whether or not prohibition is to remain in force.

"Mr. Speaker, during the 14 years that I have served in the House of Representatives I have zealously guarded the home-rule rights of the people of Hawaii. We are fully capable of settling all our domestic problems, and the waiver of this right in this instance, I trust, will not be made a precedent for future inroads by the Federal Government on the inherent right of the people of the islands to home rule.

"Mr. Speaker, Hawaii aims to do her bit to the utmost measure in this world's war. We have not failed in men nor money, and we will not fail until peace is restored in the world. And not having failed in these matters, we do not hesitate to waive our demand for home rule when it is necessary that speedy action be had to protect the thousands of soldiers who are in our Territory guarding the outpost of the western frontier.

"I trust the gentlemen of the House fully appreciate the value and the importance of the Territory of Hawaii to the entire United States. We stand as an outpost ready to fight at a moment's notice and, until the end, to protect the people on the mainland. We in Hawaii are not now in the theater of the war; but remember that this is a world's war, and surely it is wise to be prepared in all quarters.

"On the island of Oahu is the naval base, Pearl Harbor. To defend this base there are fortifications, with accompanying garrisons, and it is to save the soldiers on Oahu—and they number thousands—from themselves and the evils that go hand in hand with drink that the leaders in the religious, social, and commercial life of the Territory are asking that Congress now vote the Territory "bone dry" for the period of the war.

"Partial prohibition has already been ordered for the island of Oahu. President Wilson, by virtue of the authority given him under the draft act, has declared that, for all intents and purposes, the island of Oahu, the fortified island of the Hawaiian Group, shall be a military zone. This means that on April 10 last the saloons in Honolulu went out of business.

"But, Mr. Speaker, the order does not prohibit the manufacture of alcoholic liquors nor does it prohibit the individual from importing liquors for his own use and the use of his friends in his own home, excepting, of course, Army and Navy officers. This, then, is not prohibition. This is simply a restriction placed upon the poor man. Under the existing order the man with the money, the friends, and the 'know how' can have shipped in a supply of liquors and indulge their appetites without restriction. If we are to have prohibition in Hawaii, we must have such prohibition as will place all men on an equal footing. There should be no class distinction or advantage given those fortunate enough to have money. To my mind, all

laws, whether by direct legislation or by Executive order, should make one level for everyone concerned.

"I trust that the Members of the House and the country will not misinterpret the campaign behind the movement for war-time prohibition in Hawaii. There has been a great deal said and written about the vice conditions in Honolulu as they concern the soldiers. Mr. Speaker, I desire to state here and now that the citizenry of the Territory of Hawaii, in capability and morality and Americanism, is not outranked by any portion of the United States of America. Wherever soldiers are concentrated conditions spring up that are antagonistic to the best interests of a community. This is true in Honolulu, but the extent of the objectionable conditions is always exaggerated in a small community. It is safe to say that the vice records of Honolulu will show to the advantage of Hawaii when compared with conditions surrounding the cantonments on the mainland. A strong hand is needed to control these conditions, and the elimination of strong drink is the first step in the direction of a real clean-up.

"Up to this time I have opposed legislation that would force prohibition on the people of Hawaii without giving them a voice in the determination of the question. I favored the submission of the matter to a vote of the people, letting the majority rule. However, the war and its changing conditions and the educational work among the people of the Territory generally lead me to believe that the Hawaiians, although strong for home rule, are behind this movement for war-time prohibition. The most important and influential of all the helpful organizations of individuals in this movement, and the one that influenced my present stand on this matter, is the Ahahui Puuhonua o na Hawaii (Hawaiian Protective Association). This association has canvassed the Hawaiian people, and their report is that a majority of the people want prohibition. Petitions have been received from numerous associations and societies in the Territory, and these associations and societies are made up of people of all nationalities. Hawaiians predominate in signing these petitions, but there are many Anglo-Saxons, Japanese, Chinese, Filipinos, Koreans, Portuguese, and Chinese-Hawaiians. Indeed, there is hardly a nationality under the sun that is not represented in the movement to make the Territory of Hawaii dry for the period of the war.

"Mr. Speaker, I will now read a memorial to Congress for war-time prohibition from the Ahahui Puuhonua o na Hawaii. I wish to state that this organization, composed entirely of native Hawaiians, is truly representative of the best thought and most progressive spirit of the race. It is deeply interested in the welfare of the Hawaiian people, and because of its altruistic and public-spirited work commands the confidence and respect of all the people residing in the islands. The memorial and resolutions are as follows:

"MEMORIAL OF AHAHUI PUUHONUA O NA HAWAII (HAWAIIAN PROTECTIVE ASSOCIATION).

"The dawn of civilization broke upon a world at strife where man, under the clashes of army, was forging his way for freedom and for the attainment of happiness. Bloodshed tinged the soil where the battlements for human safety stood, and over the wide stretches of human experience ignorance and tyranny reigned with terrorizing domination. Moral degeneration and spiritual restraints carried the struggle for darkness and for light, while the means for physical sustenance were luring the human race to a deadly competition.

"But man's destiny was tuned to the divine purpose, and dark as the past was, the Imminent One, who pervaded all life, was guiding him with a patient hand. Gradually, but surely, the course for human life and conduct was unveiled, and man, in his evolution, has risen from a chaotic void which knew no bound to the lofty height of the Christian ideal, through which the world as a whole was seen to lay in all its charm of unfolding possibilities. So, as the centuries rolled on, and like a marble statue in its making, man, under divine guidance, had become somewhat stripped of the wastes and chips which weighed heavily on him, and now it is certain that in His own good time the Creator, in all His wisdom and with human agency, will complete the slow but sure task of shaping him to His own image.

"What has been true of humanity at large has also been true of Hawaii. Persisting in her struggle for higher attainments, she rose from the depths of a heinous barbarism which scattered her people into war-like tribes to the height of a national unity and peace, which resulted in a material and spiritual consolidation paving the way for the advent of Christianity and of the so-called Christian civilization. In 1819 the last chapter of her people's early struggles closed with the abolition of heathenism and idolatry by King Kamehameha II and Queen Kaahumanu. A new chapter in her history began with Opukahaia, who, through his persuasive and persistent pleas, brought the early Christian missionaries to these shores to introduce Christianity, thus making a new beginning in the transition period of Hawaii's national life.

"But the dawn of the new era did not end her struggles for that purpose for which she was made a part of the general creation. The Christian ideal of life and conduct did not come alone. Following in the wake of the civilization which accompanied it were the manifold evils and the deadly vices of the other nations, and these found fruitful judgment in Hawaii's virgin soil, thus multiplying with an alarming rapidity the physical, spiritual, moral, and social problems of its people, and thus intensifying the hardships of its leaders. The battle for racial elevation, therefore, continued, and for almost 100 years since that time, and with a new energy derived from a new source, the people of these sun-kissed shores have maintained a steady and a persistent endeavor to eliminate the venoms of heathenism and of civilization and to establish for themselves a high social and moral order of life.

"Among the deadly enemies which the ruthless and greedily worldliness brought to Hawaii, and which played a most prominent part in the destruction to human life and welfare here, was rum. Alluring and captivating in its effects and powerful in its grip, it ruined the dignity and the sanctity of many of Hawaii's homes. It broke up multitudes of families and drove hosts to poverty, devility, pauperism, insane asylums, and to their graves. As far back as 1830 king alcohol was making its drive with a deadly effect. The awful and undue pressure of lawlessness and drunkenness forced upon the natives by foreigners, even with hostile and war-like measures, were opening the floodgates of hell at the important commercial centers of these islands—pouring forth upon the helpless people the curses of alcoholism and opening a new battle field for those who were struggling for Hawaii's best interests.

"But Hawaii did not lose courage. She continued her fight with unabated vigor. The world may well look back with a deep sense of gratitude and pride at the immediate step taken by Hawaii rulers, who, in 1830, struck the first effective blow at alcoholism. Moved with indignation because of the ravages of drunkenness and flamed with a passion to guard and protect their national dignity and honor, they created a temperance society—the first in the history of the temperance movement in the United States—for the sole purpose of destroying king alcohol. Among some of the powerful leaders who constituted this much-needed organization were the four chiefs—Adams, Hoapili, Kalikioewa, and Nalehe. Many of the other prominent chiefs and Hawaiians were also members of the society. To show the far-reaching effects of ardent spirits at that time and to portray the seriousness of the situation as it appeared to these leaders, the resolution of the society is worthy of note:

- "1. We will not drink ardent spirits for pleasure.
- "2. We will not traffic in ardent spirits for gain.
- "3. We will not engage in distilling ardent spirits.
- "4. We will not treat our relatives, acquaintances, or strangers with ardent spirits except with the consent of a temperate physician.
- "5. We will not give ardent spirits to workmen on account of their labor.

"That the temperance reform should have found so much favor among the people of the islands before it had a grip in other Christian countries or brought the annual expense of alcoholic drinks in the United States not much below \$100,000,000 was to the world a matter of much surprise, to many of congratulation, and to others of vexation.

"But all this goes to show Hawaii's early struggle against the seductive and poisonous liquid, and that with the growth, development, and extension of her national, political, educational, social, and spiritual life that struggle has not ceased. On the other hand, it has been intensified and continued with an increasing momentum, and at the present it is reaching the zenith of its power and hurling its final blows.

"To make this warfare increasingly effective and to bring an immediate cessation to the losses caused by strong drink the 'Ahahui Puuhonua o na Hawaii' (Hawaiian Protective Association), an organization which represents the Hawaiian race as a whole, and created for the sole purpose of protecting that race and of maintaining the best traditions and principles of Hawaii, has been summoned by its leaders and members to work for prohibition in Hawaii until victory is won. In response to that call and in view of the pressing necessity of prohibiting alcoholic drink in order to safeguard the efficiency of our fighting men who are preparing to go to the front, this association has taken upon itself the immense responsibility of bringing to a satisfactory and final end the battle which was started by the first temperance society of Hawaii.

"It is with pleasure, therefore, that the 'Ahahui Puuhonua o na Hawaii' (Hawaiian Protective Association) present to the Congress of the United States of America the following resolutions praying for prohibition in Hawaii:

"Resolutions.

"Whereas the 'Ahahui Puuhonua o na Hawaii' (Hawaiian Protective Association), representing the Hawaiian race, in endeavoring in every way to protect the Hawaiian people from everything that is disastrous to their life and general welfare, thereby continuing the struggle of Hawaii's early leaders to maintain and to promote the best traditions and principles of their forefathers; and

"Whereas experience and facts have shown and proven that alcoholic drinks are an evil and a menace to the social, educational, physical, moral, and spiritual welfare of the Hawaiian as well as of the other races in this Territory; and

"Whereas alcoholic drinks have been proven to be detrimental and perilous to the mental, moral, and physical welfare of the fighting men of our country, thus making the elimination of the same a proper and effective war measure at this time, when our country is engaged in the world-wide war; and

"Whereas the war conditions in our country are demanding with imperative force the immediate application of all effective means for the successful carrying out of our country's war measures; and that, from such a standpoint, prohibition in Hawaii is an immediate necessity and a suspension of precedence in our home-rule practice is, therefore, necessary; and that, while we do believe in and adhere to the home-rule doctrine we do recognize that the emergency occasioned by the war must be met now, and in order to accomplish it the home-rule doctrine must be suspended: Now, therefore, be it

"Resolved, That the Hon. J. K. KALANIAN'AOLE, Delegate to Congress, be petitioned by the Ahahui Puuhonua o na Hawaii (Hawaiian Protective Association) through its officers to obtain in the Congress of the United States the passage of a Federal prohibition bill for Hawaii; that a copy of this memorial and resolution be spread on the minutes of this association; that attested copies of the same be forwarded to the President of the United States, to the President of the Senate, to the Speaker of the House of Representatives, and to Hawaii's Delegate to Congress.

"Signed by its officers and directors.

- "J. K. KALANIAN'AOLE, President.
- "JOHN C. LANE, Vice President.
- "JESSE ULUHI, Secretary.
- "HENRY KAPELA, Auditor.
- "SAMUEL C. DWIGHT, Treasurer.
- "AKAIKO AKANA, Director.
- "WILLIAM JARETT SHELTON, Director.

"Mr. Speaker and gentlemen of the House, I wish to call your attention also to a set of resolutions adopted by the Chamber of Commerce of the Island of Maui. It appears that the people of Maui are fully alive to the disadvantages of the 'dry Oahu' measure so far as the other Islands than Oahu are concerned, and they are also fully alive to the need of saving the foodstuffs which now go into the manufacture of booze in the islands. Maui, it is claimed, does not wish to become the dumping ground

for Honolulu's 'wine bums,' nor does Maui desire to have her raw food materials converted into intoxicants when we are told that 'food will win the war.' The action of its chamber of commerce at a meeting held March 22 last is, therefore, very much to the point, and I wish to include in these remarks the resolution which was then adopted:

"Resolutions.

- "Whereas in order to effectively aid our Government every effort should be made to speed up production of necessary materials for the conduct of the war, including food products; and
- "Whereas the Territory of Hawaii produces a large quantity of such food products, namely, sugar and canned pineapples; and
- "Whereas it is a known fact that the use of intoxicating liquors is one of the potent agencies which works against efficiency in all industries; and
- "Whereas the recent order of President Wilson, prohibiting the sale of liquor on the island of Oahu, may deter the passage of the bill providing for prohibition for the Territory of Hawaii, now under consideration by the Congress of the United States; and
- "Whereas although we believe the said order of the President safeguards those in active military service of the Federal Government, we believe that results will be far better if said bill becomes law as prohibition for the entire Territory of Hawaii, as it will assure far better industrial efficiency as well as the saving of foodstuffs now used in the manufacture of alcoholic beverages consumed in this Territory; and
- "Whereas we further feel that great unfairness will result to us if prohibition is applied on the island of Oahu only, as such a half-way measure will be followed by a large increase in the liquor traffic and its accompanying evils on this island: Therefore be it
- "Resolved, That the Maui Chamber of Commerce, being a representative body of the county of Maui, Territory of Hawaii, urges the Delegate to Congress from said Territory of Hawaii to use every effort to further the enactment of a law, as a war measure, providing for prohibition for this Territory as a whole; and be it further
- "Resolved, That a copy of this preamble and resolution be sent to our Delegate to Congress, J. KUHIO KALANIANAOLE.

"And now, Mr. Speaker and gentlemen of the House, by reason of all these facts which I have just stated, and in conformity with the request of the people of Hawaii, as contained in the resolution referred to, I have introduced House bill 9960, entitled 'An act to prohibit the sale, manufacture, and importation of intoxicating liquors in the Territory of Hawaii during the period of the war,' which has been favorably recommended by the Committee on Territories, and one in similar terms, having been introduced into the Senate by Mr. SHEPPARD, has been favorably reported by the Committee on Porto Rico and Pacific Islands in that body, and I earnestly request that you give this measure your careful consideration and enact the same into law just as soon as possible."

Delay, Delay, and Still More Delay.

EXTENSION OF REMARKS

OF

HON. IRA G. HERSEY,

OF MAINE.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 2, 1918.

On the bill to authorize the Secretary of Labor to provide housing, local transportation, and other community facilities for war needs.

Yet a little sleep, a little slumber, a little folding of the hands to sleep; so shall thy poverty come as one that travelth, and thy want as an armed man. (Proverbs xxiv, 33-34.)

Complaints are coming up all over the country as to the delays that have been brought about in the building of ships, in the manufacture of munitions, in the construction of guns, in the production of clothing for the soldiers. Why, gentlemen, we had almost a scandal last year in regard to matters that grew out of the Shipping Board and delays and delays in constructing shipping—delays all around. (Representative BURNETT, of Alabama, in the House of Representatives, Apr. 1, 1918.)

In the meantime our policy is a masterly inactivity. (John C. Calhoun.)

Labor, money, life, the people are giving and to give. They have the right, their representatives have the duty, and would be bad citizens as well as unfaithful representatives if they didn't fulfill it, of blaming, of attacking the administration or any part, organ, or agent, military or civil, of the Government that is or seems to be incompetent or remiss in organizing victory. They are bad friends of the administration, and what is infinitely more, of the country, who defend the administration indiscriminately, impute evil motives to those who assail it, and assume an intolerant "Byzantine" attitude. The administration itself is not wise if it shrinks from the frankest and even the roughest criticism. The winning of the war is everything. The administration, any administration, is nothing in comparison. Only the administration can hurt itself, for instance, by impatience of disapproval, by adherence to mistakes, by obstinacy, by clinging to incompetents "under fire," by concealment of unpleasant facts. (Editorial from the New York Times.)

Mr. HERSEY. Mr. Speaker, I am earnestly in favor of the passage of this bill. It should have been enacted into law and put into execution 10 months ago, and the delay is but another chapter in this awful tragedy of the unprepared.

One year ago we declared war against Germany and at once placed at the disposal of the President "all the resources of the country." We immediately gave him every assistance and conferred upon him every power necessary for a vigorous prosecution of the war.

Certain plain facts were well known to the Nation at that time. We knew the terrible distress of those who were to be our allies in this great war. England, France, Italy, and Russia had for three long years been waging a defensive warfare against a cruel invader. There was a battle line of a thousand miles held by our allied forces. They were then completely exhausted, with only men, guns, and munitions of war sufficient to hold back the invaders until they could obtain help from America.

Our declaration of war greatly cheered and heartened our friends over the seas, and we gave them to understand that the United States, the greatest, the richest, and most powerful Nation on the earth, would immediately mobilize all her resources and at once send over the seas men, munitions of war, money, ships, aeroplanes, submarine destroyers, and everything that was needed to win the war.

The Congress early requested of the President the absolute necessity of the appointment of a nonpartisan advisory war board on the conduct of the war, so that we might at all times be in touch with the war organizations and assist in the vigorous prosecution of this mighty undertaking. This was denied, the administration claiming that the President should have full power as Commander in Chief to form his own war cabinet, his own war boards, and that the work of this organization should be kept secret from Congress and be known only to the President and his personal advisers, and that the war should be carried on by policies inaugurated solely by the administration.

Within a few days after the declaration of war ex-President Roosevelt came to Washington and offered his resistless energy and his valuable services as a soldier to the President, and asked the privilege of immediately taking to France 200,000 Americans who had been trained from youth in the use of the horse and the rifle—the Rough Riders, so called, of the great West—and in France to fight side by side with our allies and carry the Stars and Stripes at once on to the foreign battle fields. This to be followed up by 200,000 more men under the command of Gen. Leonard Wood and others—men who needed no camp training and who begged the privilege of taking over their own horses and rifles and at once to represent the United States on the battle fields of Europe. This offer was refused by the President on the ground, as understood at the time, and still unexplained, that the President as Commander in Chief would conduct this war according to his own plans and policies, and with an army made up from the National Guard and those who were called under the selective draft.

In the meantime the administration assured the country that no time would be lost in war preparation and in getting men over the seas to assist our allies in their terrible struggle to hold back the foe.

Washington became at once the center of war preparations. Congress remained in continuous session while a hundred thousand new war workers, so called, came to Washington to form what was known as the war machine, whose details, objects, and purposes have not yet been fully known to the country. We do know, however, that all the public buildings were immediately filled to overflowing by chiefs, commissioners, managers, and officers, whose duties have still remained a secret to the public.

Yes; 62,000 noncombatants donned military dress and the spurs and uniforms of the Army or Navy and settled themselves into comfortable offices with all modern furniture and appliances, surrounded by a multitude of clerks and assistants.

For three years preceding the war the great munition factories and large manufacturing plants of the United States had been turning out immense war material for our allies, and they still continue to do so, and it, of course, became necessary at once to contract with these plants to furnish us guns and materials and to utilize all the great resources of the country in the way of manufactures to make for us war materials, munitions, guns, aeroplanes, ships, and other instruments of war, so as to immediately properly equip the vast Army that had been called to arms.

Some departments of the Government or subdivisions of this great War Board had been assigned no doubt to the duty of making contracts for the manufacture of goods, materials, and munitions of war, and this department, we understand, properly

performed their part of the war program, for we find that the Government early last summer made 50,000 written contracts with 2,381 different firms, individuals, or corporations for the prompt manufacture of the necessary shipping, aeroplanes, and materials to properly equip and make efficient our Army and Navy.

These 50,000 contracts were made upon what is called the cost-plus basis, which obligated our Government to furnish the skilled labor that was absolutely necessary to carry out the contracts on our part. These contracts were all to be completed within a certain reasonable time and could only be delayed if our Government failed to provide the necessary skilled labor.

It seems, however, that no one was appointed or authorized by the War Board to look after providing and furnishing the necessary labor. Skilled laborers everywhere stood ready to leave their employment in peace industries and enter the service in this new war work. Many of them by the changes wrought by the war had been thrown out of their usual employment and were standing idly in the market place, and when asked, in the language of old, "Why stand ye here all the day idle?" they answered, "Because no man hath hired us."

Long delays to obtain employment from the Government caused many of these workmen to enter the service in the ranks and in the training camps and to cross the seas. Others waited patiently through the long summer months to be called to the factories and shipyards where they could render such valuable service in our time of need. The American Federation of Labor claimed that they would furnish to the Government all the skilled labor necessary if the Government would provide the necessary housing facilities to take care of the laborers.

But the summer went by and autumn came and winter with its snows and they were not called. This serious condition ought to have been known by those having charge of the conduct of the war. It was known as early as September last. In the hearings before the Committee on Labor, February 11 last, the gentleman from Colorado [Mr. KEATING], a member of that committee, testified:

I attended a conference—and I see some gentlemen here who attended the same conference—in the office of Mr. Gompers, president of the American Federation of Labor, it seems to me, in September, at which time practically all of these facts were presented and the need for housing facilities was gone into at that time. I was very much impressed with the necessity for urgent action, and yet four or five months have been permitted to pass without such action being taken, and it seems, from a cursory examination of the facts as presented, that nothing material has been done in the way of furnishing the necessary housing facilities. At that time the conditions were about as bad as they are now and were quite as well known as now, so that this is not a new problem.

Mr. EIDLITZ. No.

Mr. KEATING. And the heads of the various governmental departments were familiar with the needs of the problem as early as September or October?

Mr. EIDLITZ. That I can not say; but they were certainly familiar with the needs on the 31st of October, when our complete report was made.

Mr. NOLAN. The real trouble is that no attention has been paid to housing accommodations for the workers in these industrial districts; is not that the fact?

Mr. EIDLITZ. Yes, sir.

In December last the Committee on Military Affairs of the United States Senate ordered an investigation of the War Department and attempted to find out something about the details of our preparation for war and also to ascertain if possible what had already been done. Before that committee appeared Secretary of War Baker, with these 50,000 contracts, which upon their face were to be completed within a very short time, and if completed according to their terms we would have plenty of guns, cannon, torpedoes, all kinds of modern munitions of war, 22,000 aeroplanes and battle planes, and a multitude of ships; and yet the information was kept from the committee that up to that time nothing had been done by the War Board to perform their part of the contract, to wit, to furnish skilled labor. At the great plants where these contracts were to be performed there were no housing facilities for the workers. These places had long been appropriated by the skilled workers engaged in the work of completing foreign contracts made before we entered into the war.

Skilled labor in distant cities would not leave good employment there and go far from home unless they could be assured that they would be housed during the fall and winter. The skilled worker desired to take with him his family and keep house, because he could not afford to pay the high board and prices required in these cities, and, more than all, he could not, of course, even find a place in which to sleep.

Labor is loyal, but the skilled laborer can not be expected to work in these factories, pay outrageous prices for food, and sleep in the open air during the winter season.

After the startling disclosures made by the investigation of the War Department in December a feeble attempt was made to carry out these war contracts and secure the necessary skilled labor. The gentleman from New York [Mr. MAHER], chairman

of the Committee on Labor, introduced a bill similar to the one now before us, which bill was referred to his committee, and that committee commenced at once hearings upon the bill. The evidence before our committee was of a startling nature. I have only time to quote some brief extracts from a few witnesses. The Hon. John Lind, member of the advisory council to the Secretary of Labor, testified:

Labor at the present moment in the Middle West, where there are extensive industries and a large supply of skilled labor, is idle. In many localities where the contracts have been let and where the war industries are carried on they are idle, not because there is no work to do but because there are no housing facilities and there are no accommodations. Labor can not be taken care of at those places.

When labor is gathered up, where there is a surplus, and sent to a point where it should be utilized there are no accommodations for it. The result is that the overturn in the factories is something horrible. Sixty per cent of the men who take employment may not remain a week, and, as a consequence, unless this situation can be remedied, and unless we can have adequate housing facilities for taking care of these people and coordinate the methods for transferring and clearing labor, we will have labor demoralized not only in respect to wages but in respect to their working capacity.

The War Department does not know where the Navy Department is letting contracts, and the Navy Department, speaking broadly, does not know where the War Department is letting contracts. Neither of them knows where the other departments of the Government are letting contracts.

Mr. G. H. Dorr, assistant in the office of the Assistant Secretary of War, testified:

Let me illustrate: Under the law as it stands, if we want to acquire land in Bridgeport for housing development, we can not buy it. We can not buy it without the consent of the Legislature of Connecticut, which legislature does not meet for a year or such a matter. If we desire to build houses there, the construction must be temporary in character. Now, to meet the needs in that town, provide for the kind of labor that is needed for the work—for example, on the heavy guns that are being built there—highly skilled machinist labor is necessary, not labor that fits in and fits out with the breezes, labor that will come and stay—proper housing accommodations must be provided. Employers engaged in that kind of work and laboring men themselves say that you can not secure and hold that class of labor without the same accommodations that such men generally enjoy, accommodations which will enable them to bring their families there.

The number of families in Bridgeport from July, 1915, to July, 1917, increased by about 11,000. Dwellings for families only increased about 5,000. Such increase as there was in number of dwellings was due to the development by manufacturers, but that has now stopped, though the increase in number of families is still going on. A skilled laboring man will not bring his family if he can not find a proper home to put them in, and if he falls to get his family located at his place of work he will not remain. A man can not put his family in barracks like the men in cantonments, who are single and are there only temporarily.

Take Bethlehem Steel Co., Bethlehem, Pa. There, as Admiral Rousseau has testified, the Government has contracts involving about \$120,000,000. Those contracts involve materials which are of urgent importance to both the Navy and the Army. There the Bethlehem Steel Co. has planned additional development to take care of the increase in labor which it foresaw would be absolutely necessary in order to perform those contracts. They had acquired a tract of land and let contracts for the erection of some 1,500 additional houses. In view of the financial situation, and in view of the demands made upon that company by the war-revenue bill, which demands they had to meet, they were financially unable to carry those plans through and canceled the contract, took the resulting loss, and there the proposition stands to-day. So it is perfectly obvious that we have got to have some relief. The population of the town is about 52,000. There are employed there now some 28,000 people in the Bethlehem works. Obviously 28,000 men can not be accommodated there at the present, and some 11,000 are scattered around the neighborhood, some coming from long distances. The general surrounding country is saturated with workers, and can not take care of any more. Transportation facilities are overcrowded, and men can not get into Bethlehem promptly and properly. In order to avail ourselves of the plants now in course of construction it is necessary for the Government to go ahead with housing development in substantially the way that the Bethlehem company had planned to do, and which that company had considered a good investment.

Contracts have heaped up at certain places, which were already centers of munition manufacture, beyond the housing capacity of those places. But in these manufacturing plants we will have many married men, and while the ratio of married men to the entire number of men employed has been figured out in the past, the chances are that the call of so many single men between 21 and 31 to the colors will greatly increase the proportion of married men who will be engaged in these various works. You can not expect married men to leave their families and go and camp out, as it were, in barracks in the same way that the soldier does during his training period. Possibly in this great emergency we ought to expect him to do it for the period of the war, but there is absolutely no way of compelling him to do it.

Mr. Otto M. Eidlitz, engineer and builder, of New York City, one of the most experienced and efficient builders in the Nation, was appointed a committee of one by the Secretary of War in an advisory capacity to the three departments—Army, Navy, and Shipping Board. He testified:

Most of these departments have been under such pressure that they tried to get on paper a fighting performance to help our allies and make a showing for our country, and they placed the contracts where they thought they could get at them the quickest, and in so doing unquestionably have overcrowded some centers and missed others. I do not think it was done with malice aforethought or with any other idea than to make the biggest showing in the shortest time possible. But they have done exactly what you suggested.

Mr. Eidlitz continuing:

We are confronted with a real situation, and it is too bad it was not realized three months ago, when we were in the midst of winter, because to furnish any relief in a matter of this kind you can not shake

It out of your sleeve and produce it overnight; that is, to do it intelligently and do it efficiently. It must have a reasonable amount of investigation, selection and intelligent construction. That can not be done overnight. It is not a contemptuous proposition. The remarkable thing is that in so many instances adequate appropriations were made for the installation of plants, but at the same time no appropriations were made to take care of the men manning those plants.

Mr. NOLAN. Is not this a fact: That through the Shipping Board it has been made known publicly, through hearings, that men did advocate millions of dollars for housing purposes and were absolutely ignored? I do not know who is responsible for that, but that statement has been made at hearings, and that is where the trouble lies, that we have not given a thought to the question of taking care of a man prior to bringing him to a locality and putting him at work.

Mr. EIDLITZ. That is stating it very moderately. Here is the question, gentlemen: Are we trying to win the war or are we not? It has been demonstrated that certain important factories making war products—products quite vital to the progress of the war—have had their output restricted anywhere from 30 to 50 per cent, and that such restriction is largely due—not necessarily wholly due—to the fact that labor has no place to go and they can not retain an efficient mechanic, because, as you know, an efficient mechanic requires a decent house in which to live or he will not remain at work. Now, when it is demonstrated beyond question that such is the case, is it not pretty nearly time for something to happen?

Take the Bethlehem Steel Co. That company have been investing millions in their plants during the last year, so that to-day they value their plants at somewhere in the neighborhood of \$150,000,000 or \$160,000,000, where a year ago they were valued at \$72,000,000. They did an average business of \$40,000,000 or \$50,000,000 a year normally, and they are to-day doing \$500,000,000 worth of business, of which \$450,000,000 is for the United States or her allies. They are working on guns, gun carriages, and torpedo floats, things that are of vital importance to the progress of this war. They were ready by the 1st of February with a new factory to operate on those particular products. They were working 8,500 men on those products a month ago; they were ready then to take on pretty nearly 4,000 more to work on a night shift in order to get to capacity. On the 1st of February they said they would complete a new plant which would require 2,800 more on this work, so that they would require by the 1st of February 7,100 additional men on this particular class of work. In other words, to put it briefly, their factory was running 39 per cent under capacity on this special kind of work. If that is not important I do not understand it.

Mr. HERSEY. What about the housing facilities there?

Mr. EIDLITZ. That was the trouble there.

Mr. KEATING. They had no place to house their men?

Mr. EIDLITZ. No. One thing is certain, that you are not going to get your output to the fullest extent, whether it be ships, munitions, or anything else, unless you do build these houses. You are not going to be able to mobilize labor or do anything with labor unless you give them respectable places in which to live. You can talk about conscription or about any other things you want to talk about, but you can not make water run uphill and you can not do the impossible. The only way to do is to start at the fundamentals and get them right, and then if the other man does not want to do what is right, go after him. But until you do place labor in proper places and provide homes for them in an intelligent way there is no use of talking about conscripting labor.

When you have investigated a dozen or 15 different places and made various propositions to the various representatives of the Government as to how to handle them, and all of those things gradually drift and nothing comes of them, the suggestions being made with the best of intentions and in order to assist in every way, it puts a damper on your enthusiasm, patriotism, and everything else, and especially when you have demonstrated your side of the case beyond the question of a doubt, and when you know it, and you know the man who holds the purse strings does not know it and refuses to listen, although he has brought you and your colleagues on here to do this trick, but looks wise when you tell him what the answer is and does not do anything, it is not conducive to patriotism.

There is one very strong point which Mr. Dorr made, and to which I would like to add one word—that is the question of labor you get out of men living under irritating conditions. The most of these contracts that he has, and many of these that the contractors have, are cost-plus contracts, and if you house men under conditions where they grow discontented and where their physical fiber runs low, they will not give you the proper output and you can not get it out of them. It stands to reason that if you are working a bed 24 hours in the day, and as fast as one man gets up another one retires in the warm bed, after a few weeks you will not be getting any great efficiency from any one of the three shifts occupying that bed. And if you have a man hanging on a strap two or three hours a day, when he gets to his work he will not give you efficient work or anything like it. When the Government is getting 60 per cent output and paying 100 per cent for it, it seems to me it would be very good finance to go to that particular locality and finance the housing and transportation problems, and let the Government get 100 per cent output or 90 per cent or 95 per cent output for the 100 per cent paid. In that way you would soon have paid in extra output the cost of your housing and transportation, and all after that would be, so to speak, pure profit. In addition, you would have the houses and transportation facilities after the contract was finished.

Mr. SMITH. Mr. Eidlitz, how much has the progress of the war been delayed, or how much is it now being delayed, on account of delay in the fulfillment of these contracts?

Mr. EIDLITZ. Well, now, you see that is a tremendous question. For instance, we will take Wilmington, Del., and Pusey & Jones and Harlan & Hollingsworth Co. say if they had the necessary houses they could increase the efficiency of their plants 50 per cent. The Newport News Shipbuilding & Dry Dock Co. say they could reduce their time of delivery six or eight months. Take the Sun Shipbuilding Co., and they say the same thing. The Bethlehem Steel Corporation says their output is being reduced 30 per cent.

After the hearings before our Committee on Labor still other inexcusable delays came to further postpone this matter. The gentleman from Florida [Mr. CLARK], chairman of the Commit-

tee on Public Buildings and Grounds, came into the House February 13 and claimed that this bill was not properly before the Committee on Labor, but should have been referred to his committee, and, on his motion, the bill was taken from the Committee on Labor and referred to the Committee on Public Buildings and Grounds; and that committee began hearings upon the bill, which hearings were continued for some time, and how long the bill would have slumbered in that committee is a question, had it not been that we received a rude awakening in this tragedy of the unprepared.

On March 21 last commenced the great German drive of 1918, which will be known as the greatest battle in the history of mankind. Germany during the past year had been running her factories and munition plants day and night, turning out great guns, the most modern implements of war, improved aeroplanes, and deadly instruments with which to slay her enemies. She had also been training a mighty army of additional millions, and all these were thrown with terrific force against the allied armies which had been for the past year upon the defensive.

In this great battle America is not a factor. How many men we have in France is a matter of conjecture. The best information is less than 100,000. They are depending upon borrowed guns, and a recent investigation by the Senate committee disclosed the fact that we have no aeroplanes in France and, further, that of the 22,000 aeroplanes promised us early this summer we have only 1 and will have only 37 by the 1st day of next July.

A further fact was disclosed in the Senate that the shipping runs away behind the United States schedule—that the Hog Island plant was 60,000 tons behind its March schedule. This was testimony given before the Committee on Commerce by George J. Baldwin, vice president of the American International Corporation, who was in charge of the work. "What is the cause of this?" asked Senator FLETCHER. "Lack of one central authority," replied Mr. Baldwin. "In my private business, if something goes wrong, I can put my finger on the man to blame. In Government business we run around in a circle."

This great battle in France discloses the further fact that the aeroplane is necessary to win the war and that we must outnumber the Germans in aeroplanes before we can win; and we are to-day informed by members of the House representing the administration that we will soon begin to build aeroplanes, for they have completed a survey of the spruce timber now growing in the United States, which will soon be cut, kiln dried, and manufactured into planes.

This great battle, however, has served to arouse in a slight degree the "masterly inactivity" of those having charge of the war work.

The committee having charge of this housing bill on March 29—the eighth day of this great battle—reported this bill into the House and asked for its immediate consideration. Now, for the first time, with feverish anxiety and hysterical haste, they demand its immediate passage without time for consideration, and it is announced that the President has made an energetic and concentrated effort to speed production and to manufacture war material and send men abroad. Only yesterday Gen. Leonard Wood, who recently returned from France, where he has been studying the war situation, made a notable address before a great audience at Baltimore, in which he said:

We are in a war which is going to tax us to the utmost. We are going into the valley of the shadow. We are going to win—but not easily, not without paying the price that all must pay for waiting too long.

This bill will pass to-day and go to the Senate, where it will no doubt receive immediate and prompt attention, but after it becomes a law, after this long delay, which has not been caused by Congress, then come contracts for building houses, then come contracts for skilled labor—delay, delay, and still more delay.

The New Republic of March 30, 1918, in an editorial says:

There are many hungry and unemployed men at the gates of our shipyards and munition plants to-day—not so many as there were in December and January, but yet a large number. At a hearing before one of the wage adjustment boards in Washington a few days ago an employer testified that he had been turning away 95 out of every 100 men who came to his plant seeking employment. The discontent of these unemployed men and the nervousness of the employed men upon whose heels they are pressing is not so much a reflection upon their patriotism as it is a serious reflection upon the competence and administrative foresight of the executives in Washington and their producing agents throughout the country. If our available man power is fairly dealt with, planfully and consecutively used and protected from the burden of unpreventable loss of wages, there is every likelihood that most of the labor unrest that continues to perplex our statesmen will disappear. What we need is less patriotic publicity of the disingenuous and fanatical sort and more teamwork at Washington.

In spite of all the postponements and procrastination of the War Department at Washington, it should be said, however, in justice to the War Board that there is one department in this

great war machine that has been efficient, and that is the one having in charge the ordering of office equipment and furniture for the new departments and bureaus. While this great battle has been raging in Europe the great vans and trucks of the Government have been hauling mighty loads through the streets of Washington and delivering to the department buildings and offices of the war boards new and improved roll-top desks; fine, easy office chairs; great filing tanks; and office appliances of the most modern type that have been ordered and delivered since the war was declared a year ago, so that this one department has been highly efficient and completed its mighty task.

Will it be said that I have unduly criticized the administration in this hour of our Nation's destiny? I have placed the facts before you, and these facts, in my opinion, the people should know and understand. The people have been lulled into false security by the exaggerated claims of the Secretary of War that we were prepared. Germany has not been so deceived. They have been aware all along of the incompetence in war preparedness and the inexcusable delays due to this fat, overgrown, lazy war machine, and this great battle now raging at the front has been precipitated by the Germans with the full knowledge that American arms would not be a factor in that contest, and that before we could properly prepare by the completion of our war contracts they would win or lose the battle in France.

My position as a Representative in Congress is well stated in an editorial from the Philadelphia Inquirer of yesterday. This is an independent paper and expresses fully my views as to my duty as a Representative. The editorial is as follows:

On April 6 we shall have been at war for 12 months—one whole year. We have in that time sent a comparatively small army to France, but have not even yet put into training in our own camps the full quota of the one draft that we have made. The men abroad are using the artillery supplied by the French. They are using machine guns furnished by France and England. Whatever protection by airplanes is furnished the line of trenches permanently occupied by our men comes, not from the United States but from France. We have not one single airplane of American manufacture in our Army, and the enthusiastic announcement made by Secretary Baker, when put under the spotlight, dwindles down to the shipment of a solitary training machine.

We shall "get there" in the course of time—if our French and English allies can only hold out long enough to wait for us. In another 12 months we should be able to accomplish genuine results in France. But in order to do so there must be an awakening of the authorities in Washington to the gravity of the problem. We must double the size of the Army; yes, call out three times the number of men we now have in the camps. We must feverishly construct machine guns and artillery. We must turn out airplanes by the thousands, and we must build ships with an aggregate tonnage measured by the millions.

And, meanwhile, let us have the precise truth.

Liberty Loan.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 13, 1918.

Mr. BROWNE. Mr. Speaker, I regret that Congress did not recess for 10 days to allow Members to visit their respective localities to assist in the great liberty-loan drive. Not being able to talk to the people of my district on this important matter, I am availing myself of the privilege to talk to them through the CONGRESSIONAL RECORD.

The United States is asking its people for a loan of \$3,000,000,000. It does not ask to borrow this money without giving ample security or paying interest. These bonds issued by the United States Government have back of them as a pledge for their payment all the national wealth of this great country, conservatively valued at from \$250,000,000,000 to \$300,000,000,000. These bonds bear interest at the rate of 4½ per cent and are secured by every foot of land in the United States. These bonds are free from all taxes—national, State, or municipal—with the exception of supertaxes, which do not affect people of ordinary income.

NATIONAL WEALTH.

In the last 15 years our national wealth has more than doubled. In that brief space of time we have accumulated more wealth than the whole British Empire in its entire existence, covering centuries of time. The total wealth of the United States at the beginning of this war was more than that of Great Britain, France, Austria, and Germany combined.

THE PEOPLE'S GOVERNMENT.

The United States has been called the great Republic. In magnitude of resources, in boundless opportunities, in splendid achievements, in happy homes and prosperous intelligent people the United States surpasses all other nations in the world. Every person who becomes a citizen of this great country, either by birth or naturalization, is a part of the Government itself. We are too apt to regard our Government as something quite intangible, something far away in which the people have but indirect and remote interest. But when we consider that even the President of the United States, the learned and dignified judges of the Supreme Court, our Senators and Representatives in Congress are but the servants of the people, each representing a coordinate branch of the Government, we are impressed with the full significance of what it means to be a citizen of this great Republic.

When the Republic of ancient Rome was at the height of its power and glory, it was considered more of an honor and privilege to be a Roman citizen than a prince or ruler of any other country or principality. When Paul, the apostle, was held a captive and was bound and ordered by the chief captain of the guard to be taken away and scourged he said to his captors, "Is it lawful to scourge a Roman citizen?" The sentence was quickly revoked and the scourges fell from the hands of the centurians. Paul, the Roman citizen, was given his freedom. Under the law no citizen of Rome could be scourged.

It means infinitely more to be a citizen of this great Republic, a Nation whose foundation rests upon the great principle that all men are created equal, that they are endowed by their Creator with certain inalienable rights—the right of life, liberty, and the pursuit of happiness, and that governments derive their just powers from the consent of the governed. In our Government the humblest citizen in the land enjoys the same protection and is entitled to the same privileges as the most influential and mighty. We are all stockholders in this great corporation called the United States of America, and all have an equal voice in directing its policies and helping to shape its destiny. It follows, therefore, as a necessary corollary, that if we share equally in the rights and privileges of the Government, we must accept the duties and responsibilities of that Government.

WAR.

The United States to-day is engaged in the greatest war in the history of the world. A war that will tax our resources to the limit, a war that will call for severe sacrifices on the part of every citizen.

In peace there is nothing so becomes a man
As modest stillness and humility,
But when the blasts of war blow in our ears
Stiffen the sinews, summon up the blood.

To-day, along the battle front stretching from the North Sea to Switzerland, the world's greatest tragedy is taking place. Back of the vast network of trenches on both sides of the dead line are armies aggregating ten millions of men. These men are armed and equipped with the most perfect guns and devices for destroying human life that the intellect and genius of man could conceive. Facing each other in support of these armies are two lines of artillery, stretching like an endless chain, hurling tons of molten iron every minute, making the very earth tremble hundreds of miles away. America has thousands of boys already along that battle front, and additional thousands are arriving every day upon the scene of action. These boys are the forces of representative democracy, fighting that governments of the people and for the people shall not perish from the earth. Every one of our soldiers on the battle front in Europe now represents 343 Americans at home. If we visualize we can see along those deadly trenches, facing the storm of molten lead, the poisonous gases, and the thrusts of bayonets, amid the lurid flames of battle, a strong-hearted, manly soldier fighting for each one of us at home. He is offering his life for us. He is making the supreme sacrifice. "Greater love hath no man than this, that a man lay down his life for his friends." The highest insignia of honor that can come to any soldier is the little wooden cross on the field of battle.

THOSE AT HOME.

Those of us who remain at home are making very small sacrifices compared with the supreme sacrifice that those brave boys are making. They are fighting for us. The very best we can do is to supply our soldiers, regardless of cost, with ships, guns, ammunition, clothing, food, hospitals, and medicine, and, above all, we must give them our moral support. If we are worthy of the boys who represent us on the battle field we will save for them, we will sacrifice for them, and give generously. If those

boys can fight for us on the battle field, we can fight for them in the grain field and every other field of effort that will aid them.

BONDS AS AN INVESTMENT.

Besides the patriotic motive for purchasing Government bonds they should be purchased because they are unquestionably the best and safest investment one can make. I confidently predict that these bonds, if held 10 years from now, will be at a premium of from \$1.15 to \$1.25. I base my opinion upon the financial history of the United States. United States bonds in 1888 sold for as high as \$1.30, and in 1901 brought \$1.39 in the stock market. In the year 1900, two years after the Spanish-American War, Government bonds bearing 2 per cent interest were offered at par and were oversubscribed. The United States has never defaulted on any of its bonds. The interest and principal have always been paid the day they were due and at 100 cents on the dollar. Back of the wealth of our national resources and security for the payment of these bonds stands the rugged honesty, thrift, and enterprise of over 100 millions of people. Liberty-loan bonds are the safest and best security in the world, and every citizen should buy as many of them as possible.

Selective-Draft Law.

EXTENSION OF REMARKS

OF

HON. ISAAC SIEGEL,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 15, 1918.

Mr. SIEGEL. Mr. Speaker, on Thursday, April 11, 1918, the gentleman from Iowa [Mr. HULL], in the course of his speech, which appears in the CONGRESSIONAL RECORD, on page 4993, in response to answer made by me, said:

I have heard a much better explanation than the gentleman gives, and that is the East took the Army contracts and they filled their munition factories with their young men, and they want to pass this law in order to exempt them. This is the real truth of the matter.

I then stated that I had the figures right there, and the gentleman from Iowa [Mr. HULL] stated:

Figures prove nothing in this case. I have no time to yield further. I decline to yield.

The discussion carried on in the House, as was shown by the debate which followed, and which also was continued on Friday, April 12, was to the effect that there must be some foundation for the statement made by the gentleman from Iowa [Mr. HULL].

On the same day, with the permission of the House, at page 4998, I inserted in the RECORD the list of States, giving the number of men who had been sent to the camps under the selective-draft law and the number of men who had enlisted in the Navy from April 16, 1917, to February 18, 1918. It appears that the total number of men who had enlisted in the Navy was 132,190, and that the State of New York had given 13,183. I also learned that of the 68,986 men who had been enlisted in the Naval Reserves and the Naval Volunteers over 10,000 were from the State of New York; the total number of men sent to camps under the selective-draft law was 871,213, and that the State of New York had given 92,949; the total number of men who had been enlisted since April 1, 1917, to April 10, 1918, inclusive, in the Regular Army was 404,941, and that the State of New York had given 44,508. This is exclusive of the National Guard of the State of New York, numbering about 35,000 men, or of the men who were in the Army and Navy previous to April 1, 1917.

It appears conclusively that the State of New York, with an estimated population of nearly 10,000,000, has furnished more than 10 per cent of the total number of men who have enlisted or have been drafted since the war commenced, regardless of the number of men and women who are working in factories and other places in order to bring victory to our forces as quickly as possible.

I make the bold statement, without fear of contradiction, that the Eastern States have done their duty fully by our country and Government in its greatest crisis of international affairs, and I do not for a moment disparage the good and effective work which has been and is being done by the other States, whether in the North, the South, the West, or the East. It is about time that men realized that this is a war being fought not for one particular State or set of States, but for the whole Republic.

When I submitted figures showing enlistments in the Army and the Navy, I did not submit them merely for one particular State but for the whole country at large. This is the spirit that should actuate all of us. I know of nothing that better illustrates the main underlying thought which should move us than the address delivered by the gentleman from California [Mr. KAHN], in New York City, on Sunday, March 24, 1918, at the Mount Morris Theater, under the auspices of the Institutional Synagogue. I, therefore, insert it in full, hoping that it may awaken within all men, whether in or out of Congress, the full realization that the vital question now before us is "Whether this Republic is to live or die, survive or perish, exist or pass out." May it strengthen all men in the determination that, having been founded to exemplify liberty and freedom in the full sense of the term, it must forever remain a beacon light for that great purpose, regardless of the cost.

The address is as follows:

ADDRESS OF HON. JULIUS KAHN, OF CALIFORNIA, AT THE MOUNT MORRIS THEATER, MARCH 24, 1918.

My colleague, ladies, and gentlemen: I would be less than human if I were not deeply moved by the reception you have accorded me this morning. I want to say that it is a great pleasure, indeed, to come here into the district of my colleague [Mr. SIEGEL] and say a few words to you upon the issues that confront the American people. Dr. Goldstein referred to the passover festival which is approaching. That festival was born of man's desire to be free. It is the Jewish Fourth of July. We were slaves in Egypt, driven by the lash of the taskmaster. We were compelled to make bricks without straw, and our people, our ancestors, groaned under the burden. Finally the Almighty gave us our freedom. We traveled through the wilderness under the guidance of perhaps the greatest leader of all times, until finally we founded a nation. That nation, while it existed, had to constantly fight for its life. Not only the men fought but the women also fought to continue their freedom. I do not think there is a more beautiful passage in scriptural writing than the story told in the Book of Judges, where Deborah, the prophetess, called upon Barak to raise 10,000 men in order to fight the troops of Sisera of Canaan. Barak, the man, said to the woman, "If thou wilt go with me, then I will go; but if thou wilt not go with me, then I will not go." And Deborah, the woman, replied, "I will surely go with thee." She went, and the forces of Barak smote the forces of Sisera, and the Jews rejoiced and had peace for many years thereafter.

We in this country who are of the Jewish faith have every cause to fight for this land of freedom. I had a striking illustration this morning in coming to this place of gathering of how much we owe this country. I came here with the father-in-law of your leader. He told me that 33 years ago he came to the United States with just 6 cents in his pocket. He was an honest and a hard-working man. He took advantage of the opportunities that he spread before every citizen of the Republic, and he prospered. He is devoting himself in the later years of his life to helping the less fortunate of his fellow men. But it was here that he found his opportunity. He did not have it in the Old World. He probably would never have been able to accomplish there what he has accomplished here. So I say to you that in a land which gives you such opportunities ought you not to be willing to give everything you have, even life itself, for that country?

Mr. SIEGEL, my colleague, in introducing me, spoke of the fact that there are people in this neighborhood who are opposed to this war. There are many people all over this country who are opposed to the war. The American people are a peace-loving people. The American people in all their history have never gone to war without having tried all the arts of diplomacy to prevent war. But what happened? We are but another example of the fact that no nation on earth is the sole arbiter of its own destinies. The American people wanted peace. The American people hoped to avoid war; then, like a bolt of lightning out of the clear sky, about 6 o'clock on the evening of January 31, 1917, the German chancellor sent for Ambassador Gerard and said: "At midnight, at the beginning of the 1st day of February, six hours from now, we will ruthlessly sink and destroy every American ship that dares to pass these lines on the Atlantic Ocean." And he gave a description of the area; these lines which Germany herself drew, lines which, under international law, we had an absolute right to cross without molestation. It came like a shock to every man in public life in this country and to every patriotic American.

The President immediately came to Congress and advised a rather pacific course, namely, that we break off diplomatic relations with Germany as a sign of protest against Germany's unlawful actions. Congress followed his advice. We sent Bernstorff back to Berlin and recalled Gerard. Congress alone in

this country can make war. It requires an act of Congress. Congress declared no war. We were in session five weeks after that event and war was not declared. Then we adjourned. After the Members had been away from Washington for about three weeks Germany carried out her threat. She sank our ships, she drowned our citizens, and the red blood of America was stirred. We had to fight or surrender our sovereignty. To have allowed this instance to go by without taking up the sword would have meant that we were ready to pull down the Stars and Stripes and hoist in their stead the white flag of surrender. I hope to God that never in the annals of our country will Americans do such a cowardly and disgraceful a thing as that.

However, we went to war. Oh, there were a few of us long before that time who had continually preached the doctrine of preparedness. We were familiar with American history. We were familiar with world history, and we knew that we were only living in a fool's paradise when we drifted on and on without making preparation of any kind to properly defend ourselves. We went into this war without preparation. We have been in the war almost a year, and we are really not in the war yet. It is too bad, but we are going to get ready and we are going to win. We will never quit until we do do it, because the future of the American continent depends upon America's winning this war.

This is not the first time that America has fought for this very right to sail the seas unmolested. Our people do not realize it, but this is the fifth time in our brief history as a Nation that we have unfurled our battle flags to fight for American rights upon the high seas. Before we were 10 years old as a Nation, before we had practically laid off our swaddling clothes as a Government, we became involved with the country that had been the friend and ally of the United States during the Revolutionary period—France. France, that had given us men and ships and money, began to interfere with our rights upon the seas. For three long years we kept interchanging notes, just as we interchanged notes in this period of our history.

The French Directorate took no heed of our protests. They seized our ships, they seized our cargoes, they made prisoners of American citizens, and our country, although young, under Washington and Adams sent protest after protest. Finally, in 1798, the matter had grown to be such a source of irritation to Americans that Congress appropriated money for the building of the American Navy, and they created the Navy Department—there had been none up to that time. Congress went a step further. They issued a commission to George Washington and appointed him Lieutenant General of the American Army. The Secretary of War went from Philadelphia, which was then the seat of Government, to Mount Vernon to deliver to Washington his commission. He found that foremost American in the fields attending to his crops. He had, at that time, retired to private life. When the Secretary of War told him what his mission was and how his fellow citizens looked to him to lead them to success in a war with France, Washington replied in words that I want you boys always to bear in your memories as long as you live, and you little girls, too, for Washington said, "I am ready for any service that I can give to my country." And that is the spirit that must actuate us to-day. It was in that spirit that we passed the selective-draft law.

The selective-draft law says, in effect, "Every man who accepts the benefits of this country, every man who lives under the laws of this country, every man who is protected in his life and property in this country, when this country becomes involved in war owes it as a duty to gather under the flag to fight the battles of the Republic." The great body of American citizens have accepted that doctrine. Under that doctrine we will furnish millions of men, who will go gladly under the Stars and Stripes to fight for the continuation of that freedom for which our forefathers bled and died.

We made peace with France in 1800. She acknowledged our rights upon the seas, and, thank the Lord, from that day to this our relationship with that great Republic on the other side of the Atlantic has always been most amicable. In 1801, the very next year, the Barbary pirates of Tunis, Tripoli, and Morocco seized American ships, sank them, seized the cargoes, made the crews prisoners and sold them into slavery. Congress declared war. That was the second war for our rights. It lasted for four long years, and finally the Barbary pirates surrendered. They acknowledged in a treaty of peace American rights upon the seas.

In 1805, when that treaty of peace was signed, Pius VII, who was then occupying St. Peter's chair in Rome, issued a statement to the world, in which he said that the new Republic, the United States of America, had done more for humanity in that war than all the Christian nations of Europe put together. So you see, my friends, over 100 years ago, when we were still a young Nation trying to uphold and maintain a fitting station

among the free countries of the world, we were fighting the cause of humanity. In 1812 we had our third war, and that was with England, as you all remember. I do not need to go into the history of that war. After we made our treaty of peace England never again questioned our rights upon the high seas.

In 1815 we had our fourth war for our rights. Algiers broke loose this time. She was receiving a tribute from all the maritime countries of the world. England and Holland and Portugal and Spain were all paying their tributes to the pirates of Algiers for the right to sail the seas. We paid ours, too. The Bey of that country thought he was not getting enough, and he wanted to raise the price. He was the original profiteer, I think. This country said, "No." He sank our ships and also seized some. He sold the officers and crews into slavery, and President Madison then sent a fleet under Commodore Decatur to punish these pirates. Decatur was the man who said, "My country, may she always be right; but right or wrong, my country." In four months' time he had the Bey of Algiers on his knees. The Algerians made a treaty of peace, under the terms of which they acknowledged our rights. Then we drifted along for 102 years without any nation on earth questioning those rights, until finally, as I told you a while ago, the Imperial Government of Germany threw down the gage of battle to us, which we were compelled, in self-protection, to pick up.

The man in this country to-day who denounces this war, his country being in the war, has no business on American soil. The man in this country who announces that he will refuse to lend a dollar to buy bonds to continue this war, so that we can supply the boys who are ready to lay down their lives, that man, in my humble opinion, is a traitor to this country. If your boy and my boy are willing to die for their country, and some man who perchance has no boy but has money to furnish the material and the food for our boys says, "I will close my pocketbook and will not lend a cent," that man should be whipped out of the country with the scourge of public scorn.

We have, my friends, my coreligionists, a great task before us. This, in my opinion, is the worst war that we have ever confronted. The number of men that will have to be called before it is all over will run into the millions. Let us not delude ourselves. Let us get ready for what there is ahead of us. Let us look the facts squarely in the face. Let us remember that the enemy is remorseless. All that you have to do is to look at Russia to-day and see what would come if we were to be quitters. Russia possessed a lot of men who had theories and possibly high ideals. Where are they to-day, and what has become of their country to-day? They have gone from one autocrat into the hands of another autocrat, or perhaps a band of autocrats. They will suffer the penalty of their folly before many years shall have rolled around. We must look at that picture and swear by the eternal that no such thing shall ever happen in the United States of America. Whenever any voice is raised in this country—a seditious voice, a traitorous voice—I hope that the strict arm of the law will reach out for that man or that woman or that set of individuals, and that we shall have a few prompt hangings. We will have to make an example of some of these people and do it quickly.

We have a wonderful country, wonderful institutions, and a wonderful people; and you young men of a later generation who will have to take the places of us older men as we pass off the scene will always remember. I hope, what you owe to your country. Did you ever read Edward Everett Hale's great story, "The Man Without a Country"? If you have not, get it as soon as you can. I brought it with me this morning. You remember he tells of a young army officer, who, in 1807, became piqued at his country and who said, "Damn the United States! I wish I may never hear of the United States again!" He was tried by court-martial, and the officers decided that he should never again hear of the United States. For 50 years he was transferred from one ship just as it was homeward bound to another that was outward bound. Everything that referred to the United States was cut out of the papers that he was allowed to read or the books that were given him to read. He was never again to hear of his own country; and finally, almost at the end of his life, he was speaking to a young officer then in the United States Navy. He said the following to that officer: "Youngster, let that show you [he was referring to what had just passed] what it is to be without a family, without a home, and without a country. And if you are ever tempted to say a word or to do a thing that shall put a bar between you and your family, your home, and your country, pray God in his mercy to take you that instant home to His own heaven. Stick by your family, boy; forget you have a self while you do everything for them. Think of your home, boy; write and send and talk about it. Let it be nearer and nearer to your thought the farther you have to travel from it, and rush back to it, when you are free, as

that poor black slave is doing now. And for your country, boy, and for that flag, never dream a dream but of serving her as she bids you, though the service carry you through a thousand hells. No matter what happens to you, no matter who flatters you or who abuses you, never look at another flag, never let a night pass but you pray God to bless that flag. Remember, boy, that behind all these men you have to do with, behind officers and government, and people even, there is the country herself, your country, and that you belong to her as you belong to your own mother."

That is the sentiment that I want to leave with you this morning—your service to your country. And you boys who will have to go many thousand miles away from here, to fight for the Republic, in the sentiment of Hale, "remember your country and that you owe everything to her, even life itself."

The Late Representative Bathrick.

MEMORIAL ADDRESS

OF

HON. WARREN GARD,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 10, 1918.

The House had under consideration House resolution (H. Res. 246), as follows:

"Resolved, That the business of the House be now suspended, that opportunity may be given for tributes to the memory of Hon. ELLSWORTH R. BATHRICK, late a Member of this House from the State of Ohio.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. GARD. Mr. Speaker, ELLSWORTH R. BATHRICK was the first man of his party to be elected from the nineteenth congressional district of Ohio. I advert to this not in any sense of partisan achievement, for I do not believe it was a partisan achievement. Rather I believe that it was a result occasioned by the popularity, the industry, and the worth of Mr. BATHRICK himself. The district he represented is typical of the highest development of our country to-day. Within its borders are the great manufacturing concerns which have to do with the necessary and proper development of our country. Within its borders, too, are the stretches of farms, the fertile land which, in the last analysis, contributes to the life and the well-being of us all. And Mr. BATHRICK appealed with singular force both to those who live in the rural sections of his district and to those who live in the congested and crowded districts of the manufacturing centers. It seemed to me that in his congressional life, as I have viewed it, he did two really great things. One was his championship of a system of credits to the farming community. Long before the present Federal farm-loan act was enacted the mind of Mr. BATHRICK saw clearly what others of us may have seen cloudily and mistily, for he believed in the extension of the Federal credits to those of farming communities in order that there be a greater productivity, in order that lands be made better, in order that a man be transferred from the position of a tenant to that of an owner; in other words, that the man himself have his feet on his own soil, and that thereby he becomes interested not alone in the temporary welfare but interested in the permanent welfare of his country, interested in all that his country might call for. So at a time when such a thing might have been and was deemed visionary he had a distinct realization that the good of the country demanded some such action, and over in the lobby of the hotel where I had the privilege of living with him for some time I have heard him upon numerous occasions—to every one in Congress, and out of it, indeed, with whom he could come in contact—make known his own ideas about what should be done in order to encourage the great farming industry, which to-day is recognized, indeed, as the very base of our national life.

And then he believed, he sincerely believed, that the great and immediate task of the United States of America was in the winning of this war, and he wanted to do that which would contribute in every way toward the speedy and successful consummation of that end. So he believed almost to the last of his days, for I had a personal knowledge of a telegram which he had sent to Members of this House making known his posi-

tion upon matters of legislation; that he wanted to be insistent, and have it known that he was insistent, that he favored, without partisanship, such matters as were for the greatest good of the country he represented.

He fought this fight, too, in the Committee on Naval Affairs, of which he was an honored member. He saw, as all of us see now, the necessity for the upbuilding of such a condition of armament on the high seas that not alone may our coasts be protected, but that the lives of our citizens, those born under and entitled to the protection of the American flag, may be protected, wherever they may be, on the waterways of the world.

Mr. BATHRICK was singularly devoted to his friends. He had a condition of mind which may not be called political, because he did not bow to the temporary whim or passing fancies; but he stood steadfastly for his convictions, for his friends, and when the last words shall have been written of him they can make no higher or greater thing known than that he stood steadfastly for his convictions and for his friends.

A short time after his death I was talking with one who came from his home district, and he told me something which seemed to me to be indicative of the man's character, and that was his courage. He said that he had offered to come over and assist Mr. BATHRICK, and Mr. BATHRICK had said that he would be delighted to have his assistance, but that "something might happen to me, and this would reflect upon you in a way which might cause you inconvenience." So, even at this time, there seemed a realization in the mind of this man that something might happen; and the brave in life are those who realize the inevitable approach of an end to all the earthly endeavors here, yet bravely, even smilingly, face the future. So this man must have realized—I think he did realize—the insidious attack of the disease which ultimately carried him off; but he gave no word, he gave no sign. His great desire always, as I have known him, was to protect and to do all he possibly could for the devoted woman who had accompanied him so long on life's pathway, and to stand, as I have said before, strong and steadfast for his convictions and by his friends.

I believe that his life and his efforts have been appreciated by the great, the eternal, the benevolent Father of all, and that it is well with him.

Broken Glass Purposely Placed in Food.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,
OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 15, 1918.

Mr. FREAR. Mr. Speaker, yesterday's paper contained a press statement, which I hold in my hand, in reference to broken glass purposely placed in food. This report reoccurs in the press nearly every day, and in order to allay public apprehension and anxiety over supposed efforts to injure either private or public property by such means or by poisoned waters I offer two letters that explain themselves:

APRIL 8, 1918.

HON. THOMAS W. GREGORY,

Attorney General, Department of Justice, Washington, D. C.

MY DEAR GENERAL: For several months the press has contained charges that efforts have been made by German spies in this country to injure our people by the use of broken glass, poisoned court-plaster, poisoned waters, and other means that appear mentioned from day to day. If such cases are established, I believe the severest penalties that can be meted out to them should be imposed.

I write you first to know how many such cases have been brought to your department or by the local departments of the different States, so far as it has come to your knowledge; how many convictions have been secured in the United States since the beginning of the war; and whether or not the Federal law needs strengthening in any way.

Thanking you sincerely for any data that you may be able to give me, I am,

Very truly, yours,

JAMES A. FREAR.

DEPARTMENT OF JUSTICE,
OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., April 12, 1918.

HON. JAMES A. FREAR,

House of Representatives.

SIR: The Department of Justice has the honor to acknowledge your letter dated the 8th instant, in reference to statements in the press that efforts have been made by "German spies in this country to injure our people by use of broken glass, poisoned court-plaster, poisoned waters, and other means."

The department has received numerous complaints of the presence of broken glass in food substances, but a most thorough investigation has failed to establish a single case in which glass had been maliciously

placed therein. The greater number of the alleged "broken-glass cases" developed into instances where there were found present small pieces of flint, sand, or other impurities that had either accidentally or through negligent manufacture appeared in the products. There have been a few cases where glass did occur in such commodities, but in these instances the presence of the glass was due, as was the presence of the other impurities just mentioned, to accident or to some negligence in the manufacture other than a willful intent to cause harm.

As to poisoned court-plaster, a number of complaints have been made to the department and have been thoroughly investigated. In all of these cases but one no harmful trace of poison was found. In one case—occurring in Illinois—the investigation showed the presence in some court-plaster of tetanus germs which, the department is assured by chemists, might occur in the negligent preparation of court-plaster, but even in this case there was no evidence of willful intent to place such germs in the court-plaster, and the inference was that they occurred through careless manufacture. The concern manufacturing the court-plaster was duly warned and has agreed to redouble its efforts to secure the production of an article free from injurious contents.

No cases of poisoned waters with intent to injure human beings have come to the department's attention, either by complaint or by its own investigations. In a few instances complaints have been made or the department has heard that there might be poison in water intended for the use of horses or other animals belonging to or intended for the Federal Government or the allies. Thorough investigation has shown all these complaints to be without foundation. The department has discovered no case where any attempt was made willfully to injure horses or animals belonging to or destined for Government use by means of poisoned water. There was found recently a small quantity of bichloride of mercury in a horse trough in West Virginia, but there is as yet no evidence to show how this substance came there and no horses or other animals belonging to or destined for the use of the Government had access thereto. This matter is being thoroughly investigated.

So far as the Federal Government is concerned it would seem that the enactment of the pending "sabotage bill" now before Congress would enable the prosecution of and the fixing of adequate punishment for such offenses as you describe against Government property, or property destined for the military or naval use of the Government.

Respectfully,

T. W. GREGORY,
Attorney General.

Calling into Military Service Certain Classes of Registered Men.

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 13, 1918,

On the resolution (S. J. Res. 123) providing for calling into military service certain classes of registered men; to change the quotas of States and districts from population to the basis of those placed in class 1.

Mr. HUDDLESTON. Mr. Speaker, the bill under consideration will not add a single additional man to the American armies. It will not make a single soldier more efficient. These things are not claimed for it. The main purpose of the bill is to provide for a change in the quota of conscripts which States and districts are required to furnish. Under the existing conscription law each State and district is required to furnish soldiers in proportion to its population. This bill would change that basis. Its purpose is to require States and districts to furnish soldiers in proportion to registered men who have been placed in class 1.

In other words, it is proposed that we shall change the rules of the game after it is half played. Communities have already furnished men on the population basis. Local boards in making their classifications have acted on the theory that the same basis would be used in future. There has been a wide variation in the classification of men. Some boards have been much more exacting than others. The Alabama boards have been unusually strict. It is now proposed by this measure to take advantage of such communities and to require them to furnish more than their fair share of men to fight our battles.

There has been no uniformity in the classification of registered men. Boards in some sections have been generous in recognizing dependency and industrial occupation as causes for placing men in deferred classes. In other communities boards have acted with great harshness and have placed all registrants in class 1 who did not have a clear and unquestionable right to a deferred classification. In some communities persons actively engaged in necessary industry, mining, and railroading have been placed in deferred classes; in other communities men with dependent parents or with wife capable of earning a living were placed in class 2. Other boards have placed all such men in class 1 without regard to dependency or occupation.

The object of the present bill is to base all future quotas upon the number of men placed in class 1, ignoring entirely those placed in deferred classes. Hereafter States and districts would be required to furnish soldiers in proportion to the

number placed in class 1. This operation of the law would work a great hardship and injustice upon States and districts whose boards have been strict or harsh in classifications.

DISCRIMINATION AGAINST ALABAMA.

The average number of men placed in class 1 in all the States is 27 out of each 100 classified. In the great State of Pennsylvania only 24 out of 100 are in class 1. In California only 21 out of 100 are so classed. Alabama boards have been unusually strict and have classified 31 out of each 100 in class 1. This means that if this bill is passed for every 21 men which California may furnish Pennsylvania will furnish 24 and Alabama 31.

But this is not all. There has been a wide variation in classifications even in Alabama. Some counties have placed only 18 out of 100 in class 1. Jefferson County, which constitutes my district, is a great industrial center, and if men are to be excused for industrial reasons more men should be given deferred classifications in Jefferson than in any other county. But what do we find? We find instead of 18 out of 100, as in some Alabama counties, and 31 out of each 100, the average for Alabama as a whole, *Jefferson County boards have placed 40 out of each 100 in class 1*, so that if this bill is passed for every 31 men that are sent to the war from other Alabama counties Jefferson will have to send 40 soldiers.

The records in the office of the Provost Marshal General are as yet incomplete. However, they show some startling variations in classifications even among different boards of Jefferson County. The Provost Marshal General's records show that Jefferson Board No. 2 has placed 47.8 men out of 100 in class 1, and Birmingham Board No. 6 only 31.5 men out of 100. Under the existing law these districts will furnish men on the population basis, so that except for injustice to the individual man harshly classified the district as a whole will not be harmed, but under the proposed bill soldiers must be furnished on the basis of class 1, so that for every 31 men furnished by District 6 in the city 47 men must be furnished from country district 2. In other words, District 2 is penalized; 16 men will be sent to war merely because they reside in that district instead of residing in Birmingham District No. 6.

These are the figures which I have obtained from the Provost Marshal General's office:

Classifications for Jefferson County, Ala.

Board.	Total classified	Class 1.	Perc. cent.
Jefferson, No. 1.....	6,229	2,513	40.3
Jefferson, No. 2.....	2,328	1,115	47.8
Jefferson, No. 3.....	3,077	1,067	34.7
Birmingham, No. 1.....	2,613	871	33.3
Birmingham, No. 2.....	3,371	1,446	42.9
Birmingham, No. 3.....	3,341	1,846	55.3
Birmingham, No. 4.....	2,660	1,050	39.4
Birmingham, No. 5.....	3,782	1,589	42
Birmingham, No. 6.....	1,860	587	31.5
Birmingham, total.....	18,627	7,399	39.6
Country districts, total.....	11,634	4,695	40.3
Jefferson County, total.....	30,261	12,094	39.9

I have no doubt that the members of Board 2 have done the best they could with the lights before them. It is obvious that in making classifications they have applied entirely different rules from those observed by Board 6. I will not vote for a bill which does such a rank injustice. I will not give countenance to harshness in classification nor penalize conscription districts merely because they happen to have boards which take a harsh and narrow view of the rules. I will not vote to permit discrimination against the people of my State nor of my county, nor of the conscription districts therein. I am here, of course, in the large sense as a representative of the people of the whole United States, but I am the particular Representative of my own constituents. It is my duty to protect them, and it is, indeed, a gracious task when in so doing I feel that I am protecting many other communities which are similarly situated.

REAL PURPOSE OF BILL.

The obvious purpose of this bill is to benefit the big industrial districts of the East and North where registrants have been given deferred classifications on ground of occupation. It will further benefit the big cities with their large alien populations. The burden taken off these communities is to be placed on the native American element. Members of Congress from alien and industrial districts recognize where the benefit goes and are unanimous in support of the bill. In no other industrial district in the whole country have so few men been given deferred classifications as in the Birmingham district. This is obviously due

to the fact that our local boards have interpreted the classification rules with exacting strictness. Especially is this the case with county Board 2.

I refuse to support this bill. The fact that the Provost Marshal General favors it is important, but it does not outweigh the injustice which will be done my constituents. His advice is worth considering, and I have given it careful consideration, but my conscience will not permit that I override my own judgment and vote for a clear injustice. I shall vote against the bill although mine is the only vote registered against it and though I stand single and alone among the Members of the House.

A LYING EDITOR.

I do not doubt that I shall be criticized by the jingo and extremist element even of my own city. Only two days ago the lying editor of a Birmingham newspaper devoted an entire editorial column to abuse and dishonest criticism of me. I am helpless to defend myself against such attacks. I have no newspaper and no space in one in which to answer the editor's slanders. I must content myself with doing my duty as I see it and trust to my people to do me justice.

Unfortunately, I have in my district a small but noisy element prone to claim for themselves all the virtue and all the patriotism. They are indeed chock full of the kind of patriotism that finds its only expression in shouting, flag waving, and advocacy of extreme measures. They are brave, yes, indeed, brave safely at home, brave in sending others to fight, but doing no fighting themselves; they would rather talk, would rather vilify their Congressman. They demand conscription, both now when war is on and for times of peace—conscription for others, mind you, not for themselves nor their sons. I wonder how they would take to a conscription which would drag them from their easy chairs and comfortable beds to do some useful work for the country in this hour of its peril.

This is the element for which the reptile editor of the Birmingham News speaks. They are enraged because they can not dictate to me. I am too conservative for them. They would have my voice in harmony with their own strident braying. I am too much a man of peace, they say. I love peace, it is true, and hate war with all my soul, but now it seems that the only way to peace is through victory—victory for which we will be forced to pay a fearful price—and so I am supporting the war with all my might, with my votes, my money, and my moral strength. I urge all true patriots, all who love our country, to stand with me against profiteering, to force the hands of plunderers out of the public treasury, to see that our boys are supported and cared for as they face the foe on the bloody fields of France, so that we may win the war and save America and American liberties as a heritage for generations yet to come.

The Selective-Draft Law.

EXTENSION OF REMARKS OF HON. JULIUS KAHN, OF CALIFORNIA, IN THE HOUSE OF REPRESENTATIVES, Saturday, April 13, 1918.

Mr. KAHN. Mr. Speaker, several of the gentlemen who have addressed the House this afternoon have referred to the fact that California's share of classified men who are in class 1 numbers 21 per cent of those registered. I want to say frankly to the House that when this resolution came before the Committee on Military Affairs I did not know what the percentage was in any State of the Union. I did not even know that the percentages had been worked out for any State. In fact, I do not think they had been worked out at that time. But from the start I recognized the justice of the principle that those registrants who can best be spared for the service, having a due regard for the industrial, agricultural, and domestic relations of the American people, should be the first ones to be taken into our armies. It is that principle that I have constantly contended for during the discussion of this resolution. While the percentage of registrants in class 1 in California is lower than it is in the States represented by the gentlemen who have called attention to that fact during this debate, let me briefly state what California up to the present time has really done toward supplying man power for our armies as compared to the States represented by the gentlemen who have sought to criticize California in regard to her percentage under the terms of this resolution.

The gentleman from Alabama [Mr. BURNETT] referred to the matter. The population of Alabama according to the census of 1910 was 2,138,093; the population of California under the same census was 2,377,549. The number of soldiers ordered to camp up to April 10, 1918, from Alabama was 17,601. Those ordered into camp to the same date from California were 29,168. The number of enlistments by States from April 6, 1917, to February 18, 1918, shows that Alabama had 1,998. In California there were 5,430. So that according to these figures the State of California has certainly done more than hold its own with Alabama in furnishing men for the United States Army.

The gentleman from Arkansas [Mr. CARAWAY] also called attention to California's percentage. The population of Arkansas according to the census of 1910 was 1,574,449. Arkansas sent to the camp up to April 10, 1918, 12,817 men. Her enlistments from April 6, 1917, to February 18, 1918, were 1,826. Compare these figures with the statistics from California and one can readily see which State has furnished the greater number of men in proportion to population. The State of Mississippi according to the census of 1910 had 1,797,114 inhabitants. She sent to the camp up to April 10, 1918, 13,314 men. Her enlistments were 1,689. Compare those figures with what California did. California has no need to apologize to Mississippi as to what the former's sons have done for the American cause in this war.

The gentleman from Virginia [Mr. SAUNDERS] also took occasion to call to the attention of the House California's percentage under the quota resolution. The population of Virginia under the census of 1910 was 2,061,612, almost the same as California's. But Virginia sent to the camp up to April 10, 1918, 17,038 men. Her enlistments from April 6, 1917, to February 18, 1918, were 2,673. Compare those figures with California's enlistments of 5,430 and her sending to the camp up to April 10, 1918, 29,168 men.

It is thus seen that California has done more in proportion to her population than any of the States represented by the gentlemen who took occasion to call attention to California's percentage under the draft resolution. I venture the prediction that all through this war California will do her full share toward furnishing men to fight for American rights and to maintain American honor and prestige. Nay, more! She will do more than her share. The people of California understand the present crisis in our Nation's affairs. They will not only respond with men but they will help furnish the money that is needed to win the war. I have no apology to make for California. Her acts speak for themselves.

The Destruction and Injuring of War Material.

SPEECH

OF

HON. GEORGE R. LUNN, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 6, 1918.

The House had under consideration the bill (S. 383) entitled "An act to punish the destruction or injuring of war material and war transportation facilities by fire, explosives, or other violent means, and to forbid hostile use of property during time of war, and for other purposes."

Mr. LUNN. Mr. Speaker, I have introduced this amendment in order that there may be no possible question as to the right of men to stop work, or not to go to work, for the purpose of better wages, if increased wages are needed, or for the improvement of conditions of labor, if those conditions are not as they should be. I regard the bill without this amendment as possible of a construction which is little less than conscription of labor.

Mr. MOORE of Pennsylvania, Mr. WALSH, and Mr. BLANTON rose.

The SPEAKER. To which gentleman does the gentleman from New York yield?

Mr. LUNN. The gentleman does not yield to anyone.

The most vital question we now have or ever will have is the question of labor. Labor is basic and fundamental. We do not desire any advantage that labor is not entitled to have, but we demand those rights which are fundamental rights. I know sufficient regarding these great difficulties that are insistent and that always will occur between the employer and the employee to know that in the interpretation of the law the human element is never absent, and that this bill unamended can be used by reactionary judges to forbid men from striking, however

just the cause. There have been speeches made on the floor this afternoon in which gentlemen infer that we can not depend on labor; that is, labor in general. With this view I have no sympathy. To my mind labor is thoroughly patriotic, and at this critical time labor can be depended upon to sacrifice for patriotism, but it will not sacrifice for profiteering. We have no right and there is no reason why we should demand of loyal labor what we do not demand of rapacious capitalists. If the time comes when, for the successful prosecution of this war, it becomes absolutely necessary to conscript everything, and the country should for its own safety conscript capital and conscript labor, then will labor not object; but capital will object every time. This bill, with the Cannon amendment, conscripts labor, as I interpret it. I can not see it in any other way, and I can not understand how any Member of the House can object to my amendment unless he is in favor of conscription of labor. If he is in favor of conscription of labor, then my amendment should be defeated.

Mr. MILLER of Minnesota. Will the gentleman yield?

Mr. LUNN. In just a moment. If there is no intention to conscript labor, then my amendment makes it clear that no such object is present in the bill. I am not a lawyer, but I know that if the amendment passes there can be no possible conscription of labor under the bill, and I for one do not think there should be under this bill or any other.

Mr. MILLER of Minnesota. I think I can see one defect in the gentleman's amendment that I would like to call his attention to.

Mr. LUNN. I would like to have it perfected.

Mr. MILLER of Minnesota. The section to which it is applicable makes it a crime to interfere on the part of the individual in the prosecution of war enterprises, and in addition makes it a crime to conspire with that object in view. The amendment of the gentleman might permit men to have as their major purpose in mind the interference with the Government in its activity and as incidental on the part of other men the purpose to get better wages. Surely the gentleman would not want anybody to have a little mild reason as a cloak for interfering with the Government in the prosecution of the war.

Mr. LUNN. The gentleman's criticism is well taken only on the supposition that the great mass of laborers are unpatriotic, which is absolutely not the case.

The SPEAKER. The time of the gentleman from New York has expired.

Address of Mr. Hoover on the Use of Wheat and Wheat Products.

EXTENSION OF REMARKS OF HON. JOHN A. ELSTON, OF CALIFORNIA, IN THE HOUSE OF REPRESENTATIVES, Friday, April 19, 1918.

Mr. ELSTON. Mr. Speaker, at a recent meeting of the hotel men of this country it was unanimously agreed that no more wheat or wheat products would be used by them until the next harvest. This patriotic resolve was their response to an appeal by Herbert Hoover, United States Food Administrator. I deem it a public service to set forth in the CONGRESSIONAL RECORD the address of Mr. Hoover before the convention, together with the whole-hearted pledge of the hotel men through their chairman, Mr. J. McE. Bowman, of New York:

SPEECH BY HERBERT HOOVER, UNITED STATES FOOD ADMINISTRATOR, AT MEETING OF HOTEL MEN, NEW WILLARD HOTEL, WASHINGTON, D. C., MARCH 29, 1918.

Ladies and gentlemen, we have asked you to come, many of you on a long journey, with great sacrifice to yourselves. We have not asked you to come for any idle purpose. Unfortunately, you meet us at probably the most serious day in our national history since the Battle of Gettysburg. The seriousness of the situation can only emphasize the problem which we wish to put before you.

The Food Administration has not taken the attitude of the general in command giving orders. Our attitude to the American public has been consistent, that we should ask for service, that we should ask for self-sacrifice, that we should tell in a clear and direct way the why and wherefore of every request. It is due to you to say that I should tell you first the why and wherefore of your coming, because of the request that I am going to make of you.

Our wheat situation is to-day the most serious situation in the food supply of the whole allied world. We have had a stock taking in the early days of March, and we find that our harvest was less than it was estimated. There is also another and more bitter difficulty in the delays of shipping, in the growing scarcity of ships, that has thrown a larger burden upon the American people in feeding the allies than we had anticipated. We had all expected that the Argentine supply would be available in Europe before this time. Those supplies will not arrive for another two months in quantity, and even then will be less than we had expected. The consequence is that the supply of breadstuffs in Europe is at its lowest ebb. There is but one source of supply, and that is the United States.

To-day our investigation shows that if we are to ship to the allies the amount that is necessary to carry over even the minimum of the bread supply to their people we must cut our own consumption by one-half. The limit that we propose on allied shipment is simply the limit of our exporting power. It may eventuate that we must reduce the bread consumption of the United States more than one-half. We intend to ship the bread supply from here willy-nilly, but it is not a simple problem of taking breadstuffs from the people.

Every shipment of grain, every shipment of wheat, that we can send from our ports is a shipment saved from the Argentine. Every ship can do double the duty from our ports that it can do from the Argentine. Every time that we send a shipment we save two ships from the Argentine. Every time we save a ship we save building a ship. Every time we save a ship we save the transport and the supply of one regiment of American soldiers. The allies within the last few days have asked us to send reinforcements, larger and faster than we had anticipated. I assure you that if we are to give them that we must draw these ships from the Argentine and put them into American ports.

We are asked why we do not ship corn, why we wish to ship wheat. No corn can be shipped across the Atlantic for two months after the 1st of April, because that is the germinating season for corn, and it will not stand shipment.

Wheat is a durable grain. From the point of view of inter-allied feeding, wheat is absolutely vital. It is the one grain that we have that will stand shipment. It is the one grain that will serve. Up to this time the allies have used some 30 to 40 per cent of corn in their bread. Their bread has been as nothing compared to the bread that we have had in this country, neither in palatability nor luxuriousness. After this, if they are to be fed they must be fed on wheat bread or none at all.

Now, in this period of extreme difficulty in Europe, the time when the morale of the civil populations of our allies is at its lowest ebb, it does not stand for us to say, "You can wait two months and then you can eat corn." It is for us to say, "You shall receive every solitary grain of wheat that our ports can handle."

Our population has lived before this on corn. For three years the Southern States lived and put up a good fight with no wheat. For periods of four and five years at a stretch no wheat was known to the people of New England. There is no reason why we should insist on having the most luxurious grain at this time when it is our only transportable grain.

Now, we have founded the Food Administration on voluntary effort. We have no desire to depart from this idea, but if we are to accomplish this problem it must be accomplished by the voluntary effort of the intelligent people, the influential people, of the community. If this democracy has not reached such a stage of development that it has in its people the self-denial, voluntary self-denial, willingness to sacrifice, to protect its own institutions and those of Europe from which our own were bred, then it deserves to go down under the German hand and take another form of civilization.

I therefore can not give you orders. I am going to make an appeal. That appeal is this: That you should abolish the use of wheat and wheat products in every first-class hotel and restaurant until the next harvest. [Mr. Hoover was here interrupted by applause, his auditors rising for a prolonged demonstration.]

I had felt that I should receive that response from you.

We must always bear in mind that our population is a population of great variety of life. A large number of our people are dependent on the baker. Those who are dependent upon the baker can only eat bread the substratum of which is wheat. You know as well as I that the baker can not bake cereal products without a predominant portion of wheat. That section of our population, our working population, must receive wheat bread to some degree, but that other section of our population, to which you gentlemen belong and to which your clientele be-

longs, and to whom I belong, can quite well and without any self-denial worth the mention make that small sacrifice. Therefore if we are to get the distribution of such wheat supplies as we must have for some sections of our population, it can only be if you and I and our kind are prepared to do without.

Now, in these times of social unrest there is one antidote. That antidote was never applied in Russia, and the result has been massacre. That antidote is a willingness for us to sacrifice more than we ask of those who have less to give. We must ask sacrifice from those who give from plenty, not from those who would have to give from their necessities.

Therefore, my message is small and concrete—the service that we ask of you, that we ask of every well-to-do, every independent person in the United States to-day is—that he shall abstain from the use of wheat in any form until the next harvest. Every message that we receive every hour of the day from this country—and it is a great country—shows us that we shall have a larger acreage planted in wheat this year than ever before. The arrival of the next harvest will solve our difficulties. If the Lord is good to us in the weather, our problem will be over by the 1st of September. That is not a long period of sacrifice.

Now, most of us can play but a small part in the winning of this war, and you and I do not wish to look into the eyes of our children 10 years hence and say that we failed in our duty. This is a sacrifice that is small in figure, but I can assure you there is no message that I can send the food controllers of Europe to-day that will carry such weight and such encouragement to their people as to be able to say that every first-class hotel in the United States has for their sake abolished the use of wheat.

SPEECH OF J. M'E. BOWMAN, OF THE UNITED STATES FOOD ADMINISTRATION, AT A MEETING OF HOTEL MEN, NEW WILLARD HOTEL, WASHINGTON, D. C., MARCH 20, 1918.

You have heard the story. You know the reason that you have been brought here. A roll of honor is needed and has got to be started here.

There are some men here running hotels, running restaurants, that can not probably give up absolutely the use of wheat, but there are plenty of men here running hotels and restaurants who can absolutely forego the use of white flour or wheat in their establishments until the next harvest.

I am going to ask you to stand up. One minute [as the audience began rising]: There are some men, as I have explained, that can not stand up and make this pledge. We will understand why they remain seated. It is no dishonor to remain seated; in fact, it is pretty hard on the man that has to remain seated, because if he is feeding a class of people that demand and have to use wheat for sustenance, then we are sorry for him. But I am running a hotel, and there are many men here running hotels, that can get along without the use of wheat in any form until the next harvest. I am standing up; I will be one to pledge myself that I will not use wheat flour in any form until the chief here gives us permission, and I want every man that can honestly do so to stand up and raise his right hand. [Gentlemen rise.]

Gentlemen, every man that is standing here with his hand raised has pledged himself on his honor to the allies for the supply of wheat. I thank you.

Wisely, but Tardily, Aliens are to be Eliminated in Determining Draft Quotas.

EXTENSION OF REMARKS

OF

HON. JOHN JACOB ROGERS,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 13, 1918.

Mr. ROGERS. Mr. Speaker, I am very glad that the House is to have an opportunity to vote, within a few minutes, upon the bill to base draft quotas upon membership in the several classes established as a result of the questionnaires recently held. Class 1 includes in general those who are most fitted to render military service, because of their freedom from dependents who will suffer if they are called. As a practical matter draft quotas will be based upon the membership in class 1 of our young men all over the United States, because the Provost Marshal General does not anticipate that in the near future it will be necessary to go beyond that class. Class

1 includes no aliens. Hence quotas will be determined without including in the reckoning aliens who, under the law, are exempt from rendering military service, and yet whose inclusion in the tabulation on which quotas have been based has enormously and unfairly increased the liability of citizens in those parts of the country where aliens constituted a large fraction of the population.

Just here has been the one glaring defect of the draft law as enacted in May, 1917. It required no second sight to foresee the result. It was patent to all who carefully considered the result of basing quotas solely upon total population of States and subdivisions of States.

On May 4, 1917, while the draft bill was in conference to reconcile the differences between the Senate and the House, I wrote the following letter to a Member of the House Committee on Military Affairs:

I notice that section 2 of the Senate form of the selective-draft bill provides, in part, as follows:

"Quotas for the several States, Territories, and the District of Columbia, or subdivisions thereof, shall be determined in proportion to the population thereof available for military service as shown by the registration provided for herein."

The corresponding provisions of the House bill do not contain the words "available for military service as shown by the registration provided for herein." The House bill, therefore, makes total population the test, while the Senate draft would exclude, in the determination of the quota of a State, men who are not citizens and who have not declared their intention to become citizens. I suppose that in Massachusetts this would exclude from the enumeration from 25 to 35 per cent of our adult males, while in Alabama or Nebraska the exclusion might be less than 5 per cent.

It seems to me that in fairness the test should be based upon citizenship, as the Senate prescribes, rather than on total population, as the House prescribes. The former is certainly much more favorable to Massachusetts. I dare say that the latter would increase by one-third the liability that a Massachusetts eligible would be held to service under the selective draft.

If you have not thought of this and if you agree that the Senate form is preferable, will you not call to the attention of such of the conferees as you think desirable the point at issue?

Sincerely, yours,

JOHN JACOB ROGERS.

Nevertheless, when, on May 18, the bill was enacted into law, the House provision, making population determinative, became the law of the land.

Registration day under the draft was June 5. Ten million men registered. In States like Arizona and Connecticut the percentage of aliens ran up to 35 or 40 per cent. In other States the percentage ran below one-half of 1 per cent. Yet quotas were determined in the former group by including one-third or more of the registrants who were exempted from military service. Much disaffection very naturally resulted.

On June 27 I introduced a bill (H. R. 5289) basing quotas upon the population liable under the selective-draft act to military service.

On July 13 I made a long speech in the House upon the subject, in the course of which I said:

If the proportion of aliens were equal in each State of the Union, or if aliens of the prescribed ages were liable under the act to military service, the foregoing provisions of the law would achieve a result both scientific and equitable. But as the proportion of aliens varies tremendously among the several States of the Union, and as aliens are specifically exempted by the language of section 2, basing the draft upon "liability to military service of all male citizens, or male persons not alien enemies who have declared their intention to become citizens," the result achieved is neither scientific nor equitable. Aliens are, of course, included in total population and hence in determining the quota of a given State; they are, however, excluded from rendering military service. The net result of this, in a word, is that the liability to be held for military service upon a given citizen in a State where there are many aliens is vastly greater than the liability of a given citizen in a State where there are few aliens.

There is surely no fairness nor propriety in any such result. The law falls short of its true goal in bringing about such a disparity. Equal liability throughout the United States to military service should be the test, not the accident of residence in one State rather than in another. Let us examine the actual registration by States in order to determine whether or not the objection which I have thus advanced is practical or only theoretical. The tabulations under the draft law are still incomplete, and final figures may show slight variations from the figures which I am to-day submitting. I am satisfied, however, that the variations will not be considerable nor sufficient seriously to modify the conclusions justly to be drawn. There are seven States—Alabama, Arkansas, Georgia, Mississippi, North Carolina, South Carolina, and Tennessee—with an alien population of less than 1 per cent. There are 15 States—Florida, Idaho, Indiana, Iowa, Kansas, Maryland, Missouri, Nebraska, Oklahoma, Oregon, South Dakota, Texas, Virginia, West Virginia, and Wisconsin—with an alien population ranging from 1 to 10 per cent. On the other hand, Arizona has an alien population of 39.6 per cent; California, 22.7 per cent; Connecticut, 36.6 per cent; Massachusetts, 29.5 per cent; New Hampshire, 25.3 per cent; New Jersey, 25.6 per cent; New York, 22.2 per cent; Pennsylvania, 21.1 per cent; and Rhode Island, 28.2 per cent. A given individual in the group of States last mentioned is vastly more liable to be called out for military service than his relative who happens to reside in either of the first two groups cited. Referring back to the suppositions comparisons, a man in Arizona or Connecticut is 60 or 65 per cent more liable to be called than his friend in Arkansas or South Carolina.

What is the remedy? Obviously to base the quotas of States upon the total population thereof liable for military service rather than upon the total population merely. The bill as passed by the Senate—

see CONGRESSIONAL RECORD, May 1, 1917, page 1610—recognized this and based the quotas for the several States upon "the population thereof liable for military service as shown by the registration provided for herein." The House draft omitted this provision. When the bill went to conference early in May I called to the attention of the conferees the importance of retaining the Senate language and indicated what seemed to me controlling reasons in support of the wisdom and justice of the provision. Nevertheless it was eliminated from the conference report and does not appear in the law. Senator CALDER, of New York, and I have pending in the Senate and House, respectively, identical bills making the basis of the quotas the population of the several States liable under the law to military service. It is doubtless too late to modify the quotas which will be called out under the proclamation of the President understood soon to be forthcoming. Men high in authority tell us, however, that the country may before many months go by be required to raise an army of two or four or six or eight or even ten million men. It is, I believe, of vital consequence that some such amendment to the law as that submitted by Senator CALDER and me should be enacted before the subsequent calls for troops are issued by the President.

As the months go by and as the United States gradually acquires a keener realization of what war actually means than perhaps it possesses to-day, it is of the most urgent consequence that every detail of the law and its operation should be so scrutinized as to avoid the slightest hint of inequality or discrimination. So long as quotas are based upon total population and aliens are exempted from service there is ground for the severest criticism. No man can say with positiveness what dire consequences this criticism may in course of time engender. Now is the time to work out the remedy—a remedy simple, speedy, and certain. Let the man in Carolina and the man in Connecticut bear exactly the same burden. No true man in either State would seek favor at the expense of his brother.

This demand for a change became louder and louder as the months passed. In the winter the plan was announced by the Provost Marshal General of classifying the registrants according to their availability for service. Then for the first time became possible an apportionment of quotas even more equitable than that which I had urged in May. This was to base the quotas upon membership in the several classes. The legislation which we are considering, already passed by the Senate, will bring about this beneficial result. Its effect will be not only to eliminate aliens from quota calculations but to insure that all the best-fitted men who have no dependents shall be called out before the less available men with dependents are summoned. I most cordially support this bill and welcome the opportunity, however belated, to vote for it.

The next thing which should be done—and it should have been done long since—is to see to it that the aliens themselves are held to render military service.

Inequalities of the Conscription Law—A Record on War Questions.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,
OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 13, 1918,

On the resolution (S. J. Res. 123) providing for the calling into military service of certain classes of persons registered and liable for military service under the terms of the act of Congress approved May 18, 1917, entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States."

Mr. RANDALL. Mr. Speaker, the conscription act, or so-called selective draft, is the law of the land and must be enforced and supported by every loyal citizen, so long as this war shall last.

It is true that I voted against that method of raising an army and in favor of the volunteer system. At that time our most powerful ally, Britain, had not resorted to the draft, though she had an army of nearly 5,000,000 men in the field, and they were winning great victories. Canada and Australia had not approved conscription at that time.

I had further in mind, Mr. Speaker, the probability that conscription would not be administered impartially by boards selected under the usual political methods in local communities. The consideration of the present resolution, which amounts to a change of the draft quotas of States and districts from the population basis to that of first selecting all of those placed in class 1 by the local exemption boards, brings to light some of the glaring inequalities of the system.

Taking the State of Nebraska as an example, the local boards have placed in class 1, subject to immediate draft, all the way from 9.92 per cent in Furnas County to 56.09 per cent in Seward

County, of all those registered for the draft in those counties. These counties are both strictly agricultural, therefore should have the same class of population and ought to have relatively about the same percentage of men in class 1. This resolution proposes to take all of the class 1 men from both counties, under this grossly unequal classification, before any men in class 2 are called in either county.

This is not an exceptional instance. All over Nebraska and other States of the Union the same inequalities are shown in the official tables of the War Department.

Two of the most populous counties in Nebraska are York and Seward, which adjoin each other. Both are agricultural and of similar conditions in every respect. York has a total draft registration of 1,480 and Seward of 1,287. Yet the Seward exemption board places 722 of its men in class 1 and York boards find only 290 men for that class.

In the city of Omaha districts 1 and 2 lie side by side and each has 3,000 registrants for the draft. Yet district No. 1 places 1,867 in class 1 and district No. 2 places 752 men in that class.

Mr. Speaker, I shall vote for the amendment of the gentleman from Nebraska, Gov. SHALLENBERGER, to retain the old system of selection with some regard to population and to total registration and to disdain the bungling work of these local exemption boards.

EXPECTS CRITICISM.

Mr. Speaker, I am not unmindful of the fact that even this slight criticism of some draft methods will furnish a handle for designing politicians in California to again proclaim through newspapers and from the stump that I am not supporting the President.

Even though I have voted for and supported every tax, bond, and appropriation bill and every other measure recommended to this Congress by the President as necessary to carry on the war, there are ambitious critics back home who are busy night and day.

Mr. Speaker, I voted against the declaration of war with Germany. Even President Wilson does not criticize this vote. He has an "acid test" of the loyalty of a Congressman far higher than that. Only a few weeks before the declaration of war I voted to table the McLeMORE resolution warning our citizens not to take passage on vessels traveling in the German submarine zone, and I voted for the armed neutrality resolution, which authorized the President to use the armed naval forces to protect our shipping on the high seas. I wanted to follow this method longer before declaring war. It had been in effect only 18 days, during which time not one of our vessels had been attacked by a submarine. However, the President himself fixes the "acid test" to be the vote on the resolutions named, and he strongly opposed the election of Congressman LENROOT to the Senate in Wisconsin, although LENROOT voted for war and for all the war measures. He failed in the "acid test," meaning on the above resolutions, upon which his vote displeased the President.

The public prints will soon be full of misrepresentations of a Congressman's attitude on war questions. So far as my record is concerned, I have no regrets and no apologies to offer. Let the truth be known, and the public will make a proper disposition of my case.

Suffice it to say that I have voted for every tax, bond, and appropriation bill and every measure recommended by the President as necessary to carry on the war. I even went further than the President desired, for I voted to send Col. Theodore Roosevelt and his volunteer army of enthusiastic fighters across the sea.

The Zone Postal Rates.

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA,
OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 25, 1918.

Mr. LEA of California. Mr. Speaker, pursuant to leave given me to extend my remarks in the RECORD I present this written statement in reference to the zone postal rates.

Under the old law second-class mail matter, composed of newspapers and magazines, has been carried at a flat charge of 1 cent a pound for country-wide delivery.

The following facts illustrate the operation of that rate:

In 1885 the Government carried 60,000,000 pounds and in 1916, 1,202,000,000 pounds, at a loss of over \$70,000,000

For a service that cost the Government more than \$85,000,000, the publishers paid less than \$12,000,000—less than one-seventh of the cost.

A continuation of the old rates with a proportionate increase in quantity would shortly impose on the taxpayers of the Nation an annual loss of over \$100,000,000.

One great company delivered its publications at an annual loss to the Government of over \$4,000,000 in excess of the postage paid for such transportation.

One issue of a magazine carrying advertisements for which its publishers received over \$400,000 was delivered through the mails at a loss to the Government of \$20,000.

Some large publishers have made a practice of paying for subscription commissions and premiums amounts in excess of the subscription price in order to increase circulation and command high advertising rates. Such publications are primarily vehicles for profit-making advertisements, subsidized by the Government in carrying them through the mails much below cost.

Some of these publications have carried advertisements bringing their owners as much as \$10,000 for a single page in one issue. In many instances one page has brought \$5,000. Can we justify compelling the taxpayers of the country to bear six-sevenths of the cost of transporting such advertisements?

Four Postmasters General have recommended legislation to raise these rates.

Under the new law to go into effect July 1, 1918, the charges are gradually raised to the final rates, as follows:

1. After July 1, 1919, the portions of such publications devoted to matter other than advertisements—reading matter—will be delivered throughout the country at a uniform rate of 1½ cents a pound. If the advertising space does not exceed 5 per cent of the total space, no higher rate will be charged for the advertising space.

2. After July 1, 1921, the portions of such publications devoted to advertisements will bear a rate of 2 cents a pound in the first and second zones, and charges will gradually rise in the succeeding zones until the eighth zone, which will bear a rate of 10 cents a pound. The first seven zones include the areas within the following distances in miles, respectively: Fifty, 150, 300, 600, 1,000, 1,400, 1,800, and the eighth, all over 1,800.

3. The publishers have the privilege of transporting such periodicals by express, fast freight, or any method at their disposal to the distributing zones where their publications can be distributed through the post office at the minimum charges of the first zones.

4. If the total weight of an issue to any one zone does not exceed 1 pound, the rate is only 1 cent.

5. The present flat rate continues where the periodical is mailed by a person other than the publisher or his agent.

6. Free circulation and existing rates on second-class matter within the county of publication are continued as under the old law.

7. Publications maintained by and in the interest of religious, educational, scientific, philanthropic, agricultural, labor, and fraternal organizations, not organized for profit, are permitted country-wide distribution at 1½ cents a pound.

The new rates are sufficient to lessen, but not equal, the annual loss in handling this class of mail.

The increased charge for increased distance is roughly in proportion to the relative costs. Charging a higher price for a greater service is not a discrimination or unjust in principle. To charge an equal price for unequal services is discrimination.

First-class mail pays more than its cost of delivery. Because first-class mail is carried at a profit is no reason why second-class mail should be carried at a loss.

The zone postal rates are not taxes. They are only part payment of the cost of the mail delivery.

The Government is the people organized. What the Government pays the people pay. What we unjustly or unwisely take from the Government we take from our fellow men.

These rates were agreed upon by conferees representing the two Houses of Congress, and separately ratified by each House as a compromise.

These rates are subject to legitimate criticism. Technically considered, they are not logically arranged, nor abstractly or relatively equal. But they are, in my judgment, more just to the country and the taxpayer than the old rates.

The initial raise in these rates is moderate. Probably before the maximum rates are reached we shall gain a practical knowledge from their operation that will demonstrate whether it is the duty of Congress to maintain or readjust the rates.

In the justice of the general purpose of the law to make profit-bearing advertisements pay the cost of their delivery, I

have no doubt. But the relative charges for the different zones and the increased difficulties of administration are such that Congress may well scrutinize their practical operation with an open mind and a disposition to readjust these rates if shown necessary or advisable, having due regard to legitimate publishers, the reading public, and a fair deal to the taxpaying people of the country who, through their Government, must bear all the cost of mail delivery not paid by the publishers.

Price Fixing.

EXTENSION OF REMARKS

HON. WILLIAM B. MCKINLEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

Mr. MCKINLEY. Mr. Speaker, I am opposed to price fixing. Money is simply a medium of exchange. Demand and supply must regulate the value of articles which are exchanged one for the other through the convenient medium of money. If a farmer who raises wheat alone is required to part with same, taking in exchange a prescribed sum of money; if he is required by law to deliver his cattle or his hogs to the buyer for a stated sum of money per pound, a proportionate value in money should be fixed for the farm implements, the shoes, the groceries, the clothing, the farmer must buy. It would be unfair to fix the value of labor by law. So, too, it is not just to fix by law the value of one commodity the farmer has to sell. In Central Illinois, where I live, the farming is diversified, and it does not make so much difference, but testimony before the Committee on Agriculture showed that in 1917 in Oklahoma, where the corn crop was a failure, the farmer had to pay more for corn feed than for wheat. When there was discussion last year before the Agriculture Committee as to price fixing, my understanding of the matter was that if there was to be any price fixing it was to be done to protect the farmer and not to harm him—that by fixing a minimum price to be guaranteed by the Government to last until a reasonable time after the close of the war the farmer would be assured of that price, even if the war closed. By some means that minimum seems to be construed as the maximum and under extreme cases the farmer is forced to sell his wheat at a net price of \$1.90 and pay \$2 per bushel for corn.

This is wrong; \$2 wheat may be fair when shoes are \$3 per pair, but not when shoes are \$5 per pair and everything else in proportion.

I will vote for the bill as it stands, because it is that or worse, and I have no choice, but I think the whole price-fixing scheme is wrong.

The Price of Wheat and the Food Supply.

EXTENSION OF REMARKS

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

Mr. RANDALL. Mr. Speaker, there is before the House the report of disagreement between the House and Senate conference committees on the price of wheat. The House stands for \$2.20 and the Senate insists upon \$2.50 wheat.

The assurance which it is proposed to give the farmer of the price which he shall receive for his wheat, of course, has relation to the food supply of the country. Such a proposition is based upon the effort to assure a sufficient food supply by encouraging the increase of the acreage of wheat.

The Food Administration wants this law. Yet the Food Administration can by one stroke of a pen save 4,000,000 pounds of bread daily and fails to act. Last summer Mr. Herbert Hoover, in answer to an avalanche of demands that he save the food wasted by brewers, wrote the following response:

In 1916 there was used in the production of malt for the manufacture of beer for home consumption and export about 60,000,000 bushels of barley, 15,000,000 bushels of corn, and about 3,000,000 bushels of rice. It will be seen therefore that the economic advantage to be gained from the prohibition of the manufacture of beer relates almost entirely to the

question of saving 60,000,000 bushels of barley, which could be milled to 60 per cent of its food value and produce a pound loaf of barley bread per day for 6,000,000 people.

Since the above letter was sent out by Mr. Hoover he has written me, under date of January 22, 1918:

DEAR CONGRESSMAN RANDALL: In the administration of the food bill we have reduced the foodstuffs used in brewing by 30 per cent. I hope that by this order there may be effected a saving of approximately 18,000,000 bushels of grain.

Faithfully, yours,

HERBERT HOOVER.

It will be seen at a glance that, from Mr. Hoover's own figures, the brewers are still permitted to use 42,000,000 bushels of barley, more than 10,000,000 bushels of corn, and more than 2,000,000 bushels of rice annually. The barley alone will make more than 4,000,000 pounds of bread daily.

And the world is starving!

One stroke of the pen will save all this food. The House of Representatives once acted and ordered the closing of the breweries. The Senate was ready to act. The Food Administration demanded that the power be not exercised by Congress. Congress yielded and gave the power to Herbert Hoover. And Herbert Hoover does not act. Why?

Is barley useful as a food? Prof. Phil S. P. L. Sorenson, the eminent Danish physiological chemist, has made an elaborate study of the subject. He finds that barley, when turned into flour and made into bread, has a higher value to the human being than through any other process.

OUR PATRIOTIC PEOPLE.

Mr. Speaker, the following news dispatch recently appeared in the California newspapers:

STATE MAY BE WHEATLESS IN 90 DAYS!

SAN FRANCISCO, March 30.

At the present rate of consumption there will be no wheat flour in California in 90 days.

The State faces a bread ration of very limited proportion.

The supply of cereal substitutes for wheat also is rapidly diminishing in California and in other States whose stocks are likewise at the point of exhaustion.

Until the new crop there will be no possibility of obtaining supplies of wheat flour or cereal substitutes.

Fresh vegetables, beans, fresh meats, potatoes, and fish must take the place of all cereals on the family table for the present.

These were the outstanding features of a statement issued in San Francisco to-day by Ralph P. Merritt, Federal food commissioner for California.

And, Mr. Speaker, to show the country the kind of real patriotism which possesses our good people, immediately after that notice was printed in the Los Angeles Tribune I received the following from the president of the Los Angeles Federation of the Woman's Christian Temperance Union:

We are perfectly willing to live entirely on vegetables and a very little meat if the good of the country and the world demands that sacrifice, but if we could have the barley flour—at least to mitigate a diet which will prove very unwholesome to many people—we should feel better about the situation; but I suppose the sacred brewers must not be deprived of their barley.

Mr. Speaker, the last regiment of soldiers may win the war. The last hundred thousand loaves of bread, made from barley, may feed the people at home so that the last regiment of soldiers at the front can have the sustaining food which will help them to win the war. And we are wasting millions of loaves daily. The responsibility is the gravest ever committed to man. The fate of the Nation may be in the balance. Will the Food Administration act upon the authority given at its request and surrendered by Congress upon that request?

THE PRODUCTION OF FOOD.

Mr. Speaker, I have devoted much time and energy for months to promoting the production of foodstuffs. Millions of pages of printed matter bearing on this subject have been mailed to my constituents. I propose to continue the work. Usually I have written to each person addressed a note calling attention to the need of the hour, somewhat after this fashion:

DEAR FRIEND: There is inclosed herein a publication prepared by experts employed by the United States Government treating of some phase of the production or preparation of food or of some feature of household economics. I am sure it will prove of interest and value to you. If you are not interested in the particular subject treated, hand the booklet to some one who is, with my compliments. Then write me and I will send you something more to your taste and in which you have an interest.

The Government of the United States is the greatest of all publishers. It employs thousands of scientists, who are engaged the year round in making researches and investigations in all branches of agriculture, in geology, in mining, in electricity, in chemistry, in astronomy, in engineering, in aviation, in preventive medicine, in forestry, in irrigation, and almost all other branches of scientific inquiry.

The results of all these activities of the most comprehensive and effective organization ever known are constantly reduced to print and poured out in an incessant flood from the largest printing works in the world.

I am here to serve and to please you and it will be a pleasure to hear from you. I am glad also to receive suggestions upon any question in which you are interested, which may come before Congress.

Very cordially, yours,

C. H. RANDALL,
Member of Congress.

Charleston Navy Yard.

EXTENSION OF REMARKS

OF

HON. RICHARD S. WHALEY,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 20, 1918.

Mr. WHALEY. Mr. Speaker, a few days ago the House passed the rivers and harbors bill, which contained the following provision:

For improvement to provide a channel 40 feet deep and 1,000 feet wide, extending from the sea to Charleston Navy Yard, \$1,500,000: *Provided*, That this work shall not be undertaken until the proposed new dry dock at this navy yard, carrying a depth of 40 feet of water over the blocks, has been authorized.

The naval bill carries an appropriation for the construction of a large dry dock and a turning basin at the navy yard. The deep water to the sea is coupled with the construction of the large dry dock and the large dry dock is coupled with the deep water to the sea. The House, by a large vote, has authorized the deep water, and there now remains only the authorization of the large dry dock. As one is contingent upon the other, I propose to discuss both together.

There have been so many misunderstandings with reference to the navy yard at Charleston, and based upon these misunderstandings so many misrepresentations have been made to this House and scattered over the country in years gone by, that there may possibly linger with some of you recollections of them which have not altogether been effaced by the real conditions which exist. Moreover, there may be some feeling on the part of the Members that expenditures toward a project which can not be completed within three or four years ought not to be considered at this time; and yet I can not conceive it possible that this House will ever permit the country again to be caught in the condition of defenselessness in which it found itself upon the opening of hostilities with Germany. We have had a rude awakening, but I feel that the awakening has been a real one, and that we shall never again invite the insults and contumely which were heaped upon us by Germany until they could no longer be borne. We shall never again be looked upon as a weak, effeminate, and defenseless people, with no thought save for making money with which to gratify personal pleasures, appetites, and passions. In awakening ourselves we have also awakened Germany to the latent power and strength of this Nation. But surely we are not so short-sighted as only to take care of our present needs and to give no forethought to the defense of our Nation at the conclusion of this war. It is beyond the knowledge of any one man, or any group of men, to know just how or just when this war will end. We all believe and have full confidence that the American soldiers will march down the streets of Berlin and raise Old Glory over the palace of the Kaiser.

When the world war broke loose in August, 1914, all the wise-aces and experts expressed the opinion that it could not last six months, because of the fearful destruction of property and life. When Lord Kitchener stated it would last three years all the world believed he was unbalanced mentally or trying to scare the British Nation into unnecessary preparedness. His judgment has proved conservative. Who of us dreamed 18 months ago that Russia would have been overrun by the Huns, her large army and famous Cossack fighters disarmed and disbanded, her territory subdivided into separate principalities, and the sons of the blood-drenched and blood-crazed Kaiser about to be made the rulers thereof? So little did we know about war that too many of us imagined that a volunteer army would spring into existence in an incredibly short space of time—over night—and would have no difficulty in defending the country.

We visualized fighting efficiency as in the days of Andrew Jackson and his squirrel shooters at New Orleans, the days of the War between the States, with open fighting and quick marches, or the Fourth of July frolic of the Spanish American War. It was not realized, because we could not or would not open our minds to the real consideration of the question—that the capacity of the country for turning out Springfield rifles was so limited as to be unable to supply an army of one and a half million in less than nine years, and that to install and equip new plants for the production of Springfield rifles would require over a year. It was not realized that we had not sufficient artillery to enable us to put an army in the field which would not be mowed down like straw before the sickle by any properly equipped opposing force, nor could we secure such artillery with

all our resources within less than two years, while a German army could land upon our shores in 16 days. How we all look back to-day and regret our mental obtuseness and long to have erred, if error there be, on the side of real preparedness. In like manner we delayed and postponed the enlargement of our Navy in keeping with the growth of our country and the naval expansions of other great nations, until Germany overtook and passed us, and now we are struggling to remedy this defect. It is admitted, with a unanimous voice, that there is no defense we can provide for the protection of the Nation so vital as the Navy. But a navy without strategically located bases from which to operate is like an army without depots for ammunition from which the guns may be supplied, and stores of rifles, machine guns, and artillery from which to replace those destroyed.

Admiral John R. Edwards is prophetic when, in an article on this subject, he states it as follows:

The events of the past year have established the fact that our next great war will be fought out in the shop and the mill as well as in the trench and the turret.

The navy yard is something more than a ship construction and repair establishment, and they should be regarded as vitally component parts of the fleet.

It is inviting disaster to "prepare" without providing facilities for "repair." Almost invariably defeat has awaited the commander who, throwing his all into the first line of battle, failed to provide a reserve in which to reform and refit. The overshadowing advantage of Germany in this war has been due to her ability to repair and refit her battered battle lines.

If our naval stations are not in condition to make rapid and adequate repairs, should that development of these stations be immediately undertaken along with the extension of the fleet?

To quote still further from the same article:

We may well take a lesson from England with regard to the industrial and military value of the dockyards. When that nation regarded France alone as its probable naval foe, the Admiralty established dockyards at Chatham, Haulbowline, Pembroke, Keyham, Portsmouth, and Sheerness. With the revival of the United States as a naval power, England commenced the development of dockyards at Halifax, Bermuda, and Esquimaux, and undoubtedly had expectations of establishing such a base at Hawaii.

For naval and maritime purposes in the Far East England established a naval station at Hongkong. For the future protection of South Africa and Australia, there was built the extensive station at Simons Bay, Cape of Good Hope. For naval operations in the Mediterranean there was developed the dockyards at Gibraltar and Malta.

With the advent of Germany as a possible naval rival, the British Admiralty commenced constructing on the east coast of Scotland the great naval station of Rosyth, whose development up to 1914 contemplated an expenditure of \$24,000,000. Four graving docks, capable of receiving any British vessel, afloat or projected, are now under construction or have been completed at this station.

Even before the commencement of this war there had been expended about \$10,000,000 upon the dockyard at Simons Bay, Cape of Good Hope. At Portsmouth, England, two new dry docks have been lately completed at a cost of \$6,500,000.

England has likewise hundreds of commercial graving and floating docks and thousands of berthing piers for her mercantile marine, which structures could in part be used for naval purposes. The Admiralty, however, deemed it necessary to develop naval dockyards both at home and throughout the world, although there was available for the use of the British fleet the right of way to the many colonial shipbuilding plants controlled by her subjects.

In contrast with our apparent indifference to dry-dock construction, Great Britain has systematically carried on the work of dry-dock extension along with the augmentation of her fleet. Never has the Admiralty outlined an extensive program of warship construction without providing for additional dry docks to receive the battleships authorized.

At no period, however, in her history has Great Britain pursued any policy that would encourage the development of outlying naval bases at the expense of the home stations. Her policy has been first to make her home coast both an impregnable wall of defense and a base for shipbuilding, and then to take up the question of the development of the outlying naval bases. Dominance of distant seas has followed, not preceded, the defense of the home coast.

This House must surely appreciate the necessity of bases, from which the Navy can operate, located at strategic points along our coasts. Too long have we been regarding the navy yards of the Nation as economic assets of the community in which they are placed. We have lost sight of the fact that they are in reality workshops and repair shops for the great machines with which we fight upon the ocean and ought to be located along our shores at the point where such workshops are most likely to be needed.

The Naval Board has repeatedly stated that the field of action in any naval war against this country will most probably be the Caribbean Sea, and yet along the 1,100 miles of the Atlantic coast facing that sea there is no adequately equipped naval base. In fact, until the last few months the Charleston yard has not even been made available to our battleships of the dreadnaught class, and simply because of the lack of the playunish sum of \$175,000.

It must be borne in mind that the Atlantic seaboard of this Nation extends from Passamaquoddy Bay, Me., to Key West, Fla., a distance of about 2,200 miles, and from Key West,

Fla., to the Rio Grande River, on the Gulf, a distance of 1,200 miles. On the north Atlantic seaboard, from Portsmouth, N. H., the most northern navy yard, to Hampton Roads, the most southern, the distance is 580 miles, and there are in this stretch of coast five large navy yards. From Hampton Roads to Key West there is a stretch of sea coast of about 1,000 miles, and only one navy yard on that coast—the Charleston Yard. The port of Charleston is 415 miles from Hampton Roads and 588 miles from Key West, just a little north of the center. A few miles south of Hampton Roads is Cape Hatteras, known to the maritime world as the graveyard of the Atlantic, and is the boundary point between the north and south Atlantic seaboard.

Now, it is proposed by the Navy Department to begin the work of making the Charleston yard a great naval base, where, in the contiguous waters of Charleston's expansive and incomparable harbor, easily accessible and easily protected, a fleet may be assembled, repaired, equipped, and from which ready protection may be sent to the vital points south of us, particularly to the Panama Canal. Can any of you gentlemen of this House maintain that a due regard to the welfare of the country as a whole does not call for the establishment of such a base on that coast? Perchance there is the thought amongst some of you that we ought to wait until this war is over before we begin the establishment of such a base. Why have we authorized the construction of superdreadnaughts and battle cruisers which can not be commissioned for three or four years? Because we must prepare for the future and not for the present alone.

Recently Gen. Goethals, speaking for the War Department, stated that it was proposed to establish a great military base at the port of Charleston and to expend some \$16,000,000 to make it the great storage terminal for military supplies south of Hatteras. And why? Because such a base is needed on that coast, and the port of Charleston is the only port where vessels to-day drawing 30 feet may enter, and because it is capable, at a small expense, of being made available to the largest draught vessels, battleships, transports, colliers, or any other class of vessels which have been built or are in the course of construction.

Gen. Goethals said, in his testimony before the Appropriation Committee, he had selected the port of Charleston because it is one of the great ports of this country for foreign trade.

Now the Navy Department feels that the time is also ripe for beginning its development as a great naval base. For many years it was doubted whether the port of Charleston was going to develop permanently into a deep-water port. The yard itself was abused in magazine after magazine and in newspaper after newspaper. Misstatements were made with reference to it without the slightest understanding of the real facts of the case or any attempts to reach them. So many conflicting statements were made on the subject that it was determined to set all controversy at rest by the appointment of a commission which should examine not only the port of Charleston, but all our ports on the south Atlantic and Gulf coasts and also those of our outlying possessions, and make a report as to which of them were found to be available for a yard of the first magnitude and also whether one or more yards of the first magnitude should be established south of Hatteras. The Commission on Navy Yards and Naval Stations has made its report and tells you not only that the port of Charleston is the deepest of the harbors on this coast, but that its harbor is amply sufficient for the assemblage of a grand fleet.

The commission, in its first report, says:

The problem of affording docking facilities for vessels of the battle cruiser and possibly larger classes at Charleston is inseparably associated with the final determination of whether or not Charleston should be developed as a first-class naval station, and this problem, as already stated, is necessarily dependent upon further examination of channel and harbor conditions and the entire south Atlantic-Gulf of Mexico-Caribbean situation.

After the commission had examined the entire south Atlantic and Gulf of Mexico situation it made its sixth report, and the first conclusion is as follows:

After carefully weighing all the advantages and disadvantages, including costs, of the various sites between Cape Hatteras and Key West, Fla., the commission is of the opinion that, in this coast line, Charleston Harbor most nearly meets the physical requirements of the Navy Department for a first-class navy yard.

It further tells you that for the expenditure of two and a half million dollars a channel may be obtained from the ocean to the mouth of the dry dock 40 feet deep at low water, with a minimum width of 600 feet.

It has also reported that for the expenditure of another million dollars a turning basin 40 feet deep may be added in front of the yard, thus giving it every facility needed for a yard of the first magnitude. The increase in the cost of materials since this report was made has added somewhat to this cost, and the Committee on Naval Affairs has estimated that

the combined project may ultimately reach \$5,000,000. But what is that sum, expended over a period of years, to secure a harbor of refuge for even one superdreadnaught or battle cruiser, costing four times as much, which may be disabled in the most probable naval battle ground for this country, which this South Atlantic coast is facing? Gentlemen, can we go on spending hundreds of millions for warships and yet hesitate to provide the most patent safeguards and facilities for their operation—for their coaling and repair—near their possible or probable battle areas?

Now, I do not ask you to take what I think on this subject. I am going to quote what those high in naval authority have to say.

First, however, let me say just a word about the original establishment of the yard at Charleston and the cause of the misunderstandings which have arisen with reference to it. The yard was established in 1901 by Secretary John D. Long, of Boston, Mass., Secretary of the Navy under President McKinley. It was established as a result of the report of a commission appointed by him under the provision of an act authorizing and directing him to appoint such a commission for the purpose of examining the port and vicinity of Charleston, and also the port and vicinity of Port Royal, with a view of determining whether the naval station at Port Royal should be transferred to Charleston. That commission in its report uses these words:

The board interprets the purpose of the law under which it is organized and its instructions from the Navy Department as further limiting its actions to the consideration of a naval station capable of accommodating, docking, repairing, and constructing the largest vessels of war, with approaches, anchorage, and shop facilities suitable to a dry dock, with 30 feet over the sill, and considers the various questions involved from that point of view.

The board not only recommended the establishment of the yard at Charleston, but selected the site upon which it was located, after examining a number of sites in the harbor. This site begins just above the city limits, on Cooper River, and extends for $4\frac{1}{2}$ miles along that river. The reasons for its selection were given by the board, and some of them are as follows:

First, its freedom from the possibility of bombardment and from the violence of storms.

Second, its connection with the railway systems entering the city.

Third, the extent of the yard and the water front which could be secured, this being over $4\frac{1}{2}$ miles, together with about $3\frac{1}{2}$ miles on the opposite side of the river, etc.

The board added that between the city and the yard there were some knolls which would have to be removed in order to secure a low-water depth of 25 feet, which at that time was all that seemed desirable. The cost was stated to be \$12,500, which it reported was too infinitesimal to be considered as against the many advantages otherwise secured. That commission consisted of—

Rear Admiral Frederick S. Rogers, Rear Admiral G. W. Sumner, Capt. George A. Converse, Civil Engineer C. P. Asserson, Naval Commander J. H. Linard, Commander E. H. C. Leutze, and Lieut. Commander S. A. Staunton.

The report of this commission was approved by Admiral Mordecai T. Endicott, chief of yards and docks, and ordered to be carried out by Secretary Long.

If there was ever a yard which was established by the Navy Department, it was this yard, and yet it was heralded all over the country merely as a political yard, put there without thought or consideration, and presumably against the judgment of the Navy Department itself.

The reason why so much has been said to the detriment of the yard is because of the fact that these knolls between the city and the yard were never removed until the present year. The Navy Department claimed that inasmuch as these knolls were not opposite the yard, but farther down the river, it was incumbent upon the River and Harbor Committee to provide for their removal. On the other hand, the River and Harbor Committee claimed that there was no commerce up the river sufficient to warrant their removal, and so year after year their removal was postponed, and in the meantime some \$5,000,000 were expended upon the yard. At the same time the draft of vessels grew deeper, and without thought as to the reasons why vessels of deep draft could not reach the yard, or at what small expense the proper approach to the yard could be provided, the country was showered with abusive articles totally misrepresenting the situation, and so effective as to prevent the installation of a proper naval base at that point up to this time.

There is another misapprehension which has arisen in the minds of some of the Members of this House to which I wish to refer, and that is the character of the river on which this yard is located. It is nowhere less than fifteen hundred feet in width, and that only for a distance of about 200 yards; otherwise it is nowhere less than a half mile in width. Its natural channel

depth except for the knolls above referred to is considerably over 30 feet.

Its tidal current is not great and its waters contain very little silt. A recent survey was made of the river for 3 miles just above the navy yard, in connection with the location of the storage terminal for the Army now located there, and it was found that there had been no deterioration whatever in the channel—which was, in general, over 30 feet at low water—since 1896, when it was surveyed by the engineering department of the Government and charted upon its maps. The following is a letter from Maj. J. L. Lee, under whose direction this recent survey was made:

Mr. RICHARD S. WHALEY, M. C.

House of Representatives, Washington, D. C.

(Subject: Investigations of the silting of the Cooper River.)

DEAR SIR: In compliance with your request as to the results of the investigation of the silting of the Cooper River from the navy yard to Goose Creek, a distance of 3 miles, which investigations were made in compliance with an order for the investigation relative to the site for the quartermaster storage to be located between Filbin Creek and Goose Creek on the Cooper River, I have to report the following findings:

"Soundings were taken by me on all of the above section from the navy yard to Goose Creek as noted above, and in comparing these soundings with the Coast and Geodetic Survey chart, which surveys were made by the United States Government Engineers prior to 1900, I find the depths of water to be substantially unchanged over the entire section.

"These findings show conclusively that no silting or filling up of the river has occurred in the past 20 years. Your attention is invited to the fact that on the Government chart is shown a pocket approximately one-half mile in length and from 600 to 800 feet in width, showing the depth of 30 to 35 feet below mean low water. This pocket is located approximately midway between Filbin and Goose Creek, and stands today exactly as shown on the Government chart made some 20 years ago. If there was any tendency of silting in the Cooper River, this pocket would have been filled up prior to this time."

Respectfully, yours,

J. L. LEE,

Major, Quartermaster Corps, National Army.

The misapprehension with reference to silt in this river was occasioned by the fact that the present dock is located some 700 feet back from the channel and a kind of canal was dug from the channel through the mud to reach it. If you dig a ditch 30 feet deep by, say, 100 feet wide in a soft substance, and then let water flow back and forth over that material twice a day, it is inevitably going to keep sliding in until the side slopes reach the angle of rest, whatever that may be under the circumstances.

For several years, therefore, this slip or quasicanal kept filling up from these sides, and it was necessary to keep pumping it out to maintain any kind of channel entrance. Gradually this lessened until the cost of maintaining full 30-foot low-water depth, together with all other dredging which may be found desirable around the docks at the yard, became less than \$4,000 per annum. The plans for the yard contemplate the widening of this narrow entrance into a broad basin which will do away almost entirely, if not altogether, with so-called silting in the approaches to the dock.

With this preliminary explanation, I would like to refer you to the authorities for the general statements which I have been making: First, I would like to quote Admiral Benson, Chief of Naval Operations, in his evidence before the Committee on Naval Affairs, March 16, 1916:

I do think that we ought to have a good yard somewhere south of Hatteras, with docks and places where ships in case of injury in battle or for other reasons could get into dock without having to come to our northern yards. There is the case of the *Lion* in the Dogger Bank Battle, which is a very good illustration of how a vessel may be saved after she is badly injured by being able to get into dock without having to go too far; and my ideas are not changed—or, I mean to say, the necessity for it has been emphasized—as to having some place down in that vicinity where we could have docks to which vessels could be taken.

Again, I shall quote Admiral Helm, the chairman of the commission which has just rendered its report on the subject of new navy yards and the enlargement of those now existing:

The fact is, as all naval men recognize, that with the opening of the Panama Canal the Charleston Navy Yard becomes an invaluable asset of the Navy. The prime purpose of the canal is to afford a quick means of transferring our battleships from our Atlantic to our Pacific coasts. The incomparable superiority of the Charleston Navy Yard lies in the fact that not only is it the nearest yard of first-class equipment to the Panama Canal but it is the only yard south of Norfolk which is impregnable against an attack by sea. Charleston, although under siege throughout two great wars, has never been captured from the water. Its defenses to-day guarantee it against such a fate in future and make the Charleston Navy Yard, sheltered from storm and protected against any hostile fleet, the great strategic base from which any possible naval warfare of the future is most likely to be conducted.

Again, I would like to quote from the report of the Naval Board of Inspection for Shore Stations, made in 1913:

It is of paramount military importance to the efficiency of the fleet that coincident with its extension there should be a corresponding development of our leading yards and stations. Every additional battleship authorized by Congress entails a corresponding military responsibility or obligation to provide means for its efficient upkeep

as well as for its rapid and efficient repair. It is therefore imperative that the navy yards should be developed along every line which would fit them for more readily meeting the demands of the fleet.

Any delay in building up the navy yards or any expectation of depending primarily upon private shipbuilding plants for meeting war demands of the fleet impairs naval efficiency and is a menace to our first line of national defense. The danger of such a policy may not be appreciated in time of peace, but there will come peril, if not national humiliation, if navy-yard development is unduly restricted.

An extensive array of auxiliary vessels is the concomitant of an efficient fleet. Consistent likewise with an increase in number of battleships and naval auxiliaries it is equally essential that there be a parallel development of navy-yard facilities.

Again, I quote Rear Admiral John R. Edwards in an article on the imperative need of developing, along with the fleet, adequate and efficient naval stations, and printed for use of the House Committee on Naval Affairs:

As regards naval operations on the Atlantic coast, our naval policy of defense must be based upon several possibilities. The first possibility, although it may be remote, is that we may have to contend on the sea with a nation operating both from the north and the south.

The Nation at large will never commend a policy that relies upon two home bases located between the Virginia Capes and Nantucket for the defense of the Isthmian Canal, for naval operations in the Caribbean, for the protection of our possessions in the Antilles, and for the defense of the Atlantic and Gulf coasts. The proposition simply discredits the judgment of naval officers in general. In expressing this view one need not depreciate in any degree the great military possibilities of the lower Chesapeake Bay as a concentration and maneuvering point for the fleet.

When there is considered the extent of our coast line on the Atlantic and Gulf coasts; when it is remembered that certain seaports of our neighbors and important harbors in the Caribbean and South America might be used for bases against our fleet, this country will never rest content to rely for its defense along the Atlantic upon two naval home bases, both located north of Hatteras.

No American fleet could operate for a protracted period in the Caribbean without establishing on the Atlantic coast a naval base south of Cape Hatteras, and Charleston is the only port on that stretch of coast which can be adequately developed into such a base.

Despite the expenditure involved in such development—and the ultimate outlay should not be less than \$8,000,000—this important work should be commenced without delay. A modern dry dock should be constructed, at least two deep-draft battleship piers built, a 150-ton stationary or revolving crane installed, additional industrial shops and storehouses obtained, a magazine for powder and projectiles provided, a suitable hospital established, additional barracks erected, and the channel to the sea improved. The development of this station means more to naval preparedness than the building of even two battleships, for it would compel every possible naval foe to extend its battle line several hundred miles, and at least a half dozen more opposing ships would have to be employed in such service.

Again, I shall cite Capt. B. C. Bryan, commandant at the Charleston Navy Yard, in his reply to the Helm Commission:

I believe that the improvement of this yard for defense of coast south of Cape Hatteras and for a harbor of refuge for disabled vessels in time of war is a necessity.

The enormous extent of our coast makes the problem of defense different from that of any other country, and necessitates a larger number of bases for protection and from which the enemy may be attacked or harassed, with sufficient docks and equipment to make repairs to such vessels as may need them. Such bases should offer safe anchorage for a large number of vessels, with protection from bombardment from an enemy's vessels or attack by torpedo boats or submarines. Charleston is a port where all these requirements may be developed at a reasonable outlay and maintained at a reasonable cost.

The cost of dredging a 40-foot channel to the Charleston Navy Yard from the sea is therefore estimated to be less than a 26-foot channel into Savannah or than a 30-foot channel into Jacksonville. The cost of yearly upkeep of this deep channel to the Charleston Navy Yard is considerably less than the 26-foot channel to Savannah.

In comparison with the immense sums spent on other harbors without even expectation of such results, the cost of the 35-foot or the 40-foot channel to the Charleston Navy Yard is insignificant.

In regard to the dredging for maintenance of approaches to the water front at this yard there seems to be an erroneous impression that much silt is deposited at all points.

Matter is only appreciably deposited at still points away from the strength of the current, and such matter is a slimy mud easily removed by a suction dredge.

The actual cost of dredging in front of the dock for the last three years, as furnished by the civil engineer of the yard, was—1914, \$3,157.72; 1915, \$3,525.71; 1916, \$5,149.74.

In conclusion, let me leave these thoughts with you: For the proper defense of this country, and especially the defense of its possessions and dependents in the West Indies and the Panama Canal, a great naval base along the south Atlantic coast facing these possessions and the Panama Canal is essential, and the Navy Department has requested its immediate installation.

While facing the West Indies and the Caribbean Sea the Atlantic coast in the vicinity of Charleston is actually the nearest coast to the center of our population. If we draw a circle around the great Rock Island Arsenal below Chicago, its circumference would pass not far distant from New York, Norfolk, and Charleston. Charleston is the nearest navy-yard port to the gateways of the West at St. Louis and Memphis, not to speak of the great territory south of this. It is the nearest port by a great many miles to the great powder plant being established at Nashville, Tenn. It is within easy reach of six or eight large cantonments and training camps, some of which will undoubtedly be permanent. Moreover, it is just a 14-hour ride from Washington.

The beginning of the project should not be postponed. The ultimate cost is not considerable when compared with costs of other ports, as will be shown by the following chart, and is distributed over a number of years:

Harbors.	Depth.	Appropriations to date.	Estimate to complete.	Total when completed.	Annual maintenance (estimated).
New York, N. Y.	40	\$17,727,263	\$35,621,940	\$53,349,203	\$303,000
Boston, Mass.	40	11,437,567	1,545,000	12,982,567	150,000
Portsmouth, N. H.	40	137,000	2,600,000	2,737,000	325,000
Philadelphia, Pa.	35	21,264,948	8,273,000	29,537,948	17,000
Norfolk, Va.	40	4,845,490	70,000	4,915,490	40,000
Charleston, S. C.	40	5,381,903	2,150,000	7,531,903	160,000
Savannah, Ga.	26	12,068,363	545,000	12,613,363	350,000
Jacksonville, Fla.	30	7,897,870	28,260	7,926,130	85,000
New Orleans, La.	35	23,293,067	2,425,000	25,718,067	425,000
San Francisco, Cal.	40	725,103		725,103	

¹ In addition to complete 40-foot channel to navy yard.

² Natural depth.

³ Basin.

⁴ See Engineer's Report, p. 243, Helm sixth report.

What should not be lost sight of as possibly a critical factor in this war, the depth of water will increase with each year, if not with each month, and the harbor be made available for deeper and deeper draft vessels. This may be needed for battleships or battle cruisers, for colliers or transports, or only large merchant vessels, in connection with the great military terminal storage depot for which Congress has recently appropriated some \$16,000,000.

In the face of the revelations which have come to us in the past year as to the plans of Germany with reference to the rest of the world, in the face of the stupendous struggle we have before us, the end of which no man can foresee, can any one of us say to the Navy Department, which has sent to this House the recommendation which we are now discussing, "We will not vote for the appropriation which you have asked, because the war might end in a short period, and we know the war is going to end in our favor, and we are not going to need any more arms and armament when it is over?"

Gentlemen, I do not believe we can be so shortsighted, so unmindful of the lessons recently learned, so deaf to the requests of that department which constitutes the first line of defense of our country, and so blind to our need of a great naval base and a great deep-water harbor along the south Atlantic as to fail to provide them just as quickly as it may be possible to secure them. Confident of your sound judgment, your clear foresight, your firm purpose to be ever prepared—fully and adequately prepared—to defend our country against any foe or combination of foes, I am satisfied this project will meet with your approval.

Trial of Persons by Court-Martial Not in the Army and Navy.

EXTENSION OF REMARKS

OF

HON. WILLIAM GORDON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 22, 1918.

Mr. GORDON. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a letter from the Attorney General of the United States on the subject of this bill to try everybody by a military court.

The letter is as follows:

DEPARTMENT OF JUSTICE,
OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., April 20, 1918.

HON. WILLIAM GORDON,
House of Representatives.

MY DEAR SIR: I have just received yours of the 19th in which you state that you have been informed that Senate bill 4364, introduced by Senator CHAMBERLAIN, of Oregon, and now pending before the Committee on Military Affairs of the Senate, to subject to trial by court-martial persons not in the Army or Navy, was prepared in my office. You ask if I will advise you whether or not this report is correct.

On April 18 my attention was called to the fact that on or about April 8 Hon. Charles Warren sent to Senator OVERMAN, of North Carolina, a brief with the following title:

WHO ARE SPIES?

A memorandum of law on the power of Congress to subject civilians to trial by court-martial under the Constitution. By Charles Warren, Assistant Attorney General of the United States—and that Mr. Warren had prepared and given to Senator CHAMBERLAIN the bill subsequently introduced by Senator CHAMBERLAIN as S. 4364, intended to carry out the views set forth in the brief referred to.

For more than six months Mr. Warren has had practically no connection with any of the activities of my department which would be affected by the legislation advocated by him. The brief and bill were sent to Senators OVERMAN and CHAMBERLAIN, respectively, without the consent or knowledge of the Attorney General. The general policies therein urged and sought to be enacted into law are exactly contrary to those approved by the assistant to the Attorney General in charge of the problems involved and by the Attorney General himself.

I entirely disapprove of the action taken by Mr. Warren, and it would not have been permitted if I had known that it was contemplated.

Very truly, yours,

T. W. GREGORY,
Attorney General.

**Agricultural Appropriation Bill—Wheat Price-Fixing
Amendment.**

EXTENSION OF REMARKS

OF

HON. DAVID A. HOLLINGSWORTH,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

Mr. HOLLINGSWORTH. Mr. Speaker, the law of supply and demand which regulates the price of agricultural products generally in this country seems to me to be a sufficient controlling factor for maintenance of reasonable prices for all products of the soil, except where the modern offense of "profiteering" by middlemen, speculators, and hoarders needs to be prevented and which is now very properly done by criminal enactments.

It is satisfactory to thus fix the price of cotton for the cotton growers of the South, and equally so for the corn growers of the North, who seem to be enjoying abnormally good prices at present, and just why a different rule should be applied to the wheat growers is beyond my comprehension.

I represent a district of varied industries—agriculture, mining, and manufacture—and am sure the wheat farmers whom I know are fully able to take care of themselves in commercial and business matters if let alone. In this I do not refer to slackers or slickers. Real farmers do not ask special protection or privileges of any kind and are apt to resent attempts to coddle them by friendly pretenses in Congress or elsewhere.

They stand square-toed on their rights, but always patriotic.

As an example, although the master of the Ohio State Grange, with headquarters, and a large number of local granges are located in my district, and no more intelligent class of farmers can be found anywhere, yet I have not received a single letter or request from any of them since this wheat price-fixing agitation began asking me to support or oppose the pending proposition, which is nothing more or less than a proposal to fix an arbitrary price of \$2.50 per bushel for the wheat production of 1918 instead of the \$2.20 price now provided by law.

On the contrary, as I learn from a telegram of yesterday, Hon. L. J. Tabor, master of the State grange, has issued an appeal to its membership of 75,000 urging them as a patriotic duty to sell their wheat at once without waiting for this possible legislative price-fixing increase.

His words are worthy of record here:

A wheat crisis is at hand. The hungry world will need every kernel of our wheat to stave off starvation until the coming harvest brings relief.

While the grange fought for a better price last fall, price is not now the question. No change in price can affect wheat on hand. It must sell at the price set last year. Producers and not hoarders will receive consideration.

Refusing to sell the wheat at present is unpatriotic.

Over 90 per cent of the farmers of Ohio have sold their wheat. The other 10 per cent should do so. Let every farmer who has disposed of his wheat make of himself a minute man to see that all other farmers do likewise.

Hoarding farmers or pro-German farmers are almost unknown in Ohio. Some farmers have not sold because local millers and dealers have not paid the Government price in that section. This must be corrected. Others have not sold because of inability to secure cars or find markets. If there is a car of wheat in your community that can not find an outlet, wire the Ohio State Grange or the Food Administration and it will be moved.

The Food Administration has announced rules covering seed and flour needs of the farmer which are fair to all. If we can get every bushel of wheat out of the farmers' hands at once, it will be a patriotic achievement for the farmers of Ohio.

If, therefore, Mr. Speaker and Members of the House, my vote were to be controlled by some of the suggestions made in argument, on the theory of a possible further increase in the high cost of living by the adoption of this resolution, such as "a large number of working people are entitled to some consideration in this proposition," "some consideration should be given in this legislation to those who toil where there is no sunlight," and so forth, it would be an easy matter for me, and probably prudent politically if I wished to continue in political life, to vote "no" on this proposition.

It also happens that I have in my district as sturdy a set of workmen and "toilers where there is no sunlight" as can be found anywhere. Fairness is all they ask. They do not believe in the Government making fish of one and flesh of another, and they would probably resent any proposition to fix by arbitrary legislation a minimum limit on their own daily wage, and, as in the case of my farmer constituents, I have not received a single request from any of them asking me to vote for or against this wheat price-fixing proposal.

They and the farmers are natural allies, and they have sense enough to know that they should be friends.

It is cheap politics to seek in argument to arouse one interest against the other.

The result of the original food-control legislation has confessedly been disappointing in some respects. Wheat, for instance, intended for human consumption is being fed to animals because of the higher price of corn, their natural food, while in our best hotels and eating houses and in the humbler cottages of our working classes ordinary white bread is denied in the name of conservation, and the use of black bread and other substitutes compelled at increased prices.

Therefore, I am doubtful of good results to follow further discriminating legislation of this kind.

But under the hard-and-fast rules of the House, the only possible vote at the present juncture is in effect a vote for or against \$2.50 wheat. The McLaughlin amendment boiled down means simply this: It is not in any sense an original food-control measure subject to revision and modification in the usual way, although it incorporates and proposes to reenact much of the original law. In full it reads as follows:

That section 14 of the act entitled "An act to provide further for the national security and defense by encouraging the production and conserving of the supply and controlling the distribution of food products and fuel, approved August 10, 1917," be amended to read as follows:

"Sec. 14. That whenever the President shall find that an emergency exists requiring stimulation of the production of wheat and that it is essential that the producers of wheat, produced within the United States, shall have the benefits of the guaranty provided for in this section, he is authorized, from time to time, seasonably and as far in advance of seeding time as practicable, to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for wheat in order to assure such producers a reasonable profit. The President shall thereupon fix such guaranteed price for each of the official grain standards for wheat as established under the United States grain standards act, approved August 11, 1916. The President shall from time to time establish and promulgate such regulations as he shall deem wise in connection with such guaranteed prices, and in particular governing conditions of delivery and payment, and differences in price for the several standard grades in the principal primary markets of the United States, adopting No. 1 northern spring or its equivalent at the principal interior primary markets as the basis. Thereupon, the Government of the United States hereby guarantees every producer of wheat produced within the United States, that, upon compliance by him with the regulations prescribed, he shall receive for any wheat produced in reliance upon this guaranty within the period, not exceeding 18 months, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the President shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guaranty. When the President finds that the importation into the United States of any wheat produced outside of the United States materially enhances or is likely materially to enhance the liabilities of the United States under guaranties of prices therefor made pursuant to this section, and ascertains what rate of duty, added to the then existing rate of duty on wheat and to the value of wheat at the time of importation, would be sufficient to bring the price thereof at which imported up to the price fixed therefor pursuant to the foregoing provisions of this section, he shall proclaim such facts, and thereafter there shall be levied, collected, and paid upon wheat when imported, in addition to the then existing rate of duty, the rate of duty so ascertained; but in no case shall any such rate of duty be fixed at an amount which will effect a reduction of the rate of duty upon wheat under any then existing tariff law of the United States. For the purpose of making any guaranteed price effective under this section, or whenever he deems it essential in order to protect the Government of the United States against material enhancement of its liabilities arising out of any guaranty under this section, the President is authorized also, in his discretion, to purchase any wheat for which a guaranteed price shall be fixed under this section, and to hold,

transport, or store it, or to sell, dispose of, and deliver the same to any citizen of the United States or to any Government engaged in war with any country with which the Government of the United States is or may be at war or to use the same as supplies for any department or agency of the Government of the United States. Any moneys received by the United States from or in connection with the sale or disposal of wheat under this section may, in the discretion of the President, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the Treasury as miscellaneous receipts: *Provided further*, That the guaranteed prices for the several standard grades of wheat for the crop of 1918 shall be based upon No. 2 northern spring, or its equivalent, at not less than \$2.50 per bushel at the principal interior primary markets, and this guaranty of prices shall not be dependent upon the action of the President, but is hereby made absolute and shall be binding until May 1, 1919."

The author, Mr. McLAUGHLIN of Michigan, explaining the effect of the proposed amendment, has already stated to the House that, although lengthy, the points involved are few. He says:

Except as to the proviso at the very end of my amendment, it follows exactly and reenacts section 14 of the food-control act. The Senate amendment, as you know, would provide a guaranteed price for the 1918 crop of wheat of not less than \$2.50 a bushel, based on grade No. 2 of northern spring wheat, and provides also that said price shall be paid to the producer of the wheat at the local railroad station or at the local elevator where delivered. My amendment approves the action of the Senate as to the price of \$2.50, it approves the grade of No. 2 spring northern as the standard, but it does not approve the amendment of the Senate that would require the price to be paid at the railroad station or at the local elevator where the wheat may be delivered by the producer. My amendment would require the price to be paid, as the law now provides, at the "principal interior primary market," of which there are 25.

So that the only effect of an affirmative vote is to increase the nominal price of wheat.

It is believed, however, by its advocates that such increase of price will tend to stimulate production by inducing farmers to increase their wheat acreage and continue in the business of wheat growing instead of turning their attention to the production of the coarser but more profitable grains, and that this and other counterbalancing advantages in future years may accrue to the whole people.

The call of our allies "over there" is for wheat, wheat, and more wheat, and this amendment is intended to encourage its production.

Being in the right direction, along patriotic lines, as it seems to me, I shall vote for it.

Presentation of Portrait in Oil of Hon. George Scott Graham.

EXTENSION OF REMARKS

OF

HON. THOMAS S. BUTLER,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 20, 1918.

Mr. BUTLER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I insert the proceedings on the occasion of the presentation to the Law Association of Philadelphia on March 5, 1918, of the portrait in oil of Hon. GEORGE SCOTT GRAHAM, a Member of the House.

The matter is as follows:

PRESENTATION OF PORTRAIT IN OIL OF HON. GEORGE SCOTT GRAHAM.

[Meeting of the Law Association of Philadelphia, held in the Law Library, No. 600 City Hall, Philadelphia, on Tuesday, Mar. 5, 1918, at 4 p. m.]

HAMPTON L. CARSON, Esq. Mr. Chancellor, in behalf of a committee of the bar and of gentlemen acting as donors I have the honor to present through you to this association a portrait in oil of the Hon. GEORGE SCOTT GRAHAM.

As I look at the canvas, on which the skillful brush of Mr. Richard L. Partington has produced the form and features of our friend, my mind runs back easily over a span of some 40 years, a span marked by a close personal friendship which never knew a cloud.

I recall as clearly as though it were yesterday when I was acting as a reporter for the Weekly Notes of Cases in the middle seventies in the Court of Common Pleas No. 1, Judges Allison, Pierce, and Biddle being on the bench, Mr. GRAHAM was arguing a motion upon a Saturday, and the remark was made to me by no less a man than the late E. Coppee Mitchell, then the dean of the law school, "That young man has a fortune in his voice and presence"—a prediction which has been amply verified.

Mr. GRAHAM very early forged his way to the front. He was a member of select council from the district of wards lying

about Broad and Oxford Streets, and shortly after the defeat of the Hon. M. Russell Thayer for the office of district attorney his name became prominently mentioned for that post. In the year 1880 he was elected to that office, and he held it for 19 successive years, a record absolutely unparalleled in our local or State history. So that anyone reviewing the history of the profession during the lives of most of us must regard him as the commanding figure in the great office of prosecutor of the pleas. I think that it was a happy inscription to place on the upper part of the picture those simple words—

GEORGE SCOTT GRAHAM, district attorney, 1880-1899.

I am old enough to remember three of Mr. GRAHAM's predecessors. I recall very clearly Mr. William B. Mann, a lawyer of a peculiar type, an almost irresistible speaker before a jury, but with a somewhat slouchy presence and a lack of those commanding qualities so characteristic of Mr. GRAHAM.

I recollect later Mr. Furman Sheppard, one of those gigantic figures intellectually which dominated the atmosphere of the court, whether on the Federal, State, or the municipal side. Mr. Sheppard was a formidable opponent. That is to say, when he was in action and arguing a case, with the blood in his head and eruptive fires in his eyes, with a voice which commanded attention and which overwhelmed and beat down opposition, he was truly a formidable man, inspiring almost terror. I never saw him, however, cross-examine a single witness or examine any witness in chief. He reserved his powers entirely for final exertion in the closing argument for the Commonwealth, after the prisoner's counsel had spoken. He relied in the preparation of his case, in the examination of the witnesses, both in chief and on cross-examination, upon his successor in the office, Mr. Henry S. Hagert, a most remarkable antithesis to Mr. Sheppard, and yet a necessary complement.

Mr. Hagert physically resembled in no degree his great chief-tain. He was slight; he was thin, somewhat haggard, with a sharp, keen face and nervous manner, but with a skill in legal analysis that was unrivaled. He had the power of dissecting a witness's statement with a pitiless cold-bloodedness that was almost unmentionable. He could dissect in such a way that, entering any orifice in the body, he would draw out a lung, then another lung, then a liver, and a heart, and not mutilate the exterior, and the witness would collapse without ever knowing that he had been deprived of his vital organs, and the carcass would be thrown upon the floor of the court room for the contemplation of the jury when the final argument of Mr. Sheppard was made, death having resulted entirely from the skillful interior dissection of the witness. Mr. Hagert, therefore, was a dangerous opponent.

Mr. GRAHAM seems to me to have combined the qualities of both of those men. He was both formidable and dangerous.

Mr. Mitchell alluded to the fortune that he had in his voice and presence. In the old days of the court of quarter sessions and oyer and terminer, in what was called the "New Court House" on the east side of Sixth Street, immediately back of Congress Hall, the physical arrangements of the room were such that the district attorney was elevated upon a platform at least as high as this desk above the floor, while the fighting from the bar in defense of the prisoner had to take place practically from a pit. I can speak from personal experience, for I had many of the bitterest and the most savage and prolonged and serious contests of my career while Mr. GRAHAM was district attorney. I never saw a more formidable figure than GEORGE S. GRAHAM, towering above the jury box, with the additional elevation of that platform, with his eyes roused with the passion of the fight, delighting in what the Romans called the "gaudia certaminis," and, with clenched fist, starting forward and sometimes bringing his foot with a decisive and emphatic stamp upon resounding boards, crushing down and crashing through all the lines of defense, a species of forensic earthquake.

I have seen him also exercise the dangerous powers of analysis. His long term of service enabled him to equip himself fully for forensic work in that particular field of action, which is a highly honorable one, charged, as it is, with the safety of the community against deeds of violence, whether subtle or open, whether brutal or studied. He was a perfect master of toxicology and of medical jurisprudence. He could examine a chemist without straining the effect of a text book, without exaggeration of the notions of recognized experts in the operation of certain poisons. He knew all about the anatomy of the human frame and of fractures of the skull, whether involving the outer or the inner table, the dura mater or the pia mater, or the arachnoid tissue, made little or no difference. He could in a few words depict the scene of crime, whether taking place in a cellar or a dark garret or among the rafters of a low building, where the shrieks of the struggling victim against an assailant

would make an atmosphere of midnight darkness thrill with horrors. I have known him to depict scenes where hungry rats gorged themselves on the flesh of the slain, or where vultures of crime seemed to brood, when by lonely midnight lamps plots were concocted and schemes were wrought and conspirators assigned to their different posts, or he could fall back and describe ordinary occurrences accompanied by a piano in a tap-room in some remote section of the city. And he would do this in a way which aroused the admiration as well as the fears of the bar opposed to him, without ever exciting their enmity, or without ever opening himself to the charge of a brutal exercise of almost indisputed and indisputable authority.

He argued his cases fairly, frankly, conceding the full force of an opposing objection if based on authority, and with an ample knowledge of all the cases which the Supreme Court from the time of Chief Justice Gibson down had announced for the guidance of lower tribunals.

I have seen him in the civil courts. I have had him as a colleague as well as an opponent, and I know that, however flushed he might be with victory, he never was ungenerous. I have known him to be tender-hearted, almost to the point of overflowing, and to refrain sometimes from grasping the full fruits of victory in a civil case because it looked too much like avarice.

And now as the artist has depicted his form—erect, commanding, speaking—this canvas is to take its place in our great gallery, which brings back the features even of members of our colonial bar, stretching from the time of Edward Tilghman, prior to the Revolution, a man who studied law in the Middle Temple in London prior to the barking of the guns at Lexington, down to the present time. Whatever the years may do with his body, GEORGE GRAHAM will always be here alive, to speak to men of this and coming generations; as one of the foremost advocates of his day; a man of surpassing eloquence, without overstrain; a man whom it was a pleasure to know, and who, I trust, will long live to wear the honors to which his talents have entitled him.

HON. ABRAHAM M. BEITLER. The law association is the possessor of many pictures in oil and busts of men who have made the name of the "Philadelphia lawyer" famous and who have distinguished themselves upon our local bench and in our State courts and Federal courts.

It is a distinct pleasure for the chancellor to be able to accept this portrait and to add it to those which the association already possesses. It is a peculiar pleasure in some respects, because, along with Mr. Carson, my days at the bar date back to about the time that Mr. GRAHAM came to the bar. I think he is slightly my senior. For many years Mr. GRAHAM and I held public office. I can speak of one phase of his character which Mr. Carson has not touched on, and that is his ability as a counselor. It was my fate to hold office where I had to ask now and then for advice, and Mr. GRAHAM was always my friend and my wise and faithful advisor.

Mr. GRAHAM is one of the men who has brought added fame in our day to the "Philadelphia lawyer." I join with Mr. Carson—I am sure I join with all of you—in the earnest hope that Mr. GRAHAM may for many years grace our profession.

On behalf of the association I thank you, Mr. Carson, and through you the donors of this beautiful portrait.

The Kaiser's World War.

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR,
OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 19, 1918.

Mr. TAYLOR of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD I insert the following address delivered by me at my home city of Glenwood Springs, Colo., on Saturday, April 6, 1918, at the laying of the corner stone of our new Federal public building:

ADDRESS OF HON. EDWARD T. TAYLOR, AT GLENWOOD SPRINGS, COLO.

Mr. Chairman, fellow citizens, friends, and neighbors, I have not traveled over 4,000 miles to be with you to-day with any idea that I can say anything on this memorable occasion that is worthy of being deposited in this corner stone and handed down to posterity, but because I wanted to be here in person.

I felt it my patriotic duty, and I believed you would be glad to have me join with you in these ceremonies.

You have given me a most cordial reception to-day, and many a kind welcome in the past, for which I again thank you from the bottom of my heart. I am pleased to take advantage of this opportunity to again express my grateful appreciation of the loyal and constant support of all my old friends and neighbors in Garfield County, because you have been the foundation of whatever success I have made as your official representative for nearly 30 years. I sincerely hope that when my public record is finally closed you may never have an occasion to regret any of your thousands of acts of kindness to me. You probably may not realize it, but I have always drawn my inspiration from my home people, from Colorado. This is my home, and only home. Official life in Washington is strenuous and tremendously important. There is a glamour and intensity about it that is inspiring. But it is correspondingly wearing on a man's nerves and vitality. We are dealing with gigantic subjects, affecting not only the welfare of a hundred and ten million Americans and all our descendants for generations to come, but the entire world. There is every incentive of patriotism and duty for a Representative to always do his level best all the time, and they all do, notwithstanding what anyone may say to the contrary. But the frightful pace, the never-ending grind, becomes most awfully wearisome, trying, and monotonous at times.

I ought not to be away from Washington even for this hurried trip, and yet I feel that it renews my energy and spirit as a good Coloradoan, which we all know means the best type of an American. In Washington we constantly hear so many things that are not so that I like to come home as often as I can and mingle among my fellow citizens. I always go back reinvigorated in health, strength, and spirit, and fortified anew with the feeling of your confidence and appreciation.

OUR PUBLIC BUILDING.

My friends, we are assembled here to-day to celebrate the first step toward the realization, the actual fulfillment, of an often-cherished and long-deferred hope. We have been appealing to Congress and trying in our humble way for 25 years to secure this Federal building. Several of my predecessors and our United States Senators for many years have had bills pending in Congress providing for the purchase of a site or for the construction of a public building here.

I first introduced the bill on March 24, 1909—just 15 days after I was first sworn in to Congress at my first session. I diligently pushed and worked on that bill for four years before I succeeded in passing it on March 4, 1913. And then there were so many other public buildings authorized ahead of this that, notwithstanding frequent importunities, it has taken the Treasury Department and the Supervising Architect five years after I passed the bill to get around to constructing this building. And even now we are exceedingly fortunate, because this is about the very last building that the Government is constructing during this war, aside from the very urgent war-emergency buildings. And now that our hopes are to be realized, what contemplations are awakened in our minds as we gather here to-day to lay the corner stone of the second Federal public building ever constructed in the western half of our State!

This is indeed an occasion when everybody feels like congratulating everybody else. It is the final realization of one of the dreams of our early days, and as a resident of this city for nearly 32 years I want to congratulate and rejoice with all of you. It marks an important epoch in the history of our city and county. To the early settlers who in years gone by sowed the seed which produced the harvest that to-day we commence to reap, we owe a debt of gratitude. And in our rejoicing to-day let us not forget the honor due the past. There are many names that deserve more than an honorable mention. I wish we could have with us to-day all of the old pioneers of Garfield County. A few of them are with us to-day, but many others have been cut down by the all-powerful scythe of time and have gone from their labors here on earth. They have crossed the "Great Divide," that we must all soon cross, and gone to their reward above.

The custom of laying the corner stone of public buildings with Masonic ceremony is widespread and of ancient origin. Its purpose has always been, as it is to-day, to set apart from commercialism, by prayer and consecration, buildings devoted to educational, State, and governmental purposes. So to-day, in accordance with these time-honored customs, we have laid with Masonic ceremony the corner stone of this splendid edifice. We have consecrated it in the usual way, with grain, oil, and wine, emblematical of peace, joy, and prosperity, as an edifice where all the people, rich and poor alike, shall forever receive just and equal treatment at the hands of our Government officials. It is indeed a day for rejoicing, not alone by the citizens of Glen-

wood Springs and Garfield County and the western slope, but by our entire State and our fraternity as well.

I hope to live to see the day when every post office in every town of a thousand inhabitants in the United States shall be owned by the Government for many reasons, but more especially:

First. Because, from a business standpoint, I feel that it is more dignified and better in every way for our Government to own the property necessary for the transaction of its own public business than to occupy the position of a tenant and pay rent to anybody.

Second. Because the occupancy by our Federal officials of buildings owned by the Government inculcates among the people national loyalty and a spirit of patriotic pride which has a value that can never be measured in dollars and cents.

The American flag always flying from the top of a United States Government building is an inspiring sight, and the old and young alike of our country take pride in the feeling that that building belongs to them. There will never be any danger of our doing too many things to inculcate patriotism and love of our country in the people from their earliest infancy to old age. While some few citizens who are fortunately situated are able to sometimes visit the Capitol of our country at Washington, yet there are many millions of our people who will never be able to visit Washington. Many of them will never see a Federal possession, unless there is in their own home town a public post-office building; and, when they are fortunate enough to have one, they are naturally, and ought to be, very proud of it; and the importance of that sentiment can not be measured upon any mere basis of whether or not the Government might rent a building cheaper than it can own one.

The Post Office Department of the Government stands for and is emblematic of the growth, economical efficiency, and stability of our Government. It records the achievements and illustrates the impulses of modern civilization. It is preeminently a people's department. It is a symbol of popular government. It is not established or conducted for the purpose of making money, but to serve the people. It is especially emblematic of our basic national principle—that our Government is established and conducted for the welfare of all our people and that the American people themselves rule our Government. A Federal post-office building symbolizes that principle. It is a monument of Government efficiency. It is solely for the public convenience and general welfare. Everybody that lives in or ever comes to this town will have business in this building; and all, young and old, rich and poor, will meet upon the level and always be treated alike.

About three years ago the Government completed a new \$3,000,000 white marble post-office building in Washington City, and President Wilson was officially invited to suggest suitable inscriptions to be placed over the two main entrances to that beautiful building. He did so, and they are to-day chiseled in large letters, so that millions of the people from all over the world may readily read them. They are looked upon as so peculiarly expressive and appropriate for a post-office building, in fittingly and succinctly describing the vast number and varied functions of a post office, that I will quote them. Over the east entrance is the inscription, as follows:

Carrier of news and knowledge, instrument of trade and industry, promoter of mutual acquaintance, of peace and good will among men and nations.

Over the west entrance is inscribed the following:

Messenger of sympathy and love, servant of parted friends, consoler of the lonely, bond of the scattered family, enlarger of common life.

Those beautiful sentiments might—especially in these strenuous war times—be appropriately inscribed over the entrance to every post office.

I was about to wish that this building which we now dedicate may stand for many, many generations to come. But instead I will say that I earnestly hope that Glenwood may grow so much that some future Congressman will secure a new building. However, many of us will not see it, and I trust this building may always be a source of pride to our people; and that as the years go by may pleasant memories gather about it, and may the people always feel that this is one building that forever belongs to them; and that even though it is comparatively but a humble structure, it stands for Uncle Sam and represents the greatest and grandest Government the sun has ever shown on. I hope this site will always be and remain the home of our post office, our land office, our Forest Service, and other Federal offices—our Government's home in Glenwood Springs—and that the Stars and Stripes will wave over it for all future time.

GLENWOOD SPRINGS.

Thirty-five years ago a dense growth of sage brush covered the site where Glenwood Springs is now situated. As many of you know, the town was incorporated October 5, 1885, and

named after Glenwood, Iowa, the home of Isaac Cooper, the real father of our town. Our parent city is on the Burlington Railroad, about 20 miles east of Council Bluffs.

The town is about 65 years old. In 1855 it only had three houses and was then called Coonville. It was located in a dense forest of trees and brush. It was rechristened Glenwood about the time of the Civil War. It now has a population of about 4,500. It is the county seat of Mills County, and is a very pretty little city about a quarter of a mile back from the railroad. The most interesting feature is that at the same time I obtained the \$100,000 appropriation for this building, Glenwood, Iowa, obtained an appropriation of \$50,000 for a public building, and it is just now building its first Federal post-office building. The first story of this building is just up and they expect to complete it this summer. Our age and population is about one-half of theirs, and our appropriation is twice as large as theirs. So that we are getting a long way ahead of our parent in our Federal building.

I wish time would permit a brief mention of the life, character, and achievements of the old pioneers who founded and helped build this town, because I shall always have a warm spot in my heart for them. But others will, I trust, more fittingly pay a tribute to them.

As we are to-day speaking, not only to ourselves but to posterity, I know you will all join me in sending greetings and best wishes to the future generations of Glenwood Springs. I earnestly hope they will be as good citizens and patriotic Americans as the inhabitants of this town have always been, and that they will be worthy descendants of the hardy, courageous, and splendid pioneers whose industry and privations have made possible what we now enjoy, and what we believe will be one of the most popular and prosperous health resorts in the world, and always continue to be one of the most beautiful cities of the entire West.

If our hopes are realized, our early-day hardships will not be in vain, and our beloved State and our country and our city will be better off for our having lived.

We have an additional reason for congratulating ourselves to-day. No matter what anybody may say, the Government does not build expensive or any buildings in unimportant cities. In fact, there are hundreds of cities in this country that are from twice to twenty times the size of Glenwood that have never yet been able to secure a public building, and this exceptional recognition by our Government should be a perpetual inspiration to our people to broader and more patriotic, public-spirited ideas and a firmer determination to accomplish all we have ever dreamed of, and to make Glenwood one of the great cosmopolitan gathering places and ideal cities of the West.

GARFIELD COUNTY.

I am glad that those having these ceremonies in charge have arranged for the insertion in this corner stone of a brief historical sketch of Garfield County. Every man, woman, and child in this county should be proud of our home county. This county has one of the most intensely interesting and typically western and thrilling histories of any county in the West. My father was one of the pioneers who came to this county in the spring of 1886, but only lived here about six months. I have for several years felt that I should like, and I still hope some day to find time and a suitable occasion, to make a speech to our home people on the subject of Garfield County. But both time and opportunity prevent me from doing so at this time. Our county was created February 10, 1883, and named after President Garfield, and is only 35 years old. It was before that a part of the old Ute Indian Reservation, with absolutely no improvement whatever in it—simply as it had existed for millions of years—and in these few years we have made it one of the finest and richest counties in all the West, with perfectly marvelous possibilities for the future. And, if you will pardon a personal reference, I will add that seldom has anyone ever had any greater opportunity or more responsibility thrust upon him in shaping the future welfare of his own home county than I probably have resting upon me at this time, as regards the future wealth and development of this county. I refer to the possibilities of the oil-shale deposits in this county. While many of us have been traveling up and down the Grand River from here to Grand Junction for 35 years, we have never realized until just recently that nature has lavished upon us one of her richest and choicest gifts. Do you know that to-day the use of oil is becoming universal? It is being applied in thousands of new directions.

Railroads are changing from the use of coal to the use of oil; the American Navy and all other navies of the world, as fast as they possibly can, are changing from the use of coal to the use of oil, and the millions of aeroplanes that are just beginning to be built in large numbers must all use oil. It seems

as though we are coming to what might be called an oil and electrical age. By a strange perversity of nature thousands of our oil wells are commencing rapidly to diminish. The actual and imperative demands for the use of oil in this country this year will be 50,000,000 barrels in excess of all our possible sources of supply. And if for any reason our supply from Mexico is cut off, and it is seriously threatened, our shortage will be at least 80,000,000 barrels this year. Just at this psychological time in our country's history we have discovered that an all-wise Providence has provided and stored in our own home county sufficient oil to supply the world, if necessary, for generations to come. And while it is going to take several years' time, unfortunately longer than we realize, and going to cost much more than we realize to successfully handle the oil-shale industry, yet if I can prevent adverse legislation by Congress, with which we are now very seriously threatened, and can, as I am very earnestly trying to do, prevail upon Congress and the administration to adopt a fair, liberal, and workable policy toward encouraging the opening up and development of these oil shales, along the line of my bill (H. R. 11555). Garfield County, aside from the big city counties, will actually be the richest county between the Mississippi River and the Pacific Ocean. But even though we may be confronted with some temporary obstacles, it will be only a question of a very short time until Garfield County will rival the rich oil fields of Oklahoma, California, and Wyoming, and this county will be the center and richest community of the entire West, because our supply will continue for generations after theirs is exhausted. And if I can aid in some slight way in bringing about that marvelous development, it will be one of the proudest acts of all my official efforts in behalf of Garfield County during the past 30 years.

Garfield County Commercial Association of Boosters several years ago, at Rifle, adopted the motto of "Grin and go to it," and if the future inhabitants of this county follow that sentiment with the same activity, courage, and determination that this generation has done there will be no limit to the development, wealth, and greatness of our splendid home county.

COLORADO.

Inasmuch as we are to-day not only felicitating ourselves upon our own good fortune, but are also talking to the future generations of this part of the State, it would be inappropriate to not refer at least briefly to the present status of our beloved Commonwealth, the State of Colorado. I feel that if perchance this corner stone may be opened a hundred years from to-day the then residents of Glenwood would be especially interested in knowing the conditions of our State as well as our county and city at this time, and how we look upon it at this time, and for that reason I am going to refer in just a few words to the Colorado of to-day.

In 1858 gold was first discovered in Cherry Creek near where Denver now is and the earliest of the Colorado pioneers came to the Rocky Mountains. What has been wrought in these 60 years is now a glorious history. The brave pioneer men and women who came to this region soon after that discovery were the early founders and architects of our State. They came not in ease, but by every hardship. They braved and suffered untold hardships that no historian will ever fully record. Several years ago I introduced a bill in Congress to appropriate a half million dollars for the building at Denver of a monument in honor of the pioneer women of the West, and I hope to live to see this most just recognition to the thousands of noble women who gave their lives to make the West inhabitable. It is said that the timid never started West and the weak died on the way. The pioneer men and women were bold, fearless, hardy, and determined. And here into the mountains and valleys, in all of this wilderness, they brought law, order, civil life, good morals, religion, patriotism, and homes; and from the tops of the mountains, in all the mining camps, there fluttered the starry emblem of our national independence. And now we look back and view with admiration the marvelous progress made in these brief years of our State's history. We have made history.

Colorado has made a new history of mining and of agriculture. We have contributed a perfectly marvelous amount in value to the store of the world's wealth. Colorado is a landmark and crowning glory in the progress and evolution of the West from a desert to a garden. And Colorado will forever stand as a monument to the adventuresome spirit, the bravery, heroism, and endurance of the western pioneers. I will paraphrase a few sentences from a recent statement of our Gov. Gunter and quote a few figures from one of the latest reports on our State's present industries.

The Territory of Colorado was organized February 28, 1861, admitted to Statehood August 1, 1876; seventh State in size—66,341,120 acres, 103,000 square miles; population nearly 1,000,000—nine persons to every square mile.

About 16,000,000 acres of now privately owned farm lands within the State, approximately 7,000,000 in cultivation; 10,000,000 acres of fertile land yet unbroken; about 4,000,000 acres now farmed under irrigation; 10,450,000 acres subject to entry under United States land laws, but only a part of this of value for even dry farms. Value of farm products of the State in 1917, exclusive of live stock, approximately \$150,000,000—nearly double the production in 1913. Agricultural production increased more than 700 per cent in the past 15 years. Live-stock production \$75,000,000 annually. Present value of live stock in the State, approximately, \$119,961,000. Gold discovered near the present site of Denver in the waters of the Platte River, in 1858. This introduced Colorado to the world. It has been producing gold in commercial quantities ever since 1859; total value from its placer and lode mines, \$625,000,000. Silver ranks second in aggregate production in the history of Colorado, value of total production to date being \$560,000,000. Gold is produced in 30 of our 63 counties, silver in 26; zinc, lead, and copper in nearly all of our mining counties. Annual output of zinc now surpasses that of silver in value, the bulk coming from Lake County, the famous Leadville district, which first became known to the world as a placer gold area and later took its name from its rich lead deposits. This district, which has yielded fortunes to many Colorado miners from its silver deposits, is now, at great depth, revealing zinc deposits among the richest in the West. The largest known deposits of tungsten are found in Colorado, and rich molybdenum ores are now being worked. The most extensive and richest beds of carnotite and other radium and uranium bearing ores yet discovered are in this State.

Colorado is fourth among the States in coal deposits, total available supply estimated at 317,000,000,000 short tons; annual output for several years has averaged about 10,000,000, and this year the output will approximate from 13,000,000 to 15,000,000 tons.

Inexhaustible supplies of high-grade building and monumental granite are found here, only sparingly developed thus far. In Gunnison County, in the western part of the State, is the largest deposit of pure white marble found in this country, and extensive marble beds exist in other parts of the State. Immense supplies of glass and molding sand, mountains of gypsum, richest and largest deposits of oil shales in the world, mostly in Garfield County, and vast stores of road-building materials are here. In brief, more than 200 valuable minerals and compounds are found in commercial quantities in Colorado.

Manufacturing has developed rapidly, reaching a value of about \$160,000,000 produced from Colorado factories in 1917. The State is first in the production of beet sugar, manufacturing it from Colorado-grown beets. Largest steel mills in the West; packing houses among the most extensive in America are among Colorado's assets. Its grain-milling interests are large, and growing rapidly. Only a beginning has been made in the manufacturing possibilities of the State.

Our climate is unsurpassed in its delightfulness. Our superb scenery—gigantic mountains and wide reaches of plains—is visited by tourists from all parts of the earth. In 1917, 50,000 automobiles from nearly every State in the Union brought 200,000 tourists to Colorado, and an equal number came by rail. More than 40,000 miles of superb highway are being rapidly improved every year, making it possible for tourists to visit in comfort and safety the most remote scenic beauties of the State.

The most splendid asset of the State, however, is our citizenship. Colorado's best crop is healthy children.

COLORADO'S WAR ACCOMPLISHMENTS.

When her National Guard was called she sent her full quota of volunteers, uniformed, drilled, and in fine training for our country's service. Colorado is the ninth State in the Union in its contribution to voluntary enlistments. Selective service has been responded to with zeal and enthusiasm, and all of the quota called—85 per cent—without a hitch is now in our country's cantonments. Colorado stands sixteenth in the list of States that were above the national average of credits allowed for volunteer enlistments in the compilation of the quotas for the selective service.

When the Red Cross call came, \$1,000,000 was asked of the State; approximately \$1,500,000 was subscribed. The first liberty-bond call was enthusiastically responded to and oversubscribed, the amount \$19,000,000. The second liberty-bond call was likewise patriotically responded to, and over \$22,000,000 subscribed. A special session of the legislature convened; again Colorado's patriotic citizenship responded in no uncertain terms. Every request of the Executive for war measures was enacted, and over \$3,000,000 appropriated that Colorado might do her full duty in this hour of the Nation's peril. Our State is

a land of homes, schools, churches, public improvements of every character, and of an industrious, law-abiding, patriotic people.

Colorado, both as a Territory and as a State, has always been foremost in patriotism and love of country, and has freely given her sons and daughters in times of stress. She successfully defended herself against the Indians; her record in the Civil and Spanish Wars is equal, and I believe in proportion to her population, is ahead of any State in the Union, and to-day she is offering more than her quota of men and women for service in the world war in order that our national honor may be preserved and that democracy may prevail over autocracy, and that liberty and freedom may forever have an abiding place among all the peoples of the earth. When the history of this war is written Colorado will have one of the proudest records of any State in the Union.

Who can prophesy the future of Colorado? Our climate is the most healthful in the world. There is more undeveloped wealth within our borders than in any other like area on the face of the earth. God certainly has smiled on Colorado.

My father first came to the Territory of Colorado in 1870, six years before it was admitted into the Union, and I think you all know that I have loved the State and her people ever since my boyhood days. I wish we could look into the destiny of future ages. The inhabitants of the Alps of Switzerland, the Highlands of Scotland, and the mountainous regions of the earth everywhere have always been the most intensely patriotic and liberty-loving people, and the citizens of Colorado now are, and the succeeding generations will be, a perpetual exemplification of this human characteristic.

Colorado is the only State in the Union that is squared by lines of latitude and longitude. Our State is literally and geographically the top of the world. Colorado is the bright jewel set in the crest of this continent, where she shines as the Kohinoor of all the gems of this Union. The Centennial State is a beacon light to all her sisters. We are supremely proud of the advancement we have made from the absolute wilderness of this territory 60 years ago to our present wonderfully rich State. Colorado's watchwords have always been:

A square deal, enthusiasm, patriotism, and do it now.

Some 15 or 20 years ago the Association of the Sons of Colorado, of which I have long enjoyed the honor of being a vice president, asked the public for suggestions of a suitable sentiment or appropriate and expressive toast to our State. I drafted a little one, and as an affectionate and loyal son I will conclude my reference to our splendid Commonwealth by repeating it:

A SENTIMENT TO COLORADO.

Here's to the land of the sturdy pine,
The crest of the Nation, where the sun doth shine;
Where the weak grow strong and all things grow great;
Here's to our home, the Centennial State.

THE KAISER'S WORLD WAR.

My friends, proud as we justly are of our home city and county and our beloved Commonwealth, our Nation is much dearer to our hearts than all of these. And while we are to-day gladly and gratefully celebrating our material splendors, yet they are all comparatively insignificant at this time to the population of our State.

Colorado, on this 6th day of April, 1918, has forgotten the material and is looking to the spiritual, to the cause of freedom, humanity, and America. It is of our Nation and the world-wide war that every patriotic citizen in the United States is thinking to-day, and of which I know you all would have me, as your home Representative in Congress, speak to you on this occasion.

A year ago to-day the American Congress formally declared that a state of war existed between the United States and the Imperial German Government, and this being the first anniversary of our country's entrance into this war it is appropriately called "Dedication Day." This day may also be appropriately called "Liberty Day." All over this broad land, from Maine to California and from the Lakes to the Gulf, the American people are gathered in assemblies like this, in a bond of patriotic devotion, to discuss together our national situation and to dedicate anew their happiness, their property, and their lives, if necessary, that they may continue to wear the proud crown of American citizenship.

I am going to ask this audience to carefully listen to a declaration, which has been approved by President Wilson and Speaker CHAMP CLARK as the most fitting, appropriate, and concise sentiment yet framed as representing the principles of our Government. It reads as follows:

THE AMERICAN'S CREED AND DEDICATION-DAY PLEDGE.

I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable,

established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

All those who cheerfully indorse this creed and make this pledge hold up your hands. I am delighted to see it is unanimous. The 6th day of April will hereafter be a memorable and sacred day in all the annals of American history. As long as our Nation lasts, as long as our descendants love liberty, as long as the Stars and Stripes float over our land, this day will never be forgotten. I am going to introduce a bill myself (H. R. 11546) making this day a national holiday and calling it Liberty Day, and I hope to pass it in commemoration of the day on which the United States took up the burden for humanity, to fight humanity's battles, and for the protection of all liberty-loving people in their God-given rights of liberty, justice, freedom, and self-government.

Over 100,000,000 American citizens are to-day imbued with but one idea. This Nation's only business now is to win this war; all else is merely incidental. Every good citizen is willing to eat less, to wear less, to spend less, and work harder, and to buy as many liberty bonds and saving stamps as possible, in order that we may do more for our Nation. This is not a day of triumph; it is no festival occasion; it is a day of dedication, and I have started the day right by buying a \$500 liberty bond myself. The forces of humanity are mustered in a frightful struggle for existence. The hearts of the civilized world wait upon us. The lives of millions of the best men the human race has ever produced hang in the balance, and human freedom calls to us to save it from destruction. Does anyone doubt that our country will live up to this great trust? Who dares fail to try? Certainly no honest, patriotic man or woman who is worthy the name of American citizen will refuse to do his or her full share.

God and our forefathers have builded this Nation. Our country's life is quivering in the balance. What shall we do with it? We can make but one answer. Every possible resource at our command, property, happiness, life itself, and all we hold dear in this world, will be sacrificed, if necessary, to preserve our liberties and our country. The freedom, the liberty, and the unnumbered blessings that we enjoy were all bought by our fathers at a very high price; they were only secured by many years of hardship, and we are not worthy to stand here as descendants of our fathers unless we ourselves are in deed and in truth ready to give our fortunes and our lives, if necessary, for the freedom and the maintenance of this great Republic which shelters and nurtures us.

This is a war by Germany against all nations. It is a challenge to all mankind and a defiance of the world. The cold catalogue of German atrocities now documented in the government archives of the different nations makes up the most sickening and horrible page in all human history. It is a menace to all human freedom on this earth for generations to come. Civilization itself is in the balance. But the eternal rights and liberties of free people are more precious than peace, and our Nation is fighting for these rights, for democracy, for the right of self-government, for the right to have peace and safety and to be a free and civilized people, and for these sacred rights America is spending her blood and her treasure and will continue to do so until these principles, which are the foundation of the birth of our Nation and the happiness of our people, shall, with God's help, be achieved.

We are fighting for the rights of mankind and for the future peace and security of the world. We have heard the cry of humanity and are going to its relief. We fight for the preservation of liberty—human liberty, individual liberty, and national liberty. We have for over 50 years thought that the scale of our Civil War in which the fathers of many of you and my father fought for over 4 years was unprecedented in the world's history, and it was. But in comparison with the war in which we are now desperately engaged the Civil War seems almost insignificant in its proportions and in its expenditures of treasure and blood.

Our flag stands for the God-given rights of all mankind. It stands for the absolute right to political liberty and free self-government.

America stands for the sovereignty of self-governing peoples, for independence, for free institutions, for the maintenance of justice, for human rights, for national integrity, for freedom of opportunity, for individual liberty, and the constitutional liberty of the world. We are in the midst of a world we did not make and can not alter. Upon America is imposed the herculean task of keeping liberty alive while the rest of the world burns.

The patriotism of America is not merely a name or an empty boast, but a splendid reality. America will never give any of her citizens the slightest reason to be ashamed of her. The

census of 1910 showed 6,646,000 foreign-born adult residents in the United States, and that number had, I assume, increased to 8,000,000 when we declared war against Germany a year ago to-day. The process of Americanization has proceeded much more rapidly and encouragingly than the most optimistic citizen realized at the outbreak of this war. Thank God the melting pot is rapidly dissolving the hyphen.

We entered this war because Germany defiantly murdered 225 of our citizens, sank 19 of our ships, denied our rights to use the high seas, and ruthlessly and insolently violated and trampled upon our rights as an independent Nation, making it impossible for us or any self-respecting nation to submit to her tyrannical insults and outrages any longer.

Germany is waging a barbarous war of conquest and subjugation against the whole human race, and America, like every other nation, is desperately fighting for its own life and existence as a nation. What we are fighting for and what we demand in this war is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; that every peace-loving nation like our own may safely live its own life, determine its own institutions, and be assured of justice and fair dealing by the other peoples of the world as against brutal force and aggression. All the people of the world are partners in this war, and unless justice is done to others it will not be done to us. The program of the world's peace, therefore, is our program.

Everything our Nation stands for is at hazard. Civilization is in danger and all her children are fighting for their lives and liberties. Some carping critics at first said that this is not our war; that we have no business in it; that we are fighting other people's battles. But every intelligent and patriotic citizen now sees that while we are fighting with nearly the entire civilized world, we are not fighting for them any more than they are fighting for us. We and they are fighting for life. This is the most gigantic and horrible war in all the history of the human race, and this is the most critical hour of this war. We have entered this war. The past is behind us. Our face is to the most terrible enemy the world has ever known. Our flag, that has never known defeat, will, in the end, wave in victory over a triumphant American Army. We will never permit the Kaiser to make a "scrap of paper" of the Declaration of Independence. Freedom is unconquerable. We have the resources, the money, the skill, the men, the heroism, the loyalty, the patriotism, the courage, and the determination, and we are going to win this war. But no one can tell when it will end or what it will cost in blood and treasure.

We must mobilize our entire population. Anyone who has an impression that he is not in this war will soon have to get that notion out of his head and make up his mind to do everything he reasonably can as a good citizen, without waiting until he is compelled to. Those people must undeceive themselves. We must all get on a war basis. We must all think together as England and France do. This is no time for rocking the boat. We must have team work. The issue is between democracy and military despotism. It is the forces of civilization against the forces of barbarism.

When the German machine guns and gas bombs are mowing down masses of Englishmen, Frenchmen, and Americans, when the nations of Europe are bleeding from a million wounds and fighting desperately with every possible resource to save their lives and homes, it is no time for Americans, safe and comfortable in their homes, to be inquiring with snug satisfaction and cheerful optimism as to why we are in this war. The issue is whether the human race will hereafter live under the principles of popular self-government or under military autocracy, and the great question for every one of us is, What can I do? We must patriotically answer that question and then do it. In the language of President Wilson to the ship carpenters, "Will you cooperate or will you obstruct?"

My friends, this is the most serious subject you have ever considered in your lives. I am going to measure my words in making a most serious statement and warning to you, and I hope you will always remember it. I solemnly and earnestly say to you that every man and woman in the United States who is entitled to remain under the protection of our flag who does not honestly contribute to the absolute limit of his and her ability toward the winning of this war will sorely regret it every hour to their dying day. War is the trade of barbarism, and we have a fierce, vindictive, and barbarous foe, who is the best prepared that any nation has ever been during the history of the world.

This is the most momentous fight in all time for the freedom of the world. The most important chapter in the history of the human race is being written every minute, and if we fail to support our heroic allies with men, ships, or food and nearly all other necessities, that horrible zone of slaughter known as the western line will move to the Atlantic seaboard. But we are not

going to fail to support our allies, and I want to say here now, for both this generation and the next, that whatever delays have been occasioned in our preparation are not the fault of the American Congress.

We have at all times and are now acting promptly. We have appropriated every dollar asked for, granted every authority asked for, and are responding to every demand that this war has made upon us, and in this patriotic work there have been no Republicans or Democrats. They are loyal Americans. We are pledged to and have got to put this war through without flinching until we win permanent peace by overwhelming victory. This is a people's war. It is not the President's war. It is not Congress's war. It is an American war for the preservation of American rights, liberties, and homes. It is humanity's war for the preservation of freedom on this earth. The civilized world is leagued against the Teuton-Turk fighting for liberty. If the German and Austrian troops and the unspeakable Turk can stand solidly together for everything that is brutal, horrible, and hellish, then in God's name surely we allies can stand solidly together for justice, for honesty, for democracy, for the freedom of the world, and the liberty of the human race.

As long as red blood flows in our veins the free peoples of the world will never submit to the hideous doctrine of German militarism or domination by the inhuman Hun. The sacrifices of the liberty-loving nations of the world will not be in vain. God still reigns above us; Christ did not die in vain. And love, and peace, and honor shall rule the world again. Our boys are soldiers of civilization, and their privations and sacrifices of the dearest ties of human life will not be in vain. They are writing a glorious tale of heroism, and giving their blood and their lives to preserve for us the Government of Washington and Lincoln, and to protect the Declaration of Independence, that all men are born equal and are entitled to life, liberty, and the pursuit of happiness; and that those cherished principles of our forefathers may be our lot to-day and the heritage of our children hereafter.

We have a heroic line of ancestors, who have each in their turn been struggling and fighting for over a thousand years to obtain the freedom and liberty that we enjoy.

Does anyone imagine that this generation, five times as numerous and twenty times as rich, is ever going to be recreant to the trust reposed in us and surrender all the blessings we have inherited? Never on God's green earth!

In the past, as in the present, we have always fought for liberty and the uplift of civilization. Our War of the Revolution in 1776 was to establish the right of self-government; our War of 1812 was to maintain the freedom of the seas; the War of the Rebellion, 1861-1865, was to preserve the Union and abolish slavery; and the War with Spain was to liberate a down-trodden, persecuted, and outraged people. The Stars and Stripes have never been lowered. We entered this war unwhipped and unafraid, and we will so continue to the end.

CRITICS, DEMAGOGUES, AND TRAITORS.

My friends, with your permission I am going to digress for a moment to speak of a matter that is incidental to this war, and has occurred in every other war in this and every other country. You all know that it is the easiest thing in the world to sit back and criticize; and no one objects to honest criticism or to constructive suggestions. But there is mighty little of the criticism about this war that is either honest or constructive or fair. We are a peace-loving Nation. War has always been abhorrent to us, and we were in no respect whatever prepared for this war. That was nobody's fault; it was the sentiment of the American people. Whether it was a mistake or not it is idle now to discuss. We had no merchant marine whatever. We had a very small Army and our Navy was not large, and when we realized that Germany was starting out on a bold scheme of conquest of the world we were wholly unprepared for it. We not only had none of the imperative necessities of war, but we had comparatively nobody who knew how to make them. We had everything to learn and everything to do. It took England two years to get into this war, notwithstanding she was only 25 miles away and had the greatest merchant marine in the world, the greatest navy in the world, and was in position and had always been on the alert for European complications, and was instantly ready to commence preparations for the war on a tremendous scale.

It is only a year ago to-day since we declared war, and yet it would require a library to even catalogue the gigantic preparations that we have thus far made; and while, of course, many people have made mistakes and many more will make mistakes hereafter—and no sane or honest person expects all human beings to be infallible—nevertheless, the record that our country has made during the past year is the greatest admiration of all the civilized world, and the carping critics and demagogues and

treasonable slanderers that are constantly trying to create discontent and to stir up strife and ill will between various classes of our citizens, and to discredit the administration and the United States Congress, ought to be publicly denounced and branded as the traitors that they are and treated accordingly.

I have no patience with any pro-German or pacifist scoundrels who are sowing the seeds of treason. When our country is fighting for her life and liberty, there is no room within her borders for traitors. I care not what they call themselves. No one can hereafter bamstring our national administration and all those who are loyally and bravely defending the freedom and rights of our people.

Fellow Americans, it is time for the liberty bell to ring again. No one has any right to protection under the Stars and Stripes unless he is 100 per cent loyal to the American flag. I do not care what a man's position is who tries to create dissatisfaction. The more prominent he is the more disloyal he is. We must clean out the nests of serpents at home and put Americans on guard to support Americans at the front. This is no time for bolsheviks, self-seeking blatherskites, to be trying to boost themselves by playing upon the prejudices of the people. Possibly a man may be a patriot, and a critic also, but the line of demarcation between criticism and treachery these days is mighty thin: and I ask you as patriotic citizens to look behind the criticisms you hear, and you will find nine times out of ten that not only the criticisms are groundless but the motives in making them are selfish, dishonest, and disloyal; and this is the time for all good American citizens to place everyone in the column where he rightfully belongs. There can not be any fifty-fifty Americans. The melting pot has got to melt. It is time we had a hundred per cent American club in every community.

TRIP ABROAD.

As you all know, I was one of the party of 10 Congressmen who last October and November made a semiofficial trip to England and France, and what is left of Belgium, and took a 2,000-mile trip up and down and backwards and forth along the western battle front, from Switzerland to the North Sea, inspecting the actual war conditions on the ground. We visited the troops on the entire front and went over each of the battle fields where the armies have been desperately fighting for nearly four years; and knowing the scenes as I do, especially Amiens, Rheims, Soissons, Noyon, Roye, Ham, Perrone, Comblès, Albert, Bapaume, and Arras, cities through which I walked a few days ago, and which have during the past few days been the scenes of such a frightful slaughter, this human carnage is fearfully vivid to me. When I think of the men being shot down in these places, as many as five to the square yard, it is such a sickening and realistic horror that I can think of nothing else. I was just behind the French lines and only a few miles away on November 3, 1917, when Prts. Hay, Enright, and Gresham were killed. They were the first American soldiers who fell on French soil in this war. I heard of it the next morning, and I will never forget the impression it made upon me. They gave their all for justice and liberty. America salutes them. Their souls will go marching on for all time; and tens of thousands of America's sons will follow them to their long, long sleep across the sea.

This is the most critical hour in all the history of the human race. The crisis is here. The battle now raging is the most momentous battle in all human history. Picardy may go down to remotest ages as the field of Armageddon. This drive may last for weeks or months, and no one can prophesy the outcome. But the forces of civilization can and will fight many a battle if necessary for victory's sake. The enemy of mankind, drunk with the lust of power, conquest, and spoils, is frantically slaughtering hundreds of thousands of better men, but the struggle is his own death struggle. No nation ever existed which could afford to wantonly throw away its manhood at the rate of 50,000 men a day. The beast will rave and kill wherever his fangs and claws can reach, but his clutches will sooner or later sag as his lifeblood drips away, and in due time the sword of liberty will reach his vitals. Even if our allies are defeated and we have to fight the battle for human liberty alone, America will never permit freedom to perish from this earth. Humanity can not exist half slave and half free. We must and will fight, without counting the cost, until the freedom of mankind is safe. No one man shall ever dominate this earth. Napoleon, Caesar, Alexander, and others tried that and failed, and the German Kaiser will ignominiously fail.

My friends, do you fully realize that, notwithstanding all the terrible horror of the present battles, the real truth is that the battle between America and Germany is still to come? It will end only with the prostration of Germany or the collapse of the United States, because it is the irreconcilable conflict between freedom and slavery.

For 17 days the mightiest military force, the most perfectly organized and heavily reinforced army ever massed in the history of the world, has been hurling itself with maniacal fury against the defenders of liberty and desperately striking on the breastplate of civilization, frantically determined to force a breach through which to drive a mortal blow. The breasts of millions of Englishmen and Frenchmen are the walls of liberty facing and falling before that fiendish German dragon. Behind those vallant defenders of liberty is Paris, and behind Paris is London, and behind London is Washington. While our Army over there is not yet large, American troops are among the defenders, and somewhere in the midst of the barbarous slaughter that is mowing down hundreds of thousands of human beings our boys are heroically flying the Stars and Stripes. In all the annals of time the sun and moon never looked down upon such a ghastly and horrible sight as that unrolled in the path of the imperial warrior's army. Prussian autocracy and avaricious military despotism has already wantonly sacrificed a half million of the manhood of Germany in killed and wounded in this one desperate drive, and the allies have probably lost half that many. It is the most frightful carnage and hideous human slaughter in all history.

In his insane frenzy the mad Emperor fiendishly butchers friends and foes alike, utterly unmindful of any dictates of humanity. Tens of thousands of Germans, as well as allies' soldiers, are left wounded on the battle field to die in a delirium of agony, without food or water or attention. This pitiless monster that has flooded Europe with blood and tears is now drunken with power and conquest, and is striking at the heart of civilization in the hope of making the whole world slaves to Germany. To prevent his success and defeat him will require every man, every ship, every airplane, every gun, every loaf of bread, every pound of meat, and every dollar that America can spare.

My friends, this war is the personal and private hell of the Kaiser. I know what America is up against. We are facing a living and seething hell, and it is time everyone knew it and acted accordingly. I have been there. I have seen it. I believe in telling the truth. I am, in desperate earnest about this situation. I have been talking to you for 30 years, but I never in my life talked to you with such earnestness before. It has been as plain to me as the noonday sun from the first that the United States must sooner or later fight Germany to a finish. It is American against German individually and collectively. There is no halfway station for compromise. There can be no peace until complete victory is achieved. We will make peace with the sword. Our ideas of government are directly opposed to each other, and either Germany or the United States must go down. There is not enough room on this planet for the American flag and the German flag. Unless our indomitable allies win this battle for us we will be face to face with the terrible reality of a death struggle or surrender, and we must forge our weapons of death on a gigantic scale commensurate with our awful task. The issue is between democracy and military despotism. Shall the United States be free or a German colony? We must steel our hearts to this national obligation. No honest citizen can hereafter sidestep his duty to the Stars and Stripes. America is first or it is not. We are either patriots or we are not. Those who are not with us are against us. And everyone who does not stand loyally behind President Wilson and Gen. Pershing is a traitor to our country. We must open our eyes and realize the facts. We must all mobilize behind our Government. Americans, you have got to fight. Otherwise our liberties are gone and our Republic is a dream. Everything our Nation stands for is at hazard. The issue for both America and Hohenzollern is victory or death.

After the war the world will either be German or be free.

Germany was ready at the beginning and has grown stronger ever since. She has lost 6,000,000 men, but she has also glutted herself upon those she has captured. She now has conquered and is exploiting all the men and women and property and resources of Russia, Roumania, Serbia, Montenegro, Belgium, northern France, and northern Italy. Are our liberties to be also placed as a burnt offering upon the altar of that terrible god of brute force and barbarism?

When that atrocious monster and imperial manslayer, the German Kaiser, is finally removed from this earth and is called before his Maker, he will have murdered more human beings and caused more suffering, misery, and loss in the world than any thousand men that have ever been permitted to disgrace this world; and he will, during all future ages, be the most execrated, accursed, loathed, abhorred, and detested human being that has ever lived on this planet.

He will have upon his soul the blood of 30,000,000 men, butchered, blinded, and maimed; and 30,000,000 more innocent

and helpless men, women, and children, brutally degraded, outraged, worked, starved, and tortured to death—all slaughtered and sacrificed on the altar of Hohenzollern greed. He will, in addition to the destruction of 60,000,000 people, have caused untold and indestructible suffering, want, and privation to practically every other human being in the world, not only during this war, but for the rest of this generation.

He will also have caused the destruction and loss of more property in value than all the cost of all the Governments in the world, from the time Christ was born on this earth until this minute. Ten thousand billion dollars could not replace the loss, and a hundred years will be required to restore the destruction—all caused by the heinous ambition of one man and his fanatical and autocratic military satellites.

No meeting of this kind anywhere in the United States to-day can honorably disband without paying a profound tribute to the heroic, brave, and indomitable Englishmen, Frenchmen, and Americans who are to-day giving their life blood for the cause of humanity. These gallant men are falling in a glorious cause, standing shoulder to shoulder and fighting in defense of their own families, their freedom, and their homes. They, with our help, will ultimately win. As sure as there is a God in Israel, the English and the French, fighting on their own soil for their lives, their liberties, and their sacred rights, may be driven back, but they can never be conquered. I can never believe that a just God will ever permit freedom to perish from this earth.

As I saw and read of the conditions under which these gallant soldiers are fighting, I absolutely marvel that the delicate and sensitive mechanism of the human nerve and the human mind can withstand the frightful strain without derangement. Human flesh and blood can not long endure it. Many of the campaigns in our Civil War fill us with admiration, pride, and wonder. But our troops in the Civil War were never compelled to undergo such indescribably furious cannon and machine-gun fire, poison gas, and all the horrors of a thousand infernal regions as the troops on the western front are going through at this very minute. If by the heroic and appalling sacrifice the allies are now making they can stop the Germans, the sacrifice becomes a victory forever famous in the world's history, marking the turning point of liberty's struggle with her terrible foe. The frantic attempt of Germany to strike down France and Great Britain is a challenge to all the courage, resources, and determination of the American people. It is a direct attack upon this Nation, and it directly calls into action and demands the determined exertion of the sturdy qualities that underlie the American character. All honor to the indomitable spirit of France and England! They are glorious allies, brothers standing shoulder to shoulder in defense of civilization. America should not only be electrified by the news from France, but we should reverently take off our hats to France and England to-day. The guns whose roar is heard in London are firing at the heart of America, and many American boys over there are manfully dying every day in defense of the Stars and Stripes. These boys are making a thousand times greater sacrifice than any that we older people can ever make. Life, with all it holds dear, is before them, while with many of us life is largely behind us. They are giving their lives to our Government while we are only loaning our Government a little spare money at what is a good rate of interest, considering that it is the best security on earth. Every man and woman in the State of Colorado ought to buy a liberty bond. The terms are so liberal and easy that everyone can buy at least one bond. And the parents ought to encourage and aid every child to buy some war savings stamps. Besides that, every man, woman, and child should every month contribute something to the Red Cross. If every citizen and child in our State would make that record, we would 10 years from now have the proudest, most popular, and best State in the Union.

I profoundly believe that the English and the French will hold the western front until we can come to their relief. That line may waiver and bend, but it will never break. I can not believe that those heroic people can ever be conquered, and I further believe that this great world war is ultimately going to be won on that western front where to-day the American troops are now gallantly fighting and dying side by side with the British and the French, and the Star-Spangled Banner is grandly floating beside the French and the English flags on the plains of Picardy. When brutal trampers upon human rights trample upon the American flag and strike down boys from American homes who have gone forth to defend liberty, the old spirit of 1776 and 1861 will rise again. It will require at least another year to get fully prepared for this war. But, thank God, American patriotism is being aroused. We must pay no attention to the mistakes of the past. Our faces are to the future;

the enemy is before us; my own son, Edward T. Taylor, Jr., who is as dear as life itself to his mother and me, and the sons of many of you are facing our terrific enemy. We to-day have 1,800,000 boys in arms facing and ready to face the Kaiser's cannon, and we will have 3,400,000 by the end of this year and 5,000,000 by the end of next year. As the German hordes sweep forward, the blood of these splendid American boys is being poured out and their lives given to their country. The barbarous Huns may suffocate our boys with poison gas and mow them down with machine guns, but they never can conquer them.

In God's name let us give our boys the backing they deserve, and they will do the rest. Every time we send a boy away, and every time we write him, let us all say: "Good luck and God bless you. We are all proud of you, and everybody at home is standing squarely behind you; and we will furnish you every dollar and everything else you need to beat the Beast of Berlin." It is for us here at home to see that every drop of this blood shall not be poured out in vain, but shall be rewarded in the victory of liberty. America's time has come. She must make good her liberty or surrender. Is there anyone here who has any thought that America will ever surrender? If we lose this war, what is all our wealth and freedom to us? What is our property, our business, our mines, our fields, or our homes to us or to our wives or daughters if our liberties are gone and we are a subjugated race? America will fight to the last for the things which we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own Government.

From my experience in Congress during this war, and from observations and diligent inquiry in London, Paris, and along the western front during last October and November, I am profoundly impressed with the conviction that the task before our country is many times greater than the American public yet realize. There are a million things to do, but a few of the greatest and most imperative, and upon which we must concentrate our utmost efforts, are as follows:

First. We must coordinate the conduct of this war by the allies. We must have one authoritative head to all of the allied armies, and use them all with the same union and precision that the German Army is handled. We are now preparing to do that by the appointment of Gen. Foch, the great French strategist, generalissimo, and commander in chief of the English, French, Italian, and American Armies. I have great confidence in Gen. Foch. I believe history will accord him the credit of being the hero of the battle of the Marne and of having turned the tide of the German Army and saved Paris and the French Army from being captured. If we had had this systematic work and perfect harmony and union among the allied armies three years ago conditions would have been vastly different now. But all of the allies now realize this necessity, and I have every reason to believe there will be harmony and perfect and effective teamwork from now on.

Second. We have absolutely got to furnish the food and nearly everything else to sustain and supply not only our own Army and Navy but the armies of our allies. This puts an enormous burden and responsibility on our farmers. But they have got to and they will meet it. The farms and resources of our allies are so exhausted during the nearly four years of war that they can not even supply their own women and children and old and disabled men.

Third. We have got to build fully 3,000 ships. To win this war and safely provision our Army and those of our allies, we must practically build an indestructible bridge across the Atlantic Ocean. When 10,000,000 soldiers are fighting in a famine-stricken country and must be supplied from our country, it is imperative that we shall have ships enough to adequately supply the armies with food, munitions, and everything necessary, utterly regardless of U-boats or anything else.

This is, in my judgment, the most urgent and difficult task of all the problems confronting the American people at this time. We will raise all the men necessary and drill and train an army of 5,000,000 or 6,000,000 men and promptly produce all the money necessary to feed and supply our Army and the armies of our allies. But there is no human possibility of our being able to build and equip as many ships as we need or as fast as we need them. However, we are making tremendous strides in ship-building, and we are going to have enough as soon as it is a human possibility to construct them.

Fourth. The next great necessity is aeroplanes. We must create and operate an air fleet that will be the most powerful aerial army in the world. We have absolutely got to get control of the air, and we are going to do so. But it will require the building of possibly a hundred thousand aeroplanes and the training of the half million aviators to man them. This is a perfectly stupendous task and an enormous expense. And while

we have been working with marvelous rapidity it will necessarily require many months yet before we can command the overwhelming superiority of the air that we actually must have.

The aviators in this war are the eyes of the army. They are the cavalry of the clouds. They are as necessary to our Army as food and ammunition. They are our lookouts and monitors from the sky. And the American boys are going to be preeminently the best aviators in the world. David Lloyd-George, the premier of England, in his historic speech, which I heard him deliver in Parliament on October 29, thanking the British Army and Navy for their heroic services in this war, in speaking of the aviators eloquently said:

High above the squalor and the mud, so high in the firmament that they are not visible from the earth, they fight out the eternal issues of right and wrong. They are struggling there by day and by night in that titanic conflict between the great forces of light and of darkness. They fight the foe high up and they fight him low down. They skim like armed swallows along the front, taking in their flights men armed with rifle and with machine gun. They scatter infantry on the march, they destroy convoys, they spread dismay. Every flight is a romance, every record is an epic. They are knight errants of this war, without fear and without reproach. They recall the old legends of chivalry, not merely by the daring of individual exploits but by the nobility of their spirit, and among the multitudes of heroes we must continuously thank the cavalry of the air.

Fifth. This is preeminently a war of recent inventions. The old style of warfare in which my father and the fathers of many of you fought for over four years in the Civil War is practically all obsolete. Long-range cannon of enormous size, bombs, and frightfully destructive instruments charged with ammonel and other explosives, ten times more destructive than dynamite, are the instruments of destruction that are now being most effectively used. We absolutely must construct and teach our boys to operate hundreds of thousands of these terrific man-slaughtering instruments. The only way we can win this war is by beating Germany at her own game. We must fight the devil with fire. The only way to make humanity safe on this earth is to slaughter and utterly exterminate so many Germans that what is left of them will be so glad to be alive that they will be willing forever hereafter to respect the rights of the rest of humanity. For this purpose we must produce cannons and cannons and more cannons.

Sixth. The next important requirement is the construction of tanks. I will not go into details, but a 45-ton tank that will go over a ditch 15 feet wide or shell holes, trees, fortifications, trenches, or barbed-wire entanglements just as if they were cobwebs—I feel that we should have large quantities of these steel monsters manned with cannon to protect the lives of our boys, and especially to attack the German concrete pill boxes. I am emphatically and most desperately in earnest in urging our Army officials to use more cannon and bombs and tanks, gas, and every other conceivable instrument of destruction rather than use so much flesh and blood. I am willing to vote almost any amount of money for all kinds of modern frightful man-killing apparatus for the purpose of saving the lives of our boys as much as possible. I would rather spend a hundred million dollars on guns and ammunition in one battle than to sacrifice 25,000 of our boys. This is a war of brains, ingenuity, and inventions, and we have got to rapidly learn and exercise greater skill, ingenuity, and expenditure than the greatest military geniuses the world has even known.

There will from now on be many thousands of sorrowing men and women in this land. Their anguish will be too deep to be expressed or to be comforted by words. But I know that there will not be a single one of them who would recall the valiant dead to life at the price of their country's dishonor. The example of our brave boys who are falling to-day, and who will hereafter fall, will enrich the life and exalt the purpose of the human race. These millions of young men, willingly sacrificing everything this world can offer them in obedience to a higher call, are grandly ennobling our country. The fallen will illumine with a fresh luster the glory of their home land and touch with a new dignity the households which they left for the battle field. There will be millions who will come back and live to tell children now unborn how a generation before loyal American sons of patriotic sires were willing to leave ease and comfort to face privation, torture, and death to win protection for the weak and justice for the oppressed. And let me again repeat that these returned heroes will receive the plaudits, the honors, and the rewards that are justly due them. They will during the balance of their lives rule this Nation both in politics and in business. And the destiny of our country will be safe in their hands. Many a man who heretofore has not been able to control himself will hereafter become master of himself, his habits, and his circumstances. Many a man now regarded by himself and his friends as a failure, with little to hope for in the future, will come back from the war with head erect, eyes steady, grip firm, and an air of confidence in himself never seen

before. We will see the unsuccessful boy transformed into a seasoned, disciplined and efficient, honored, and successful man.

Horrible as it is, this war has some compensation for those who shall do their part. Many men will find their success in life began the day they took their place in the ranks of the American Army. I never knew a man who went into the Civil War on either side and who returned with an honorable discharge and worthy record express regret that he went to the army. I have heard many who did not go express the keenest regret that they stayed at home; and I prophesy here and now that, unless there is some very good reason, the red-blooded American boys who can and do not enter this war in some way will have occasion to sorely regret it in after life. America expects everyone to do his duty.

There will be many thousands who will never come back. For them there will be for ages to come sacred memories in a myriad of homes for the brave, chivalrous, and loyal young men who gave up their lives for freedom, for justice, and for the right. Of them I may fittingly close my humble tribute by paraphrasing a few words of our martyred President, Abraham Lincoln, in his immortal address on the battle field of Gettysburg, by saying:

The world will little note nor long remember what we say here, but it can never forget what they did. It is for us, the living, to be here dedicated to the great task of taking up and carrying on the unfinished work which they have left, and inspired by their illustrious example prove ourselves worthy of the trust which this Nation has imposed on us. That we here highly resolve that our honored dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, and for the people shall not perish from the earth.

My fellow Coloradans, when the future historian comes to write the record of this terrific war, the greatest and most momentous in all the history of the human race, I know the sons and daughters of the Centennial State will be forever recorded as 100 per cent loyal to the American flag.

The Coast Guard in the War.

EXTENSION OF REMARKS

as

HON. GEORGE EDMUND FOSS,
OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 20, 1918.

Mr. FOSS. Mr. Speaker, I desire to call to the attention of the members of the Committee on Naval Affairs the effective service which is now being performed by the Coast Guard during the war, and urge upon them the consideration of the bill now pending before that committee and recommended by the Secretary of the Navy, which remedies some of the inequalities and injustices in the matter of rank and pay of the officers of the Coast Guard Service.

I have always felt especial interest in the Coast Guard Service from the very beginning of its establishment. On February 9, 1912, in the second session of the Sixty-second Congress, I introduced a bill, known as H. R. 19805, to establish a bureau in the Navy Department to be known as the Coast Guard Bureau. I think this is the first bill ever introduced in Congress providing for the establishment of such a service. The title of the bill was: "A bill to establish a new bureau in the Navy Department, to be known as the Coast Guard Bureau," and the bill was as follows:

Be it enacted, etc., That the President of the United States be, and is hereby, authorized to appoint a board consisting of seven persons, one representative of the Department of Commerce and Labor, two officers of the United States Revenue-Cutter Service, and two officers of the United States Navy, who shall devise and report to Congress, as early as practicable, a plan for the transfer and consolidation of the United States Revenue-Cutter Service, the United States Lighthouse Service, the United States Life-Saving Service, and the United States Coast and Geodetic Survey, into and under the jurisdiction of a new bureau in the Navy Department to be known as the Coast Guard Bureau of said department, but to form no constituent part of the Navy proper except in time of war.

The bill was not considered during that Congress, but in the Sixty-third Congress, Congressman Adamson, chairman of the Committee on Interstate and Foreign Commerce at that time, and now a distinguished member of the United States Board of Merchandise Appraisers in New York, introduced a bill to provide for the consolidation of the United States Revenue-Cutter Service and the United States Life-Saving Service, which was

favorably reported by the committee and later became a law. On the 20th of January, 1915 (page 1968 of the CONGRESSIONAL RECORD, vol. 52, of the third session Sixty-third Congress), when the bill was under consideration in the House, he was kind enough to give me credit for the initial step in the consolidation of these two services in these words:

For 14 years that the gentleman from Illinois [Mr. MANN] and I were on the Interstate and Foreign Commerce Committee together, there came every Congress from the Senate to our committee the Frye bill, to provide for the Life-Saving Service the right of retirement. That bill was met by the objection that it proposed a civil pension. I and other members of the committee said, and the gentleman from Illinois did not object to it, "Go back into your fighting organization; go back into your military service, and ipso facto you will become entitled morally and legally to these retirement fees." They finally took us at our word. We objected to their becoming the vanguard and entering wedge for a great civil pension list. Finally Mr. Foss, of Illinois, introduced a bill while he was in Congress and chairman of the Committee on Naval Affairs, to reunite the two services that originally operated as a military service. It was not done then, but since then it has been indorsed by two administrations. Secretary MacVeagh during his administration caused the two branches of the service to agree on the terms of this bill, and he approved it. When the Republicans went out of the administration of the Government the present Secretary of the Treasury, Mr. McAdoo, indorsed the same bill, and the President of the United States indorses it and urges its passage.

As I said before, this bill became a law, but it did not go as far as the bill which I had previously introduced. My bill provided for the consolidation of not only the United States Revenue-Cutter Service and the Lighthouse Service, but also the United States Life-Saving Service and the United States Coast and Geodetic Survey, and I proposed to unite all these services into a Coast Guard Service to be placed under the Navy Department. In other words, the idea was to combine all the smaller maritime services into one organization to be operated as part of the Navy in time of peace as well as in time of war.

I believe that such consolidation would mean greater economy and efficiency in governmental administration. I trust that some day this will be carried out.

I wish to speak now of the service which the Coast Guard is now rendering during this war. Upon the declaration of a state of war the Coast Guard, with all its personnel and equipment, was automatically transferred from the Treasury Department to the Navy Department in accordance with existing law. All vacancies were filled at the earliest opportunity and, in addition, the crews of all vessels were placed on a war footing. At the Coast Guard stations such additional men were authorized as were necessary to place them in the highest state of efficiency. The vessels of the Coast Guard were assigned to the several naval districts, generally those to which they were most conveniently located. Immediate steps were taken to extend and perfect the coastal communication service, and to this end 300 miles of new submarine telephone cables were laid and 750 miles of overhead lines constructed, this being additional to the extensive telephone system heretofore maintained by the Coast Guard. Connections were made to Coast Guard stations, light-houses, and other prominent outlying points along the coasts. These extensions and improvements have now been perfected and are in successful operation. The construction of additional lines and the laying of new cable is continually being undertaken as the needs of the coastal communication service develop. Through the coastal communication service and the patrol system from the coast stations immediate communication may be had from Washington to any point on the Atlantic coast from Maine to Florida.

At the beginning of the war there were 229 commissioned officers and 3,882 warrant officers and enlisted men. The personnel of the Coast Guard now consists of 227 commissioned officers and 4,683 warrant officers and enlisted men. A recruiting and training station has been established in connection with the Coast Guard Academy at Fort Trumbull, New London, Conn. Here all recruits for the service are taken and subjected to a period of intensive training of three months' duration, both on shore and on board a cutter used for training purposes.

In September last, by direction of the Secretary of the Navy, six of the seagoing cutters were thoroughly equipped, outfitted, given larger batteries than those used in peace time, and they are now operating in the submarine zone under the direction of Admiral Sims. Many officers of the Coast Guard are now detailed to various duties in the Navy proper. Five naval training stations and two naval aviation stations are under the immediate charge of Coast Guard officers.

Under the provisions of the espionage act, two Coast Guard officers have been made captains of the port and given authority over all merchant vessels entering and leaving the ports of New York and Norfolk. The rules prescribed in accordance with law by the Chief of Engineers of the War Department for the loading of high explosives are being enforced by the Coast Guard in the port of New York. For this purpose the captain of the port has under his direction a number of harbor craft and about

300 officers and men. New anchorages for the loading of explosives have been prescribed at safe distances from the thickly populated sections of the harbor, and every ammunition ship now is loaded under the immediate direction of a commissioned Coast Guard officer, assisted by a sufficient number of armed guards to insure that the regulations of this most important duty are complied with rigidly.

The patrol and protection of the connecting waterways between Lakes Superior and Huron have been intrusted to the Coast Guard. Through these waterways most of the iron ore for war purposes has to pass, and the importance of the safe passage of ships carrying this ore and other essential materials is of first consideration.

Under the directions of the various naval district commanders, the cutters are performing such patrol and other duties as are found to be necessary. At various times when not employed in strictly military duties, these vessels are patrolling the coast to render aid to distressed vessels.

Such is the efficient service of the Coast Guard in this war.

Accomplishments of the Present Congress.

EXTENSION OF REMARKS

OF

HON. JOHN JACOB ROGERS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 23, 1918.

Mr. ROGERS. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I print a letter recently sent by my colleague, Mr. LUFKIN, to a constituent who had sent him one of the "Hurry-up" postals. Mr. LUFKIN has made a compilation of the accomplishments of the present Congress, and sets forth this compilation in his letter. To my mind it establishes conclusively that any delay in the prosecution of the war can not be attributed to the Congress. Mr. LUFKIN presents his material in a spirit entirely free from any partisanship, and I think his letter will be found a useful and interesting summary of the work of the Congress:

APRIL 22, 1918.

HENRY F. BROWN, Esq.,
Gloucester, Mass.

MY DEAR MR. BROWN: I am in receipt of a post card signed by you, bearing at the top the words, "For God's sake, hurry up!" which appeal was the last public utterance of that distinguished American jurist and diplomat, and likewise son of Essex County, Joseph H. Choate, delivered on May 11, 1917. Your post card is one of several of a like nature which have been signed by residents of the sixth congressional district and mailed to me. The senders are apparently imbued with the idea that Congress has been negligent in its uppermost task at the present time, to wit, in backing up the administration in its preparation and conduct of the present war.

I cheerfully agree with the sentiments expressed on this post card and believe that the time has come when the whole country must "hurry up." I can not concede, however, that Congress is the particular branch of the Government which needs such a stimulant at the present time. A brief consideration of the accomplishments of the legislative branch of the Government since war was declared, a little more than a year ago, will, I believe, convince even the most critical that in the matter of war legislation the Senators and Representatives have done their duty.

No intelligent American will deny that there is need for applying Mr. Choate's words, "For God's sake, hurry up!" in many directions. On the other hand, no intelligent American who has been a student of affairs in Washington during the past year will venture to say that the United States Congress has not been keenly alive at all times to the demands of the administration, both in appropriating money to run the war and in providing legislation to facilitate and make more efficient and effective its management. In fact, the main criticism of people here is not that Congress has been a laggard or has been unwilling, but that it has been far too subservient in delegating its legislative authority to the will of the executive branch of the Government and has appropriated almost unheard of sums of money for the conduct of the war when called upon by the President, with little or no debate. Personally I believe that such criticism is just as unfair and uncalled for as is the criticism of the men who hold that Congress needs to hurry up. To my mind the President, as the Commander in Chief of our Army, is the one great leader in this crisis, and there is but one thing for an American Congress to do, and that is to back up with all the speed and alacrity possible the recommendations of this American Commander in Chief for the prosecution of this American war.

In the last session of the Sixty-fourth Congress, which expired on March 4, 1917, and from the time of the declaration of war last April until the adjournment of the first session of the present Congress, in October, there was appropriated and authorized, at the call of the President, approximately \$21,000,000,000 for the conduct of the war during the present fiscal year. This amount represents more money than was ever appropriated by any body of men that has been convened since the world began. This immense sum was appropriated for the enlargement and maintenance of our Army and our Navy, for a colossal extension of our air and submarine service, for the construction and establishment of an immense fleet of ships to transport our men and supplies to the fighting line across the seas. Included in the above items were \$640,000,000 for the air service alone and \$500,-

600,000 for new ships. In addition, that initial session after the declaration of war provided legislation for placing the food and fuel supply of the country on a war-time basis, for the issuance of the first and second liberty loans, for the selective-draft system of increasing our Army, for the control of alien property, for the internment of alien enemies and punishment of persons suspected of disloyalty to their country, for the soldiers' and sailors' allotment and war-risk insurance legislation, and for a new revenue law to help provide the money to pay these greatly increased expenses, to say nothing of many minor laws asked for by President Wilson and his advisors to help fight the war to a speedy and successful conclusion.

If there has been delay or inefficiency in the execution of this gigantic program Congress can not be held responsible. Congress can only make the laws and provide the appropriations; the executive branch of the Government must carry them out. Congress has no authority in the appointment of these great boards and bureaus charged with the task of executing the work for which the money and legislation have been provided, and can not remove them when it is found or believed that inefficiency and extravagance exist. We can only point out their shortcomings to the executive branch for such action as it may see fit to take.

That an internal quarrel among the members of the Shipping Board has resulted in approximately a year's delay in providing the necessary ships to transport our Army across the sea can not be laid to the door of Congress any more than can the almost absolute failure of the aircraft program up to the present time. The apparent unsatisfactory condition of the Quartermaster's Department and the Ordnance Department, and the deplorable lack of equipment and supplies at some of the cantonments, which were brought to light by Senator CHAMBERLAIN and his Committee on Military Affairs, can not be charged to Congress; but the great improvements in many directions since that investigation can be credited to the courageous and self-sacrificing attitude of the Oregon Senator and his colleagues on the Committee on Military Affairs, including our own Senator WEEKS, in calling them to the attention of the country. Congress promptly provided the legislation for the conservation and regulation of the fuel supply of the country last summer, but it can not be held responsible for the fact that the system created by the administrator broke down absolutely in midwinter, resulting as it did in the almost complete paralyzing of our industries during that critical period for days at a time.

The record of the second session of the Sixty-fifth Congress, now in session, equals if not excels the preceding one in the amount of important war legislation which has been or is about to be enacted. No session in the history of the country has accomplished so much. Take the House of Representatives, for example. Since the Christmas recess we have been in session every day, Saturdays included, with the legislative hopper grinding steadily on. With the session only four months old we have passed an urgent deficiency bill of over \$8,000,000,000, as well as all of the regular appropriation bills except four. The great naval bill for the next year, appropriating as it does over \$1,000,000,000, is now under consideration, to be followed by the appropriation for the Army Establishment, which will contain appropriations of upward of eight billion more. In addition to all this, we have passed two bills appropriating \$110,000,000 for providing houses for employees at shipyards and munition plants, \$200,000,000 for the Farm Loan Bureau, \$8,000,000 as a loan to encourage the wheat raisers of the Northwest, and \$19,000,000 for river and harbor work recommended by the Army engineers as war necessities. Moreover, in these four months the House has passed legislation protecting the civil rights of soldiers and sailors, for the Government operation of the railroads during the continuance of the war, for the drafting for service in the war of the resident aliens of our allies, for further amendments to the war-risk insurance act, for the third liberty loan, for the great War Finance Corporation, for a radical change in the workings of the draft law, for preventing the destruction of war material, and many minor military bills asked for by the War Department; 14, for example, in one day.

In conclusion, may I repeat that the accomplishments of one short year indicate that Congress is heeding Mr. Choate's advice, and has been heeding it since the very day when war was declared. More power to the propaganda inspired by Mr. Choate. Let every American get behind it. Let him practice it as well as preach it; but let him also sound the slogan of "For God's sake, hurry up," not at Congress but in every direction where there is the least sign that things are slowing up. In an effort to have the whole American Nation running at full speed, with every cylinder working cleanly and giving the greatest power and efficiency on the least possible supply of gasoline.

Sincerely, yours,

W. W. LUFKIN.

Our Aviation Program.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 25, 1918.

Mr. TILSON. Mr. Speaker, in accordance with the permission just granted to extend my remarks in the RECORD I insert here a speech delivered by me on April 4, 1918, at a mass meeting held under the auspices of the Aeronautical Society of America in New York City:

Mr. Chairman, ladies and gentlemen, I have been interested and, on the whole, pleased with the calm and dispassionate attitude taken by the two members of this society who have addressed you to-night.

At the outset I would have you know that my attitude is one of extreme friendliness to the War Department, and especially to that part of it charged with the duty of creating and carrying out our aviation program. The possibilities of the use of aircraft for purposes of national defense have appealed to me ever

since that summer day almost nine years ago when I saw one of the Wright brothers, with Lieut. Foulis—now Brig. Gen. Foulis—as a passenger, make the first official flight from Fort Myer to Alexandria, Va., and return.

That flight was the official beginning of the air service as a part of our military activities. Unfortunately, we did not do much more about it for several years. In fact, very little of anything that was military in character seemed to interest us in those days. I recall my going upon the Military Committee when I first went to Congress. I was astonished to find that it was considered by most people as a committee of no importance whatsoever. Anything connected with the Military Establishment appeared to be of no particular interest to the people, and many of my friends interested in my political future advised that I attempt to get off the Military Committee just as quickly as possible and get on some committee in which the people of the country would take some interest. Therefore, when we come to determine where the blame for our lack of preparedness lies—well, we must not attempt to saddle it all on one individual or political party. There is blame enough to go around among us all, and we are all justly entitled to bear a share of it. [Applause.]

As a people we were not interested in the subject of military preparedness and we are paying for it now. [Applause.] One of the penalties we are paying for it is realized when we reflect that at the end of the first year of the war we have only a small army in France, and that with the exception of the shoulder rifle, which the infantryman carries, our soldiers have not a single weapon with which they can defend themselves or help win the war, except what they get from our friendly allies. [Applause.] For machine guns they must use the French Chauchat for the light gun and the French Hotchkiss for the heavy gun. These are both chambered for French ammunition, so that for the machine guns we must use the French ammunition, mixed along with the American ammunition which is used in our rifles.

As you know, for heavy guns we have sent comparatively few cannon abroad. We must use cannon drawn from our allies, and after the great number that they have lost during the present great onslaught into Picardy I am afraid that we are going to be hampered in regard to heavy guns.

It has been outlined to you by previous speakers how that in the matter of airplanes we have to rely upon the French for protection. How long that will continue I do not know. I am not inclined to blame any one person in particular. It is all a part of the price we are now paying for our wrong attitude on matters of national defense. These aeronautical engineers, this aeronautical society, in their honest efforts to find out what the trouble is, so that if possible they may help correct it, have no doubt come upon some of the reasons for the delay in the matter of airplanes.

I am advised that the elementary-training planes and now a few of the advanced-training planes are coming along. I think we may say that the problem, so far as the elementary-training planes are concerned, is practically solved. The advanced-training planes will probably not cause us much difficulty. The trouble, as we now know, is with the battle planes. It is doubtless true that we have not realized anyone's prediction who has made a prediction on that subject. The worst is now known. Let us face it bravely.

I was one of those who, a number of years ago, urged a larger use of airplanes. Even in the Post Office Department I have long advocated their use for carrying the mails. Not that I thought mails could be carried economically by air service now, although I thought it was quite possible that very important mail could be carried advantageously between a number of our larger cities. It is very gratifying to note even the tardy recognition by the Post Office Department of the wisdom of the idea. What I had in mind then was a development of the use of the airplane not only for peace purposes but in order that in case of war we should be just so much further advanced along that line. [Applause.]

The airplane having been invented in this country in imitation of our own American eagle, we should have taken to the air and there reigned supreme. We did not do it. Instead we dropped it.

The more imaginative Frenchman took it up, to some extent as a sport, for it is surely a master sport, and as a result it was greatly developed in France. The practical, military German, of course, took hold of it and put it right into the military program in earnest, so that when the war came on we found France and Germany substantially equal in air service, although Germany was probably ahead for purely military uses.

As the war went on, as has been described to you, first one side went ahead and then the other. At the Battle of the Marne

the Germans used the old Taube. On the French side the old Nieuport, the Bleriot, and other machines of various types were soon pressed into service. Next came the Fokker on the German side and gave superiority. Then an improvement of the Nieuport and others shifted the balance of the scale toward the French side, and so on, and the chapter has not yet ended. In the meantime we were doing practically nothing.

The Mexican-border trouble came on in 1916. A considerable number of National Guardsmen were sent down to the border, my own regiment among the rest. Airplanes would have been specially helpful down there, because the Mexicans did not have any. It would be a picnic to use airplanes over an enemy that has none. A portion of such airplanes as we had were sent down—I do not know just how many; a very few—and our aviators attempted to fly them. As you all remember, in the higher altitudes they did not work well. They would not fly over the Mexican mountains. A little four-page newspaper, published in the town where my regiment was stationed, printed a tabloid editorial one day to the effect that the entire air service was out of commission because the string necessary for repairing the machine had broken. [Laughter.] Work was begun on an improved engine, and by the end of that year we had one capable of producing 160 horsepower and able to climb over the Mexican altitudes. In the last month of 1916 we were making regular trips from Columbus, N. Mex., down to Colonia Dublan, where Pershing and our men were at that time. It showed that we could move things if we chose to do so.

Our progress since we came into the war has been described to you by those who have preceded me here this evening. There have been a number of serious disappointments in connection with the air program, some of them relating to the Liberty motor. I do not believe that it was the deliberate intention of the Signal Corps officials to deceive the people of the United States in regard to it for any sinister purpose. If there was a bit of camouflage used, I prefer to believe that it was intended to produce a proper psychological effect. It was probably figured out that if we could work up this great Liberty motor, as Mr. Cammen has described to you so effectively, and spring it on the American people, it would have its psychological effect, and it did. If it could have been carried through without a hitch anywhere, it really would have been a great thing. [Laughter.]

The purpose of this society and of this meeting in particular, as I understand, is not simply to criticize the administration of the air service, and I am glad of that. The load that these men are carrying in this great war problem is already too great, and no one with the slightest bit of patriotism would desire to add one single burden. The only thing any of us should consider is how can we help make matters better? Is it better to gloss over patent defects and cover up the weak spots, or is it better to open them up, reveal them to the sunlight, and, if possible, cure them? [Applause, and cry of "I agree with you" from back of hall.]

In my humble judgment there is only one way to answer that question, and that is to face the facts squarely as they are, the unpleasant as well as the other kind. Let us face the facts squarely and try to meet them.

I came here, as I said in beginning, in a spirit of the utmost friendliness to our air-service administration. I know the head of the air service very well. He is a scientific man, a technical man, and in my opinion a perfectly splendid officer. He has had unusual opportunities to see the working out of aircraft in war conditions across the water. He is a great enthusiast, as well as a scientific man. For my part I do not know any man in the Signal Corps of the Army that might have been better chosen, if you or I had been choosing, than Gen. Squier. [Applause.]

It is not inappropriate to say at this point, ladies and gentlemen, that I do not believe that this country adopted the right system in the beginning for working out such problems as the production of airplanes and munitions generally. Army officers are fine men. They are the best soldiers in the world, we believe. They are trained as fighting men, but they are not trained as great captains of industry. Consider the things that we have to produce in a war like this. Take the large ordnance and quartermaster problems for example, as well as the aviation problem. These are not fighting men's problems. They are industrial problems; they are engineering problems. [Applause, and cries of "Yes!" "Yes!"] In my judgment this initial mistake is at the bottom of all our trouble. We unload upon the shoulders of our fine Army officers such work as never should be unloaded upon them. They are not trained for it, many of them are not adapted to it, and they ought not to have been required to do it. [Applause.]

Great Britain had to make a change after she had tried another plan for a short while, and the change was so great, and it affected the people all over Great Britain to such an extent, that it played its part in a complete change in the administration, the overthrow of the cabinet, and the forming of a coalition ministry, with a separate department of munitions. It is a civilian department, so that instead of having majors and lieutenant colonels in charge of large manufacturing enterprises captains of industry, who have been trained to do these things, are put to doing them; and they have made a great success of the ministry of munitions in Great Britain.

We began originally on the other plan, loading large industrial enterprises upon the shoulders of military men, in many cases entirely untrained for such work. You can not make a Carnegie, a Gary, or a Schwab out of an Army officer who has been trained for a fighting man simply by appointing him as the head of a bureau. It can not be done so easily. Neither will it serve the purpose entirely to bring in men and put uniforms on them. I care not how great or important they may be in the industrial world, you can not make Napoleons out of them by doing that. They do not thus become great soldiers necessarily, and instead of helping them as business men you hamper them from the moment that you put the uniform on them. [Applause.]

Here is the story as it is usually told. Men who at home were general managers of great industries are brought down to Washington. A major's uniform is put on them, and then they are subject to the orders of some little insignificant lieutenant colonel who perhaps would have been their office boy, or at best their bookkeeper, back at home. [Laughter and applause.] Instances bordering on the amusing are frequently arising in this connection. I shall not forget the malapropos feeling I had one day in calling for Mr. Wigmore, the great authority on evidence. Anyone who is a lawyer knows about Wigmore. A judge or lawyer uses his great work on evidence as a Bible. [Laughter.] Men of the law give him a very high place. When the war came on he came down to Washington, and they made him a major. When I asked for Maj. Wigmore it really sounded funny, but there he was a major, and any little lieutenant colonel in the Judge Advocate General's Department could put it all over him. [Laughter.]

The great surgeon, Dr. Mayo, now a major in the Medical Corps, came down to Washington and appeared before our committee asking for higher rank, not for himself, but for other surgeons who came in as reserve surgeons. He said that as long as he had his uniform off he could make himself heard and his influence felt, but just as soon as he put on a major's uniform he said he had just about as much weight, authority, and influence as a bell hop at a hotel. [Laughter and applause.]

If we were starting anew to create a military establishment, I am persuaded that we should never give military rank to any but military men, and that our great staff corps would be formed on different lines. We have started under the other system, however, and I suppose the best possible way is to bring down the best men we can find along various necessary lines, give them commissions, and let them advise the military men in charge.

We are missing a great opportunity in not having the aviation program in full operation at this particular crisis. What work our airplanes might do now in Picardy and Flanders! What great opportunity for psychological effect if we were ready!

The Germans have rarely lost an opportunity to work the psychology of the game. The first thing they sprung was the big 42-centimeter gun. Nobody had ever heard of such a gun being mobile or semimobile until the Germans were actually using them. It appealed to the imagination of the German people and other people.

Next came the Zeppelin. The Zeppelin can be written down now as a failure, so far as any offensive use is concerned, but it struck terror to the people in England when they went over, one after another, and dropped bombs on London.

Then came that fatal day at Ypres, when 50 tons of chlorine gas to the mile was turned loose on the unsuspecting Canadians and English who were holding that sector. We all know what terror the submarine has created. In this latest and greatest battle at the psychological moment, when the British lines of defense were bent and almost broken, we hear of the monster 75-mile gun bombarding Paris.

The best thing to be used on our side to produce the proper psychological effect would be the very thing we started out to create, a great fleet of airplanes. A few hundred planes would have helped materially, while a thousand or so ready for action in this great battle would have struck terror to the enemy, and

if anything could have broken his morale that would have done it. [Applause.] I am sorry that in this hour, when there is so much need of them, we are not able to throw in a few thousand airplanes to help in the time of need.

It is shown in the dispatches that in the present battle, where the fighting planes swoop low and use their machine guns, they inflict severe losses upon the advancing ranks of the enemy. The dropping of bombs from airplanes is not an experiment, but we know from what has been done already that great damage can be done. Great possibilities are offered by the use of airplanes of this kind, and if used in great numbers, not only against personnel but for wrecking buildings and setting them on fire, would do more than anything else to destroy the enemy and his morale.

One of the causes making for delay in the aviation program has been suggested by some, but has not been mentioned here to-night. It is that we have been too much inclined to go in for the best that ever could be produced, too much relying upon the saying that the best is none too good for us. You remember that old Biblical admonition to "prove all things." That is a proper course to pursue, and we ought to go on proving and trying to improve everything just as long as it can be improved. It is well, however, to remember the companion admonition to that one, which is "Hold fast that which is good." We ought not, in the hope that we are going to get something better than anything that has ever been before, let go that which we know about and which we can produce, expecting something better out of the future.

A similar thing has happened to us in our machine-gun preparation. We had some good guns available. There was the Lewis gun and the Marlin gun, at any rate. Both had been made and were in production, so that they could be turned out in quantities. Instead of supplying ourselves with Marlin and Lewis guns and others that we could get, we waited and went on developing some other gun until finally we have developed the Browning gun. This is an excellent gun; I think the best gun made—when we get it. [Laughter.] Meanwhile we were practically without machine guns for any purpose. It should be said, to the credit of the Aviation Service, that it was unwilling to build its program upon any gun not yet in actual production. As a result, orders were placed for 40,000 Marlin guns for the fusilage gun and 40,000 of the Lewis guns to use as a flexible gun.

It is said that our same inventive propensity has operated to delay our making the French 75. You know the history of the French 75-millimeter gun. It has long been considered the best gun made. The secret of the recoil is one that was not permitted to be known generally to the officers of the French Army. Only a few officers of the ordnance department of that country were permitted to know the secret of the recoil.

When we came into the war the Frenchman was more than glad to welcome us. When it appeared that we had only a few 3-inch pieces—so few that it did not seem worth while to take them over, and that it was best to use them for training purposes and make the 75—the Frenchman brought over his 75 and said, "Here is our matchless gun; take it just as it is, recoil and all." He took it down and showed us the whole thing, including the wonderful recoil, that is not usually shown even to French officers. [Applause.] What did we do?

It was said in the Senate the other day that we spent six months trying to improve the recoil. [Laughter.] One bright French officer expressed an element of truth when he said recently, "You Americans are so inventive. You are our despair." The very best attainable should always be our aim, but without relinquishing that aim we should hold fast to that which is good, to that which we have tried and have in hand, until we have attained the better or best.

Mr. GIBSON. Might I ask, if by any chance you hold out a ray of hope or a little word of cheer, if the conditions which you admit are conducive to delay in Washington are about to be changed? Can you tell us that from your investigator's position?

Mr. TILSON. Yes; there is hope even in the air program, which has been so fully detailed to you by others to-night. There is hope in other directions, also, especially the machine-gun direction. We are making the light Browning gun; in fact, it is now coming into production, and we are making the other two that I spoke of. By the end of this year we ought to be well taken care of in the matter of machine guns. Meanwhile, we are going to use the French guns, and we are told that they have plenty.

Mr. GIBSON. I mean, are we going to change from that condition where a good man can not operate because he is an officer to the condition where a manufacturer can get busy and can give us the things we have not got?

Mr. TILSON. I am afraid that is some distance off. I started out by advocating that very thing—that we should have a bureau of munitions, subject to the President, to report directly to him, and be held by him responsible for the production of these things made in accordance with the needs of the Army. We have, however, gone in upon the other system, which, in my judgment, is the wrong system, and it is a query in my own mind whether we would not lose more by turning things topsy-turvy now in trying to take up a new plan rather than go on with the wrong system and try to work it out. Meanwhile, the Army men are being trained in the industrial positions which they are now compelled to occupy.

A VOICE. Could we possibly lose anything by changing from a system which gave us one aeroplane in a year and a half? [Laughter and applause.]

Mr. TILSON. Well, it would look as if we could improve upon that, and I think we shall.

A VOICE. You can move that one, anyhow. [Laughter.]

Mr. TILSON. If the system that is already in use has produced just one aeroplane, but has taught the lesson of how to produce more, that would be something to say against starting in now to build up a new organization.

A VOICE. You just said there would be only 31 more produced in July.

Mr. TILSON. No; some one else said that; but I believe that is the information that has been reported from the Senate, and the Senators have been holding an investigation, which the House committee has not. The air service, however, is going on with the training planes, and, as I told you, they are getting plenty of these to train the men. Of course, there are those who say that the men ought to train in the battle planes, and I believe that as soon as possible the men ought to train in the kind of machines that they are going to fight in, because if they do not they are going to get used to running the usual training machines and it will take them some time afterwards to learn how to run the battle planes. I think myself we ought to get to training on battle planes just as soon as we can.

A VOICE. Do you not think it would be advisable for the Government at the present time to use what is acknowledged by the aviators in France as the most successful motor that they have been completing here before the beginning of the war rather than working upon a motor that they are trying to perfect, an automobile motor that has been in existence for 19 or 20 years, and in 6 years' time doing what one man could do in one month alone? It is well known that the oil system has nothing to do with the functioning of the motor. It has something to do with the motor's life and running power. If the functioning of that Liberty motor does not give them more power, why it is best to go back to the other. I suggest that the public of the United States and the citizens of the country should immediately demand the Hispanos to be built, and not continue on trying to improve a motor that could not be a success over the Hispanos.

Mr. TILSON. The gentleman has touched upon a matter that I have tried to bring out, and that is that we should make a tried gun, or a tried motor, or a tried anything else rather than delay too long in an attempt to bring out something new. If the Hispanos motor is a good one, or if the Rolls-Royce, the Su-beam, or any other that is in production is a good one, we should have a number of those and go on making them until we are sure of something better. [Applause.]

A VOICE. As far as the Hispanos improvement in motors is concerned, the United States Motor Car Co., and a number of men working upon the Liberty motor—I say that the Packard Motor Car Co. has not been working upon the Liberty motor all that time in its improvement. I have been working only two and one-half months on a motor which will overrun the Liberty motor, or any other motor about three times, and I will complete that motor in three weeks.

Mr. TILSON. I hope the gentleman will succeed in doing what he says, but I hope that we shall not halt the aviation program to wait for the gentleman's motor.

Just a word more and I am through. It is admitted that everything is not well with our aviation program. There have been disappointing delays, doubtless more disappointing to those in charge than to anyone else. Those not acquainted with the nature of the obstacles to be overcome become impatient. Some demand that Congress do something without indicating just what. Others from force of habit abuse Congress for everything. I am no apologist for Congress. I am on the minority side and in no wise responsible for the party in power. If so inclined I might make political capital out of the situation. I would scorn such a thing. I wish to say to you, ladies and gentlemen, that you can not legislate motors or aeroplanes into

existence. I wish to say further that Congress, though controlled by the party opposite to my own, has, with my consent and by my help, appropriated every penny that has been asked for by those in charge of the aviation program, and it has given them any legislation that they deemed necessary for the working out of that program. No officer in the air service would attempt to fix the blame upon Congress.

The President of the United States is the Commander in Chief of the Army and the Navy. All the executive departments are under his control, as they should be. What has been referred to is all a matter to be worked out by the executive departments. I wish to state that I am working in harmony with those executive departments, especially with the War Department, doing everything I can, by an industrious study of the things that they are doing, to have a clear understanding of them, to better enable me to vote understandingly upon the appropriations they ask for and to help pass the legislation they need for the carrying out of their stupendous tasks.

Much has been done in all of the various departments engaged in war work. The burden was large; the task was big; it was a great thing to spring from extremely inadequate preparedness to thorough preparation to meet the greatest fighting machine that has ever been known in the annals of time. That was the problem to be faced. Many mistakes have been made, but many great things have been done. We should give credit for the great things that have been done. At the same time we should not close our eyes to the mistakes or seek to cover up the weak spots. When such men as Senator HITCHCOCK, Senator CHAMBERLAIN, and Senator THOMAS, of Colorado, all good Democrats, stand up in the Senate of the United States and tell of mistakes that should be corrected and weak spots that should be uncovered and strengthened, we must listen, we must pay attention to what they say. They can say more than Republicans can, and say it more effectively, because if Republicans begin talking it is said at once that it is for partisan purposes, that they are trying to gain partisan advantage by pointing out the weak spots of the administration. God knows that I do not know of any Republican who is so low that he would place the interests of his party or himself above the interests of his country! [Applause.]

I shall stand by the War Department in every effort to work out these almost superhuman problems, but they can not be worked out by glossing them over. It is no time to imitate the ostrich in concealing its head in the sand. We can not accomplish the task in that way.

In my judgment the way to master a great problem of this character is not by attacking anybody, but by tackling the problem, seek out the weak points in the program, find the place where it has fallen down, how it has fallen down, why it has fallen down, and in what way it can be remedied. That is the way to face these problems. If criticism is necessary let it be constructive, helpful, sympathetic criticism, not just knocking. I find myself incapable of being just a plain knocker. I would be a booster at all times, but especially so when the interests of my country, when perhaps the fate of its national existence, hangs in the balance. Partisanship counts for nothing. The one thing in which we are all supremely interested in this trying hour is the ability to win speedily this war and stop the awful cost of blood and treasure. [Applause.]

Mr. Speaker, further in accord with leave granted by the House to extend my remarks in the RECORD, I here insert an editorial printed in the Washington Post on Monday, April 22, 1918. As it relates to a matter touched upon in my remarks at the meeting of the Aeronautical Engineers in New York, it is relevant and appropriate in this connection.

The editorial is as follows:

"BUILDING THE AIR FLEET."

"Thousands and perhaps millions of Americans are firmly convinced that the most effective service which the United States can perform in this war is the creation and operation of an aerial army. They see reasons why it will be difficult for the United States to apply its full strength in other fields of war, although no intelligent American doubts that this Nation can collect forces sufficient with its allies to defeat the enemy either on land or sea. But since the allies have armies of immense size and fleets treble the size of the enemy's, it seems to many Americans that after supplying the necessary number of troops and supplies for the allies it should be the duty of the United States to aim for overwhelming superiority in the air.

"The air program of the United States has not been handled properly. Too many boards and commissions have succeeded in squandering invaluable time. The designers and builders of the Liberty motor have been repeatedly stopped by official order, to tinker with supposed improvements, and production on a

large scale has only recently been uninterrupted. As for types of planes, the conflicting boards and commissions have adopted and rejected type after type, aided in their indecision by the keen rivalry of foreign manufacturers anxious to sell certain types at great profit.

"Thorough investigation of the situation by a small committee, charged with the duty of ascertaining just what ailed the aircraft program and recommending a remedy, has resulted in a report to the President which is believed to point the way to immediate action. It is no secret that the committee recommends the complete divorce of production and operation, a simple matter in statement, but not so simple in fact. The manufacture of motors and planes, in the opinion of the committee, should not be under the direction of boards or commissions or the Signal Corps, but should be directed by a civilian, thoroughly acquainted with the industrial facilities of the United States and capable of utilizing them to the utmost extent.

"The committee evidently believes that airplanes, like ships, should be built by one authority and operated by another, and that the operating authority should not interfere with questions of production. Just as Mr. Schwab has been drafted to produce ships, so the aircraft committee will recommend that another strong man shall be drafted to produce airplanes. The producer in each case will produce what the Government needs, of course, and therefore the types of ships or planes may be altered according to the opinion of experts. But these alterations must not be made from hour to hour by halting the wheels of factories while experts quarrel over theoretical improvements. Established types must be produced, even if they are not the very latest wrinkle, and newer types must be introduced in such manner as not to interfere seriously with the output of workable types.

"The United States, on account of its great automobile factories and its abundance of raw materials, as well as on account of the alert and daring quality of its aviators, should go to the front rank of nations in the contest for supremacy in the air. Ten thousand aviators, daily and hourly shooting and bombing the enemy, will be enlisted, trained, and fully equipped by the United States within a few months, even at the halting rate at which the program has gone forward. Men of the caliber of Charles M. Schwab or Henry Ford, with unhampered authority, could easily double the aviation fleet and enable the United States to bombard and utterly destroy the German armies and fleets.

"This all-important branch of American war power is under consideration of the President. He has shown by his solution of the shipbuilding problem that he intends to utilize the master minds of the industrial world. Without doubt he will call to his assistance, as builder of the air fleet, an American in whom the whole country will have confidence."

Naval Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. AUGUSTINE LONERGAN,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 20, 1918.

Mr. LONERGAN. Mr. Speaker, I am heartily in favor of the pending measure. We can not consistently deny to our Navy, the first line of defense, adequate funds with which to carry out its program when we look to that program for the safety of our national life by making secure not only our territorial frontiers, but also by guarding the sea routes of our troops to the battle fields of France.

At this time it is proper to direct attention to the fact that the Navy, under its admirable Secretary, the Hon. Josephus Daniels, is not alone living up to the traditions of the service, but it is also adding new luster to its laurels. The criticism which before the war and during the early days of it was directed against the Secretary—for what sinister purpose we need not now inquire—is to-day silent, and gradually the Nation is realizing that his aims are steadfast and his methods sure.

It may be a coincidence, but it is in truth noteworthy, that in the careers of the present Secretary and the esteemed Secretary in the Civil War, the Hon. Gideon Welles, there is a marked parallel.

Mr. Welles, who was a native of Glastonbury, Hartford County, Conn., which county I have the honor to represent, was, like Mr. Daniels, called from the ranks of journalism, in which he molded public opinion, to administer the affairs of the Navy. Educated in the Protestant Episcopal Academy at Cheshire, Conn., and at the Norwich University, that State, he later became associated with and for a time directed the policy of the Hartford Times, now the leading Democratic newspaper in southern New England.

So great became his influence that Jackson was guided by him in reference to Connecticut policies. During those days, when almost each week brought its great issue, he gradually went from the party of Jackson, now losing its hold under succeeding administrations, to the Republican Party. Other men might not have made the change, but it was typical of Mr. Welles that he should be attracted by a party that attracted a Lincoln. The Republican Party in those days had statesmen.

Whoever appreciates the structure of our Government need not inquire why Lincoln should have selected Mr. Welles to guide the destinies of the Navy during the trying days of the Civil War. It is necessary in a true democracy that the military should always derive its strength from civil authority. And the man who acts, even in cases of extreme national peril, as the head of the War Department or of the Navy Department should be a man of and from the civil walks of life. But he should be a citizen of proven worth. Such was Mr. Welles. Lincoln selected him because Lincoln knew he had the qualities that make for success.

The Cabinet Lincoln gathered to himself was indeed one of distinction. The Carpenter painting in the House of Representatives makes this more clear than any phrases can. Stanton, Chase, Smith, Seward, Blair, Bates, and Welles, all standing for something definite, something eminently worth while. In comparison with none of them did Welles appear the less able.

Time and again, when Lincoln sought real advice, he went to the sturdy son of Connecticut; and always he came away the better for it. Mr. Welles, if he were alive to-day, when times are as trying as in those dark days, might not perhaps be setting the land afire with addresses of wonderful eloquence, but in his own complete way he would be devoting every energy, as he did then, to the preservation of our existence as a Nation, for that indeed is the high purpose for which we war.

Mr. Speaker, this is no time for lengthy speeches. It is a time rather for deep thought and vigorous action. And we can act with greater courage when we reflect that in other days men like Welles, undaunted by adverse criticism, inspired by true patriotism, and guided by righteousness, gave the best that was in them for their native land. Connecticut in the present war is showing clearly to her sister States that the example of her sons in other days was not given in vain.

Increase in the Price of Flour.

EXTENSION OF REMARKS

OF

HON. JOHN W. RAINEY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

Mr. JOHN W. RAINEY. Mr. Speaker, time for discussion of this amendment being very limited, I will be brief in what I have to say.

About a year ago the Congress of the United States, after mature deliberation, guaranteed the farmer \$2 a bushel for wheat, believing that to be a fair price and from which he would derive a reasonable profit. The President went further and guaranteed the farmer \$2.20 per bushel. The argument seems to be that if the price is increased to \$2.50 you will increase the production of the 1918 crop. I am advised this is not true, that the fall crop has already been sown, and not a very perceptible increase could be made in the spring wheat.

There have been many suggestions made here about the loyalty and patriotism of the farmer. I am not inclined to believe that during these perilous times anyone should be commended for his patriotism. We are all Americans; hence all are presumed to be loyal.

I will vote against the increased price of wheat because I feel the price of \$2.20 gives the farmer a margin of profit and feel he should be satisfied. I believe the farmer has been well cared for by both Congress and the President.

The farmer should not attempt to become a profiteer on a necessity absolutely vital to our associates in this world's war, to our boys who are fighting at the front, who have every right to feel and believe that the American farmer is back of them, and to the millions of poor unfortunates who on account of the high cost of living can scarcely keep body and soul together.

It has been jokingly remarked by one of the House that a Member who comes from Chicago is an authority on farming. Well, I claim the proud distinction of coming from the same city, and while we may not be authorities on production we are specialists when it comes to price, because we, like the rest of the people in the cities, pay the toll. The people of the cities are the great consumers.

One of the speakers suggested that if the price was increased to \$2.50 per bushel it would increase the price of flour per barrel but \$1.50. I am reliably informed that the increase would be much greater, probably \$3; but grant that the increase would be but \$1.50, purchased by the barrel, what would be the cost to the great mass who purchase flour by the pound or by the sack?

But on this subject let me suggest that the district from which I come does not produce wheat; they do produce some of the finest men in America; they have responded to our country's call and have gladly made the great sacrifice not in giving wheat but in giving their flesh and blood to fight the fight for humanity.

Many of these lads could have claimed exemption on the ground of dependency, but they waived and volunteered to make the supreme sacrifice, if necessary. In order that this country might continue to live. In many of these homes, on account of the increased cost of living, a barrel of flour is a luxury not enjoyed for a long time. If they have made sacrifices, is not the farmer, who is thousands of miles away from the trenches and battle fields, expected to do his share?

Gentlemen, I am opposed to increasing the price of wheat, because I think \$2.20 a fair price also on account of the great hardship that would be imposed upon millions of our people.

Sanitary Conditions at Army Camps.

EXTENSION OF REMARKS

OF

HON. WARREN GARD,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 7, 1918.

Mr. GARD. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a series of communications from the Surgeon General of the Army to the Chief of Staff upon the sanitary conditions of the Army camps and cantonments.

The communications are as follows:

NOVEMBER 26, 1917.

From: The Surgeon General, United States Army.

To: The Chief of Staff

(Through The Adjutant General of the Army).

Subject: Report of Inspection of Camp Wheeler, Macon, Ga.

1. In my recent inspection of Camp Wheeler, at Macon, Ga., I found conditions as here indicated by reports. There had been a sharp epidemic of measles, some 3,000 cases, and as always occurs with measles, a certain number of cases of pneumonia. At the time of my visit there were some 300 cases of pneumonia in the hospital. While the hospital was crowded, the right of way was given the pneumonia cases, and they were being well cared for.

2. In the past month there have been about 60 deaths from pneumonia. The height of the measles epidemic was passed some 10 days ago, and at the time of my visit the epidemic was markedly on the decline, but the pneumonia was still on the increase. Generally pneumonia does not develop in a patient until a week or 10 days after the incidence of the measles.

3. We can, therefore, expect a considerable number of deaths from pneumonia.

4. The camp is well situated and was in generally good condition. I think the reason for the measles affecting so severely this particular camp is the fact that men came from the surrounding Southern States which are sparsely settled, and therefore the inhabitants do not, as a rule, have measles in childhood.

5. A large proportion of the cases of pneumonia were evidently contact cases, and I am anxious on this score, fearing that we may be beginning here an epidemic of septic pneumonia. We have had a few cases of meningitis, a few cases of scarlet fever, and some cases of mumps.

6. Whatever the original cause of the epidemic and the present conditions, all these evils are accentuated by the crowded condition of the camp. The tendency to pneumonia has no doubt been increased by the fact that the men have generally been exposed to the cold weather of the past month with no other protection than their summer clothing. Clothing is now rapidly coming into camp and about two-thirds of the men are supplied with woolen garments.

7. I recommend that it be insisted upon that all men in the camp have 50 feet of floor space each, and to accomplish this such additional shelter be supplied as may be necessary; that no fresh men be brought

into the camp until the epidemic has subsided; that an observation camp be established; and that all new men be kept under observation until the main camp is free from infection.

W. C. GORGAS,
Surgeon General, United States Army.

CAMP SEVIER,
Greenville, S. C., November 29, 1917.

From: Surgeon General, United States Army.
To: Chief of Staff, United States Army.
Subject: Camp sanitation.

1. Sanitary conditions here are serious. Sixty men have died of pneumonia in the past month. The camp has been exposed to a general epidemic of measles, about 2,000 cases having occurred within the last month. During this same period they have had 175 cases of pneumonia and 15 cases of meningitis. The new conscripts of this command are men who are nonimmune to measles. They come from the neighboring Southern States, where population is scarce, and therefore have not had measles in childhood. Always with measles a certain number of cases of pneumonia occur. The mortality of pneumonia from any cause is always high.

2. The basic insanitary condition, however, in my opinion, is overcrowding. In the past in this camp the division commander has had to put 11 and 12 men in a tent, due to the shortage of tentage. This would give about 20 square feet of space to each man. At present he has to put 9 men in a tent, which gives about 28 square feet to the man. I urge that the division commander be directed to furnish at least 50 square feet of floor space to the man, which would give about 5 men to the tent.

3. I also recommend that an observation camp be established where fresh men can be isolated and kept under observation for at least two weeks, or until the camp itself shows evidence of being free from infection.

4. The division commander tells me that he expects a large increase in the force at an early date. I urge that no fresh men be sent to this camp until the division commander says that he is able to care for them along the lines of this recommendation.

5. There has been a good deal of discomfort and exposure on account of the men having nothing but their summer clothing. This has been in great part corrected in the last 10 days by the arrival of woolen clothing and overcoats. The O. D. wool has not yet been issued, but the authorities are informed that it is on the way. The whole command is still in khaki.

6. Heat and plumbing are badly needed in the hospital. Both were authorized two weeks ago. I recommend that the matter be pressed and the hospital be equipped in this respect at just as early a date as is possible. The hospital needs badly more transportation. I recommend that they be furnished one motor car, one 3-ton truck, one 1½-ton truck, and one three-fourth-ton truck. The hospital at present has 750 patients.

W. C. GORGAS.

CHIEF OF STAFF,
War Department, Washington, D. C.:

BEAUREGARD, December 1.

During the past month this camp has had 38 deaths from pneumonia and 6 deaths from spinal meningitis. During the same period 177 cases of pneumonia have been admitted to the hospital and 11 cases of spinal meningitis. An epidemic of measles exists, of which disease 2,300 cases have come on sick report during the past month. I consider sanitary conditions serious, though measles and pneumonia are now on the decline. The camp is much overcrowded, with nine men to the tent. I recommend that the division commander be directed to furnish not less than 50 square feet of floor space for each man, and that an observation section be established for the camp. I recommend that no more men be sent to this camp until the division commander is prepared to care for them along the lines of the above recommendations. Letter follows.

GORGAS.

CAMP BEAUREGARD, La., December 1, 1917.

From: The Surgeon General, United States Army.
To: Chief of Staff, War Department, Washington.
Subject: Sanitary conditions, Camp Beauregard, La.

1. During the past month this camp has had 38 deaths from pneumonia and 6 from spinal meningitis. During the same length of time they have had 2,300 cases of measles, 177 cases of pneumonia, and 11 cases of spinal meningitis. The immediate cause of the pneumonia, from which the mortality comes, is the epidemic of measles. Both the measles and pneumonia are on the decline. The sanitary conditions, however, I consider very serious, and steps should be taken at once, as far as possible, to remedy them.

The command is at present quartered at the rate of nine men to a tent. This gives about 28 feet of floor space to the man, and, in my estimation, is excessive overcrowding.

I recommend that the division commander be directed to put up sufficient tentage to give each man at least 50 feet of floor space, which would furnish about five men to a tent.

2. The camp has become infected with measles and meningitis by the transfer of infected troops from other camps. To avoid continued infection in this way an observation camp should be erected where new arrivals could be kept under observation for at least two weeks, and for such longer period of time as necessary while the main camp shows evidence of infection. This same precaution should be taken with regard to men being transferred to other camps.

3. The base hospital is located 4 miles from town. I recommend that the hospital be furnished at once with one 2-ton truck, one 1½-ton truck, and one 1-ton truck, and one motor car, urgently needed for its transportation.

4. The base hospital is located about 2 miles from camp and connected with camp by a very poor road. The road is in such poor condition that the transfer of sick from camp to hospital is hard on the patients. I recommend that the road between the hospital and camp be at once macadamized.

5. The men in general came to this camp in their summer clothing, and have suffered a good deal of discomfort on account of cold. The tendency to pneumonia has been increased by their exposure to the cold in this badly clothed condition. Within the last two weeks the whole command has been furnished with winter underclothing. About half the men of the command have overcoats, but so far no olive-drab uniforms. The completion of the equipping of the command with winter clothing should be expedited as much as possible.

6. The division commander informs me that the placing of nine men to a tent was due to orders from Washington.

W. C. GORGAS.

CAMP BOWIE,
Fort Worth, Tex., December 3, 1917.

CHIEF OF STAFF,
War Department, Washington:

Sanitary conditions here more serious than at other camps visited. In the last month 41 deaths from pneumonia, with 409 admissions. Cause same as at other camps recently reported; primary causes overcrowding. Recommend that the division commander be directed to allow only five men to a tent and that no more men be sent to this camp until division commander says he is ready to receive them. Most urgent need in hospital of water, plumbing, and sewers. Urge this be ordered at once. Letter follows.

GORGAS.

CAMP BOWIE,
Fort Worth, Tex., December 3, 1917.

From: The Surgeon General of the Army.
To: The Chief of Staff, War Department, Washington.
Subject: Conditions Thirty-sixth Division, Camp Bowie, Tex.

1. We have had in this camp during the past month 41 deaths from pneumonia, with 409 cases admitted. About 2,900 cases of measles in the same length of time. The causes of this condition are much the same as in the other camps reported upon. The great number of cases of measles is due to the fact that the men come from the sparsely settled States of Texas and Oklahoma and have not had measles in childhood, but the basic cause is due to the overcrowding of the camp. We have at present nine men to a tent. I recommend that the division commander be directed to furnish sufficient accommodations so that each man will be allowed 50 feet of floor space. This would give not more than five men to a tent.

2. Measles and other epidemic diseases are introduced into these camps by cases being brought by the incoming troops. To provide against this an observation camp should be established, where all newcomers could be kept under observation for at least 14 days, and no new men should be placed in general camp until it is free from infection. I recommend that the division commander be directed to establish such observation camp and that no fresh men be sent in until he is ready to receive them under the above instructions.

3. The command, until recently, has had nothing but their summer clothing. This has caused a great deal of discomfort and probably increased the tendency to pneumonia. Most of the command has recently been issued woolen underclothing, and I am informed that the thick clothing for the whole command is now in camp, with the exception of overcoats, and are in process of being issued. I urge expediting the forwarding of overcoats as rapidly as possible.

4. The base hospital is in an unfinished condition; no water in the hospital, no plumbing or sewer connection. With the large number of patients in this institution this lack of water, plumbing, and sewer connection causes serious inconvenience to the sick and increases greatly the burden of caring for them. I recommend that telegraphic instructions be sent to the division commander at once to put in plumbing, water, and sewer connections. I also recommend that telegraphic instructions be sent to put in electric cookers in the diet kitchens in all of the wards.

5. I met by appointment last night the governor of Texas and the health officer of the State. They made several criticisms of conditions, which I thought were justified, but they were satisfied, I think, when I pointed out the impossibility of meeting in all respects the conditions that have been suddenly forced upon us and that we were trying in every way to correct these conditions. A copy of the recommendations of Gov. Hobby, addressed to the division commander, was furnished me at our interview, which is inclosed herewith.

6. There is a great deal of uneasiness and criticism among the people with regard to conditions here, which are worse from a sanitary point of view than in any of the camps I have visited.

7. I think the recommendations I have made will tend to correct the existing sanitary errors, but I can not urge too strongly that they be put into effect at once. The camp site and surroundings are all that can be desired. The troops and general conditions are good, with the exception of such conditions as relate to the epidemic diseases at present prevailing.

Major General, United States Army.

THE BASE HOSPITAL,
Camp Pike, Ark., December 5, 1917.

From: The Surgeon General.
To: The Chief of Staff.
Subject: Report on conditions at Camp Pike, Ark.

1. During the last month we have had at this post 57 deaths from pneumonia, with 241 admissions; 4 deaths from spinal meningitis, with 16 admissions; 2,100 cases of measles admitted; 128 cases of scarlet fever, with 11 deaths—the immediate cause of death in these cases being pneumonia, they are included under that heading—124 cases of mumps. These figures indicate a serious condition of affairs at this camp. The principal cause of measles, as has been pointed out in other camps, is that a large number of the troops came from the sparsely settled States and had not had measles before. Of the 16 cases of meningitis occurring within the month, 10 came from Fort Riley. This is an illustration of the way one camp can infect another by means of cases brought by incoming troops. All these infections have evidently been introduced into the camp by troops coming from other infected camps or by men who had been infected at their homes. An important means of preventing this for the future will be the building of observation camps, where the men can be kept under observation for at least two weeks before they are admitted to the general camp. As this camp shows such evidence of severe infection, I think the same observation camp could be established for those going out.

2. Crowding in this camp I do not think exists to any appreciable extent. When the division shall have been filled we will have about 40 square feet per man. As this camp shows such marked evidence of infection, I recommend that this be increased, by means of additional buildings, to 50 square feet per man.

3. The number of cases of measles admitted has been declining rapidly for the past 10 days, and I believe the present epidemic is over. The number of cases of pneumonia from measles, as would be expected, is on the increase and we should naturally expect a greater number of

deaths from this disease during the next week or 10 days. Within the last 15 days 8,000 new men have been introduced into the camp. It is possible that when these 8,000 men begin to show infection we will go through an epidemic similar to that through which we have just passed. However, as most of these men come from the thickly populated State of Iowa, I do not think it probable that they will have measles as severely as the men who have just been through the epidemic; but certainly until this matter is determined and the camp is free from infection no additional men should be sent here. I recommend that the division commander be directed not to receive more men until he is able to comply with the recommendations above made concerning space and observation camps and until this camp shows evidence of being free from infection.

4. One great difficulty here is lack of segregation. In Camp Bowie, for instance, if we get a case of meningitis in a tent of 9 men it is a very easy matter to segregate these 9 men and determine whether or not they have been infected. Here, with a squad room containing 120 men, this is much more difficult. I urge, therefore, that in extending this camp as above recommended that the quarters to be erected for this purpose and for the purpose of isolation contain not more than 8 men.

5. The command has been in its summer clothing until recently. During the last month the winter clothing has begun to come in and the men are now pretty well supplied with thick clothing, though there are several commands in the camp that have not yet been fully supplied. This lack of clothing, with the exposure to the cold, has no doubt been an element causing large pneumonia rate.

6. The camp is well located and the camp site good. Cleanliness and order and general sanitary conditions, with the exception of the epidemics, seem to be excellent.

7. The hospital is nearly completed and is as well supplied as could be expected under the circumstances. At present they have in the hospital 1,251 patients. This somewhat crowds the hospital, as it was built for a thousand patients. The overflow is at present being cared for, and I think well cared for, by the use of the galleries. Additional nurses' quarters are needed; additional officers' quarters at the hospital and additional barrack buildings for hospital attendants are needed. A small kitchen in the rear of the wards for contagious diseases and some addition to the administration building are needed. The hospital is very short of transportation. I recommend that one touring car and one three-quarter-ton truck and one 1½-ton truck be permanently assigned to this hospital.

Surgeon General.

CAMP FUNSTON, KANS.,
December 7.

CHIEF OF STAFF,
Washington, D. C.:

Strongly recommend that sites for detention, quarantine, observation camps, as selected on this reservation by the commanding general Camp Funston be approved. Action now being delayed by post commander on technical grounds of local command. Urgent that action be taken at once.

GORGAS.

CAMP FUNSTON, KANS.,
December 8, 1917.

From: The Surgeon General.
To: The Chief of Staff.

Subject: Sanitary report, Camp Funston.

1. During the past month this command has had 84 deaths. Of these 84 deaths 54 were from pneumonia, with 189 cases; 34 deaths from meningitis, with 70 cases; 131 cases mumps. This indicates a most serious condition of the cantonment, as far as infection from the two serious diseases, meningitis and pneumonia, are concerned. As emphasized in the draft situation, I call attention to the fact that they had 84 deaths from all causes, when the normal death rate of such a command should be about 12.

2. The reason for this condition, as we look back, is very evident. When the drafted troops were brought in they came in large numbers, all at once. The cantonment was excessively crowded. Between October 4 and October 26, 36,000 drafted men were injected into the cantonment. Among these there were many meningitis carriers.

3. This part of the country is well known to all health officers as having been for the last few years the principal endemic center in its civil population for meningitis. Granting the conditions above mentioned, no further explanation is needed to explain the present conditions as to meningitis. I would attribute the form of pneumonia existing here principally to the past crowding of the cantonment. It is the same form that occasionally becomes epidemic when large numbers of men are brought together in a crowded space. The excessive dust, which blows about in blinding storms, has no doubt accentuated the condition, and as it occurred at the other cantonments the lack of woolen clothing has also been a contributory cause. The cold weather in October to which the men were exposed in summer clothing and without any heat in their barracks tended in the same direction.

4. In discussing this matter, I will first treat it as if the conditions were new, and nothing has been done, and will point out what should be done under such circumstances. As a matter of fact, the epidemic has been excellently handled, and all measures I have to recommend have been put into effect as far as possible for the division commander to do so.

5. Meningitis and other infectious diseases were originally introduced from the outside. To meet this condition, observation camps should be established, where all men coming into the camp could be observed for at least two weeks or such longer period as may be considered necessary. In this way the men who had been infected could be picked out as they developed those diseases, and the incoming troops finally gotten out in an uninfected condition. The same process should be observed with troops leaving the camp as long as the camp showed evidence of infection. Orders should at once be given that no more troops be sent to this cantonment until the division commander states that he is ready to receive them.

6. The internal arrangement, as regards the isolation and caring for infectious diseases, should conform with those measures that are generally recognized as applying to these conditions, and that are at present being carried out most satisfactorily and successfully in the camp. As a matter of fact, all the above recommendations are being carried out at present, as far as lies in the power of the division commander. To cover the question of overcrowding I recommend that at least 50 square feet of floor space be allowed to every man.

7. I think, however, it would be wise for orders to be issued to Washington directing that in the future the measures above recommended be carried out. My desire to have this done is with the object of giving the division commander the opportunity of asking for

such material as he needs for putting up the observation camps he is at present constructing, and also with the idea that it may be an order that will govern all future commanders of this cantonment. I wish to particularly call attention to the telegram sent out regarding this matter relative to ground for a detention camp in the post of Fort Riley. This is very much to be desired.

8. The camp has been located in the river bottom and is excessively dusty. In my experience the use of oil on the roads and grounds has been very successful in lessening the dust. The division surgeon tells me that their experience here has shown that the use of oil for this purpose is very effective. I recommend that they be supplied with such amount of oil as they find necessary to meet this very insanitary condition.

9. In their observation camp, as at present being erected here, they are using a tent, floored and framed with side walls, that holds five men each. I think this is an ideal condition. It gives complete segregation and no overcrowding. I recommend that as these tents wear out they be converted into permanent buildings by putting on a roof. I recommend that all future construction conform to the plan, so wisely adopted in the observation camps, of allowing only five men to the building, which gives 50 square feet of floor space to the man, and segregates in bodies of five.

10. It is a very important element to get patients from various parts of the camp to the hospital promptly. For this purpose here the three motorized ambulance companies are used. Great difficulty is found in getting the motor ambulances started during the cold weather on account of the freezing of the water in the radiators. I recommend to obviate this the ambulance sheds be inclosed and heated.

Major General, United States Army.

DECEMBER 17, 1917.

From: The Surgeon General.
To: The Chief of Staff.

Subject: Sanitary conditions at Camp Doniphan, Oklahoma.

1. During the past month Camp Doniphan has had 74 admissions from pneumonia and 11 deaths; 316 cases of measles, with 1 death; 104 admissions from diphtheria, with 1 death; and 6 cases of meningitis, with 4 deaths. While the number of cases and the number of deaths from the above-mentioned diseases are somewhat less than in other camps visited, the conditions in respect of those diseases is considered serious. The basic cause I consider to be overcrowding of the camp. At present there are 9 men quartered in each tent, which gives a totally inadequate floor space for each man. I recommend that the division commander be directed to furnish sufficient tentage or other accommodations, so that each man will be allowed 50 feet of floor space. This would give no more than 5 men to a tent.

2. Measles and meningitis were introduced into these camps by cases being brought by incoming troops. To provide against this in the future it is recommended that an observation camp be established for all newcomers, where they may be kept under observation for at least 14 days, or as much longer as may be considered necessary by the division surgeon, and no new man from observation camps should be placed in the general camp until it is free from infection. I recommend that the division commander be directed to establish such observation camp and that no fresh men be sent in until he is ready to receive them under the above instructions.

3. To properly control the spread of measles, meningitis, and pneumonia now confronting Camp Doniphan it is necessary that tent contracts be immediately removed from the general camp upon the appearance of the first case of communicable diseases and placed in a separate detention camp, for daily observation and treatment during the incubation period of the disease. It is recommended that such a detention camp be established for such contacts, in addition to the observation camp previously recommended for incoming men.

4. The command until recently has had nothing but summer clothing. A great deal of discomfort has resulted and undoubtedly the tendency to pneumonia has been increased. I am informed that shipments are now coming in rapidly, and that as fast as received are being issued to the men. From personal observation, however, I find that many men are still wearing their cotton khaki clothing.

5. The base hospital is in an unfinished condition. Many wards which are required for patients are not yet finished, and this has caused great embarrassment to the hospital authorities. The installation of a sewerage system and necessary plumbing in all buildings was authorized several weeks ago, and while work has been begun it is now at a standstill, and the difficulties in caring for patients is greatly increased thereby. It is urgently recommended that the work of installation of sewers and plumbing be expedited.

W. C. GORGAS,
Surgeon General, United States Army.

Desecration of the Uniform.

EXTENSION OF REMARKS

OF

HON. THOMAS S. BUTLER,
OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 26, 1918.

Mr. BUTLER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter addressed by the Democratic floor leader of the House [Mr. KITCHIN] to a citizen of Ohio, who addressed him a letter on the subject concerning the desecration of the wearing of a soldier's uniform by a slacker.

The letter is as follows:

WASHINGTON, April 20.

Objections of Members of Congress to the commissioning of men of draft age in the noncombatant corps of the Army were set forth to-day in a letter written by the Democratic floor leader, Representative CLAUDE KITCHIN, of North Carolina, to an Ohio man who is over the

draft age and had been offered a captaincy in the Quartermaster's Corps. Mr. KITCHIN declined to reveal the identity of his inquisitor, but he did make public his reply.

A formal report from the War Department that there are now 1,772 men of draft age who have been commissioned in noncombatant branches of the service since the declaration of war now on duty in Washington has not stopped the agitation against putting draft eligibles in chair jobs.

Several weeks before the report was made to Congress an announcement was made that these officers would be sent from Washington to training camps at the rate of 25 per cent a week, so the number still on duty here is relatively small compared to what it was when Members of Congress began making their attacks.

Approximately half of the men of draft age who have obtained commissions and are still on duty in Washington are in the Ordnance Department, one of the noncombatant branches of the service that has been most vigorously assailed by Members of Congress. Mr. KITCHIN has taken an active part in the protests.

Representative KITCHIN in his letter to the Ohioan wrote:

"My chief protest is that young men within the draft age who never saw a military training camp, who never served in the Army, with no military experience, and with no qualifications as a soldier officer, have been and are being commissioned in the noncombatant branches of the service.

"Many such young men, perhaps their number reaches into the thousands, have succeeded, through some kind of influence, in obtaining commissions, from lieutenantcies up, in the Ordnance, Quartermaster, Intelligence, or some other department for no other purpose than to escape service at the front.

"The uniform of the American soldier instead of being an insignia of dare and do for the country is being desecrated by its use as a shield and protection to slackers.

"And I further object to the real soldier, officer or private—the man who must face danger for his country—being required on all occasions deferentially to salute such noncombatant commissioned officers. This tends to destroy the morale of the Army and is an injustice and humiliation to the real soldier. I include, of course, as real soldiers the Engineer Corps that goes to the front.

"My position is that no man within the draft age and physically fit should be admitted to these noncombatant branches of the service, either as a private or commissioned officer, if men under or over the draft age can be found equally competent to perform the duties. In my judgment, such men can be found by the tens of thousands ready and willing to perform such duties.

"While I have no serious objection to civilians over the draft age being appointed and commissioned to such positions for the purpose of serving their Government, I see no sound reason if a civilian really desires to devote his time and talents to his Government in such honorable service why he should demand or require a military title and uniform; and certainly, if he is given a title and uniform, he should be perfectly willing to have a mark known to the public, distinguishing him from the real fighting officers and soldiers.

"For instance, if he is appointed an officer in the Quartermaster Department or Ordnance Department, why should he object to having marked plainly on the sleeve of his coat, respectively, 'Q. M. D.' or 'O. D.'? The man who really desires to serve his Government could not object to this, except on two grounds: first, that he is ashamed of the position he holds or the service in which he is engaged, or, second, that he desires to deceive the public into the belief that he is a real soldier.

"Take yourself, for instance, and your letter impresses me thoroughly that you are absolutely sincere and earnest in your desire to serve the Government; say you are appointed captain in the Quartermaster Department, an office which you say has been offered you. Your life has been that of a lawyer. You have no military training or experience.

"Giving you the title of captain and putting a uniform on you would not make you a soldier or give you the least qualification of a soldier or military officer, but you could easily, though in your case I do not think you would have any such desire, impose upon the public, as most of them do, as one of Uncle Sam's actual fighting officers.

"Being above the draft, if you or other persons under similar circumstances were appointed neither I nor any other Member of Congress, nor anyone, would consider you or such persons as slackers, but as men doing necessary and most honorable service for the Government, though we do think it but justice and right to the fighting man or officer of the Army that such noncombatant's uniform shall bear some mark, known to the public, distinguishing him from such fighting man or officer.

"Of course, there is now a mark making such a distinction known, however not by the public, but only by the cult of the military. No one receiving such appointment can now deceive the military combatant or noncombatant, but we think it but fair and just that one so appointed should not deceive or have the power to deceive the public."

Eulogy on the Late Cyrus A. Sulloway, Late a Member of the House of Representatives from New Hampshire.

MEMORIAL ADDRESS

OF

HON. JULIUS KAHN,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, April 28, 1918.

Mr. KAHN. Mr. Speaker, from the day I entered Congress, on the first Monday in December, 1899, I learned to know and to admire CYRUS ADAMS SULLOWAY. His massive physique stamped him with an individuality that was bound to impress the man who met our deceased colleague for the first time. During all the years that have intervened since the opening of the Fifty-sixth Congress I learned to admire him more and more.

Mr. SULLOWAY never trespassed upon the time of the House unless he had something to say that would be of interest to his

colleagues and to the country. He rarely took the floor, but when he did he was accorded that attention which the House always pays those Members whose opinions it values.

Himself rejected as a soldier by reason of physical defects, he gave the greatest attention to those who, more fortunate than himself, had fought to preserve the Union. In his death the old soldiers of the Republic lost a valued friend, a warm-hearted and sympathetic counselor. Every year the line of veterans who wore the blue during the trying days of the Civil War is steadily diminishing. It will not be long before the last of those heroes shall be called to his everlasting sleep. Mr. SULLOWAY recognized the debt of gratitude their country owes them. His heart was ever ready to respond to their worthy appeals. Perhaps many of those of a later generation could not so thoroughly appreciate what those men endured in their effort to preserve the Union. Many Members have been too prone to look slightly upon the deserving appeals made from time to time by these old soldiers. It was therefore especially fortunate that they had on the floor of this House such a valiant champion as Mr. SULLOWAY. They will assuredly miss him from this Chamber.

In all the legislation incident to the proper preparation of our country for the present war in which we are engaged Mr. SULLOWAY constantly voted for the protection of American rights and the maintenance of American honor and prestige. The very fact that he had sought to be a soldier of the Republic in the years gone by made him an ardent, earnest advocate of our country's cause. In the closing months of his life he spoke to me frequently about the war and the patriotic duty of Americans, regardless of political affiliation, to stand behind the Government in the prosecution of the struggle. He forgot all partisanship and remembered only that he was a whole-hearted, thorough-going American.

We have missed him and shall continue to miss him in our deliberations during these momentous days.

The Spring-Wheat Situation.

EXTENSION OF REMARKS

OF

HON. HALVOR STEENERSON,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 25, 1918.

Mr. STEENERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the hearings before the Committee on Agriculture, Sixty-fifth Congress, second session, on the spring-wheat situation.

The hearings are as follows:

[Hearings before the Committee on Agriculture, House of Representatives, 65th Cong., 2d sess., on the spring-wheat situation, Wednesday, Mar. 13, 1918.]

THE SPRING-WHEAT SITUATION.

COMMITTEE ON AGRICULTURE,
HOUSE OF REPRESENTATIVES,
Wednesday, March 13, 1918.

The committee met at 10.30 o'clock a. m., Hon. ASBURY F. LEVER (chairman) presiding.

The CHAIRMAN. I have called the committee together this morning at the request of Representative STEENERSON, who desires to give the committee the opportunity of hearing Mr. Owen.

STATEMENT OF HON. HALVOR STEENERSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MINNESOTA.

Mr. STEENERSON. Mr. Chairman, Mr. Owen is the publisher and editor of the Farm, Stock, and Home, a paper which has a very large circulation among the farmers of the Northwest, in the spring-wheat region. He is in close and constant touch with the farm situation up there. I have been constantly getting letters from that section, and probably others of you have been receiving them. I think I will leave with the clerk of the committee two samples of them. Those letters emphasize the situation that has arisen on account of the rise in the price of barley, rye, oats, and corn, so that wheat is now the most unprofitable crop that is raised. Spring wheat is seeded between the 1st of April and the 1st of June. In my district they finish seeding about the last of May. Now, we fear that the effect of that condition on the production of spring wheat will be disastrous if that situation continues as it is. They do not seem to be able to control the prices of those substitutes which are used for wheat, and I want Mr. Owen to explain that situation.

Mr. LESHER. Instead of increasing the price of wheat, why do they not lower the price of rye and barley?

Mr. THOMPSON. Mr. Hoover stated the other day, or he announced in a published statement, that the Food Administration was not to fix the price on anything else.

Mr. STEENERSON. Let me say further that I had a conference with the gentleman in charge of milling in reference to the disparity between the prices of these things, or these different crops. I asked him why they did not either raise the price of wheat or lower the price of these other products so as to put them in a relation that would not

penalize a man for planting wheat, and he said, "That is what we are up against." He said, "The lawyers of the Food Administration claim that they have no power to do that." I said, "That must be some department law or ruling," and he said, "No; Mr. Hoover has the best legal staff obtainable, and that is the real situation." He told me that right straight, that they were not able to do it, in the opinion of the legal staff that they have got. So I do not think there is any chance of changing the price of rye or barley, oats, or corn, unless there is some legislation passed.

Mr. THOMPSON. He has as much authority to fix the price of corn, rye, barley, and oats as he has to fix the price of wheat, has he not?

Mr. STEENBERSON. I doubt it. I would prefer to have Mr. Owen proceed now.

The CHAIRMAN. The committee will be glad to hear Mr. Owen.

STATEMENT OF MR. H. N. OWEN, EDITOR OF FARM, STOCK, AND HOME, MINNEAPOLIS, M. N.

Mr. OWEN. Mr. Chairman, I would like to state at the opening that the situation is very serious.

The CHAIRMAN. Before you begin I would like to say that we want to conclude the hearing at 12 o'clock.

Mr. OWEN. I must do so, because, through the train being late yesterday, I could not fill my appointment with the Senate committee. Theoretically, I am supposed to be before the Senate committee now.

The CHAIRMAN. In view of that statement, I will ask the committee to allow Mr. Owen to complete his statement in chief before asking him any questions.

Mr. OWEN. Mr. Chairman, I wish I could make everybody who has any power in this matter, from the President down, to realize the situation and what we are up against on wheat. Now, we have been told that wheat will win the war, and we have been urging the necessity of bending all of our energies to the growing of wheat. Of course, I do not want to seem to be setting my opinions up against the opinions of the men down here in the administration. We are all undoubtedly trying to do our best, but it seems to me that our initial mistake was made in fixing the price of wheat. I think that, as an economic proposition, the matter of price fixing is very dangerous, but I think that if the committee must go to price fixing, then it must go the limit on it. We must fix the price of everything, not only of what the farmer has to sell, but of what he has to buy.

Now, of course, the logical conclusion of a situation of that kind is that the Government will have to take over all industry, which will land us in State socialism, whether we want to call it that or not, or whether we want to go into that situation or not. That, it seems to me, will be the ultimate finish. However, that is a matter that is not exactly germane to this question. The fixing of the wheat price and making wheat the lowest-priced cereal through the law of supply and demand operating on other grains naturally would tend to increase the consumption of wheat. But, then, we step in and decree our wheatless days, we restrict the amount of wheat or the amount of flour that the bakers can use, and we change the milling standards in order to conserve wheat, in order to conserve the cheapest cereal, while, of course, those substitutes which have been forced on wheatless days have had the effect of raising the price of the coarse grain. That is perfectly natural. It is just as natural as for water to run down hill. Therefore, we are facing this situation: That every kind of grain that we can grow, with the exception of oats, or every grain that the spring-wheat farmer can put in, except oats, will show him a larger profit per acre than he would get from putting in wheat. You may argue that it is not good business for the farmer to speculate on the prices of the coarse grains remaining as high as they are now.

Now, frankly, I do not believe that that is a matter of speculation at all. I do not believe that it takes any very great amount of foresight to realize that, even under the best conditions possible, even granting that we can get an increased acreage or the increased spring-wheat acreage that Secretary Houston is calling for—granting all that and taking into consideration the winter-wheat conditions at this time—it seems to be absolutely beyond the realm of possibility that we can grow enough wheat to give us an unrestricted use of wheat next year. After the 1918 crop is harvested the demands of our allies being as they are, and the probability of our total wheat yield being as it is, we must continue the restrictions on the use of wheat after our 1918 crops have come in. I do not see how you will get away from it. If you do that, then you are going to continue this same burden on the coarse grains that is on them now, and the coarse grains operating under the unrestricted law of supply and demand, will be relatively just that much higher than wheat next fall as they are now. I do not believe that you can get away from that. Of course we are told that the farmer should be patriotic and that he should put in all the wheat he can purely from patriotic motives. That is true, he should, but gentlemen, you are assuming—I do not say you are, but when that argument is advanced the assumption is that the farmer is operating with a large surplus, that he has a large surplus in bank that he can go to work with, and that he can afford to do a sort of business. That would simply be taking money out of his right-hand pants pocket and putting it in his left-hand pants pocket. But unfortunately, gentlemen, that is not true.

Now I want to give you a few Government figures, taken from the 1916 Yearbook of the Department of Agriculture, to show you how the thing works out. These figures show that 50.9 per cent of the farms of North Dakota were mortgaged, the average amount of the mortgage being \$2,497; in Minnesota 46.3 per cent of the farms were mortgaged, the average amount being \$1,864; in South Dakota 38.6 per cent of the farms were mortgaged, the average mortgage being \$2,899; in Montana 28.1 per cent of the farms were mortgaged, the average mortgage being \$2,692. Now, that makes an average for the four big spring-wheat States of mortgaged farms of 49.1 per cent, the average amount of the mortgages being \$2,599. In addition to that we have in North Dakota 15 per cent of the farms rented; in Minnesota 22 per cent of the farms rented; in South Dakota 25 per cent of the farms rented; and in Montana 12 per cent of the farms rented, making an average of rentals for the four big spring-wheat States of 18.5 per cent. That means that out of the total number of farms in the spring-wheat territory there are 67.6 per cent of the farms either rented or mortgaged, and there are 32.4 per cent of the farms free from mortgage or free from incumbrances, which means that practically there are only 32.4 per cent of the spring-wheat farmers able to go ahead and order their farming as they want to.

Now, the chairman of the ninth district Federal reserve bank took us to task a little severely upon the ground that we were discouraging the farmers from growing wheat. Of course, in point of fact we were not doing that, but we were simply reflecting back to you gen-

tlemen down here the situation that existed and that exists to-day. But we put it up to Mr. Rich in this way: We told him to take these figures and look over the ground and ascertain the attitude of the country banks toward the farmer who puts in all of his available area in wheat. We said we wanted to know what they were going to do, provided there should be a crop failure, or provided the farmer should fail to make as much money out of his wheat as he could out of the other grain. We asked him, "Will you bankers be willing to carry them another year?" We put it up to him straight. We got back from Mr. Rich a bunch of glittering generalities, but that was all. The disposition in some quarters seems to be to make the farmer the goat, and he is being asked to bear burdens that he should not be asked to bear, and burdens that he can not bear. Now, the prosperity of the whole country is largely, or, in fact, you might say that it is entirely bound up in the prosperity of the farmers. If you will draw a line north and south through, say, Pittsburgh, I think it would be safe to say that 75 per cent of the business of the country west of that line is largely dependent upon the prosperity of agriculture. If you draw a line north and south through Chicago, I think I would be safe in saying that 90 per cent of the business west of that line is dependent upon the prosperity of agriculture. Now that being so, it is absolutely necessary that the farmer conduct his business with the greatest possible profit, because the only way that we can finance this war is by taxation.

Of course, we have the power of confiscation, if that becomes necessary, but we do not want to consider that yet. The only way we can pay taxes is out of profits. Now, if you ask the farmer to make financial sacrifices that leave him no profit, you are cutting down the purchasing power of 30 per cent of our population. That being true, gentlemen, where will we land? I do not want to seem to be this morning a special pleader for the farmers. Of course, my own personal prosperity and the prosperity of the institution I represent is absolutely bound up in the prosperity of the farmers, but my interest is broader than that and is wider than that. This is a matter that concerns the entire country. Now, I have here some figures furnished by a farmer in the northern part of Minnesota, in Mr. STEENBERSON'S district. These figures show that in 1914 a 7-foot self-blinder could be bought for \$150; in 1917 the price of it went to \$185, and in 1918 that same blinder will cost \$250. A 20-foot double-disk drill in 1914 cost \$130; in 1917 it cost \$145, and in 1918 it cost \$200. A 14-inch gang plow cost \$65 in 1914, \$85 in 1917, and \$140 in 1918. Those are the retail prices back in the country. A lumber wagon, complete, cost \$75 in 1914, \$95 in 1917, and \$150 in 1918.

The CHAIRMAN. What kind of a wagon is that?

Mr. OWEN. An ordinary lumber wagon.

Mr. HUGHES. How much does it cost now?

Mr. OWEN. \$150. Binding twine that cost 9 cents in 1914 sells for 26 cents in 1918. That is what the farmer is up against on that side of the question. Farm labor could be employed for eight months work in the Red River Valley last year for \$35 per month, while in 1918, or at this time, the farmers are offering but they do not say that they are getting them, \$65 per month for eight months. The men are not to be had for \$65 per month. That \$65 per month means that you must feed them, after paying them the \$65 per month, and it appears that they are not getting them even at that. The farmer to-day does not know whether he is going to be able to harvest the crop that he puts in; he does not know whether he will be able to get the men, but he is simply going ahead and trusting to luck. He is just like the catcher who is playing baseball; he catches the ball and throws it over to second base; he throws it to second base hoping that there will be somebody there to catch it. The farmer is simply throwing the ball, hoping somebody will be there to catch it. That is what he is up against. I have a number of letters here from men who are right in touch with this situation. Here, for instance, is one from the Kilkenny Grain Co., of Kilkenny, Minn., in which they say:

"Do not think the farmers of this locality will seed as much wheat this year as last. They are not satisfied with price set; also, other grains are bringing more money. There will be a lot of barley seeded here where there should be wheat."

Here is another letter from the Hanley Falls Farmers' Elevator Co., of Hanley Falls, Minn., which I will read:

HANLEY FALLS FARMERS' ELEVATOR CO.,
Hanley Falls, Minn., March 8, 1918.

FARM, STOCK, AND HOME,
Minneapolis, Minn.

DEAR SIRS: Your telegram was received this afternoon and I am answering your wire at once.

The farmers in our country had planned on increasing their wheat acreage, as they are all very patriotic, and in return they had expected better prices and better grades. It is hard to tell what percentage will be sown to wheat at this time. I know there is a great demand for seed barley and seed oats by some of our wheat growers, but if they are going to put in less corn or less wheat it is hard to tell at this time. Barley is bringing \$2 or better here now, 48 pounds, while wheat of the class we get here is worth \$2. The average crop of wheat for the country would not be over 12 bushels or \$24 per acre, while barley will go 30 to 40 bushels. Oats is worth 87 cents and yields from 40 to 80 bushels on the best land. At these prices the farmer who raises wheat loses money, but of course he is quite a patriot.

Yours, truly,

HANLEY FALLS FARMERS' ELEVATOR CO.,
HENRY FORSAN, Manager.

Here is another letter from Mr. E. F. Ladd, president of the North Dakota Agricultural College. I think you will admit that Mr. Ladd probably, through the nature of his position, is in very close touch with the North Dakota situation. His letter is as follows:

NORTH DAKOTA AGRICULTURAL COLLEGE,
March 8, 1918.

HUGH J. HUGHES,
Care of Farm, Stock, and Home, Minneapolis, Minn.

DEAR MR. HUGHES: Replying to your letter of February 22, I have gone over carefully the article submitted by you and can indorse the same. The price for wheat, \$2.20, is too low, with conditions as they are at the present time for the terminal markets. It is out of proportion to that of the price of other cereal crops that can be grown in this part of the country; and if the farmer is not wholly disposed to ignore the question of profits and grow the crop as a patriot there will certainly be a considerable reduction in the acreage.

The conditions are not wholly favorable in North Dakota at this time for a large acreage of wheat, and to meet obstacles in the price will tend further to discourage; and I see no reason why the farmer should

be expected to disregard the question of profitable crops, for I have not been able to see where any manufacturers or producers outside of the farmer have been taking such a course.

I am sure the farmers of North Dakota are ready to do their share, but with the exceedingly high price of feed at the present time and the profiteering that has been done with wheat mill products, it will have a tendency to induce the farmer to provide for his own stock for the coming year as the first step, and then, to do what he can with un-nourished animals and the shortage of labor to grow spring wheat; and there is bound to be a decrease rather than an increase in the acreage, if I can judge rightly.

Yours, very truly,

E. F. LADD,
President.

You know, gentlemen, what North Dakota means as a spring-wheat factor. If you do not, Mr. YOUNG can tell you. It is a big bite.

Here is another letter, from the Alfalfa Stock & Farming Co., of Hallock, Minn. The signer of this letter, Mr. Henry, is one of Mr. STEENELSON'S constituents. His letter reads as follows:

THE ALFALFA STOCK & FARMING CO.,
Hallock, Minn., March 4, 1918.

Hon. H. N. OWEN,

Publisher Farm, Stock, and Home, Minneapolis, Minn.

DEAR SIR: Relative to your inquiry as to the wheat-extension situation in this and adjoining counties I wish to say that my experience, after having taken a crop census in 1917 in Kittson County and after a careful survey of the situation, is as follows:

Practically every farmer in Marshall, Roseau, and Kittson Counties decided when he did his plowing last fall just what acreage he would sow to wheat this coming spring on lands he then prepared therefor.

I find no lack of patriotism among the farmers. They are willing to do their part for their country. The demand now, however, is for more wheat, more acres sown to wheat this spring. This result is not going to be accomplished unless there is a financial inducement, together with a modification of the Federal grading in vogue this last season to make the farmers see that it will be profitable for them to plant wheat.

There will be some extra wheat acreage, solely on account of patriotic motives, but the farmer who has a mortgage to pay off and who must make his yearly interest charges and pay the present price for farm machinery and help must of necessity see to it that he gets the highest possible returns from his farm and his labor.

If the price of other grains is reduced, it will not mean more wheat. Something must be done to make the farmer see that he is not only benefiting his country but he is benefiting himself in order to get him to increase his wheat acreage.

Reducing the price of other grains would not decrease the wheat acreage; neither would it increase it. If a price of \$2.75 is made for wheat, I know from my personal observation and knowledge of conditions and my own farming experience that it will result in much land being put into wheat which would otherwise be summer-fallow. With a \$2.75 price, farmers are going to make an especial sacrifice—borrow money, if necessary, for more seed wheat—and the wheat acreage will be largely increased.

Practically the wheat acreage is now settled in the mind of every farmer. To change his mind, to change and rearrange his plans, he must be shown that he will have for his pains something more than consciousness of a duty well done. For an illustration, in 1917 the farmer had this experience with the Federal grading of grain: He received an inferior grade for a first-class quality of wheat solely because of the fact that there was a sprinkling of barley therein.

He got nothing whatever for his barley.

His wheat was reduced from one to three grades when it would have been standard wheat or No. 1 hard wheat if it had not contained the barley.

If he is to extend his wheat acreage, he will have to do so on lands that raised barley last year. He will not be very anxious to repeat this 1917 experience in wheat raising unless there is a change in prices and the Federal grading.

For financial reasons and the good of his farm, the farmer will feel that his land should be sown to something besides wheat, knowing well that the yield will be small. In order to induce the farmer to put that land into wheat and thereby lessen the producing value for the following year, he will have to have some monetary inducement.

The farmer knows well to-day that the only one reaping benefits of his barley, for which his wheat grade is depreciated, is the miller as the miller is now grinding some barley with the wheat for which the farmer gets nothing and loses grade on his wheat.

In other words, it would be more profitable to the farmer if he would put that same land into barley again, as it is a known fact that barley is very easy on the land and the wheat yield from such land would not be very great. To sow such land to wheat would not be a proper method for handling the land from any scientific viewpoint.

I have read the March issue of Farm Stock and Home, and after comparing the crop census I took a comparative table contained in that issue, and find that your figures are approximately correct and agree with the figures I obtained from my crop census and with what 38 years' farming experience had taught me.

My conclusions are that unless the Federal grades are changed and the price of wheat changed, the acreage for 1918 will not be materially increased.

Yours, very truly,

J. D. HENRY.

Now, Mr. Henry touched a point that should be brought out here: In asking for a material increase of the spring-wheat acreage, we are going back on all that we have been teaching the farmers and on what their own experience teaches them, and that is that it is not advisable to plant wheat after wheat. If he does that through pressure of necessity or through patriotism or through a possible chance of profits, he is not going to get a normal yield from those acres. Barley can be sown much later than wheat; it can be sown after a great many of the weeds have germinated. This is an advantage, because the process of putting in barley kills the weeds, so that a crop of barley leaves the land in much better condition for next year than a crop of wheat, because the wheat must go in very early, and the foul growth comes along with the wheat. That is another big inducement for the farmer to grow barley even after the prices have been evened up on barley and wheat.

Here is a telegram from Mr. G. W. Randlett, who is in charge of the extension department of the University of North Dakota, in which he says:

"Feeling general that wheat acreage in North Dakota will be decreased. Large increase in rye acreage seeded last fall. Best prices of rye, oats, and barley promise greater profits than from wheat. Feeling general wheat price \$2.20 good, but price rye, oats, barley, corn should be regulated accordingly."

"G. W. RANDLETT."

Mr. Randlett has, I think, a wrong angle there, because all the farmers I have talked with say, and in all the letters I have received from them they say that if you do that, that if you reduce the price of the coarse grains—and I read Mr. Randlett's telegram simply to bring this point out—if you reduce the price of the other coarse grains on the basis of \$2.20 for wheat, the farmer, on account of the labor shortage, can not afford to grow those coarse grains regulated on the basis of \$2.20 wheat. They say there will be a lot of land that will be summer fallow and a lot of land put to grass. There will be danger in the course of reducing the price of the coarse grains in order to increase the wheat acreage. That is a course that I believe would be absolutely fatal. That is, you will do just what you can not afford to do. You will cut the profits of the farmers down to a point where they can not make any money. We would all suffer if you did that. The last thing that ought to be done or that should be considered is the reduction of the coarse-grain prices to conform to this arbitrary price of wheat. Now, if you will go back to some of the lean years, you will find that in the early nineties, in 1894, I think it was, wheat sold in Minneapolis for 49¢ cents. That meant for the North Dakota farmer about 38 cents for wheat. The farmer was told that that was unfortunate, but that we were facing a period of over-production. He was told, "It is too bad, but you will have to take your medicine." Now, when that great law of compensation causes a reversal, and the wheel is swung around to a point where the law of supply and demand is evening up things—not for those poor fellows who were starved back in 1894, but for their children—when those things are evened up, would you say to them, "You can not have it." I do not think that that will go, because I do not think it is fair, or based upon the principles of eternal justice.

I have a great many letters here, but I do not think it is necessary to burden the committee with reading all of them. Here is a letter from Mr. A. H. Wijs, of Moorhead, Minn. He is operating on both sides of the Red River Valley, in North Dakota and Minnesota. His letter is as follows:

MOORHEAD, MINN., March 3, 1918.

Mr. H. N. OWEN,

Farm, Stock, and Home, Minneapolis, Minn.

DEAR SIR: The feeling in this locality as to the matter of wheat acreage, so far as I know it, is not to sow wheat on other than such land as has been summer fallowed and on such fall plowing where it is reasonably certain that a fair crop may be raised. We have so much land that has been farmed so long for small grain that we must pick out that portion of it for wheat which, as already stated, is best fitted for wheat.

With a number of horses on the farms, we must try to raise our own feed, which is principally oats, and if we are to fatten any hogs or cattle for the market we generally have to depend upon oats and barley to do that.

In the spring and summer of 1916 any amount of oats, corn, and barley were shipped into the entire Northwest for feed. The same thing is being done this spring, which goes to show that this section of the country does not, as a rule, raise enough feed for its own use.

The fact is that so much of the land is in such condition that the oat and barley crop put in on the spring plowing turns out to be a light one at the best.

It is plain now that our oat and barley acreage was not large enough last year.

To be in a position to raise wheat we must raise our own feed. With the prices on everything the farmer needs and must have to operate his farm running rampant, it would seem the height of folly to choke off the revenue which the farmers of the Northwest always have depended upon to pay their bills.

To encourage wheat production in this section of the country—one locality being in practically the same position as the other—the market should be restored to its former status.

At the present fixed prices of wheat, the farmers may as well feed wheat to the hogs as to buy corn for that purpose—that is, upon the basis of economic value.

From personal observations since the harvesting and thrashing of the 1917 crop of wheat, I am satisfied, except in individual cases, the wheat crop was far from a paying proposition.

Yours, truly,

A. H. WIJS.

Now, if I had the time I would like to go into this matter of Federal grades, which has cost the farmers a great deal of money in the Northwest this year. The grades have been modified very largely, but it will take their operation over the next crop to demonstrate whether or not there is very much relief. However, they have been modified, and modified in time to be a factor in increasing the wheat yield. But that will be a small factor; the greatest factor is that of price. The house is on fire, and we have not time to debate this matter. We are practically ready to start our drills. Another 10 days of fairly warm weather will put the farmers at work in the fields with their wheat seeding, unless we have a relapse into winter weather. The ground is reasonably free of snow. Any action taken that will result in an increased wheat acreage must be taken at the outside within the next two weeks. It has been argued that to increase the price now would result in undue profits for those farmers who have held their wheat until now and to those who have purchased wheat from the farmers. I do not believe that that is an insurmountable obstacle. I believe that by making the farmers make an affidavit, with a drastic penalty for a false affidavit, as to when the wheat he is offering is grown, and then providing he shall not get more than such a price for the 1917 crop, while the price of the 1918 crop can be adjusted—I believe that would work all right. My understanding is that it is simply a question of wanting to make this change; that the Food Administration can do it if they want to do it, and I want to see some pressure brought to bear upon the Food Administration that will make them want to do it. I trust that you gentlemen here will recognize the seriousness of the situation, and the fact that we must have the wheat. I want you to do your best to bring that pressure to bear in the proper quarters to produce results.

I will be glad to answer any questions that any gentlemen desire to ask.

Mr. YOUNG of North Dakota. What is the condition of the rye crop in the Northwest?

Mr. OWEN. Well, of course, it is a little early to determine that. We really can not tell about that until we have had a little growing weather up here.

Mr. YOUNG of North Dakota. You do not know how it has come through the winter?

Mr. OWEN. No, sir.

Mr. YOUNG of North Dakota. The acreage was increased, was it not?

Mr. OWEN. Yes, sir; the acreage was increased; but as to how it has come through the winter it is hard to tell now. I am afraid, however, that there has been considerable winter killing.

Here is another point I want to make while I think of it. While I am not in as close touch with the winter-wheat situation as I am with the spring-wheat situation, because we do not grow winter wheat to amount to anything, there are a great many winter-wheat fields that are in a very bad condition and that may yield possibly 6 or 7 bushels to the acre. Now, with a price of \$2.20 per bushel, the winter-wheat farmer is not going to allow those fields to come to maturity, but he will turn them under. He will turn them under and put in something that will bring in more money. He will do that as sure as fate; that is, a great majority of them will do that, if they see that they will not get an even break out of their winter wheat. If they see that, they are going to put that land into something that will produce a profit. That is another thing that is very serious and that must be given due consideration here.

Mr. YOUNG of North Dakota. Your idea is that if any change is made it must be made quickly?

Mr. OWEN. Yes, sir; absolutely. Of course, you know the North Dakota situation. As Mr. STEENERSON says, it is possible to sow wheat as late as the 1st of June, but it is very hazardous farming to do it.

Mr. YOUNG of North Dakota. Personally my thought has been during the last couple of weeks that it is absolutely impossible to get any change made in the price of wheat or the prices of any other farm products by the Food Administration, and it seems to me that under that situation it is pretty nearly time for us now to turn in and do everything we can to increase the production this year. That is to say, that we should use every possible persuasion that we can to have the wheat acreage increased. Now, it may be that I am mistaken about that; it may be that something can be done; but it seems to me that now, at this late date, we of the committee ought to know pretty well as to what it is possible to do, because if this agitation continues I think there will be a decreased acreage in wheat. The agitation will have that effect, because as long as the newspapers and others discuss this matter, or as long as the newspapers and others intensify the idea in the farmers' mind that he can make more money by putting in something else, the effect must be to reduce the acreage.

Up until quite recently I was very strongly in hopes that something could be done, but I think that we ought to be able to make up our minds now as to whether it is possible to do anything or not; and if we can not, I think we ought to throw off our coats and do everything we can to get the farmers to put in wheat this year, because the country needs it. Besides, who knows that coarse grains will bring a better return than wheat next fall? It is not uncommon for coarse grains to be high in the spring and much lower in the fall.

Mr. OWEN. If you will pardon me, I think you have the cart there a little before the horse. The agitation has come from the farmers. We did not take this up, and we did not publish that open letter to Congress on our own initiative. We did not simply assume that there was a certain condition there, but we were sure the condition was there before we sounded the alarm. Of course, if it were possible to get in absolute personal touch with every farmer in the spring-wheat territory, you might, if you were a good persuader, persuade them to increase the acreage to some extent, but that is not practicable. You have got to play your obvious card, and that is a better price, if you are going to get results. I do not believe that all the persuasion or all the oratory in the world will produce results at this time. Understand me, I am not allowing anyone to say that the farmer is not patriotic; understand that, because he is patriotic. He will do the best he can under the conditions that he is up against. There is no doubt about that.

Mr. YOUNG of North Dakota. I am not questioning the patriotism of the farmers now. I think there is perhaps a little more question of the patriotism of some others. I think we are getting to the line now where, if we keep on agitating for higher prices, we will decrease the acreage, and I do not think any man ought to do that.

Mr. OWEN. Why don't you take the other alternative, and take off your coat and push this proposition—

Mr. YOUNG of North Dakota (interposing). All through the winter—and I think these gentlemen around the table will agree to this—we people from the wheat areas did all we could; the people from the spring-wheat areas came here and they appeared with us before the Food Administration, the Secretary of Agriculture, and the President, and urged them to do the very thing that you are asking for now on the 13th of March. We have been working at that for months, but we have not been able to increase the price, and I have about made up my mind that we can not do anything, which, I believe, is the opinion of the committee. If that is true, it is pretty nearly time for us of the Northwest to wake up to it, take another track, and do all that we can to have the acreage increased. We are working in this committee now to get a bill out to fix the prices upon farm machinery and other articles. That is a good place to use some publicity.

Mr. OWEN. We have been working on Germany for nearly four years, but we are not yet ready to say we are licked.

Mr. YOUNG of North Dakota. We can not lick Germany by decreasing the wheat acreage. If the price can not be changed this spring, which seems to be well settled, then the talk about wheat being a poor thing to plant from the economic standpoint ought to stop.

Mr. THOMPSON. You live in what State?

Mr. OWEN. In Minnesota.

Mr. THOMPSON. You are an editor?

Mr. OWEN. Yes, sir; I am the editor and publisher of Farm, Stock, and Home.

Mr. THOMPSON. What is the circulation of that paper?

Mr. OWEN. One hundred and forty thousand.

Mr. THOMPSON. In what States?

Mr. OWEN. In Minnesota, the two Dakotas, western Montana, northern Iowa, and eastern Wisconsin.

Mr. THOMPSON. The condition you describe here is the condition that exists in the spring-wheat-growing States?

Mr. OWEN. Yes, sir; in the big spring-wheat States.

Mr. THOMPSON. The farmers all through that country, like the farmers all over the country generally, pretty well understand, without having some man down here in the department in Washington to go out and tell them, what they will be able to make out of the different crops at the prevailing prices?

Mr. OWEN. Yes, sir.

Mr. THOMPSON. You have found that they have figured that out?

Mr. OWEN. Yes, sir.

Mr. THOMPSON. And when they come to plant this year they will take that into consideration? They will take that into consideration when they go to plant their fields?

Mr. OWEN. Yes, sir.

Mr. THOMPSON. And that is the reason you believe that there will be a decrease in the spring-wheat acreage?

Mr. OWEN. Now, I do not know that I would like to go so far as to say that there will be a decrease. There may be a decrease. Some of my correspondents say that there will be a decrease. I think I can say that there will not be an increase.

Mr. THOMPSON. You do not think there will be an increase?

Mr. OWEN. There will not be an increase, and there may be a decrease.

Mr. THOMPSON. If they plow up the wheat that will produce 5, 6, or 7 bushels per acre, that will be the result, will it not?

Mr. OWEN. That will decrease the total acreage. Of course I do not want to give the idea that I am speaking by the card on that winter-wheat situation, because my information there is largely secondhand, but it is the natural thing. It is a matter of business, and that is what they are likely to do.

Mr. THOMPSON. And the farmer understands, of course, that while they are fixing the price of the things he produces they are not fixing the price of the articles that he purchases?

Mr. OWEN. Yes, sir; absolutely.

Mr. THOMPSON. Don't you suppose they discuss that point?

Mr. OWEN. That is a sore spot.

Mr. THOMPSON. They are sore about it?

Mr. OWEN. Yes, sir.

Mr. THOMPSON. That is your understanding of the situation in the part of the country you are in touch with through your publication?

Mr. OWEN. Yes, sir.

Mr. HAUGEN. As a matter of fact, while it was the announced purpose in fixing the price of wheat to increase the production of wheat, it has not worked out that way. Now, what suggestion have you to make in regard to that situation?

Mr. OWEN. Put the price of wheat up to \$2.75 a bushel. Now, I want to tell you a peculiar coincidence about that figure of \$2.75. Mr. Hughes, our editor, took the prevailing prices of the coarse grains, and figured out what the price of wheat should be in order to be in line with the price of those coarse grains. The editor of the Commercial West, which is not a farm paper, but a paper having a milling interest, also figured it out. They did this figuring independently of each other, and the secretary of the chamber of commerce also figured it independently. They all figured it independently of each other, but all using the same basis. Now, in point of fact, Mr. Hughes arrived at \$2.77 as the right price, while the editor of the Commercial West arrived at \$2.75. Then Mr. McHugh, the secretary of the chamber of commerce, also arrived at \$2.75. That was a peculiar coincidence.

Mr. ANDERSON. That is on the basis of farm values this year?

Mr. OWEN. That is on the basis of the price of the coarse grains. I think Mr. Hughes used them as they were on the 25th of March.

Mr. STEENERSON. February, was it not?

Mr. OWEN. February, I should have stated. As a matter of fact, it was January. It was based upon the values contained in the open letter to Congress, which was published on the 1st of February. He used those prices, and they were the prices of about the 20th of January.

Mr. STEENERSON. January of this year?

Mr. OWEN. Yes, sir; when he made that comparison he used the February figures there. The comparison was published on March 1.

Mr. STEENERSON. It was in February.

Mr. HAUGEN. The difficulty that the farmer is laboring under is largely due to the shortage of help, and the competition that he must meet from the manufacturers of munitions, etc., in the employment of labor?

Mr. OWEN. Of course, that is true.

Mr. HAUGEN. Have you any remedy to suggest for that?

Mr. OWEN. Of course, as I understand it, the administration is working on that. They are working on some plan for mobilizing help on the farms, and, as I understand it, they are putting farm help in the deferred class for the draft. But when you come down to competition with the \$5 and \$10 per day wages that they can get from the manufacturers, that is a very difficult problem. It is assuming to ask laboring men to do what we are asking the farmers to do; that is, we are asking the laboring man to sell his services for patriotic motives at less than the market price, just as the farmer is being obliged to sell his wheat at less than the market price.

Mr. HAUGEN. I believe we all appreciate that. Have you any suggestions to make along that line, as to how we can overcome that difficulty?

Mr. OWEN. Of course, we sent out a good many high-school boys last summer, and a good many of them made good. In fact, in a number of cases the farmers are asking for the same boys back again. That might be one way out.

Mr. HAUGEN. The other day the Secretary of War announced the purpose of furloughing young men back to the farm. I think that is to be done during the planting and harvesting seasons, and while that will greatly relieve the situation in many sections of the country, they will still be up against it in other sections where the help is needed the year around, as in dairying and diversified farming.

Mr. ANDERSON. In the matter of fixing a ratio as between these different grains, I do not think it is possible to establish any day to day ratio, week to week ratio, or year to year ratio, but we can only arrive at the ratio by taking the figures as they happen to be on a particular day.

Mr. OWEN. Yes, sir.

Mr. ANDERSON. You are suggesting a price of \$2.75 per bushel for wheat on the basis of the present prices of those other grains. Would not that price still be considerably lower, or would it not still be profitable to raise corn, or barley, or oats, in preference to wheat at that price?

Mr. OWEN. There would not be any appreciable difference there. Putting the price of wheat at \$2.75 would be \$32.72, taking the average yield of wheat of 11.9 bushels. Of course barley would run stronger than that, at \$36.32.

Mr. ANDERSON. Is that the farm price?

Mr. OWEN. That is the terminal market price. We could not very well figure on the farm price, because the farm price is determined by freight rates and distance from the terminal market. Then, there is another point: You do not want to figure this \$2.75 as being just that—that is to say, that \$2.75 is on this basis of \$2.20, and the price of wheat is \$2.17 in Minneapolis. This is the price of No. 1 first-grade wheat.

The CHAIRMAN. At Chicago?

Mr. OWEN. It is \$2.17 at Minneapolis, and \$2.20 at Chicago.

Mr. ANDERSON. It seems to me that the whole question of the price to be established is determined by the ratio which may be determined variously upon different bases. For the country over it seems to me that the average farm price for a long period would constitute the best basis for arriving at the ratio.

Mr. OWEN. Yes, sir.

Mr. ANDERSON. And, of course, if that basis is taken it would still be too low, but if you took the basis of the present price it would be more.

Mr. OWEN. Of course, the coarse grains have gone up very rapidly since those figures were compiled, but it does not necessarily follow that they will be that high next fall. We are getting along toward the tail end of the crops, so that it would not be safe to assume that to-day's (March 13) prices of the coarse grains are the prices that will prevail next fall.

Mr. ANDERSON. Is not that the basis upon which the farmers are now figuring in determining whether they will plant corn, oats, barley, or wheat?

Mr. OWEN. Unfortunately I think that is so, but we are pointing out to them that this rise in coarse grain is a matter that wants to be given due consideration and that they do not want to consider that they can get \$3 for rye next year or \$4.34 for flax.

Mr. ANDERSON. Does not that lead right back to the proposition that any basis we fix now may be an entirely wrong basis when you have the figures on the production for the current year?

Mr. OWEN. That may be so, but I think that \$2.75 is much nearer right than \$2.20.

Mr. ANDERSON. I am inclined to agree with you about that, but it is a question of whether the situation we are in now warrants us in establishing a different basis.

Mr. OWEN. I think I get your angle. You think that if we take the prices of to-day as the basis, then the price of wheat should be even higher than \$2.75?

Mr. ANDERSON. Unquestionably so.

Mr. OWEN. Then we are on the same side of the fence.

Mr. ANDERSON. That is true, if we should conclude that that is the basis we ought to take, but I am not coming to that conclusion. I am not coming to the conclusion that the commercial prices of to-day ought to be the basis on which to determine the price for next year.

Mr. OWEN. Of course, you must take into consideration the factors that may determine the price of the coarse grains next fall, which I touched upon there, and the necessity of restricting wheat consumption. Even after the 1918 wheat crop is in the bins, we will be up against the wheatless days, and that burden will be thrown upon the coarse grains.

Mr. ANDERSON. Unquestionably so. If we go strongly into the substitution of the coarse grains for wheat, with a resulting enlarged acreage in coarse grains, there will be a proportionate decrease in the price. It does not follow at all, it seems to me, that the people who are figuring upon making large profits out of growing barley, corn, and oats are going to realize on that theory.

Mr. OWEN. Of course, we have no absolute data on that, but we know that if we increase our wheat acreage we are bound to take it out of the acreage of the coarse grains, so that you are still likely to have a spread there.

Mr. ANDERSON. They might carry that proposition so far that they might get a spread the other way, and get a bigger spread than you have now.

Mr. OWEN. Yes, sir; but that will not affect this year's planting. It is this year's planting that we must look at. As Grover Cleveland said on one occasion, we are up against a condition and not a theory. As for myself, I am scared to death. We have got to have wheat. We must have wheat, but we will not have it unless we do something quickly. I do not believe that you people down here realize what you are up against on this wheat proposition.

Mr. ANDERSON. I think most of the members of this committee have realized that for a long time.

Mr. OWEN. But the Food Administration has not seen the light yet.

Mr. OVERMYER. Mr. Owen, I was interested in the figures you referred to a while ago, in giving a comparison of the prices of farm machinery, etc. Now, what is the percentage of increase in the price of wheat as fixed by the Food Administration over the average price for the last 10 years?

Mr. OWEN. I do not think it is quite fair to go back to a prewar period.

Mr. OVERMYER. What, in your judgment, is the percentage of increase in the price of \$2.20 as fixed by the Food Administration over the average price for the last 10 years?

Mr. ANDERSON. It is about 80 per cent over the average for 1914, 1915, 1916.

Mr. OVERMYER. And going back 10 years it would be an increase of over 100 per cent?

Mr. OWEN. Yes, sir.

Mr. OVERMYER. What was the percentage of the increase in the cost of the farm machinery you mentioned?

Mr. OWEN. Well, the increase in twine was from 9 cents to 26 cents, or pretty nearly 300 per cent.

Mr. OVERMYER. And what was the increase in the price of binders?

Mr. OWEN. The price of binders advanced from \$150 to \$250.

Mr. OVERMYER. That is about 40 per cent, is it not?

Mr. OWEN. Yes, sir. If you take a 10-year average for farm machinery, you will find that it has kept up the same relative increase of price as wheat.

Mr. OVERMYER. So that the percentage of increase in the prices that the farmer has to pay for the things he buys is about the same as the percentage of increase in the price of wheat as it has been fixed? I am leaving out of consideration the question of labor.

Mr. OWEN. That is the most serious factor. I do not know how you would figure that percentage of increase. They can not get men now at \$65 per month and board, whereas they could get plenty of them before at \$20 per month and board.

Mr. McKINLEY. Has the President by proclamation fixed the price for 1918?

Mr. OWEN. Yes, sir.

Mr. McKINLEY. Do you think, Mr. Owen, that with 20,000 Federal officers not under civil service in the employ of the Government, you could get a bill through Congress contrary to the desires of the President?

Mr. OWEN. That is a question you can answer better than I can, because that is your business.

Mr. HUTCHINSON. Do I understand from your talk that you are in favor of price fixing, if it is fixed high enough?

Mr. OWEN. I am in favor of fixing the prices as long as we have embarked on that course; but as a general proposition I am absolutely and utterly opposed to any price fixing at all.

Mr. HUTCHINSON. You say that the farmers are patriotic but that they are not willing to run the risk of not getting a good price for wheat?

Mr. OWEN. How is a man on a rented farm going to come out, or how is a man with a mortgage that he must pay interest on—

Mr. HUTCHINSON (interposing). That is the question I asked you—whether he could run that risk?

Mr. OWEN. He can not afford to run the risk. Now, here is another point: Here is a farmer who goes to work and puts in wheat and foregoes any profit. Then we come along with a liberty-loan campaign, and if he does not come across for a liberty bond he is damned as an unpatriotic citizen, while, as a matter of fact, he may be making more contribution than the man who comes across with \$50,000 worth; that is, in proportion to his ability. He might be doing just as much, even if he does not buy a bond.

Mr. HUTCHINSON. Now, I understand you to say that you are opposed to Federal grading. Is the Federal grading more strict than the State grading?

Mr. OWEN. Yes, sir; and it is very complicated. The result was that last year we had Federal grades which were so complicated that no one knew how they would apply. Therefore the buyer, who was going to make sure that he paid a little enough price for the wheat, saved himself. That was natural. Now, here was the situation with the old grades in force: When a farmer took his load of grain to market, he knew what that wheat was; he absolutely knew it. The grade was simpler then, and he knew what he was going to get.

Mr. HUTCHINSON. I want to say this, that I have bought grain for years and years, and I never saw a farmer yet who did not think that he had the best grain that was ever grown.

Mr. OWEN. I want to qualify that. He may have known what his grain was, but like every other trader he wanted the best price obtainable.

Mr. HUTCHINSON. I want to say that I think that that is one of the best laws ever passed by Congress.

Mr. OWEN. The farmers do not think so.

Mr. HUTCHINSON. You take barley, for instance. Formerly they did not get anything for barley, but now they get the same price that they do for wheat.

Mr. OWEN. No, sir; they are docked for barley.

Mr. HUTCHINSON. How are they docked?

Mr. OWEN. It is knocked off on the grade.

Mr. HUTCHINSON. But they get it on the number of pounds. If the wheat is graded as No. 3 wheat, they get the price of No. 3 wheat.

Mr. OWEN. I do not know where the barley goes to, but they are not allowed anything for barley.

Mr. HUTCHINSON. You do not mean to say that they take off some number of pounds for the barley?

Mr. OWEN. Yes, sir; they did it in a great many cases out there. They have no right to do it.

The CHAIRMAN. That was not the fault of the law.

Mr. STEENSON. That was done according to these rules. Barley is a separable material, and the dockage would be estimated at so much. If it contains 2 per cent barley, the dockage is that much, just as if the barley had been removed. The farmer has to give away that dockage. Now, rye is an inseparable material—

Mr. HUTCHINSON (interposing). Do they take off a number of pounds for the barley?

Mr. OWEN. They steal the barley.

Mr. STEENSON. Yes.

Mr. HUTCHINSON. You say that in 1894 wheat was selling for 49 cents, and you say the farmers were told that that was because of overproduction. Do you remember what was the size of that crop?

Mr. OWEN. They told us it was due to overproduction.

Mr. YOUNG of Texas. About a year ago, when we had the food-control bill under consideration, quite a number of farmers from the spring-wheat section of the country came down here and advocated the policy of the Government taking charge of wheat and fixing the price. They advocated that measure, and now they are dissatisfied with the price fixed. Is that a correct statement of it?

Mr. OWEN. I say that some North Dakota farmers were dissatisfied with the Minnesota grades, and that is true. Of course, you will find some farmers who are dissatisfied with any kind of grades. They were dissatisfied with the Minnesota grade and came down here and wanted a Federal grading bill. Well, of course, there is a very great difference between wanting a better grading bill and what they actually got. What they actually got did not meet the case.

Mr. YOUNG of Texas. As I recollect it, they were down here advocating the passage of a law one of the terms of which was to fix the price of wheat. They wanted wheat to go under the food control, and they advocated the passage of the bill. Did they not want to leave the fixing of the price to the food controller? Is not that what they said about a year ago?

Mr. YOUNG of North Dakota. I do not think the record will show that.

Mr. OWEN. How is that relevant at this time?

Mr. YOUNG of Texas. That bill was enacted into law, but when it left the House no price was fixed in the bill, but that power was left with the food control. Then western Senators from that wheat-growing section of the country were afraid of that procedure, and wrote into that bill that not less than \$2 per bushel should be the price for wheat. Now, as I understand it, they are dissatisfied with the prices that have been fixed under that bill that they advocated here.

Mr. OWEN. Well, that is a fact. I don't know why they should be bound to the changing conditions—why that should be brought up against them at this time. Everybody has had to change their positions a great many times since 1914.

Mr. YOUNG of Texas. This goes to demonstrate that this price-fixing business is a pretty dangerous experiment to enter upon.

Mr. OWEN. That is true; but my judgment is what would be better than fixing prices on wheat at this time would be simply to back right out of it entirely and let the price of wheat go where it belongs. That would be much more logical than putting in the \$2.75.

Mr. LESHER. I don't know. I thought they only came down here and asked to fix the minimum price. Of course, when we fixed a minimum price that fixed the maximum.

Mr. OWEN. Theoretically this is a minimum price, but if you are caught paying any more than this minimum price you may lose your license. There was a fat chance of getting any more than that \$2.20 price.

The CHAIRMAN. As a matter of fact, Mr. Owen, the minimum guaranty written into this bill has absolutely nothing to do with the power under which the Food Administration is fixing the price of wheat. The Food Administration is fixing the price of wheat through the Grain Corporation and its power to buy wheat.

Mr. OWEN. It isn't necessary to get congressional action.

The CHAIRMAN. I don't think that it is. I think there is full power in the Food Administration to fix the price of wheat at \$10 a bushel to-morrow if they want to. They can buy some things. One is wheat and another is beans.

Mr. WASON. What power has the Food Administration under that legislation to organize a corporation—an exclusive trust?

The CHAIRMAN. I think under the powers of the act they can do it.

Mr. WASON. And go in the country and control prices?

The CHAIRMAN. I think they can.

Mr. WASON. I don't think that is food administration.

Mr. MCKINLEY. I would like to ask Mr. Owen one question. You made a statement about the winter wheat. Doesn't the Food Administration give out the figures now that there will be more acreage than ever before? That is the report, isn't it?

Mr. OWEN. I haven't seen the March Government report as yet. My information as to the probable plowing up of the winter wheat, where it looks as though the yield is going to be small, is from Senator GORE. He told me that yesterday afternoon. He said that is the situation in a large proportion of the winter-wheat territory.

The CHAIRMAN. Who told you that?

Mr. OWEN. Senator GORE. Of course, as I say, that is secondhand information, but I think from that source we must give it a certain amount of attention anyhow.

Mr. YOUNG. I want to say, Mr. Owen, in addition to what you said awhile ago, just to keep the record straight, I believe you have reflected the actual feeling out in the Northwest.

Mr. OWEN. I have endeavored to do so.

Mr. YOUNG. At least, my correspondence shows the same condition that you have described. My thought is simply this: I think after you hang around the Capital here a few days you will understand how difficult it is to get things changed—get legislation, or to get action upon the part of these bureaus—and others have been here working for months on these things and have about come to the conclusion that nothing could be done in respect to a new price for wheat this year. I regard the situation as very serious. If this committee can see any possibility of changing the price now, I think it ought to be done. If we find we can't do it, which seems to be well settled, I think we ought to quit talking about prices and boost for the farmers to put in all the wheat they can, because our country will need it this year.

Mr. OWEN. That is true; but let's see if we can't keep up the fight to the last ditch.

Mr. YOUNG of North Dakota. You do not seem to realize that when the President issued the proclamation fixing the price for 1918 the fight was over.

Mr. HAUGEN. You spoke of opposition to the grain-fixing act. Is it the act or the way it is applied?

Mr. OWEN. It is the way it is fixed.

Mr. HAUGEN. The object of the law was to provide for uniform standards and uniform application of these standards, and to give the shipper an opportunity to take an appeal from State inspection to Federal inspection and guard against discrimination and unjust grading.

Mr. OWEN. Oh, no; there is no fundamental objection to the idea, but it is the application of it, and of course there have been a great many modifications made.

Mr. HAUGEN. Modifications will be made from time to time?

Mr. OWEN. Well, they have already announced very radical modifications, but the danger in that is whether or not those modifications are going to stick, or whether you will come back to the objectionable features again when the conditions get to be more normal.

Mr. HAUGEN. Have you any suggestion to make that would improve it?

Mr. OWEN. One big objection to the system in my mind is its inflexibility. It applies the same grading, same methods to all sorts of crops. Now, the old Minnesota system when Minnesota had its grading, they used to get together, the board did, along in August, just before the wheat began to move, and they would take into consideration the general condition of that crop as to quality and would make their grades in a way, just as far as they could, to conform to these various conditions. Now, the Federal grading is simply an inflexible proposition. Whether you have got a dry, nice crop, or whether you have a badly damaged crop from moisture, or from heat or from rust, you have got to come right up to those standards.

Mr. HAUGEN. As you may know, this grain commission met once too often. They made a few conditions to accommodate certain interests on a long and short, and it was determined to fix grades. If they were fixed, they should be fixed at the head of the harvest season. Those things can be fixed by taking it up with the department which has the matter in charge, and if there is any discrimination in fixing the grades it ought to be corrected. I take it an honest effort will be made to do that.

Mr. OWEN. I want to say something here, not in the spirit of criticism but just the way it strikes me, and that is that Mr. Brand, while he may be all right, he got himself in very bad last December in Minneapolis and Fargo. Whether it is so or not, he gave the impression that these are the grades, and we would have to take them whether we want them or not. That is the impression he gave to the farmers. It was an unfortunate impression, both for him and the department.

Mr. HAUGEN. It goes without saying that experienced men would be more competent to fix grades than inexperienced men, and it goes without saying that Mr. Brand should consult men who fix these grades and get their judgment in the matter.

Mr. ANDERSON. Suppose the Food Administration fixed the price of \$2.75 on wheat, what effect would it have on wheat and what effect on coarse grain?

Mr. OWEN. Anything I might say on that subject would be largely a matter of opinion and largely a matter of guesswork. If it brought about the increase in the acreage that we hope it will, it will have to be largely at the expense of some of the other grains, and we might find ourselves up against pretty nearly the same situation next spring as we are up against now. That would depend, of course, largely on the harvest outcome. The corn crop, it doesn't seem to me, can be a very big one. I think there will be a great many acres of land that normally would have gone into corn—that is, if we had had the seed—that are now going into the other coarse grains, or, if the price of wheat is put to \$2.75, will go into wheat; so that I think it is a fair assumption that we wouldn't have a very much larger increase in the coarse-grain acreage, as a whole—that is, we would move onto the acreage that we intended to put into corn; we would move that into wheat.

Mr. ANDERSON. What I am getting at is this: Would there be a general tendency in the market for coarse grains to move up to the higher prices of wheat on the basis of their present high prices, or would the coarse-grain problem remain at the relative ratio as they do now?

Mr. OWEN. I should think on \$2.75 wheat I wouldn't expect to see the coarse grains go very much higher, because I think our increased wheat acreage would largely come on the land that we would have devoted to corn if we had been able to get the seed, which we can not do.

Mr. McLAUGHLIN. I think the chairman has correctly stated the situation. I think the Food Administration has authority to fix the price. If they don't find it in the spirit of the law, they will find it in their way of doing business. They are a law unto themselves. They have a way of fixing food prices. I don't know what legislation can be enacted. With this authority in the Food Administration and those higher up, if they do not wish to increase this price we can't get anything through this Congress to increase the price.

The CHAIRMAN. Mr. Owen, I don't know what \$2.75 wheat would mean translated into prices per barrel. Mr. Hutchinson, you might say.

Mr. HUTCHINSON. About \$13.50; that would be wholesale. It would be about \$15 retail.

The CHAIRMAN. You are very likely to have a pretty strong combination of men who would say, "I can't afford to vote for that, because my folks in the cities and towns have got to pay for it." On the other hand, those of us who have tried to study it in a broad way have come to feel that unless the farmer is induced to produce, the law of supply and demand itself will fix these prices to the ultimate consumer, and he will be the burden bearer in any event.

Mr. OWEN. It may become necessary before this war is over to adopt the English system. There they guarantee the price to the grower and guarantee the price of the loaf to the consumer, and the Government as a whole made up the difference. That has cost England up to this time about \$400,000,000. It would probably cost this country a good deal more than that, but what is the difference? We are in war; we can't count the cost of war.

The CHAIRMAN. I think the committee knows I am very favorable to the English system of handling this whole proposition. It is a very big thing, but I don't know that the country is ready for it yet. If the war goes on, the Federal Treasury will have to make up the difference, not only as to farm products but also as to labor. I don't think we are up against it yet, but I think we will come to it.

Anything else, Mr. Owen? If not, we thank you for your statement.

Mr. OWEN. I want to say, gentlemen, I want to thank you for the courtesy of permitting my appearance here and the interest you have given me.

Mr. STEENBERSON. I would like to say that I introduced a bill to fix the price of wheat at \$2.75, and, besides, that provision contains a few words that I thought would correct the injustice of the grading. Of course I don't seek to change the Federal grades, but I do seek to require the Food Administration in buying wheat below the first grade that is fixed in the proclamation—everything below that should be bought by its milling value.

The thing the farmers complain of and with which they are dissatisfied in my district and throughout the Northwest is the fact that there are at least 6 grades of each class of wheat, making 96 grades in all. But say we produce only one kind of wheat; there is one, two, three, four, five, and sample, and these were graded down because of admixture, sometimes because of separable matter, and sometimes because of inseparable matter, like rye. The penalty is so severe, in fact, we have samples that I intend to show to the House later on, with wheat weighing 60 pounds per bushel, is the finest wheat, but you lose sometimes 12 or 18 cents a bushel because of the number the inspection gives it. To relieve against that difficulty, the Food Administration did revise the rules so that they could pay within 1 cent of the next grade, so that if you got No. 5 you could get within 6 or 7 or 8 cents of No. 1 price. For milling it might be as valuable as No. 1. But it was penalized because of the reason I have stated.

Now, my bill provides that they should fix the price below these No. 1's, which is the basic price, upon its milling value, regardless of any grading. I think if they did that, it would remove the dissatisfaction under which the wheat raisers of that country are now laboring. They are very much wrought up over their treatment in this regard.

Another thing I want to add to what Mr. Owen has said, and it is this: That the propaganda that at once emanated from the Food Administration when we talked about raising the price of wheat was to the effect that it would enrich the speculator. Every newspaper carried the headlines it would be raising the 1919 crop from \$2.75 or \$2.50, that it would enrich the speculator that had the 1917 crop on hand. That is unfortunate. The proclamation of the President in regard to the 1918 crop, which is the first attempt to fix the price of that crop, says:

"For the purposes of such guaranty only I hereby fix the guaranteed prices at the respective principal primary markets above mentioned for the following grades of wheat, to wit: No. 1 northern spring, No. 1 hard winter, No. 1 red winter, No. 1 durum, No. 1 hard white. The guaranteed prices at the respective principal primary markets aforesaid of all other grades of wheat established under the United States grain standard act approved August 11, 1916, shall be based on the above guaranteed prices and bear just relation thereto.

"The sums thus determined and fixed are guaranteed by the Government of the United States at the respective principal primary markets of the United States above mentioned, to every producer of wheat of any grade so established under the United States grain standards act, upon the condition that said wheat is harvested in the United States during the year 1918 and offered for sale before the 1st day of June, 1919, to such agent or employee of the United States, or other person as may be hereafter designated, at any one of the above-mentioned cities which are, for the purposes of this act, hereby declared to be the principal primary markets of the United States, and provided that such producer complies with all regulations which may be hereafter promulgated in regard to said guaranty by the President of the United States."

Now, the Government designated the purchaser and required you to prove that that crop was raised in the United States and raised in 1918. There is no danger that anybody who had a warehouse full of wheat raised in 1917 can get the benefit of it, and you would have to fool the agents of the United States to do it. That difficulty is simply a delusion. It was started by those who are opposed to raising the price of wheat for the purpose of scaring the public.

In regard to the suggestion that has been made here about the guaranteed price, the farmer didn't ask for a price to be fixed. When Congress was considering the bill for the food-control act, they asked as a protection against an unreasonably low price, the price to be fixed by the Government, should not be too low—the Senate put it in there, to guarantee a certain amount, as a minimum, but that wasn't the suggestion of the farmers. That was a companion provision to the one that authorized the fixing of prices, because if it hadn't been for that the Government might have fixed the price at 50 cents a bushel. So it was a limitation on the price-fixing provision contained in the bill.

Another thing I want to call the committee's attention to is this: I have numerous letters, as all Congressmen of that section have, showing the disparity between the price of wheat and other grain. Now, they say it is very much more profitable to feed the wheat to the stock. If that continues, isn't that going to be an element in the quantity that we can supply to our allies and to our own people? If you are confronted with a proposition that it pays and it is possible to use the wheat for other purposes than bread, it would be used for that, and it is just the same as if you hadn't raised it. It seems to me that ought to be taken into consideration.

In regard to the proposition of Mr. Young that it is too late to do anything, that is, perhaps, true, because it takes time to pass a law; but the thing we want to do is to help the country. Here is a question of helping the country, and to help the country we have got to try to do all we can to remedy the complaints of the farmers. The wheat raisers of the Northwest are dissatisfied; not with the grain-inspection law, as some erroneously believe. Very few of them have said anything about that, because the grain-inspection law says the Secretary of Agriculture shall fix standards of grain, but it is the administration of that law; and I say without fear of contradiction that the Agricultural Department, in the rule it has made for determining the grade of wheat, has, unconsciously or otherwise, adopted so strict regulations in regard to the moisture test, in regard to admixture, that it works a great hardship. What is the use of penalizing a man who happens to have 4 or 5 per cent of another wheat just as good for food value? The idea of a rule that would penalize a man for having a few per cent of rye that is not wheat because they are not separated. The idea of the Department of Agriculture is this: They want to encourage the farmer. They regard him as a sort of child. They want to encourage him to separate his different varieties of wheats in the field and keep them separated in order that they may be stamped and graded and sold as such. No farmer needs to be told that. Scientists tell us that wheat gets mixed of its own volition. You can sow one variety of wheat and in some instances you will find it develops different varieties of itself.

Another thing, if you have wheat in two fields adjoining, it will cross fertilize in a few years—it will mix—and you will have a voluntary crop come up the next year, and it is impossible to keep it from mixing. These rules are not the act of Congress. The complaint is against the administration of the law, not of the law. Congress is supposed to have some influence with the administration and might help to get just and equitable enforcement of the law. The wheat raisers are not making a fight on the grain-standards act, but they are against the unjust rules made under it. They operate against the producer and in favor of the middleman.

I have met millers, big elevator men, and I have met farmers; invariably you will find that the miller is perfectly satisfied. He is satisfied with these strict rules that Mr. Brand has established penalizing the farms on every turn, because he don't know what has happened. He doesn't know that the grain standards act is administered only at the mill. His rules are so severe that the local buyer has got to run the price down in order to play safe, and the farmers everywhere in the Northwest are dissatisfied. It isn't just one. Mr. Brand said at the hearing that this was a "cooked up" dissatisfaction. There never was a more unfounded assertion made. The dissatisfaction is growing. If the Members of the House interested in food production will cooperate with us in new legislation or getting better rules from the executive branch of the Government on this subject, it will help to raise more wheat. That provision in my bill requiring the Food Administration to buy wheat below a certain percentage according to its milling value—would be only for the period of the war, of course—would remove the dissatisfaction. I am sure that something ought to be done. If you could have satisfaction on the question of these grades, you would have more wheat planted, and these two things, whether we get it by legislation or by administration of the grain standards act, are important. I think we could, if we put our shoulders to the wheel, get this relief in a few days.

Mr. Brand has posted notices throughout the Northwest that there will be hearings. He states now that it isn't necessary to keep two kinds of wheat so much separated. The law forces them to mix, and he says during the war these grades are proposed to be modified, but they put a "warning" on the front that it isn't adopted yet. So I presume a great deal has got to be said and done before we get changes, but unless we get changes and get them quick there will be a lot of discouragement so far as wheat raising is concerned.

The amendment I offered is embodied in H. R. 10063 and reads as follows:

"The guaranteed prices of wheat for the crop of 1918 shall be as follows: For No. 1 northern, United States standard grades, not less than \$2.75 per bushel at the principal interior primary markets; for all other wheat the prices shall be based upon the milling value thereof as compared with No. 1 northern, and where dockage is taken the value thereof less cost of separation to be added."

(Thereupon, at 12.20 p. m., the committee adjourned.)

Dry Docks Needed.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 2, 1918.

Mr. MOORE of Pennsylvania. Mr. Speaker, several weeks ago, when the river and harbor bill was under consideration, I spoke of the shipbuilding activity along the Delaware River. The Government is doing so much work there at the present time as to place the river and the industries bordering upon it in a class by themselves. If the output of ships comes up to the expectations of Congress and the administration, the Delaware River will be entitled to the grateful appreciation of the Nation now

engaged in a great world war. But along with the ships we must have dry docks in which to examine and repair them after they have been launched into the national service. I am moved to ask permission to extend my remarks upon this subject because of a timely agitation started in Philadelphia for the construction of dry docks. The propriety of making these observations is also heightened by the announcement in this morning's papers of the loss off the Delaware coast yesterday of the *City of Athens*, an American coastwise vessel, which was rammed in a fog by a French cruiser, causing a loss of 66 lives, including civilians and United States marines. An argument for dry docks might not apply in this particular instance because the rammed vessel went to the bottom almost immediately following the collision. If she had been able to float, however, a dry dock would have been the first thing toward which she should have been taken, or if she should be lifted for repairs and future service the same question would immediately arise. In either event the proximity of a dry dock would be an essential factor in the problem of salvage, both of life and property.

There is another announcement in this morning's papers which bears with equal, if not greater importance, upon the dry-dock question. I submit it herewith:

200 MORE WOODEN SHIPS TO BE BUILT.

WASHINGTON, May 1.

Expansion of the wooden-ship-building program to include the construction of 200 new vessels of about 4,500 tons displacement each was announced to-day by Chairman Hurley, of the Shipping Board.

The board also authorized to-day contracts for 25 large seagoing tugs for use in the coast trade. This will bring the number of tugs now being constructed for the Government up to 100.

Query: If in addition to its extensive shipbuilding plan the Shipping Board intends to increase the total by 200 new wooden ships, what provision is being made for dry-docking? True, we have a limited number of dry docks at our navy yards, some of them not completed, though ample appropriations have been made. True, there are certain private dry docks, including a large new one built by the State of Massachusetts at the port of Boston, but relatively, and certainly compared with England and some of the other European countries, we are not in such a state of preparedness in the matter of dry docks as a great nation at war, and hoping to establish a merchant marine commensurate with that national greatness should be.

SUGGESTIONS FROM SHIPPING MEN.

It is to be presumed that the Shipping Board and the Emergency Fleet Corporation are giving attention to this important phase of the shipping question. I have assurance from the chairman of the board that this is so. But still it can not be denied that we have much to do to catch up on the dry-dock question, just as there is much to be done to bring our channel depths up to proper dimensions for the accommodation of the ships we are building. The director of wharves, docks, and ferries at Philadelphia, Mr. George S. Webster, and the various trade organizations of that port have been anticipating this new national need. I am happy to say they have enlisted the interest of the officials directly concerned. As the result of their joint efforts much data has been prepared and submitted to the authorities. I insert here a report of the war shipping committee of the Philadelphia Chamber of Commerce, with an accompanying resolution, favoring the construction of at least four dry docks at or near the port of Philadelphia:

REPORT AND RECOMMENDATIONS ADOPTED AT MEETING OF WAR SHIPPING COMMITTEE, PHILADELPHIA CHAMBER OF COMMERCE.

At a meeting of the war shipping committee of the Philadelphia Chamber of Commerce, held on the 3d day of April, 1918, the following report was received from a special subcommittee and noted and recommendations adopted as hereinafter appear:

The need for dry-docking facilities as a necessary adjunct to the ship construction and operation of the United States of America through its Shipping Board has long been apparent to thoughtful citizens interested in ships. As we have had no mercantile marine worth mentioning for many years, it is to that preeminent shipping nation, Great Britain, that we must turn for statistics on which reliable conclusions can be based. Lloyd's Register gives the number of commercial docks in Great Britain, exceeding 350 feet in length, in 1915, as 171. The tonnage served by these docks equaled approximately what our present construction program calls for. It is fair to assume that the supply did not exceed the demand. As we have but 27 dry docks in this country to-day, our needs in this direction are impressive. On the Great Lakes, where the demand for water-borne transportation and our laws have contributed to the development of American shipping, to the extent of 2,300,000 tons, there were, in 1915, 20 docks of 350 feet or more in length. On the basis of this proportion we will require 182 docks for our future fleet. These figures, it will be noted, compare closely.

It must also be borne in mind that the efficient operation of ships requires fairly constant dry-docking. Bottoms must be inspected and cleaned and minor repairs must be made. This is a most important consideration at this time, in view of the character of the ships we are building and the service for which they are being built. The wooden ships will undoubtedly require careful examination, as an engine-driven wooden ship in trans-Atlantic service would be subjected to great stress and strain, and could only in this way be maintained water-tight. The fabricated ships will likewise require similar attention. They are to be built in the greatest haste possible, and, in the very nature of things, there will be much to be done from time to time after these ships are in service.

We are also hearing from time to time of vessels which, although torpedoed, have succeeded in making their way to port. Without the dry-docking facilities existing abroad, it is very easy to see how serious this phase of the situation would be. It is within the realm of possibility that in the future ships may be torpedoed near our coast, in which case, if they could be saved, it would only be by working them back to our ports, and upon us would fall the burden of making the repairs. It is not too much to say, therefore, that the lack of dry docks constitutes almost as serious a menace as the submarine itself. It would seem, therefore, that the need of dry docks is beyond the controversial stage, the only question being where they should be located.

In view of the fact that 35 per cent of the ship-construction program is to be carried out in the yards of the Delaware River district, of which Philadelphia is the port, the claims of this city should not be overlooked. At the present time there is here but one private dock, which, under normal conditions, has been greatly overcrowded.

It is essential, in the opinion of your subcommittee, that the construction of at least four dry docks of 350 feet or more in length in the port of Philadelphia be undertaken at once. As, necessarily, some time must elapse before completion, every moment is priceless.

There is another phase to the question than the shipping side solely. It is from the point of view of commerce and industry generally. Today the port of New York is overcrowded. As a point for originating foreign shipments, it does not compare with Philadelphia, except in one respect. It has some nine dry docks of over 350 feet in length. In consequence of this, ships in need of repair or overhauling must, of necessity, call at the port of New York. The ships being there, the cargoes go to them, although their point of origin in the United States, in many cases, is much nearer to Philadelphia, where they can be handled direct from the railroad cars to the ships without lighterage.

Only recently a vessel for which a cargo was waiting in Philadelphia was compelled to go to the port of New York for certain necessary repairs. Naturally it never came back, taking on a cargo at that point.

The department of wharves, docks, and ferries of the city of Philadelphia gives it as its opinion, the result of careful study and a thorough knowledge of the port, that unless dry docks are built here the magnificent advantages of this port—fresh water, nearness to industries, far enough from the ocean to be immune from attack by sea, at the same time near enough to be easy of access—are to be wasted.

There are sites available, served by rail connection, for the transportation of the necessary materials for the construction and for ship repairs after the dry docks are built, which lines of railroad at the present time are not overburdened: Be it therefore

Resolved, That the foregoing report be approved and adopted by this committee, and that a recommendation be made to the United States Shipping Board that at least four dry docks of 350 feet or more in length be located in the port of Philadelphia, and that a recommendation be made to the authorities of the city of Philadelphia, its commercial and governmental representatives, that nothing should be left undone to have these docks located here, and their construction should be commenced without delay, and that they be completed at the earliest possible date.

DIRECTOR WEBSTER'S STATEMENT.

A letter by Director Webster to the various trade organizations also presents some timely and useful information upon this subject:

DEPARTMENT OF WHARVES, DOCKS, AND FERRIES,
Philadelphia, April 13, 1918.

Mr. WILLIAM M. COATES,
President Philadelphia Board of Trade.
Mr. JOHN S. W. HOLTON,
President Philadelphia Maritime Exchange.
Mr. EMIL F. ALBRECHT,
President the Bourse, Philadelphia.
Mr. LOUIS G. GRAFF,
President Philadelphia Commercial Exchange.
Mr. ALBERT E. BROWN,
President Vessel Owners' and Captains' Association,
Philadelphia.

DEAR SIR: In order that the port of Philadelphia may be placed on a competitive basis with other neighboring maritime centers of our country, I feel it is most important at this time to bring to your attention the urgent necessity of the early construction by the United States Shipping Board of well-equipped dry docks and railways to meet the demands of the merchant marine now in course of construction by this Government, and in this effort I would very much appreciate the cooperation of your body.

It would seem unnecessary to dwell otherwise than briefly on the matter in which our port has been handicapped in the past through lack of dry-docking facilities, and this difficulty must become more acute as our own fleet increases.

Charterers of vessels can testify as to how difficult it sometimes is in normal times to get owners to consent to their craft coming here, as they are invariably required upon the discharge of their cargoes to suffer delays in securing dry-dock facilities or are forced to go to other ports to be docked, scraped, and painted.

It seems also unnecessary to remind you of instances of damaged vessels having to be conveyed to other ports to be repaired.

We are now happily confronted with the condition of Philadelphia becoming the leading shipbuilding center of the world. Upward of 40 per cent of the tonnage for our merchant marine is being constructed along the shores of the Delaware, yet we find ourselves utterly lacking in repairing and dry-docking facilities—with but 5 marine railways and 2 dry docks, the largest one, privately owned, being capable of only lifting a ship 412 feet on the bottom. At League Island there is one dock 707 feet long, but this is seldom available for commercial purposes.

In contrast with the conditions prevailing in the various ports of the United Kingdom and Continent, we are forced to admit that it will be physically impossible under these conditions to cope with what must follow the program of ship construction contemplated by the United States Shipping Board.

In this country New York seems adequately provided for, with 86 railways and graving docks, the largest of which is capable of lifting a ship of, say, 703 feet between perpendiculars. Boston follows with 13, including a Government-owned dock 750 feet in length, but the largest privately-owned dock is 465 feet.

Norfolk has 10, with the largest 550 feet; Newport News, 3, with the maximum one 860 feet long. We have the precedent of large docks to be constructed at Portland, Me., and at Savannah, Ga., by the United States Shipping Board.

Would it not be interesting, at least as emphasizing our dire necessities along these lines, to give consideration to what are the facilities of the various important ports of the United Kingdom and Continent? Thus, briefly, I take the liberty of following with some of this data:

	Docks.	Maximum.
		Feet.
Belfast, Ireland.....	5	850
Birkenhead, England.....	16	930
Cardiff, Wales.....	16	633

May I not anticipate an early statement of your views concerning this important question, in order that the matter can be placed intelligently before the United States Shipping Board?

Yours, truly,
(Signed) GEORGE S. WEBSTER,
Director.

OPINION OF ADMIRAL BOWLES.

Admiral Bowles, in charge of the great work of organization at the Hog Island Shipyard, has also pointed out the wisdom of starting in early upon a dry-dock construction plan. A copy of his letter to the Shipping Board follows:

UNITED STATES SHIPPING BOARD,
EMERGENCY FLEET CORPORATION,
Philadelphia, April 24, 1918.

Hon. EDWIN N. HURLEY,
Chairman United States Shipping Board,
1319 F Street, N.W., Washington, D. C.

DEAR SIR: I am handing you herewith letter from the Philadelphia Maritime Exchange, under date of April 23, calling attention to the importance of additional dry-docking facilities in this port. This subject has not been under my charge, but I am informed that it has been under consideration by the Division of Shipyard Plants of the Emergency Fleet Corporation.

In connection with the subject, I beg to say that, considering the extensive terminal facilities already existing for shipping in Philadelphia, the improvement in that respect now under way, considering the terminal facilities being created at Hog Island, and the very large number of vessels under construction in this district, I am strongly of the opinion that the dry-docking facilities are seriously inadequate, and, in my judgment, the construction of several additional dry docks for vessels of moderate size should be undertaken with the least possible delay.

Respectfully, yours,
(Signed) F. T. BOWLES,
Assistant General Manager.

SHIP CONSTRUCTION REQUIRES NEW FACILITIES.

That the growing importance of this dry-dock question may be more clearly understood, as to the Delaware River, I append hereto a list of the shipyards, with the number of their ways, together with a list of the employees. This schedule was handed to me as of March 27 last, and does not include all of the ship and barge construction under way or planned for:

	Ways.
Merchants Shipbuilding Co., Bristol.....	12
Traylor Co., Bristol.....	10
Cramps, Philadelphia.....	13
New York Shipbuilding Co., Camden.....	14
Do.....	10
Pennsylvania Shipbuilding Co., Gloucester.....	6
New Jersey Shipbuilding Co., Gloucester.....	7
Hog Island, below Philadelphia.....	50
Sun Shipbuilding Co., Chester.....	5
Chester Shipbuilding Co., Chester.....	7
Harlan & Hollingsworth, Wilmington.....	4
Pusey & Jones, Wilmington.....	4
Jackson & Sharp, Wilmington.....	4
Total.....	146

Employees March 27, 1918.

Merchants Corporation	6,500
Traylor	900
Cramp	8,250
New York	8,000
Pennsylvania	2,200
New Jersey	800
Hog Island	22,500
Sun Co.	3,700
Chester Co.	3,500
Harlan	3,800
Pusey & Jones	1,800
Total	61,950

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. PETER F. TAGUE,
OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 2, 1918.

Mr. TAGUE. Mr. Speaker, when the naval appropriation bill was being considered by the House I was absent on a visit to Boston in company with the Secretary of the Navy, Mr. Daniels, on an inspection of the Boston Navy Yard, for the purpose of learning what improvements were necessary to put the yard in condition so that they may be able to handle the great volume of work which the navy yards are now being called upon to perform.

I think I can safely say that the Secretary's visit to Boston has shown him the absolute necessity for immediate improvements which are essential at this time, and should be included in the present appropriation bill.

Since I have been a Member of this House I have always been a strong advocate of the upbuilding of the navy yards of the country, believing that the Government should make use of these splendid institutions which the present crisis has shown to be of so much importance to the country.

In the rebuilding of the yards, the Government has decided that the Boston Navy Yard, located in the district which I have the honor to represent, should become a repair shop of the Navy and should be used for repairing ships of the Navy, and also the building of the smaller ships which are to be used for transports, hospital ships, and supply ships.

This kind of work is now being carried on successfully at the Boston Navy Yard, and the efficient manner in which it is being performed is recognized by the department. On account of the increase in numbers and sizes of naval ships many improvements are necessary, and tools and machinery are required in order that this work can be accomplished in a satisfactory manner. It was not until the bill had been reported on the floor of the House by the committee that I was aware that no appropriation was being made for improvements in the Boston Navy Yard, notwithstanding the fact that the officials there had made many urgent requests for the same, which to them were absolutely essential and necessary. I called this fact to the attention of the members of the Naval Affairs Committee and was surprised to learn from them that the Navy Department had not recommended any appropriations. I then inquired of the heads of the several departments in charge of the different branches of work, and was informed that while they were in favor of improving the plant, and had so recommended, the department had not made the recommendations to the Naval Affairs Committee. I then took the matter up with the Secretary of the Navy, asking him why an appropriation had not been made after the Boston yard had recommended these improvements, and asked him to recommend appropriations in the bill now before the House. The Secretary assured me that he had ordered plans drawn and that it was his intention to see that everything was done to make the Boston Navy Yard a first-class yard, and would give the matter his personal attention.

I want to say that the very efficient corps of officials at the Boston Navy Yard, headed by Capt. William R. Rush and backed up by the splendid workmen employed there, have always shown their willingness to work hard on any work sent to Boston, and they enjoy the confidence of the Navy Department, which on many occasions has commended them for their high-grade workmanship and efficiency.

On the 19th day of April Secretary Daniels made a visit to the Boston Navy Yard and made a thorough inspection. Under his instructions the officers had prepared plans and specifications of improvements which, to their minds, were needed and

which could be accomplished without in any way impeding the progress of the work now going on. The Secretary was thoroughly convinced, after his inspection of the yard and plans arranged, that the best interests of the navy yard could be served by making the improvements as laid out. I believe he was also convinced that the improvements asked for were of such a nature that they should be included in this bill. I understand that amendments to the appropriation bill will be presented in the other branch of the Government when the bill is reported there.

After the Secretary had completed his inspection he thanked the officers of the yard very heartily for their cooperation and the manner in which the work at the navy yard was progressing. He also paid a tribute of praise to the workmen of the yard for their cooperation and for the spirit they displayed in turning out the work in such an efficient manner and as quickly as they had.

I do not believe there is any question in the mind of anyone as to the advisability of immediately putting this navy yard in a condition where it can handle the great volume of work that is now and will be necessary. It must be apparent to all that with the increase in numbers and sizes in naval ships, and increase in numbers of merchant marine now in our Army embarkation service, and the increase in numbers of merchant ships in naval overseas transportation service, that every available yard in this country will be tested to its full capacity. To me the present repair and alteration facilities of Boston are inadequate, but with the proposed improvements the present navy yard will be improved and will have facilities required by every first-class yard, and the capacity of the yard will be doubled. The most urgent of these improvements, and which were agreed upon should be done at once, are:

First. The extension of piers known as Piers Nos. 4, 4A, 5, and 6. These piers were built in the olden times, when the smaller ships were in use in the Navy, and are now inadequate to meet the demands of the present-size ships. To accomplish the extension of the ways it was necessary to secure the consent of the War Department and the waterway commission of the State of Massachusetts. Both of these departments have agreed that this work is beneficial and should be done, and have granted the permission to do so. It has also the indorsement of the shipping interests and property owners in Boston Harbor. It is estimated that the cost for the extension of these piers will be \$400,000.

Second. The present power plant is not large enough to meet the demands of the yard, and is now being used to its full capacity. In case of an accident of any kind to this plant the entire service of the Government at the navy yard would be crippled. It is advised that a new power plant should be built of sufficient size to adequately supply the demands of the yard, and the estimated cost of this improvement is about \$1,200,000.

Third. One of the most important, if not the most important, improvements necessary is the extension of the machine shop and foundry. It has been recommended on very many occasions and was only a question of how and where this work should be done. It has now been definitely decided that an extension and enlargement of the present machine and foundry shops be made in order to have the facilities to put these ships in a first-class condition and enable them to perform the work now required of them. It is felt that some immediate steps must be taken to provide for the installation in the machine shop of the tools now ordered on approved requisitions that will be delivered within the next 6 or 12 months. These tools are most urgently needed at present to handle the large volume of new and repair work that is being done at this yard by working the force in three shifts daily seven days a week, including holidays.

The completion of work could be better expedited and much additional work undertaken were the facilities provided at this yard. The labor market in this vicinity is such that the force of machinists could be considerably increased, it is believed, especially if we had the shop facilities and tools to carry on work in one shift rather than prosecuting it with so much night work. The need of increased floor space in the foundry is also urgent. This has been particularly accentuated since the large increase in output demanded by the present emergency, the installation of a Tropenas converter for making steel castings, and recently by the labor disturbance involving a strike of all molders in New England. Owing to the congested space in the foundry of this yard it is impossible even approximately to meet the demands for castings made on us, either of brass, iron, or steel, notwithstanding that the force is being worked a maximum of 10 hours daily 7 days a week. The present foundry building was erected in 1857 and has a floor space of 2,091 square feet, which was entirely inadequate for the needs of the yard even long before the present emergency arose. Since the

advent of war other navy yards have been provided with new foundries or have had large and radical extensions made to existing structures, so that it is believed that the foundry at this yard must compare very unfavorably with the material conditions that now obtain in connection with foundry plants at other navy yards as well as with any manufacturing establishments attempting anything like the amount of work that is done at this yard. It is absolutely imperative that the present foundry here should be enlarged at the earliest practicable moment.

As outlined above, some arrangement must be made for installing the machine tools that have been ordered, and additional floor space must be provided for the foundry.

One especially good point in connection with the alterations suggested is that they can be effected with little interruption to the present activities in the shops, new walls and roofs being built around and over shops before present walls are removed. Also, it is believed that these alterations can be made more expeditiously and quickly than any others that will give anything like the same amount of increased floor space for the machine shop and the foundry.

In reference to this matter the engineering officer has reported as follows:

If the above alterations are approved, the extension of machine shop No. 1 and the foundry wall will remove from the yard wooden structures which fire underwriters have characterized as a menace to the yard. It will also permit of utilizing to best advantage the present unused space in the courtyard and provide for a modern washroom and toilet, replacing the present insanitary and inadequate arrangement.

With the advancement of modern shipbuilding, the mold loft and shop of the yard are not equipped or of sufficient size for the carrying out of the work now required. It has been recommended that this shop be enlarged at the estimated cost of about \$600,000. For incidental expenses, such as improvements in shipping, paving, distributing light and power for the above-named improvement, a miscellaneous appropriation of \$300,000 is required.

The Secretary has already recommended and the money is appropriated for immediate improvements to the present power plant of \$425,000 and an addition to the present storehouse at \$900,000; \$500,000 is also laid aside for new tools, which are on the way and which will be in use in the yard in a short while. Appropriations for these improvements are to be recommended, and, I believe, have the sanction of all who have the best interest of the Navy at heart, and I trust when the naval appropriation bill returns to this House with appropriations in it it will be accepted by this body. These improvements have been needed for a long time and now, with the present emergency at hand, they should be made.

Mr. Chairman, the people of Massachusetts have always been liberal in their efforts to support improvements in any part of the country that would be for the welfare of the whole country. They have been unwilling to stint any appropriation, but have always been willing that all parts of the country should be developed. In the building up of our own section of the country they have always displayed this same liberality.

We have in Boston one of the best harbors in the country, made so by the liberal expenditure of the money of the people of the State of Massachusetts. From 1825 to date, a period of 93 years, the United States has expended about \$13,000,000, or about \$150,000 per year, on Boston Harbor in the State of Massachusetts, while in one-half of the time, from 1870 to 1918, 48 years, the State has expended more than \$15,000,000. Receipts from the customs of the port of Boston are over \$10,000,000 a year, and there will be collected in the State of Massachusetts from ordinary income taxes \$40,000,000, and from individual income and excess-profit taxes \$160,000,000, making up a total paid by the citizens of the State of Massachusetts of \$200,000,000 last year.

In the past few years we have expended \$9,000,000 in building docks, and to-day we are building the largest dry dock in this country. This dock will be built at an expense to the State of Massachusetts of over \$3,000,000, and the State has already agreed with the National Government that they will have the privilege of the use of the dock as against any private or commercial business.

We have built at a great expense out of our treasury the largest pier on the Atlantic coast, large enough to accommodate six of the largest ships afloat, and the docks have deep water to 40 feet to enable them to accommodate any ships that are now being constructed. I am quoting these figures to show that Massachusetts is ever ready to do her share in protecting the commercial interests of the Nation by the building up of her harbor, and I believe that every part of the country benefits by these improvements.

The foreign commerce with the port of Boston is annually about \$300,000,000. New England manufactures one-seventh of

the entire manufactured products of the Nation, and the greater part of this goes out from this port to foreign countries.

I believe that the Boston Navy Yard, which has not for a long time received any great improvements, should now be improved in keeping with the rest of the navy yards of the country, and it is the duty of the Government to do so. The Charlestown Navy Yard has been a repair yard rather than a yard for construction work, and the great amount of work that has been done in the yard has been repairs on ships sent there.

The property of the Government here is worth in the vicinity of \$30,000,000 and the location of the yard is right at the head of Boston Harbor, at a point where the Mystic and Charles Rivers meet and close in a water front of almost one-half a mile in the most desirable place in the harbor, which for commercial and shipping use would be invaluable.

Mr. Chairman, from the earliest days of American history the men of Massachusetts have always been interested in shipping and shipbuilding, and from that day unto this it has been one of the leading ports of the Nation.

Previous to the establishment of the Charlestown Navy Yard a number of vessels had been built in the vicinity of Boston, several of which subsequently became well known. In the very earliest days of our settlement the importance of ships was recognized, and as early as 1629 we find records of six shipwrights having been sent out from London. Gov. Winthrop, who reached Boston Bay in 1630, records in 1631 the launching of the *Blessing of the Bay*, the first ship of the infant colony, and on August 9 of that year states, "The governor's bark, being of 30 tons, went to sea." This small vessel was later converted into a cruiser against pirates, and may, therefore, lay claim to the honor of having been the first American vessel of war.

The *Massachusetts* was built at Germantown, a promontory in the town of Quincy, in 1789. The frigate *Constitution*, launched in 1797, was built at Hartt's shipyard, on the site now known as Constitution Wharf, and the frigate *Boston*, the second of that name, was launched from the same yard in 1799.

It was undoubtedly the work already accomplished in shipbuilding, as well as the importance of the settlement and the facilities offered by the harbor, that suggested Charlestown as a desirable location for a navy yard.

On January 25, 1797, a resolution was reported from the Naval Committee of the House recommending the establishment of a Government dockyard. There seems to have been no direct authority from Congress to purchase a site or build a dockyard; but on February 25, 1799, an act was passed authorizing the building of six ships of war, of not less than 74 guns each, and appropriating \$1,000,000 for this purpose. Hon. Benjamin Stoddard, then Secretary of the Navy, recommended the purchase of the site, which was approved by the President. The earliest record of the transaction was a letter from the Secretary of the Navy, dated June 2, 1800, to Dr. Aaron Putnam, of Charlestown, who appears to be the agent selected for negotiating the purchase, stating:

It is desirable, for the purpose of establishing a navy yard for building ships or vessels of war at or in the vicinity of Boston, to purchase, on account of the United States, from 10 to 50 acres of land if it can be obtained on reasonable terms.

And inclosing a list of the property referred to, amounting to about 47½ acres. A later letter from the Secretary to Dr. Putnam, dated August 13, 1800, states:

The President having determined that the 37½ acres of ground at Charlestown described in the plan herewith sent should be purchased for a ship and dock yard, I have the honor to request, upon satisfying yourself of the goodness of the titles, you will make the purchase, taking deeds to the United States for same, which, after having recorded, you will be pleased to send to me. I have already remitted you \$10,000 on this account, and will remit the residue when I am informed you want it.

In accordance with the above letter, the first site of the Charlestown yard was purchased, the original purchase amounting to about 34½ acres and the purchase price being about \$37,356. Further purchases were made as follows: In 1817, from Isaac Hull, 5,186 square feet, for \$3,889.50; in 1862, from Oakman & Eldridge, 115,210½ square feet, for \$123,100; and in 1867, from A. Hull, 2½ acres, for \$7,000. The amount purchased, with the filling in of the marshes and flats, made, in 1880, 87½ acres, and with the extension of harbor line and further filling in since that time makes the present area of the yard proper about 111 acres, of which 80 acres are land and 31 acres water.

The first commandant of the yard was Capt. (afterwards Commodore) Samuel Nicholson, who remained in office until his death, December 29, 1800. The records show but very few improvements in the yard up to this time. The commandant's house, afterwards the old museum, was built prior to 1808, the exact date not being recorded. There were also erected a brick

store, marine barracks, a hospital, a powder magazine, a wharf, and a few temporary sheds.

Commodore Bainbridge was the next commandant, and he took a very active interest in the affairs of the yard and vicinity, surveying the harbor and recommending improvements; but the appropriations were very meager, the expenditures for accommodations and improvements at the yard in 1811 and 1812 amounting to but \$5,742.43, although, during the year 1812, 13 vessels received repairs amounting to \$245,225.13. The first vessel launched at the yard was the sloop of war *Frolic*, on September 11, 1813, and the next was the *Independence*, on September 22, 1814, and from that time up to the commencement of the Civil War 21 vessels in all were launched at the yard.

Among these were several of historic fame—the *Cumberland*, which was sunk by the Confederate ironclad *Virginia* (*Merrimac*) in Hampton Roads in March, 1862; the *Merrimac*, the first steam frigate launched for our Navy, was built at this yard in 1854-55. The history of this vessel need hardly be told to any American—how she was left at the navy yard, Norfolk, in 1861, and converted by the Confederates into an ironclad and created such havoc with our vessels until she was defeated by the little *Monitor* in 1862, and was afterwards destroyed by the Confederates.

On January 1, 1858, the keel of the historic ship *Hartford*, the flagship of Admiral Farragut, was laid, and she was launched in November of that year.

The cost of improvements at the yard up to 1859, including the cost of site and Dry Dock No. 1, which was built in 1827-1833, amounted to \$3,671,521.

During the Civil War there was great activity at the yard, and between 1861 and 1866, 39 vessels of war were built and 43 purchased vessels were equipped; the number of vessels repaired, provisioned, and so forth, is up in the hundreds. At times there were as many as 5,000 men employed. The *Monadnock*, a double-turreted monitor, launched in 1864, was the first vessel of the kind to go from the Atlantic to the Pacific Ocean, arriving at Mare Island in 1866, and being afterwards rebuilt and converted into the vessel now of the same name.

In 1874 the iron torpedo boat *Intrepid* was launched at the yard and was the first vessel of that kind added to our Navy.

From 1832 to 1880, inclusive, \$10,618,716 was expended for general maintenance of the yard. This does not include the expenditures on ships built or repaired or pay of workmen employed on them. Only one vessel, a small training ship, the *Cumberland*, has been built at the yard since that time.

From 1880 until about 1900 very little was done to improve the buildings in the yard, but from 1900 on until the present time remodeling and building has been continuous.

During the present administration new ways have been erected for the building of modern types of ships, the most important of which was the U. S. S. *Bridge*, which was completed in record time. There is at the present time being built at this yard a hospital ship, which will soon be completed, and it is expected that the ways will be kept busy in this style of ship. The relocation of the marine railway will also be the means of handling the work efficiently at the yard. Many other improvements have been advanced, and it is the hope of the citizens of Boston that the improvements will continue until this yard is in the fore rank of the navy yards of the Nation.

[From the Boston Herald, Apr. 28, 1918.]

NAVY YARD EXTENSION.

The Navy Department acts wisely in planning the extension of the Charlestown Navy Yard. War Department plans on the South Boston water front really necessitate an enlargement of the repair plant at the other end of the harbor. It would be absurd to send ships away to be repaired at other ports for want of facilities here. Yet this has had to be done even under existing conditions, because the navy yard has not grown in proportion to growing demands. Not always has the Navy Department wished to make the yard larger or more largely useful. For a good many years the matter was not thought important enough to require any serious consideration. Let it be candidly admitted that if Washington was somewhat blameworthy, so was Boston, or at least certain Boston interests. There were local objectors to lengthening of the navy yard piers, as a restriction of general shipping convenience and an interference with private rights. No doubt the objectors did not see how scientific engineering could accomplish the work in a manner that would satisfactorily dispose of the objections.

Now is the time for all the authorities and interests concerned, both Federal and local, to come together and do their best unitedly to make the great improvement which is obviously necessary. We see the Navy Department wishful to proceed, the Massachusetts State officials expressing hearty approval, the mayor of Boston and the chamber of commerce strongly supporting the project, and the principal shipping interests acquiescing. Now let the private property interests in the vicinity of the yard show that they also are public spirited, and not engage in any harassing opposition. They will be cared for justly, losing nothing whatever to which they are entitled. There may be still a few heads into which the proper authorities will have to knock the truth that the public claim to a harbor shore is higher than any private claim. Boston as a port has the first title to her water front. And her wharves are for the development of shipping facilities, not for the erection of manufacturing plants. If our port is to grow as it ought to do, through the right use of its natural advantages, factories must get out of the way of shipping.

All good citizens will do what they can to help along the navy-yard improvement, cooperating to the extent of their ability and opportunity with the official representatives of Nation, State, and city. We must open our eyes to the national importance, even the national urgency, of the Boston undertakings of the War and Navy Departments. The works are not intended to be temporary; they will be of a lasting character; yet they can not be completed at leisure, the very first purpose they have to serve being the winning of the war. Though all who are concerned may hurry to the utmost, it will be impossible to finish and put into operation one day too soon the immense embarkation plant from which many divisions of our soldiers, with the requisite equipment and supplies, may take their departure for freedom's battle line "over there." And so with the navy-yard enlargement; it can not be carried out even an hour too soon for the repair of ships that will convey and carry our country's armed forces to the European ports of debarkation. Boston has the shortest road at her door, and should be able to send the hosts of victory over it with corresponding quickness. Government energy and local good will together may soon enable us to rejoice in the greater usefulness of Boston Harbor.

[From the Boston Post, Apr. 27, 1918.]

BOSTON IS COMPETING FOR SHIELD—FIGURES SHOW 21,615 SONS IN FEDERAL SERVICE.

11,615 IN MILITARY BRANCH.

Boston's entry was made after a careful checking of all available records. On the basis of its 1910 publication—the last official United States Government census, which is being used as a basis for the tabulations in the contest—Boston had a population of 686,092, including 15,507 residents of Hyde Park, which in 1910 was not a part of Boston.

Adj. Gen. Stevens and Charles F. Gettemy, director of the State bureau of statistics, have been able to gather figures showing 11,615 men in the military branch of the service. Boston's gross quota under the first draft was 8,715, and enlistments in the various units of the Regular Army from April 1, 1917, to April 1, 1918, are estimated at 2,750. To this was added 150 to allow for enlistments from April 1 to April 6, the latter date being the basis of the Shield of Honor tabulations.

9,000 IN NAVAL BRANCH.

Charles Boshier, of the adjutant general's office, who is in charge of the naval branch of the State and special aid bureau, is satisfied that Boston is heavily represented in the Navy, almost as strong as in the Army. His estimate of this strength is 9,000. This does not include hundreds who have enrolled in the Naval Reserve, but have not yet been called to active duty.

Military officials believe that 1,000 additional men are in the various units, properly included in the Shield of Honor competition, but men of whom there are at present no available records, due to the crush of official business in the War Department at Washington.

3,500 NATIONAL GUARD.

The strength of the National Guard when taken into the Federal service was approximately 3,500 from Boston, and in determining Boston's net quota of men to be sent to Ayer due allowance was made Boston as other cities which furnish National Guard units.

Again yesterday came a flood of additional entries in the competition. None of them worried the present leaders, however, and Gay Head swung into the final day of receiving tabulations with what appeared to be a comfortable lead over all the other claimants.

But from several towns came word to the Shield of Honor editor that before the time limit expires at midnight other entries will be recorded which will change the list of leaders.

CHECK ALL RECORDS.

The winner will not be reported to Gov. McCall and announced by him until all the records of the leading claimants have been carefully checked. All claims must be substantiated by Government credits to the town and city quotas in order to prevent any mistakes being made. It is for this purpose that the Shield of Honor editor and his assistants will check the claimants' figures.

Melrose, through Mayor Adams, got back into the competition yesterday and registered the fine showing of 3.9 per cent of its population in service. A service flag bearing 625 stars was raised recently in the city.

122 MASSACHUSETTS MEN GIVEN CROSSES OF WAR FOR BRAVERY IN FRANCE—AMERICANS WHO FOUGHT AT APREMONT HONORED BY FRANCE AND PRAISED BY UNITED STATES GENERAL COMMANDING.

WITH THE AMERICAN ARMY IN FRANCE,
Sunday, April 28.

The French Army to-day paid an historic tribute to the United States when 122 soldier sons of Massachusetts were decorated with the war cross for bravery displayed in recent fighting. The ceremony, which was held on a picturesque field a short distance from the front-line trenches, was one of the most impressive in which American soldiers have participated since their entry into the war.

One hundred and seventeen men from the One hundred and fourth (Massachusetts) Regiment, who bore the brunt of the German attack in the Apremont Forest on April 12, received medals, as did five men of another regiment who had participated in earlier fighting around Soissons. Here and there in the line of heroes were spaces representing Americans who were killed or wounded seriously.

It had been raining in the forenoon, but the sun broke through the grayish clouds when the One hundred and fourth Regiment, which also was decorated as a unit, passed in review before American and French generals. Bands played "The Star-Spangled Banner" and "The Marseillaise," while the American and French flags waved proudly and defiantly within sound of the roar of German guns. The French general, in conferring the decorations, said of the regiment:

"It showed the greatest audacity and a fine spirit of sacrifice. Subjected to very violent bombardments and attacks by large German forces, it succeeded in checking the dangerous advance and took at the point of the bayonet in a most vigorous way prisoners and some demolished trenches, from which it had fallen back at the first assault."

The few civilian spectators who witnessed the ceremony included several French women, residents of villages near the front. They cheered as the young-Americans, wearing full equipment and helmets, marched by.

Some Americans attached to other units were greatly moved when the band played the national anthem. They saw the bright new flag and realized what their comrades had been through to merit the honors.

The general commanding the American forces shook hands with and spoke words of encouragement to each of the men decorated, saying it was the proudest moment of his life to be the commander of men who had done such great honor to the country.

NAVY YARD DOUBLES LIBERTY LOAN QUOTA.

With speeches and music to-day the Charlestown Navy Yard celebrated the feat of doubling its liberty loan quota, which it made known by placing a blue star in the honor flag. This yard now leads the navy yards of the country in number of subscriptions, as 97 per cent of its employees have bought bonds.

Not satisfied with this record the liberty loan organization, under Pay Director J. S. Carpenter, is out for a record of 100 per cent and a new star which goes with it. At the gathering to-day it was stated that 27 of the shops had subscribed 100 per cent and only 2 shops had not yet reached that goal.

The total subscriptions now amount to \$650,000, while the quota is \$300,000. The coppersmith shop proudly displays two stars in its flag to show that each of its employees has two bonds.

Speeches were made at the gathering to-day by Lieut. A. A. Gathemann and Pay Director Carpenter. Naval officials present included Capt. William R. Rush.

Mob Violence.

EXTENSION OF REMARKS OF HON. MERRILL MOORES, OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 3, 1918.

Mr. MOORES of Indiana. Mr. Speaker, in 1837 Abraham Lincoln, at the time less than 28 years old, in addressing a club of young men at Springfield, Ill., on "The perpetuation of our political institutions," spoke as follows:

There is even now something of ill omen amongst us. I mean the increasing disregard for law which pervades the country—the growing disposition to substitute the wild and furious passions in lieu of the sober judgment of courts, and the worse than savage mobs for the executive ministers of justice. This disposition is awfully fearful in any community; and that it now exists in ours, though grating to our feelings to admit, it would be a violation of truth and an insult to our intelligence to deny. Accounts of outrages committed by mobs form the everyday news of the times. They have pervaded the country from New England to Louisiana; they are neither peculiar to the eternal snows of the former nor the burning suns of the latter; they are not the creature of climate, neither are they confined to the slaveholding or the nonslaveholding States. Alike they spring up among the pleasure-hunting masters of southern slaves and the order-loving citizens of the land of steady habits. Whatever, then, their cause may be, it is common to the whole country.

It would be tedious as well as useless to recount the horrors of all of them. Those happening in the State of Mississippi and at St. Louis are perhaps the most dangerous in example and revolting to humanity. In the Mississippi case they first commenced by hanging the regular gamblers—a set of men certainly not following for a livelihood a very useful or very honest occupation, but one which, so far from being forbidden by the laws, was actually licensed by an act of the legislature passed but a single year before. Next, negroes suspected of conspiring to raise an insurrection were caught up and hanged in all parts of the State; then, white men supposed to be leagued with the negroes; and, finally, strangers from neighboring States, going thither on business, were in many instances subjected to the same fate. Thus went on this process of hanging, from gamblers to negroes, from negroes to white citizens, and from these to strangers, till dead men were seen literally dangling from the boughs of trees upon every roadside, and in numbers that were almost sufficient to rival the native Spanish moss of the country as a drapery of the forest.

Turn then to that horror-striking scene at St. Louis. A single victim only was sacrificed there. This story is very short, and is perhaps the most highly tragic of anything of its length that has ever been witnessed in real life. A mulatto man by the name of McIntosh was seized in the street, dragged to the suburbs of the city, chained to a tree, and actually burned to death; and all within a single hour from the time he had been a freeman attending to his own business and at peace with the world.

Such are the effects of mob law and such are the scenes becoming more and more frequent in this land so lately famed for love of law and order, and the stories of which have even now grown too familiar to attract anything more than an idle remark.

But you are, perhaps, ready to ask, "What has this to do with the perpetuation of our political institutions?" I answer, "It has much to do with it." Its direct consequences are, comparatively speaking, but a small evil, and much of its danger consists in the proneness of our minds to regard its direct as its only consequences. Abstractly considered, the hanging of the gamblers at Vicksburg was of but little consequence. They constitute a portion of population that is worse than useless in any community; and their death, if no pernicious example be set by it, is never matter of reasonable regret with anyone. If they were annually swept from the stage of existence by the plague or smallpox, honest men would, perhaps, be much profited by the operation. Similar, too, is the correct reasoning in regard to the burning of the negro at St. Louis. He had forfeited his life by the perpetration of an outrageous murder upon one of the most worthy and respectable citizens of the city, and had he not died as he did he must have died by the sentence of the law in a very short time afterwards. As to him alone, it was as well the way it was as it could otherwise have been. But the example in either case was fearful. When men take it in their heads to-day to hang gamblers or burn murderers they should recollect that in the confusion usually attending such transactions they

will be as likely to hang or burn some one who is neither a gambler nor a murderer as one who is, and that, acting upon the example they set, the mob of to-morrow may, and probably will, hang or burn some of them by the very same mistake. And not only so; the innocent, those who have ever set their faces against violations of law in every shape, alike with the guilty, fall victims to the ravages of mob law; and thus it goes on, step by step, till all the walls erected for the defense of the persons and property of individuals are trodden down and disregarded. But all this, even, is not the full extent of the evil. By such examples, by instances of the perpetrators of such acts going unpunished, the lawless in spirit are encouraged to become lawless in practice; and having been used to no restraint but dread of punishment they thus become absolutely unrestrained. Having ever regarded government as their deadliest bane, they make a jubilee of the suspension of its operations and pray for nothing so much as its total annihilation, while, on the other hand, good men, men who love tranquility, who desire to abide by the laws and enjoy their benefits, who would gladly shed their blood in the defense of their country, seeing their property destroyed, their families insulted and their lives endangered, their persons injured, and seeing nothing in prospect that forebodes a change for the better, become tired of and disgusted with a government that offers them no protection, and are not much averse to a change in which they imagine they have nothing to lose. Thus, then, by the operation of this mobocratic spirit, which all must admit is now abroad in the land, the strongest bulwark of any government, and particularly of those constituted like ours, may effectually be broken down and destroyed—I mean the attachment of the people. Whenever this effect shall be produced among us; whenever the vicious portion of (our) population shall be permitted to gather in bands of hundreds and thousands, and burn churches, ravage and rob provision stores, throw printing presses into rivers, shoot editors, and hang and burn obnoxious persons at pleasure, and with impunity, depend upon it, this Government can not last. But such things the feelings of the best citizens will become more or less alienated from it, and thus it will be left without friends or with too few, and those few too weak to make their friendship effectual. At such a time, and under such circumstances, men of sufficient talent and ambition will not be wanting to seize the opportunity, strike the blow, and overturn that fair fabric which for the last half century has been the fondest hope of the lovers of freedom throughout the world.

I know the American people are much attached to their Government; I know they would suffer much for its sake; I know they would endure evils long and patiently before they would ever think of exchanging it for another; yet, notwithstanding all this, if the laws be continually despised and disregarded, if their rights to be secure in their persons and property are held by no better tenure than the caprice of a mob, the alienation of their affections from the Government is the natural consequence; and to that, sooner or later, it must come.

The question recurs, "How shall we fortify against it?" The answer is simple. Let reverence for the laws be breathed by every American mother to the lisping babe that prattles on her lap; let it be taught in schools, in seminaries, and in colleges; let it be written in primers, spelling books, and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice. And, in short, let it become the political religion of the Nation, and let the old and the young, the rich and the poor, the grave and the gay, of all sexes and tongues and colors and conditions, sacrifice unceasingly upon its altars.

While ever a state of feeling such as this shall universally, or even very generally, prevail throughout the Nation, vain will be every effort and fruitless every attempt to subvert our national freedom.

When I so pressing urge a strict observance of all the laws, let me not be understood as saying there are no bad laws or that grievances may not arise for the redress of which no legal provisions have been made. I mean to say no such thing. But I do mean to say that, although bad laws, if they exist, should be repealed as soon as possible, still, while they continue in force, for the sake of example they should be religiously observed. So also in unprovided cases. If such arise, let proper legal provisions be made for them with the least possible delay, but till then let them, if not too intolerable, be borne with.

There is no grievance that is a fit object of redress by mob law. In any case that may arise, as, for instance, the promulgation of abolitionism, one of two positions is necessarily true; that is, the thing is right within itself and therefore deserves the protection of all law and all good citizens, or it is wrong and therefore proper to be prohibited by legal enactments; and in neither case is the interposition of mob law either necessary, justifiable, or excusable.

This speech was made by Mr. Lincoln more than 80 years ago, but every year that has passed since it was made has given evidence that what he said was true. In 1837 the Federal Government had no power to legislate for the control and restraint of mobs. There was then no duty on Congress to control the mob.

Half a century ago the fourteenth amendment to the Constitution of the United States was ratified, which by section 1 provided that no State shall "deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

With the adoption of this amendment 50 years ago it became the duty of the Congress under the Constitution to see to it that no State shall deny to any person within its jurisdiction the equal protection of the laws; for the amendment itself provides that "the Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

There is no Member of Congress so ignorant as not to know that many States in the Union, by the acts or wicked and criminal negligence or cowardice of their officials, are constantly denying to and withholding from aliens and citizens of a different race or complexion than that of the majority the equal protection of the laws. There are seemingly States in which almost the only protection the laws afford is that accorded by the courts and officials to Caucasian citizens of Anglo-Saxon ancestry of

the reformed or Protestant faith, who speak the English language without perceptible foreign accent.

It is not difficult for one not trained to the law to understand what this provision means nor to see its purpose, but if the language were obscure we have the benefit of a stronger light of judicial reasoning in the construction of this one section than of any other section in the Constitution. Briefly stated, the prohibition upon State action or nonaction as stated by the Supreme Court of the United States is, that the provision "has reference to actions of the political body, denominated a State, by whatever instruments or in whatever modes that action may be taken. A State acts by its legislative, its executive, or its judicial authorities. It can act in no other way. The constitutional provision therefore must mean that no agency of the State or of the officers or agents by whom its powers are exerted shall deny to any person within its jurisdiction the equal protection of the laws." (Mr. Justice Strong, *ex parte Virginia*, 100 U. S., 347.)

A distinguished southern judge has given this definition:

By "equal protection of the laws" is meant equal security under them to everyone, in his life, his liberty, his property, and in the pursuit of happiness. It not only implies the right of each to resort on the same terms with others to the courts of the country for the security of his person and property, the prevention and redress of wrongs, and the enforcement of contracts, but also his exemption from any greater burdens and charges than such as are equally imposed on all others under like circumstances.

The Supreme Court of the United States says of this provision:

When the facts shown establish an administration directed so exclusively against a particular class of persons as to warrant and require the conclusion that, whatever may have been the intent of the laws as adopted, they are applied by the public authorities charged with their administration, and thus representing the State itself, with a mind so unequal and oppressive as to amount to a practical denial by the State of that equal protection of the laws which is secured to the petitioners as to all other persons, by the broad and benign provisions of the fourteenth amendment to the Constitution of the United States. Though the law itself be fair on its face and impartial in appearance, yet if it is applied and administered by public authority with an evil eye and an unequal hand, so as practically to make unjust and illegal discriminations between persons in similar circumstances material to their rights, the denial of equal justice is still within the prohibition of the Constitution.

In another case the same court said:

An actual discrimination against a negro, on account of his race, by officers intrusted with the duty of carrying out the law is as potential in creating a denial of equality of rights as a discrimination made by law.

It is true that Article I, section 8, of the Constitution, gave the Congress power "to suppress insurrections," but it was not until long after the adoption of the fourteenth amendment that our Supreme Court construed "insurrections" to include mobs and riotous assemblages, although, as commonly defined, the word clearly includes them. There can be no doubt whatever as to the power of Congress under the Constitution, as construed by the Supreme Court, to punish lynching.

In the face of recent history, can there be any doubt as to our duty to enact laws which will make good the constitutional assurance of equal protection of the laws as to life, liberty, and property in every part of the Union and to see that the poor, the weak, and the unfortunate are everywhere protected? No country is really free where its flag does not bring to everyone within its jurisdiction a guaranty of all his constitutional rights and an assurance that the Nation will give to its humblest inhabitant that protection which is his right under the law.

Let us look the matter of lynching and its unholy prevalence squarely in the face. By the best statistics obtainable, in the 33 years since 1885, forty-two hundred and ten persons have lost their lives by lynching in the United States. Where a man is put to death by lynching he surely has no redress thereafter. Has anyone heard of any punishment accorded to any murderer who has taken another's life by lynching? Has anyone heard of any compensation to the widow or orphan children of any American citizen so lawlessly slain by his neighbors?

It is true that the United States has paid other nations large sums for the killing of their citizens resident among us. I append a statement from the Secretary of State showing that we have paid as a Nation to France, Spain, China, Italy, Great Britain, and Mexico an aggregate of \$792,499.39 as a poor compensation for the murder of their citizens by lawless mobs of Americans; and that there are unadjusted claims for the murder of Austrians, Greeks, Japanese, and Italians in recent years.

I blush to have to confess that in all the diplomatic controversies which have grown out of claims for compensation for these murders our Government has uniformly and consistently pleaded the baby act, alleging that the Federal Government is impotent and that the respective States are solely to blame for not protecting foreigners. From the days when our common ancestor laid the blame for lawbreaking on his only human companion human nature seems to have remained unchanged and unchangeable.

I can not imagine anything more humiliating to a Government claiming to be a sovereign State, a Nation, than the confession that it is unable to carry out the guaranty in its Constitution that no person shall be deprived of life, liberty, or property without due process of law.

The payment of almost \$800,000 to friendly foreign nations for the unpunished murder of less than 100 of their citizens seems large, but it was undoubtedly just or Congress would not have paid it. If the murder of less than a hundred strangers has cost \$800,000, the question naturally follows, How much has the murder of 4,000 of our citizens and neighbors cost the country and the communities in which their lives were taken?

No statistics of lynchings prior to 1885 are obtainable. The *Cyclopedia of American Government* accepts as authentic the figures of the *Chicago Tribune* that the number of persons lynched between 1885 and 1912 was 3,539. The *World Almanac* gives the lynchings since 1912 and up to November, 1917, as 671, making for the 33 years a total of 4,210, not counting some 50 or more persons killed in the race riots at East St. Louis last year.

It is interesting to know in what States the laws are not enforced, and I give from the *cyclopedia* above quoted, supplemented by figures from the *World Almanac*, a statement covering such crimes for the last 10 years:

Alabama	45
Arizona	3
Arkansas	36
California	1
Colorado	0
Connecticut	0
Delaware	0
Florida	57
Georgia	112
Idaho	1
Illinois	48
Indiana	0
Iowa	0
Kansas	1
Kentucky	32
Louisiana	52
Maine	0
Maryland	1
Massachusetts	0
Michigan	0
Minnesota	0
Mississippi	67
Missouri	12
Montana	3
Nebraska	1
Nevada	0
New Hampshire	0
New Jersey	0
New Mexico	2
New York	0
North Carolina	11
North Dakota	1
Ohio	3
Oklahoma	29
Oregon	2
Pennsylvania	1
Rhode Island	0
South Carolina	29
South Dakota	0
Tennessee	33
Texas	89
Utah	0
Vermont	0
Virginia	5
Wisconsin	0
Wyoming	1

The following table, taken from the tabulations of the *World Almanac*, is interesting and will repay careful study as classifying the persons lynched:

Year.	Total.	South.	North.	Negro.	White.	Mexican.	Male.	Female.
1910.....	66	65	1	58	8	63	3
1911.....	65	61	4	57	8	65
1912.....	52	49	3	50	2	49	3
1913.....	45	42	3	45	45
1914.....	27	25	2	22	5	24	3
1915.....	78	77	1	42	21	15	77	1
1916.....	55	54	1	48	1	52	3
1917.....	32	30	2	30	2	31	1
Total for 8 years.....	420	403	17	352	52	15	401	14

The above table does not include the killing of 50 or more in the race riots at East St. Louis last year.

Offenses charged as excuse.	1910	1911	1912	1913	1914	1915	1916	1917
Murder, or attempted murder.....	56	34	23	31	21	41	10	1
Rape, or attempted rape.....	14	8	7	6	8	11	12	11
Miscellaneous.....	56	23	15	6	21	15

Under the classification given as miscellaneous are many trivial charges or offenses, some of them punishable with a small fine or brief jail sentence and many not recognized even as misdemeanors. In some cases no charge at all is made. Among the grounds stated for the lynchings are the following: Six "killed by night riders," theft, insults to men, insults to women, race prejudice, wife beating, poisoning mules, insolence, entering woman's room, accidentally killing a child in driving a motor car, intimacy with a woman, vagrancy, fomenting strikes, and many others of like character and gravity.

I have simply stated the bare facts in describing a condition which every good citizen knows ought not to exist.

Strenuous efforts have been made in many States where lynching prevails to stamp it out by State legislation, all of which have proved unsuccessful. The constitution of South Carolina provides forfeiture of office and imposes severe penalties upon officers who permit prisoners to be lynched; and Georgia, North Carolina, Ohio, Tennessee, Kentucky, Texas, Michigan, Kansas, Indiana, and other States have enacted laws directed against lynching, but the evil still exists and the statistics given show that State legislation has not proved effective for its eradication.

The very fact that many of the States have tried to suppress lynching and been unsuccessful affords a strong argument for Federal intervention.

The fact that we are at war furnishes another most powerful and persuasive reason. The brutality of our enemy may lead the Kaiser at any moment to retaliation upon the person of some brave American officer for the murder of Praeger in Collinsville, Ill., last month. The lynching of an Italian, Frenchman, or Englishman—and citizens of all three countries have been lynched here in comparatively recent years—may effect a break between us and one of our allies. Whatever we do in peace, in war we must stand united against the common enemy. Race prejudice and enmity must certainly for the time be stamped out. When the Caucasian, the negro, and the Malay are standing shoulder to shoulder fighting under and for our flag, let us say to our soldiers of whatever race, color, nationality, or religion that their families and their own people shall be protected in their civil rights and in their lives, liberty, and property here at home.

I have submitted for your approval and confidently ask the enactment of a bill to assure to persons within the jurisdiction of every State the equal protection of the laws. Its purpose is to hold out the protecting hand of the Federal Government to every man who may have cause to think that his life is in danger from the mob.

We have now a law on the books which has been in effect since 1870, and whose constitutionality has been sustained by the Supreme Court of the United States (sec. 31 of the judiciary act, R. S., U. S., sec. 641), which provides that "when any civil suit or criminal prosecution is commenced in any State court, for any cause whatsoever, against any person who is denied or can not enforce in the judicial tribunals of the State or in the part of the State where such suit or prosecution is pending any right secured to him by any law providing for the equal civil rights of citizens of the United States or of all persons within the jurisdiction of the United States" the cause may be removed for trial to the Federal court of the district.

I simply propose that the protection of this act and its assurance of a fair trial and the equal protection of the laws shall be broadened and enlarged until it embraces within its protection the friendless and unfortunate person who may be justly in fear of mob violence and whose life may be taken from him before he is given opportunity to make whatever defense he may have.

Provision for a removal to the Federal courts and for the protection of the Federal officers is made in the first seven sections of the bill. The eighth and ninth define and punish the crime of lynching. The remaining sections simply adopt the South Carolina and Ohio laws imposing a penalty upon the county in which the laws against lynching have not been sustained, in the States by which they were enacted, the South Carolina law in *Brown v. Orangeburg County* (55 S. C., 45; 32 S. E., 764) and the Ohio law in *Commissioners v. Church* (62 Ohio Stat., 318). I can find no stronger argument for this remedy for an admitted evil than these words from the opinion of the South Carolina court:

It has been held that statutes making a community liable for damages in cases of lynchings, and giving a right of recovery to the legal representatives of the person lynched, are valid on the ground that the main purpose is to impose a penalty on the community which is given to the legal representatives not because they have been damaged but because

the legislature sees fit thus to dispose of the penalty. Such statutes are salutary, as their effect is to render protection to human life and make communities law-abiding.

MEMORANDUM REGARDING INJURIES INFLICTED ON CERTAIN ALIENS IN THE UNITED STATES AS A RESULT OF MOB VIOLENCE AND REGARDING INDEMNITIES PAID BY THIS GOVERNMENT IN SUCH CASES.

On November 15, 1811, an affray took place in Savannah, Ga., between some American sailors and some seamen belonging to the French privateers *La Francaise* and *La Vengeance*, which were then in that port. In the affray one of the American sailors was killed and a French seaman was mortally wounded, and in consequence of this affair a local mob was raised which killed several of the French seamen and destroyed the privateers by fire, notwithstanding the interference of the police and military authorities at Savannah. It seems that the State of Georgia offered to make reparation for the outrage, but that the French minister at Washington demanded the prosecution and punishment of the guilty, the tender of satisfaction for an insult to the French flag, and indemnity for the owner of the vessels.

The French Government also presented a claim for 70,000 francs on account of the French privateer *La Revanche du Cerf*, which was burned by a mob at Norfolk, Va., on the night of April 15, 1811, because, it was said, of false reports circulated against the vessel.

By a convention concluded July 4, 1831, for the mutual settlement of claims, it was recited that, in consideration of the payment of 1,500,000 francs, the United States was liberated from all claims on the part of France or her citizens, either for supplies or accounts, or for "unlawful seizures, captures, detention, arrests, or destruction of French vessels, cargoes, or their property."

In 1851 a riot took place in New Orleans, the Spanish consul and consulate and certain Spanish residents being the objects of attack. It appears that on August 21, 1851, news was brought to New Orleans by the steamer *Crescent City* of the capture by Spanish authorities in Cuba of one of the Lopez filibustering expeditions. Some of the members of the expedition were executed, while others were held as prisoners. On receipt of the news a Spanish paper at New Orleans, called *La Union*, published an "extra" giving an account of the affair with comments. Subsequently the office of this newspaper was attacked by a mob and practically destroyed, some Spanish coffee houses and tobacco stores were wholly or partly demolished, and the Spanish consulate was raided.

The Spanish Government requested that indemnification be made to the consul and to Spaniards resident at New Orleans for the injury and loss of property. Considerable diplomatic correspondence followed, and Congress, on recommendation of President Fillmore, by an act approved August 31, 1852, appropriated the sum of \$25,000 "to make compensation to the Spanish consul and other subjects of Spain residing at New Orleans and subjects of Spain at Key West for losses occasioned by violence in the year 1851." By an act of March 3, 1853, however, the President was requested to make an investigation of the losses in question, and it was provided that such losses as he should certify as having been suffered should be paid.

In 1880 certain British subjects were injured by a mob in Texas. Secretary of State Evarts, in a communication addressed to the British minister at Washington, took the view that as the offense "was directed against the peace and dignity of the State" it was "cognizable only by the authorities of that State," and that the injured persons, "in their capacity of British subjects, could resort to the courts of the United States at their option for civil redress and indemnity."

In 1864 Secretary of State Frelinghuysen, in a communication addressed to the Japanese minister at Washington, took the position that the Government of the United States was not responsible to the Japanese Government for the lynching and murder of a Japanese subject in Utah by a mob, which could not have been prevented by due diligence and energy by the Government. In this case the Japanese had shot and killed a woman "without excuse or justification."

In 1880 certain Chinese residents of Denver, Colo., suffered serious injuries in their persons and property and one of their number was killed. These occurrences resulted from the conduct and action of a lawless mob, who for a brief period obtained the mastery over the law and local authorities. The attack of the mob appears to have been at first indiscriminately directed against the law-abiding citizens of the whole community. Secretary Evarts, in discussing this case with the Chinese minister at Washington, expressed regret for the outrages perpetrated and pointed out that, whatever remedies might be afforded to the citizens of Colorado or to the citizens of the United States from other States of the Union resident in Colorado for losses resulting from that occurrence, were equally open to Chinese residents of Denver who suffered from the lawlessness of the mob. This, he said, was "all that the principles of international law and usages of national comity demand."

In 1885 the Chinese minister at Washington brought to the notice of Secretary of State Bayard that an attack had been made on Chinese subjects at Rock Springs, in the Territory of Wyoming. He stated that several hundred Chinese subjects, while quietly engaged in their usual occupations at that place, suddenly and without provocation were attacked by a lawless band of armed men, who were said to have numbered about 150 persons. It appears that many of the Chinese were shot while in their houses or while they were endeavoring to run away from them; that the raiders set fire to the houses and the entire village; and that all the Chinese habitations therein were burned to the ground. Considerable diplomatic correspondence between the Government of the United States and the Chinese Government followed this occurrence, during the course of which Secretary Bayard denied liability on the part of the Federal Government for reparation or indemnity for the injuries inflicted by the mob.

By an act of Congress approved February 24, 1887, which was passed on the recommendation of President Cleveland, it was provided that the sum of \$147,748.74 should be "paid to the Chinese Government in consideration of the losses sustained by certain Chinese subjects by mob violence at Rock Springs, in the Territory of Wyoming, September 3, 1885." No reservation was made in this act of the question of liability.

By Article V of the immigration treaty between the United States and China, signed at Washington March 12, 1888, it was stipulated that the sum of \$276,619.75 should be paid by the United States to the Chinese minister at Washington as full indemnity for various losses and injuries inflicted on Chinese in the United States. The losses and injuries referred to were inflicted in the Territories of Washington, Montana, and Alaska and the State of California, and were in addition to the losses sustained at Rock Springs, for which indemnity was made under the act of September 24, 1887. Legal liability to pay any indemnity was disclaimed in the treaty. This agreement, for reasons not connected with Article V, was not ratified. Congress, however, by an act approved October 19, 1888, provided for the payment to the Chinese Government of the precise sum specified in Article V of the treaty.

In 1891, 11 persons of Italian origin, who were charged with having been concerned in the murder of D. C. Henesy, chief of police at New Orleans, La., were killed by a mob of citizens in the parish prison in that city. Of the 11 persons who were killed, 5 had not been tried, while 3 had been acquitted, and 3 were to be tried a second time. The murder of Henesy was alleged to have been the result of machinations of a secret society called the Mafia. The Italian Government urgently insisted on reparation, and, failing to obtain it, withdrew its minister. The reparation demanded by the Government of Italy was to consist of the following points:

- "1. The official assurance by the Federal Government that the guilty parties should be brought to trial.
- "2. The recognition in principle that an indemnity is due to the relatives of the victims."

The incident was closed by the payment to the Italian Government of \$24,330.90.

In 1895 the corpse of A. J. Hickson, an American saloonkeeper, was found in a coal field in Huerfano County, Colo. The coroner's jury found that he was murdered by an Italian miner, who was immediately placed in jail at Walsenberg. Other miners were implicated and were arrested. Four of them were held, and on their way to Walsenberg, under the escort of two deputy sheriffs, they were intercepted by half a dozen men on horseback. Subsequently seven masked and armed men got into the jail and killed two of the prisoners. Two others were afterwards found wandering in the mountains frost bitten, so that their feet had to be amputated. In October, 1895, the Italian ambassador, at the suggestion of the Secretary of State, entered a claim against this Government. On recommendation of President Cleveland Congress, by an act approved June 8, 1896, made provision for the payment to the Italian Government of an indemnity in the sum of \$10,000.

In 1896 an outbreak of mob fury occurred at Hahnville, La., whereby three prisoners of Italian origin, held on a charge of homicide, met violent death. No indemnity appears to have been paid in this instance. Secretary of State Olney, in a report to the President respecting this occurrence, pointed out that it appeared that all normal precautions for the safety of the prisoners had been taken by local officials, and that no blame could justly attach to them by reason of the sudden outbreak of mob violence. He further observed that investigation had disclosed that the three lynched men by participating in political affairs of this country and voting at elections should "probably be regarded as having renounced their natural status."

In 1896 three Italians were lynched at Hahnville, La. Diplomatic discussion followed this occurrence, and the Italian ambassador complained of a failure of justice in the case. By an act approved July 19, 1897, Congress appropriated \$6,000 to be paid "out of humane consideration and without reference to the question of liability therefor, to the Italian Government."

In 1899 the Italian Embassy at Washington communicated with the department regarding the hanging by a mob at Tallulah, La., of four Italians against whom it seems that fury of a mob had been aroused because of a quarrel which arose between one of them and a Dr. Hodge, who it had been erroneously reported had been shot. President McKinley brought this occurrence to the attention of Congress and renewed recommendations previously made by him that Congress appropriately confer on the Federal courts jurisdiction in this class of international cases where the ultimate responsibility of the Federal Government may be involved.

In 1901 the Italian Embassy at Washington urgently presented to the Department of State the case of three Italians, two of whom were killed and the third wounded, at Erwin, Miss. Representations made by the ambassador were transmitted by the Department of State to "the committees of the Senate and House of Representatives having under consideration the President's recommendation that indemnity be graciously tendered to the families of the victims, and that legislation be enacted to give the Federal courts original jurisdiction of treaty offenses against aliens." By an act approved March 3, 1903, the sum of \$5,000 was appropriated by Congress to be paid "out of humane consideration, without reference to the question of liability therefor, to the Italian Government, as full indemnity" to the heirs of the slain men.

In 1895, during the labor disturbance in New Orleans, the purser on the British steamer *Engineer*, while on the wharves in the discharge of his duties, was shot and wounded by a body of armed men without provocation or warning. As the man was apparently permanently injured, the British Government informally suggested that the United States pay him \$500, "as a voluntary grant of compensation." It appears that the rioters did not intend to shoot the man, but that he was struck by a shot fired at laborers whom the rioters desired to prevent from working. In an act approved June 8, 1896, provision was made for the payment to the injured man of the sum of \$1,000, and to another British subject and his wife and daughter \$1,000 "for loss of property and bodily injuries inflicted in the State of Nebraska by residents of that State."

In 1885 two persons, named Sears and Meirhaus, were shot, the former fatally, at Yreka, Cal. Two persons, one of them a Mexican, were arrested and put in jail on the charge of having committed the crime. Subsequently both of them were taken from jail by a mob and hanged.

The Mexican minister at Washington requested that persons concerned in the lynching be punished and that a suitable indemnity be paid to the family of the Mexican citizen who had been lynched. The matter was brought to the attention of Congress by President McKinley, and by an act approved July 7, 1898, Congress appropriated the sum of \$2,000 to be paid "out of humane consideration, without reference to the question of liability therefor, to the Mexican Government, as full indemnity to the heirs of Luys Moreno."

By an act approved March 3, 1901, Congress, on the recommendation of President McKinley, made appropriation of the same amount in similar terms to be paid to the Mexican Government as indemnity to the heirs of Florentine Suaste, a Mexican citizen, who was lynched in Lasalle County, Tex.

On the occasion of a conflict which took place in 1897 near Hazelton, Pa., between the sheriff of Luzerne County and his armed force, on the one side, and striking laborers on the other, 10 Austrian and Hungarian subjects were killed and 11 more or less severely wounded. The minister of Austria-Hungary at Washington brought the matter to the attention of the Department of State and requested that an investigation therein be made. During the course of an extended diplomatic discussion the Government of the United States took the position that the case was "not one for diplomatic intervention"; that the interested parties had "a resort to the courts for recovery of damages," if any had been unlawfully occasioned; that this Government was convinced that the strikers were engaged in an act of lawlessness, and that any injuries inflicted were sustained by them in resisting the lawful efforts of local authorities to keep the peace.

In 1909 a riot occurred in the city of South Omaha, Nebr., which was directed against Greek subjects residents in that place. Personal injuries and property losses were inflicted on the victims of acts of violence committed by the rioters, and approximately 1,200 Greeks were driven from the city. Prior to these riots a feeling of hostility appears to have existed among the people of South Omaha against Greek subjects there resident, caused, as represented by residents of the city, by the manner of living of some of these Greeks, by the lawlessness and offensive conduct of some of them, and by the fact that Greek laborers were brought into South Omaha to be employed in packing houses, where they worked for less wages than those ordinarily paid to residents of the city.

A claim for indemnity was presented by the Greek Government, and the matter was brought to the attention of Congress by President Wilson in 1916, with a recommendation that Congress be requested to make "as an act of grace and without reference to the question of liability of the United States" an appropriation to affect a settlement of the claim. Congress has not acted in the matter.

In 1910 Angelo Albano, an Italian subject, was, while in custody on a charge of crime, seized by an armed mob and killed. An investigation of the case was made by local authorities, but no indictment was found. The Italian Government requested that an indemnity of \$6,000 be paid in settlement of the case. On recommendation of President Wilson, this sum was appropriated by Congress in an act approved November 14, 1913.

DEPARTMENT OF STATE,
Washington, April 10, 1918.

MY DEAR MR. MOORES: Referring to your oral request that the department furnish you with certain information regarding injuries inflicted on aliens in this country as a result of mob violence and regarding indemnities paid by this Government in such cases, I take pleasure in inclosing herewith a memorandum which I hope contains information such as you desire to obtain.

In this relation I may invite your attention to Moore's International Law Digest, Volume IV, at page 809, et seq., in which will be found an extended discussion of these matters.

I am, my dear Mr. MOORES,
Sincerely, yours,

ROBERT LANSING.

Inclosure: Memorandum as above stated.
The Hon. MERRILL MOORES,
House of Representatives.

Indemnities paid by the United States for mob violence.

Year.	Paid to—	Amount.
1881	France.....	\$285,000.00
1882	Spain.....	25,000.00

Total.....	792,493.39

Address by Hon. S. D. Fess.

EXTENSION OF REMARKS

OF

HON. JAMES C. McLAUGHLIN,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

Mr. McLAUGHLIN of Michigan. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Congressman S. D. Fess at Majestic Theater, Hartford, Conn., Sunday, March 17, 1918.

The address is as follows:

ADDRESS BY CONGRESSMAN S. D. FESS AT MAJESTIC THEATER, HARTFORD, CONN., SUNDAY, MARCH 17, 1918.

Ladies and gentlemen, when the invitation came through my good friend, your Congressman, Mr. LONERGAN, to come on this afternoon to speak to you regarding the causes of the great war I was not inclined first to accept, because, as has been suggested, work at Washington is very pressing, and to make a trip here would entail time, strength, and energy. But I had in mind an experience of a few months ago. While sitting in my office, a committee came in and asked me if I would go out in a certain portion of the Capital and address an audience on the occasion of unfurling a flag. I hesitated, because these invitations frequently come, when Admiral Chester, who was sitting in the office, having come to talk over some matters, noticed my hesitation, said: "Mr. Fess, accept the invitation and make the address." As soon as the committee went out I turned to the admiral and said, "Would you please tell me what was in your mind when you urged me to accept?" He said, "Mr. Fess, in spite of the work that Congress is doing, no matter how important, I regard it one of the chiefest duties that Members of the House or Senate could render to go to the people and explain to them the situation as he sees it." I said to him: "I realize that there are certain portions of the country that ought to hear the situation, but you would not include Washington as one—the seat of the National Government, the center of things pertaining to the war?" He said: "Yes; I even include our own people, for while our people know we are at war they do not comprehend it, and I fear they are not awake to the problems."

So, ladies and gentlemen, as a public servant, inclined to do what I can in this crisis, I am very frank to say that I believe it is a duty for those who are charged with legislation pertaining to the prosecution of the war to carry the information as near first hand as possible to the people, for after all it does not make much difference what Congress will do; it makes little difference what the object or attitude of the national administration may be, the people of America will make the final decision and they must be aroused and united in a task that must see an end to the most dangerous organization dealing in refined brutality to depopulate the world that has ever been conceived or imagined since the morning stars sang together.

I speak to you this afternoon as a member of the Foreign Affairs Committee of the House—I also speak to you as a Member of the House, by the request of the House—that has compiled the documents detailing our dispute with Germany that led us finally into the war. So what I say to you is not rumor, but I speak to you at first hand, with a fair acquaintance with the points of dispute between us.

Just as soon as Great Britain and Germany entered the war America knew that it would extend to the sea, for it was a contest between the greatest representative of militarism on the one hand and of navalism on the other known to history, and we recognized that it would not be fought to a finish without its extending to the sea, and in so doing almost certainly American rights would be invaded.

Soon after war was declared our Government sent a note to all the belligerent powers, with specific meaning to both Germany and Great Britain, and asked the belligerents whether they would agree to confine the program of warfare on the sea to the Declaration of London of five years before, 1909. Unfortunately, not only for us but for the world, they would not agree to it. Then we sent a second note to all the belligerents and asked them if they would agree to a limitation in the warfare on the sea, and we specifically named three: First, that no nation would sow the open sea with floating mines; second, that no nation would plant a stationary mine in a closed sea where it had a right to do it—would plant any mine which when broken from its moorings by a storm would not cease to

be a dangerous mine; and, third, that no nation would employ the submarine except under the rules and practices of international law.

Unfortunately, not only for us but for the world, the nations declined to agree. This country, having exhausted its resource to confine the warfare to any specific limitation, immediately announced to all these countries that we will withdraw our former suggestions and will now take our place upon international law; that we will respect it, and we shall insist upon a rigid adherence of all belligerents to a respect for international law as it is written in the rules and as practiced by the nations.

We did this in order that we might not be embarrassed. Our Nation was truly desirous of maintaining neutrality, and this was all we could do. You will notice at once that we will be embarrassed if there is any nation among the belligerents that decides to ignore international law, and you therefore see immediately the source of the first dispute with Germany.

International law, both as written and repeated in the seventh article of the Hague Conference in 1907, and as practiced by every belligerent nation, including Germany, permits the citizens of a neutral country to sell munitions of war to a belligerent, and it also permits a belligerent country to exercise the right to buy munitions from the citizens of a neutral country. Germany, therefore, had a right to buy munitions from America, and the people of this Nation had a right to sell them; so with England. But the fleet of Germany, inferior to the fleet of Great Britain, immediately after the war sought a shelter in the Kiel Canal, where it still hides, while Great Britain holds the sea. Therefore Britain could not only buy her munitions but she could deliver them wherever she wanted to. Germany could buy her munitions, but her delivery was locked up, and she could not deliver, and, seizing upon that situation, Germany had the brutal audacity to say to us:

Admitting that you had a right to sell munitions, both to us and to Great Britain, in view of the fact that we can not deliver what we have a right to purchase, you ought to forbid Great Britain the sale, for if you do not you are partial to our enemy and you are assisting our enemy in war.

And our reply, in effect, to Germany was, "Your inability to deliver what you have a right to purchase is not America's wrong; it is Germany's misfortune, and your misfortune is not a sufficient ground for America to violate international law, upon which we have taken our stand. We said we can not, and we will not, and we shall expect Germany to respect the law of nations."

Germany replied to us in brutally frank terms and declared that if there is a German soldier killed or wounded by an American shell discharged from a French or British gun America will pay for it. Then began that famous system of bookkeeping on the part of Germany in her pretended relations with us, and she was keeping the account in order that in the future she could lay a claim grounded in pretense in right to collect from America an indemnity sufficient to pay for the war. That was her ground-work for it. She confidently looked forward to the time when her power would be able to name the terms.

When Germany found that we would not be bluffed the Kaiser refused to receive in interview our representative at Berlin, Mr. Gerard. Mr. Gerard oft requested an interview. As often the Kaiser had refused it, and once declared, "I shall receive the representative of no country that permits the sale of munitions of war to our enemy." Then Gerard dispatched a laconic note to Chancellor Von Bethmann-Hollweg, which, in substance, was, "Referring to my oft-repeated request for an interview with the Kaiser, I now announce that you need pay no further attention to it." Within five days the Kaiser sent word to Gerard that he wanted to see him. In this interview the Kaiser pressed the question of munitions, and to every pressure our representative insisted that "we will not violate the laws of nations as written and practiced by all countries, including his own country in the Boer and Russo-Japanese wars." When Gerard reminded the Kaiser that America was driven, through our inability to induce the nations to agree upon a code of warfare, to take this stand on international law, listen, friends, to the astounding statement the ruler of Germany made in reply to our representative, "There is no international law." (A Voice: "He will soon find out.") That is precisely the way a million and a half boys in uniform are saying to-day.

That is the type of ruler that America was in a struggle with diplomatically. Germany became angry at America because we would not do what we could not do.

Then the question of blockade came up. Every belligerent country under international law has the right to blockade the coasts of its enemy. That means Germany had the right to blockade the coast of Great Britain; Great Britain had the right to blockade the coast of Germany; no neutral nation like our

country, up to April 6, 1917, had any right to interfere with either.

All we asked of belligerents was, Make your blockade in accordance with international law; that is, a blockade is primarily an announcement not to belligerents but to neutrals. In a word, the blockading country says to neutrals: "Do not break this blockade; do not carry in either munitions or food or any consignment of goods of whatever character to our enemy. If you do, we will capture your shipping; we will seize your ship and confiscate it; and we will also confiscate your cargo, and it is paid for." That is the law of nations; that is the way we spoke to England when the North blockaded the coast of the South from 1861 to 1865, which was our right. All we asked was that the blockade be valid by making it effectual. If it is not made effectual, then it is invalid and indefensible, because it is illegal. And so we said to Great Britain, "Your blockade must be sufficiently strong that Holland can not go through it; Norway and Sweden must not go through it; Denmark and Spain can not go through it. If you make it effectual, so no neutral can take advantage of us, then we will respect it, for it is your right." And when England made it effectual our dispute with her ended, and we respected it. We ordered her to plant her battleships out in the open; put them close enough together so that all nations desiring to trade with the enemy can know the danger, and we will respect it—and Great Britain did.

Now, when it became effectual, Germany came through her representatives to us. One of the greatest German scholars in America, at that time domiciled in Washington—now interned, as I understand—came to my office twice to ask me to introduce a resolution to compel Great Britain to lift the blockade to the extent of allowing milk to go from America into Germany to feed the children. He came to me because I had just spoken, on the 11th of January, 1916, on the insistence that we would not respect the blockade of Great Britain unless it was made effectual, and he thought that speech indicated that I was more or less opposed to Great Britain and he might speak to somebody that had some sympathy with Germany; so he came to my office and asked me to introduce a resolution to compel Great Britain to lift her blockade to the extent of allowing milk to go through. I said to him: "Why, Doctor, I do not understand your angle, speaking to me as you are, a student of international law. How could you expect America, a neutral country, to violate international law by saying to any of your enemies, 'Lift the blockade?' Of course we would not; we could not if we would; that is not our right; but we respected, as was our duty, the blockade of Great Britain over the coast of Germany. Then somebody has inquired whether we respected the blockade of Germany of the coast of Great Britain? Why, certainly we did not, because there never was a blockade of the coast of Great Britain to respect.

A blockade is not made of orders, is not a paper blockade; it is made of ships, sufficiently powerful and close enough put together, surrounding a coast and forbidding any vessel that undertakes to go through. How could Germany blockade the coast of Great Britain when her blockading squadron was in the Kiel Canal, where it had been from the beginning of the war? Somebody asked, "But did she not have her submarines out there?" Well, a submarine can only operate as a blockading squadron when it is in the open, lying out in the offing, where the public that are interested in trade may know where it is. You can not build out in the open sea an invisible fence and then say, "Do not go over," and call that a blockade. Oh, no. Because we respected the blockade of Great Britain of the coast of Germany and did not respect anything on the coast of Great Britain, some foolish American said that we were not fair; we were partial. You never heard a German say that Germany ever undertook to blockade the coast of Great Britain. He knew better. Some untutored American that is more or less sympathetic with Germany tries to speak that into your ear.

Ladies and gentlemen, it might be of value to you to know, having known Germany from the university standpoint and the research side, being a college officer and interested in research most of my life, I had the greatest admiration for that country; and when the war opened, although a student of international law, I watched every moment to ascertain just what our attitude was and what we were attempting to do. I was one of the Members of Congress that insisted that we must give Germany just as much of a square deal as we give any other nation; and when the news began to break through which revealed that refinement of brutality seen in her frightfulness and in the utterances of the Kaiser that there is no international law and in the invasion of Belgium; and when the doctor urged me to introduce a resolution to break the blockade, I began to see, though very reluctantly and unwillingly, the real attitude of the outlaw and the disregard that that nation was beginning

to show to anything like law and order; and it was one of the most unwelcome convictions that I ever had forced upon me, to be compelled to recognize that we were then threatened by one of the most conscienceless organizations in the form of government that the world ever saw. And while I was insistent that we should be very careful to maintain our neutrality, as we were attempting to do, and to avoid hatred and bitterness, yet I now have come to the place where I know and you know that the mere name of German and Germany will have associated with it such contempt because of her campaign of terrorism and frightfulness in disrespect for all law and everything that will appeal to humanity that that name will inevitably be hated for a thousand years from now. I know it because of the effect this outlawry has had upon me.

I regret it for the sake of many fine people, as fine as can be found, but it is the penalty that a people, no matter how innocent, must pay for a vaulting ambition of an irresponsible war lord that has absolutely no limitation. When we were thus trying to maintain our position on international law these rulers of Europe, overrunning Europe, sword in hand, were declaring to us, There is no law. When we came to the final conflict we said to Germany: You can use your submarines, but you must use them like any other ships; that is, when you are in the open sea and you see an American ship you have a right to stop it and to go on it and search it, and if there is on that ship contraband you can take it, and you can even sink the contraband; but you can not sink the ship, because it is not allowed in international law. You can take the ship into a prize court and hold it till the war is over, but you must not sink it. If you can prove that the cargo is contraband, it is yours to do as you please with, and you can hold the ship, but you can not destroy it. Germany replied, in substance: "If we see a ship out on the ocean, we will not only seize it, but we will sink it; and we will sink the cargo; we will sink the crew of the ship; we will sink the passengers of the ship." She virtually declared, "We will commit open murder on the sea." We read the law to Germany: The open sea is not the ownership of any nation. The high sea is the highway of all nations, and when an American vessel is out on the open sea that vessel is American soil; when an American citizen stands on the deck of that vessel, wherever it is on the high sea, that citizen stands on the sacred soil of America. And if you sink that ship, or if you attack it, it is not different from attacking the city of New York or the city of Washington.

When we read the law to those countries, especially Germany, how did she regard it? She attacked the *Gulflight*, the *Cushing*, the *Falaba*, and the *Nebraskan*. She sank the *Lusitania*, with 114 American citizens and over a thousand citizens of other countries. Not only that, but when we were attempting to make her make restitution for that murder, her answer was to strike a medal of honor to the captain who perpetrated the deed; and we are informed that on the 7th of next May Germany will respect the anniversary by a celebration. That is her answer to our demands for restitution, and defines her regard for international law. After we spent the summer trying to compel Germany to make restitution, she came finally with her answer in the spring of 1916 by an attack upon the *Sussex*, an English steamer that carried no freight—carried nothing but innocent passengers. Instead of respecting our rights and restituting the damage to America by the sinking of the *Lusitania*, she answered our demands by repeating the offense in an attack upon the *Sussex*.

The President saw that it was useless to undertake by diplomatic processes to induce Germany to respect our rights, and sent on the 25th of April, 1916, his ultimatum, which announced to Germany that if the German Government did not disavow this act, and did not give orders to the captains of the submarines not to attack American vessels, and did not send to America assurance of those orders, that we would immediately break off diplomatic relations and have nothing further to do with the German Government. Germany saw what it meant, and met our requirements, and gave the promise that that would not be done longer, and gave orders to the German submarine captains, and repeated that promise at least five different times. That was in the spring of 1916. All summer of that year we were considerably concerned about a certain thing that Germany had said when she claimed that what she did would depend very largely upon what we required of Great Britain. We then informed Germany that she must not make, as a condition of her adjustment of our differences, that we make adjustment of any difference between us and Great Britain, for our difference with Great Britain never had gone beyond property rights, which we can adjust in a court—it can be settled by a money damage—but we can not adjust our difference with her in a court on a money damage, because her conduct went to the

destruction of life, which can not be paid for at any price—there is no such thing as a money damage for that. Germany let that be known as a threat—if we did not do certain things to Great Britain, that she might reconsider her promise to us.

The fulfillment of that threat finally came to us on the 31st of January, or, rather, the 1st of February, of last year, since our representative was informed but six hours before. The note came directly from Berlin to Washington, an announcement that, beginning that night at midnight, which would be the 1st of February, Germany would resume her ruthless submarine warfare. I have given you the language of the note—"the ruthless submarine warfare"—and the note announced to us the limits Germany proposed to enforce, fixing the lines 600 miles out from shore, both Great Britain and France, forbidding our entrance in the waters of these countries—indeed, Europe, comprehending five-sixths of the population of Europe. The command was virtually: "Stay out of these waters, for any vessel that will be found in this area will be sunk at sight, without warning or opportunity to escape." Here was the announcement falling upon our ears like a bolt from a clear sky, repudiating the promise made at least five times to us.

The President sought an opportunity to speak to the House and Senate, which was done on the 3d of February, when he announced to us what we already knew, that he had sent home Bernstorff and had recalled from Berlin Gerard. That indicated that we were near war. Congress was not unaware of the danger. The leaders were alive to the possibilities, but the people of the country were not, for at that particular moment an incident had occurred that not many people in the country knew.

On the 19th day of January preceding the announcement from Berlin on the 31st, Mr. Zimmerman, of the German cabinet, had addressed a note to the German minister in Mexico, in which the minister was authorized to propose to the Government of Mexico that that Government join Germany in a war with the United States, and that Mexico proceed to induce Japan to join both of them. The note went on to authorize Mexico to begin instantly to get Japan and Germany together; and then the note promised to Mexico as a recompense for this bit of treachery that if she joined Germany in a war with the United States Germany would cede—now think of the arrogance—would cede to Mexico the States of Texas, Arizona, and New Mexico. Do you get the force of that? Mark you, ladies and gentlemen, that is official, from the German cabinet, and was a proposal to dismember the American Republic in order to induce these countries with which we have had some sensitive relations to join Germany in a war with us. When was that note written? January 19, at a time when Germany professed her friendship and her representative was domiciled in the Capital of the Republic. When was the submarine order sent? January 31. But, ladies and gentlemen, that note never reached the Mexican Government nor the German minister at Mexico. It was intercepted on the border of Mexico and brought to Washington, where we now have it.

We did not declare war until April 6, and that note was written January 19—we had it several weeks before we declared war. Now, when people far removed from what might be considered the danger points ask me what was in the minds of the Congressmen when they took the step to go into this awful whirlpool of war, I will frankly tell you what was in most of our minds—first, to protect American honor; secondly, to save American lives and the life of the American Nation.

Listen, ladies and gentlemen, to the prophecy of the German war lords to the German people. If we use our submarines unhindered, we will starve Great Britain within three months, and we will make peace by the 1st of April. Now, Germany felt sure of this. Germany said that if she could sink all the food on the sea she could easily dictate terms of peace to France and Great Britain, because they could not feed themselves except from across the sea. As long as the seas are open, Great Britain would not suffer for want of food, because she would get it from Canada, New Zealand, Australia, South Africa, and the Indies, and so on. But close the sea, sow it with submarines, sink every cargo of food that is on the sea, and Great Britain would starve before four months. Germany said if we can accomplish this we will make peace and we will dictate our own terms. The problem was, Could she do it? That is the big problem. Let us see our attitude—let us look at it from the standpoint of America for a minute. Germany promised two things to her people—both were promised by the Kaiser. The first one was at Potsdam a few days after war was declared against Great Britain, that the soldiers would be back in their homes before the leaves fell from the trees. It was early in August of 1914 that he said that.

What was he thinking about when he made that statement? I think he was honest in it. He was thinking of the history of Germany. He thought of 1864, in the war with Denmark, that lasted but three weeks, when they got all they wanted. He thought of 1866, in the war with Austria, when they got all they went after in a war that lasted about four weeks. He was thinking of 1871, in the Franco-Prussian War, that lasted less than six weeks, when terms of peace were made at Versailles. The terms gave Germany Alsace and Lorraine and an indemnity of 4,000,000,000 marks, and both were acceded to by France, with the German Army in Paris at the time. The longest war was less than six weeks and the shortest war not quite three weeks—and the Kaiser was thinking of those things. His government had been preparing for 40 years for this war.

Germany is a perfected military machine. Her populations are drilled for war. Across the continent run 16 trunk lines, military in their use and character. Germany had been preparing all these years, and the Kaiser was honest when he said, "Your soldiers will be back in their homes before the leaves fall." But something happened in Belgium, and something happened on the Marne. It is now approaching the end of four years, and the soldiers are not yet back home, and I fear they will not be until American soldiers drive them home, which, if called upon to do, they will certainly do it in time.

The next great disappointment of Germany is this promise that the Kaiser made to her people, that they will not be required to pay for this war; "it will be collected from our enemies." The Kaiser had promised that from the beginning of the war. Now, after nearly four years of war the Kaiser has small hope of collecting that from France, Italy, or Great Britain, after the war had run its frightful destruction of wealth and because of the awful debt those countries had to undergo. He was therefore looking across the sea to the youngest Government of them all, to the most populous of them all, to a Nation in wealth double that of Great Britain, and almost equal to the wealth of Britain, France, and Germany combined. He evidently decided to collect the indemnity there; that country can pay for it.

Here is what he planned. Send the submarines to the sea; sink every cargo of food found on the sea; shut off the supply to France and Britain; starve these countries; then we will say to them, "We will excuse you from the payment of any indemnity, but you must transfer [speaking to Britain] your fleet to us," and to France, "Transfer your fleet to us." With the united French, British, and German fleets they would have a combined power of four times the American fleet, and we in our brilliancy on the sea would last probably 24 hours. Germany thought that if she could by the submarine starve these countries she would have a weapon more powerful than any big gun any front will see in the war, and then with the spoils of war would dictate terms to the Republic.

Our people saw it. We felt sure that while Germany never could get possession of these fleets, because they would fight to their death before they would give them up, yet there was one thing America must recognize in view of the Zimmerman note—that is, war is inevitable; it is coming; and if we were making a mistake it was because we did not think and act quick enough, but we hesitated too long to take the step. We faced the alternative, which we had to, to determine whether we preferred to fight this war alone or fight it while the allies were in fighting trim—and we took the step with our eyes wide open to consequences.

I have gone into this diplomatic side, ladies and gentlemen, that you might see the delicacy under which this Nation had been living while we were over the mouth of a volcano for two and a half years, and to assure you that we took our step advisedly when we went into it. What now of the situation as it appears to us? In a word, I might say that it does not look as encouraging to the average reader as it really is. In other words, you are likely to read what is carried in the dispatches and become more or less pessimistic. I want to announce a warning to you. Germany will not be defeated because of any revolution among her people. There will not be anything of that kind in Germany. If I had time, I would like to show why we must not make the mistake of expecting to win the war by Germany breaking; and, second, Germany will not be defeated because she will starve. Germany never has been in danger of starving. You probably do not recall what she has done in the past, but here is the fact: Germany's population works in her soil to feed her own people, while Germany, as a military policy of the Government, works the subject people in Poland, Serbia, and Roumania. Portions of Poland and Roumania have the richest wheat fields in the world. She says to these poor subject people working in the soil, "Produce food and feed the soldiers, for if starvation comes it hits you first." Those poor people are the ones who suffer. The German people in the German

Empire are not suffering like the people in Belgium, Serbia, Montenegro, Roumania, and Poland. That suffering is indescribable.

Germany will not be weakened to the point of defeat because of lack of munitions. Germany takes out of the mines of Serbia and France—she has possession of one-fifth of France, and that comprehends nine-tenths of the mineral wealth of France—and out of the raw material looted from the nations she has overrun she makes her munitions; then sells the munitions to Austria-Hungary and Bulgaria and Turkey, her vassals, and then loans these countries the money with which to pay for them. Where does she get the money? She makes it. How? With the printing press. In this way she supplies her allies with munitions from the spoils of war, and then puts them inextricably under her financially. These countries under this policy have become mere vassals under Germany, from which they will never recover. If Germany wins—if the central powers win—Austria-Hungary will lose. They ought to know it, and doubtless they do.

Germany started in this war with 68,000,000 people. She has under her control to-day, without reference to what she has recently overrun in Russia, including her vassals, 176,000,000. What has she taken in Russia? She has overrun Lithuania, Esthonia, all the Ukraine, and has taken Odessa. The Black Sea is now a German lake; the Baltic Sea is a German closed sea. She will doubtless place a son of the Kaiser over Finland. She has added 400,000 square miles of Russia and probably 70,000,000 people. You may inquire how is she doing that? Just like she did the other. Four weeks ago the danger was of Germany controlling middle Europe, the import of which may be judged by beginning with Hamburg, pass on down through Germany and Austria-Hungary, on into Bulgaria; she has recently forced a treaty with Roumania, which includes that unhappy country; down into Turkey and beyond to Bagdad in Persia. That is the significance of Germany in middle Europe. Now, within the last few days she has added Russian territory until she will control Petrograd. She already has Odessa, the richest wheat market in all Europe. Whatever was her situation for food heretofore this new success can have but one meaning.

So do not make the mistake of thinking that we are going to defeat Germany by starving her. One of the most delicate problems to-day with Germany is a problem that I can not discuss—it is the problem of Siberia. From whatever angle you look at it that is a serious problem. Russia has man power to the number of 12,000,000. We must keep in mind every minute that German brains and diplomacy might possibly organize the man power of Russia, and if any untoward thing should happen that would throw Russia into the lap of Germany, friendly, it would be desperate, because after all it is possible that the Russian people might prefer to be under the direction of Germany to being in a state of bolshevik anarchy. That danger confronts us every minute. On the other hand, we must consult Japan's national interests. If we order Japan to stay out of Siberia, we can not make sure that we are not offering offense there, neither can we be sure where that might lead Japan, for, when the world is on fire and five-sixths of the population is in war, every great nation is likely to go where its interests are. America must not offend Japan.

I appeal to you, my friends. I am speaking to-day as an American citizen, as I always try to do. In politics I would be spoken of as a Republican and out of sympathy with the President's economic policies, but I appeal to you do not be too free to criticize the diplomatic efforts of the Government in these hours of delicate diplomacy. The war involves intricate problems in the Far East, so that if I were asked what should be done, I might have my opinion as to what ought to be done, as I have; but at the same time it might not be the best thing to do. It is difficult to make certain what would be the proper thing to do, for it is an unknown quantity in the Far East.

However, this is one thing America must see—there is no help from the east front. Russia is gone, and has been for over 18 months, and we must make no program that would take into its reckoning that Russia will ever be a force to help us, because the problem of revolution is too great and the condition is too attenuated over there. We must also see that the Saloniki and Persian armies have their problem, because Germany may be heading now for India, and if she gets into India she will liberate 30,000 prisoners there that might be sufficient nucleus for an army to disintegrate all India. What we must see and see at once, and not be at all surprised over it, is that Germany must be, can be, and will be defeated, and that is on the west front, where we have got to do it at whatever sacrifice.

We can hope a good deal from Italy. They have an army of between three and four millions of the best soldiers in Europe. When Germany withdrew so many divisions from the Russian

front to throw against Cadorna, she simply overcame the Italian Army. It was not unlike a football game, where they form the center rush—the mass play was too much to overcome—it broke Cadorna's line. If you noticed, the first line of Italy broke; the second line broke, but the third one held; and there is a fourth one back of the third. I do not think there is any ominous danger of a serious character down in that section.

France will hold. She will put this year into line 250,000 of the 1918 boys, not one of them less than 18 years old. England will put 350,000 in of the same class, making 600,000. Germany, according to Col. Repington, can not put in more than 440,000 at the maximum, and they will be under 18, some as young as 16 years old, for she has many of her 1920 class in now. In the battle of Arras, according to official report, 30,000 prisoners were taken, among them many boys of 16. In the battle of Flanders it was reported that 3,000 were boys of 16. We are told if this war goes on a year Germany will have her 1921 class in. That will begin to rob the cradle, for it means boys down to 15. Germany's only weak place is in her man power, and that she can not resuscitate unless she can win Russia. I do not think she can do that.

I have said nothing about America. I am speaking of what Italy, France, Great Britain, and Belgium have on the west front, and while it is said Germany has a superior force, since she has brought most of her men from the Russian front, yet we have waited for the German drive, and the allies have hoped that it would come, because when they come out of their holes they expose themselves to a further weakening of man power, the only way to end the war. America has been slow, but we are coming from a state of peace of a hundred years; we are coming to a state of war. I have been one of the Members of the Congress who has been considerably impatient with the building of the Army. However, as yet I have not felt free to offer criticism. Nobody has seen any criticism from me, because in the first place it should come from Members who know the real facts in the situation, and I do not know the details sufficiently well to criticize constructively; in the second place, I am not quite certain just how much good general criticism does, and there is one thing I have felt all the time, nothing should be done unless it strengthens our case. This in spite of the partisan bias of the administration, which is to be sincerely deplored. While I find no fault with those who are pointing out the things we have not done that we ought to do, indeed I have decided sympathy with them, yet nobody should allow a word to drop from his lips that would give any comfort to the enemy on the other side. Doubtless their greatest discomfort will come from our demands that nothing less than our very best will appease America. Criticism which compels the abandonment of a self-sufficient for a more efficient prosecution of the war is justified, but it should be left to those who can point out the facts.

Our country has been slow, painfully slow, when viewed from our promises, and many of us have been impatient because of it, yet we all must admit that it takes a long time to come from nothing to everything. We have the promise of those who ought to know, that by spring we will have 500,000 soldiers in France, and before the summer ends we will have a million and a half at the front. The midsummer will probably call 800,000 more into training.

I have recently come from some of the camps in the South. I talked with a foreign officer who had observed the boys down at Camp Hancock, at Augusta, Ga. I said, "That looks to me like a fine bunch of soldiers." As I recall his reply, it was to the effect that there is not a fitter division either in America or France than that division; they appeared ready to go. Those boys, as I conversed with them, would keep saying to me, "Can you not do something to speed the thing up? We would like to get over there." That is the thing that is hard for me to understand. They seem wild to go. I stood on the rim of an old vacated reservoir, in the bottom of which they were practicing their bayonet work. It was the most uncanny performance I ever saw. I said to myself, "My God, what a stern business is this war!" There those boys were practicing every feature from the moment they leaped out of their own trenches until they went over the top into the enemy trenches—every feature scientific—and every man who witnesses what I saw must conclude that when they get over there they will make an account of themselves that America will not be ashamed of. Ladies and gentlemen, we have an awful task before us, and I want just to ask one thing of you to-night. To-morrow in the House we will resume our discussion on the finance corporation bill. It is a bill I do not like to support, but we have to do it. There seems to be no other way. I am afraid of the expansion of credits, under the stress of war, to the point of inflation, which

is absolutely inevitable under war legislation like this. But we have to do it for one reason, and only one—if America would act as a unit and realize that this war must be financed, and the only way it can be safely financed is to secure the funds from our citizens by taxes and, secondly, by loans, and that those taxes and loans must be paid out of savings rather than borrowings, we would not be asked to print our needs. If we could get Americans to see that fact, so that they would fully realize that whenever they spend anything they do not need, they have to induce the Government by some artificial method of borrowing to supply its needs by creating values where there are no values, because our citizens do not save and loan their savings to the Government. If we could get every man and woman to see that and induce them to take a pledge to cut off all luxuries, to stop our spendthrift indulgences, and to save our pennies, nickels, dimes, and dollars, first, to pay in taxes and, secondly, to loan to the Government in the form of buying war stamps and liberty bonds—which means simply loaning the Government the money—we would not need to go into this war finance corporation movement, to create money where there is no value attached.

That is the danger. When we lend by borrowing we do a dangerous thing. We must not be compelled to finance the war in that way. When we run our printing presses to make money out of nothing, a stage we may yet reach, that is a danger which every country has encountered at some period. And yet if we do not as a people save and turn our savings over to the Government upon the contract of repayment, there is nothing else for us to do but to produce it in some other way. It is on that line that I shall speak upon this bill to-morrow in the House of Representatives. We are compelled to enact such legislation because our people are not educated up to what the war means. You will all feel it, because the war can not be short. As I see it now, there is no possibility of it being a short war. We will all, sooner or later, realize this, and everyone, as the doctor said to you a moment ago, every one of you ought to be willing to give what you can in the form of service, of labor with hands, and willingness to loan or to purchase the little stamps, that the Government's exchequer may be replenished.

The war will cost us, I fear, from thirty-five to forty billion dollars before 1919 is ended. That is going to be an awful burden, but it is not a drop in the bucket in comparison with our wealth. However, it will test our financial system. That is the danger.

One warning that I want to give to these good people: Do not let anybody come around you and whisper in your ear that we ought not to be in this war. That man or woman may consciously be German in sympathy, and yet may not be consciously, but he really is a German sympathizer in results, whether consciously or not. Do not let anyone induce you to believe that there was some other way, and that we have no business to go on with this struggle. That is the danger that confronts America to-day.

After all, the people will determine what we are going to do, and neither Congress nor the President can do it. The people will decide, and my fear is that our people may grow tired, as they will, of the burdens of this awful struggle; that they might feel depressed, as they will, with the list of casualties that will come sweeping in soon. We must expect that, and my God, my people, I am not speaking as one who has no interest in it. I am speaking the truth when I say I never suffered such mental torture as when we were passing the conscription law to supply the men for the fighting columns in this war, because it is one thing for you to give your opinion as to duty in legislation, and it is another thing widely different for a responsible Congressman to vote it into a law. When I saw that the war was so far away and our public did not and could not understand the delicacies of our problem, while I wished to retain the volunteer system, yet I was afraid that we could not build an army without employing the method of conscription. In modern warfare we build an army like we build a substantial house—by taking only the choice timbers. You go into a home and pick out this flower of the home and say, "We want you"; you go into another home and find some fault, a physical defect, with this boy and say, "You can not stand up under modern warfare, we will have to leave you"; you go into another home and say, "We will leave you because you are needed on the farm"; into another home and say, "We must leave you because you are needed in one of the munition plants." In other words, we must build the Army by making our selections and rejections not to embarrass an individual home, but to insure greatest perfection in fighting ability. When I realized that I knew that the war would invade my own home, for my boys were college bred, educated, and were sound physically, and I think

clean morally. I knew they would make good soldiers, and when I voted for conscription, although I knew they would volunteer anyway, yet I voted with my eyes upon my own sons; one of them is in the machine-gun battalion as a volunteer, which he calls the suicide club, and another, not old enough to come under the draft, is now a common seaman, but training for the radio service and will soon be on the rolling waves to serve his country. A third son, not yet in because of his wife and baby, is easily the most unhappy of the three.

My great desire in my last utterances to you is, do not allow the German propaganda to whisper in your ear dissatisfaction which will tend to disunite us. We must be united and aroused. Do not allow these people to do for America what they have done for Russia in the Bolshevik movement there. It can not, it must not, be done here, my friends. That is the most serious thing that is facing us. When Gerard was told by German authority that "You can not have a war with Germany simply because there are 500,000 Germans in the United States who hold allegiance to the fatherland" Gerard lost his head. At the time I was sorry he said what he did, but I do not care at all now. He said, "Yes; we might admit that there are 500,000 Germans in the United States in sympathy with Germany, and you must remember that there are 501,000 lamp-posts in the United States."

Ladies and gentlemen, I have come to you on invitation of your Congressman to point out to you the diplomatic struggles that led us to take the fateful step. I wanted to indicate to you the situation as it seemed to me. I also desired to suggest to you, but time will not permit, the part the United States must play, not only in the line of the Army and Navy and the force we are organizing to take possession of the air but especially the work that the citizens at home must be willing to do in order that we may end this war as quickly as possible and at the least possible loss.

I simply say that it is not a short or an easy task. It is, from whatever standard of judgment we set up, the greatest effort the world has ever known. But I want no one, because of what I have said of the power of Germany displayed in her bloody sweep, to become pessimistic or unduly distressed, for the war can end in but one way. In the first place, England will hold; there will be no doubt of it, although the submarine has not been controlled by a long distance. It is still our biggest problem. We have got to meet it, first, by submarine destroyers; secondly, by increasing the supply of food at home; and, thirdly, by the building of ships and sending them on the sea, all of which point to the submarine as the important item. Those are big problems, and we must meet them. England will not and can not be weakened to the point of giving up; neither will France nor Italy. Even though they would, which is unthinkable, this war will not and can not end until it is ended right, because America has the man power and the money power; she has the virility, the spirit, the determination now since she has been forced to fight, and she has the cause, so that if it becomes necessary America, single-handed and alone, will bring Germany to defeat.

Necessity for the Government Manufacture of Duck in the Atlanta Penitentiary.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 8, 1918.

Mr. WEBB. Mr. Speaker, under the privilege accorded me by the committee I desire to have printed in the RECORD the following letters from Attorney General Gregory and one from the War Industries Board of the Council of National Defense, written by Mr. Scott. The letters are as follows:

DEPARTMENT OF JUSTICE,
Washington, D. C., February 26, 1918.

Hon. E. Y. WEBB,
Chairman Committee on the Judiciary,
House of Representatives, Washington, D. C.

MY DEAR MR. WEBB: There is pending before your committee House bill 8938, which is a bill to equip the United States penitentiary, Atlanta, Ga., for the manufacture of supplies for the Government, and for other purposes.

In the sundry civil bill approved June 12, 1917, Congress provided \$129,500 for shop buildings at the Atlanta Penitentiary, and these buildings are rapidly nearing completion. The department needs funds

for looms and for machinery. Even though the funds for the machinery were available now the buildings would be done long before the machinery could be delivered.

The situation is this: The committee on supplies of the Council of National Defense says that there will be a very large shortage of heavy cotton duck and that it is one of the important war problems to provide an increased supply; that the Government departments face a deficit of from five to six million yards during 1918, in addition to the requirements of the Navy and the Shipping Corporation, which in themselves are heavy. The committee says that if the Atlanta Penitentiary could install 500 looms to produce cotton duck it would tend to greatly ease a very tense situation.

The bill above referred to not only authorizes the appropriation of funds for the machinery but authorizes the appropriation of funds as the nucleus of a working capital and grants the authority necessary for the operation of the plant and for the disposal of the product to the Government departments.

Assistant Attorney General Fitts and Mr. Duehay, superintendent of prisons, will explain the detailed estimates. I wish to urge the importance of the early enactment of this legislation.

Sincerely, yours,

T. W. GREGORY, Attorney General.

COUNCIL OF NATIONAL DEFENSE,
WAR INDUSTRIES BOARD,
Washington, November 19, 1917.

The ATTORNEY GENERAL,
Washington, D. C.

DEAR SIR: We wish to urge upon you the necessity of increasing the supply of looms in the country capable of producing numbered duck at the earliest possible moment. The demand for such duck for paulins, escort-wagon covers, transport covers, and for the Emergency Fleet Corporation is far beyond the capacity of the country to supply. If the Atlanta Penitentiary could install 500 looms to produce these goods, it would tend to greatly ease a very tense situation.

In order to be of the greatest value, however, these looms should be contracted for at once, since the demand for these goods is for immediate delivery. If any way could be found by which these looms could be purchased now, so that they could be in operation within the next few months, we would most strongly recommend that some such action be taken.

Generally speaking, the quantity of numbered duck yet to be purchased from an already overburdened industry is over 31,000,000 yards.

Yours, truly,

COMMITTEE ON SUPPLIES,
COTTON GOODS SECTION,
By ALBERT L. SCOTT.

TREASURY DEPARTMENT,
Washington, October 5, 1917.

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I have the honor to transmit herewith for the consideration of Congress a copy of a communication from the Attorney General, of this date, submitting a supplemental estimate of appropriation in the sum of \$315,500, required by the Department of Justice for machinery and equipment for shops, United States penitentiary, Atlanta, Ga.

Respectfully,

OSCAR T. CROSBY, Acting Secretary.

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., October 5, 1917.

THE SECRETARY OF THE TREASURY.

SIR: I have the honor to transmit herewith an estimate of appropriation for machinery and equipment for shops in the United States penitentiary, Atlanta, Ga., in amount \$315,500. Accompanying the estimate is a copy of my letter to the President explaining the estimate in detail. May I ask that this copy accompany the estimate when you transmit it to Congress.

Respectfully,

T. W. GREGORY, Attorney General.

DRAFT OF ESTIMATE.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of \$315,500 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the purchase of machinery and equipment for shops in the United States penitentiary, Atlanta, Ga.

DEPARTMENT OF JUSTICE,
OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., October 5, 1917.

MY DEAR MR. PRESIDENT: I am transmitting herewith for your formal approval an estimate of appropriation, in amount \$315,500, for the purchase of machinery and equipment for shops in the United States penitentiary, Atlanta, Ga. Although I have understood that Congress would likely adjourn in a day or two, I believe this matter to be of sufficient importance to justify an attempt to have the appropriation made at this session.

This is the situation: Mr. Albert L. Scott, of the committee on supplies, Council of National Defense, told me yesterday that there will be a very large shortage of heavy cotton duck and that it is one of the important war problems to provide an increased supply; that the Government departments face a deficit of from five to six million yards during 1918, in addition to the requirements of the Navy and the Shipping Corporation, which in themselves are very heavy.

In the sundry civil bill approved June 12 Congress provided \$129,500 for buildings for a cotton-duck mill in the Atlanta Penitentiary, and the construction of these buildings is now under way. We need funds now for looms and other machinery. The capacity of this plant is calculated to be sufficient to relieve the Government's estimated shortage of duck, but the plant should be rushed to early completion in order adequately to meet the situation.

If you approve this estimate, I suggest that it be transmitted to the Secretary of the Treasury, accompanied by the inclosed copy of my letter to you as an explanation of the urgency of the estimate.

Faithfully, yours,

T. W. GREGORY, Attorney General.

THE PRESIDENT,
The White House.

ADVISORY COMMISSION,
COUNCIL OF NATIONAL DEFENSE,
Washington, D. C., October 4, 1917.

THOMAS W. GREGORY,
Attorney General of United States,
Department of Justice, Washington, D. C.

SIR: There will be a shortage in heavy canvas 30 inches wide or under during the year 1918. Estimates which have been received by us from various departments of the Government, not including the Navy or the Shipping Corporation, indicate the demand for 10,000,000 yards of this fabric. The total capacity of the country per annum is about 8,000,000 yards. Of this capacity probably more than one-half has already been sold and can not be considered as available to be applied against the demand mentioned above. We therefore face a shortage of from five to six million yards during 1918, in addition to what the Navy may require and the Shipping Corporation, and also in addition to all civilian needs.

Yours, truly,

ALBERT L. SCOTT,
Committee on Supplies.

Liberty-Loan Day.

EXTENSION OF REMARKS

OF

HON. JOSEPH J. RUSSELL,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

Mr. RUSSELL. Mr. Speaker, I ask unanimous consent to have inserted in the RECORD a speech made in my district, at Jackson, Mo., on Liberty-Loan Day, by Hon. XENOPHON P. WILFLEY, who has since that time been appointed by the governor of Missouri to the United States Senate. At that time it was not known by him or anyone else that three days later he would be appointed to the Senate, but this address did him great credit then as a private citizen and equally so now as a United States Senator.

The speech is as follows:

SPEECH OF XENOPHON P. WILFLEY IN JACKSON, MO., LIBERTY-LOAN DAY.

The chief concern of every loyal American to-day is to win the war. To that end we should stand ready to put forth the utmost of service and valor. For the time being political differences must be forgotten. There are no Democrats, no Republicans. We are all Americans. Personal gain and individual preference must be subservient to the call of the Government. The forces of the Nation must be coordinated and attuned to the spirit and fact of war. Intemperate and extravagant speech must yield to deliberate, accurate, hard thinking, so as to produce the maximum effort of sacrifice and courage. The time to do our "bit" has passed. We are now called upon to do our best. This requires extraordinary effort, for we are not enamored of war. We are a peace-loving Nation. Indeed, we have been suspicious of anything that tended to exalt the military over the civil power. But we are in a world war, and we can not shut our eyes to the situation—if we do we will not evade it. Inactivity means infinite sorrow and suffering, and indifference means destruction. With patient forbearance we endured repeated and revolting insults, and suffered indignities so humiliating and insolent that we could no longer maintain our honor and self-respect without expressing our resentment in a declaration of war. A year has passed since that momentous event. During that time we have been marshaling the resources and energies of this Nation in defense of its honor and integrity. The fact that we did not bring on this war is all the greater reason why we should fight to win it. An innocent man who is struck by a bully deserves more credit in resenting the insult than one who is looking for trouble.

We did not will this war; on the contrary, we did everything possible to avoid it, and did not enter it until it was perfectly apparent that our independence as a Nation was threatened. The Imperial German Government not only denied our rights as a Nation but defied our protests against her brutal and wholesale policy of destruction by murdering Americans—men, women, and children—while engaged in pursuits which have always, even in the darkest periods of history, been deemed innocent and legitimate. The passions of war ravaged Belgium with rapine and murder, and finally reduced the able-bodied population—men and women—to vassalage. The feeling of the rulers of Germany toward Belgium is not different from their attitude toward the United States, and the gain that would come from the domination of Germany over the United States is so vastly greater than that over any European country, all of

which she is seeking to control, that it is perfect folly to think that her program of world dominion did not include our own beloved country. World dominion or death! That is the policy of the German Empire. This policy is backed by propaganda of destruction and terrorism which, in horror and magnitude, surpasses all wars in the history of the world combined.

We must meet this situation with a supreme and indomitable purpose to put an end to that accursed spirit which brought all this misery and sorrow upon the world. The warfare waged by Germany is so ruthless and reckless and heartless that it challenges all mankind to rise and defend the rights of humanity. This is not merely a war of armies or of governments, but it is actually a war of entire peoples. The propaganda of the German Government is the very antithesis of our conception of civilization. The turpitude of the Kaiser and his Huns is but the logical and consistent culmination of a policy to destroy the ideals of modern civilization.

The German philosopher, Nietzsche, than whom no man has had greater influence in shaping the trend of German thought in the past 30 years, long before the war broke out wrote, "You should love peace as a means of preparing for future wars."

The world can never be safe when such a sentiment dominates the ruling power of a nation like Germany. We were slow to realize that it was possible, at this advanced age of Christian civilization, for a whole people to become imbued with the spirit of militarism and make it paramount to every other sentiment of the community. But this is the situation in Germany. Three months after the outbreak of the war Maximilian Harden, one of the ablest and most influential of the German publicists, wrote:

Let us renounce those miserable efforts to excuse the acts of Germany in declaring war. It is not against our will that we have thrown ourselves into this gigantic venture. The war has not been imposed upon us by others or by surprise. We have willed the war. It was our duty to will it. We decline to appear before the tribunal of united Europe. We reject its jurisdiction. One principle which contains and sums up all others—might.

This sums up the philosophy of the German propaganda. We could enumerate hundreds of similar utterances of leaders of German thought which indicate the same spirit of militarism and brute force by which they propose to dominate the world. And yet they have the effrontery to declare this is a defensive war. The most shocking utterance of the Kaiser was his reference to God as his chief ally in this war. Such blasphemy deserves a condemnation that will ring through history until the day of judgment. It arouses our indignation to the uttermost efforts of our capacity as a nation.

We have greater resources than Germany, we have a more resolute and stalwart race than Germany, and we must employ these resources of men and materials to protect us and restore to us the permanent peace we love so well. Let us not misunderstand our relation to this crisis. We did not go into this war on account of the loss of property, enormous and serious as that was. We are not prompted by impulses of revenge, hate, or avarice. We do not want one dollar of indemnity for ourselves or one foot of territory from any nation on the face of the earth. We are fighting to guarantee our right to exercise free and absolute sovereignty over our own land, independent of the dictates or domination of any foreign power. We do not propose to be the vassal of the house of Hohenzollern. We stand for the principle that every people on the face of the earth with national instincts should be allowed to determine its own form of government and live in peace and safety under it. This is the fundamental spirit that governs this Nation in its relations with the other nations of the world. In defense of this spirit we have drawn the sword of democracy. We will wield that sword with all the power of the combined resources of this Nation until we have laid low and made powerless the accursed spirit of Prussian militarism. The atrocities of Germany were designed to put fear into the heart of the human race; in place of that they have filled it with fury. The only way to establish an era of permanent peace is for the sword of democracy to destroy the spirit of Prussianism, which seeks to crush the world, that it may have dominion over it. Prussianism relies upon might and recognizes nothing but power. With power we must fight it at any cost until it is brought to the realization that our power is greater than its power—this is the only means within our grasp to win peace.

We are fighting the Imperial German Government to compel it to abandon a course of action we deem intolerable to civilized free peoples. To do less than our utmost to win this war is to do less than our utmost for peace. The only hope for Germany is that we will do less than all we can to compel enduring peace. She knows full well that against the United States of America, fully armed and resolute on the side of her enemies, she can not stand. It is a great privilege to be an American

citizen and live under the benign influence of American liberty and freedom, but to-day the greatest experience that can be realized in this time of crisis is to be an American soldier, and fight, and, if need be, die, for that Government that has brought the best and greatest blessings ever enjoyed by any people on earth.

On the field of Flanders is now being fought the greatest battle in the history of the human race. In the American battle line there are Missouri boys, perhaps some of your friends and loved ones; they are fighting for you and for me, to make the world safe for your children and my children. The private soldier on that battle line is just as much a hero as Gen. Pershing, Gen. Haig, or Gen. Foch.

The Teuton, the Latin, the Anglo-Saxon have dominated the world since the Christian era. This Nation is a composite of these dominant races. They have been welcome to our borders; have helped to build up our institutions; have enjoyed the protection of our Government, and constitute the very warp and woof of our civilization. To-day not a fiber of this mighty Republic can escape the scrutiny of inspection necessary to determine the test of national loyalty. The policy of this Nation now must be backed by a determined and resolute populace. There must be a national solidarity, not only of material resources, but of the people, in order that the American Army may strike the death blow to the enemy.

We have in this country a large population of German descent. I can conceive of no other reason for their coming to this country except that they thought it a better place to live than Germany. Naturally those of German descent have suffered deep sorrow and anguish at the fact that the German Empire, with all its glory, is now dominated by a spirit of militarism that is a disgrace to the history of the Teutonic race. In some communities there have been reports of men of German origin who, misguided or corrupt, have attempted to weaken and depose the resolute purpose of this Nation. I assume there are none such in this community, but if there be let them be warned there is sweeping through these United States a mighty wave of stern and grim determination which bodes ill for anyone standing in its way. Conscience and judgment must dictate terrible resentment on the part of all high-minded German people against the Prussianism which now dominates the German Empire.

The American of German descent who in this time of test and trial declines to serve the land of his adoption with the utmost measure of single-minded devotion and with every ounce of his power perjured himself when he took his oath of allegiance, and proves himself guilty of treasurable duplicity.

The ambition of the Kaiser has already made thousands desolate, and he is scattering the wealth of nations like sands of the sea, and is lavishing the blood of nations like water. Graves for his subjects and thrones for his sons is the policy of the Kaiser. He has witnessed the greatest destruction of the German Army in the last two weeks in the history of its existence. It seems that nothing short of complete annihilation will subdue his frenzied ambition. This is an international crisis, and the destiny of the world depends upon its outcome. The result will be either a Prussianized world, ruled by a military autocracy of brute force, blinded to the rights of individual freedom and initiative, or a world filled with the spirit of peace and justice and the rights of nations, great and small, and the privilege of men everywhere to choose their own way of living and obedience.

It is really the old story presented in a new, curious, and mighty form. Away back at the dawn of history we find the conflict between oppression and freedom. The oppression of the Pharaohs over the children of Israel lasted for generations before a Moses arose to lead them from the land of bondage. Moses allowed the children of Israel to endure all the insults and oppression of the house of Pharaoh for a long time, but when they could endure it no longer he delivered them from the bondage of Egypt and led them to the banks of the Red Sea. He looked around, and behold, the hosts of Pharaoh were still pursuing him. His people apparently confronted a situation more desperate and hopeless than any that has ever confronted the allied armies of Europe. By a mysterious and miraculous power the waves of the Red Sea parted and the people of Israel marched through in safety. Moses could then have brought the waves of the Red Sea back and had absolute protection from the hosts of Pharaoh, but he realized the time for pacifism had passed, and so Moses destroyed all his enemy. With this example of the meekest man who ever lived, there is no excuse for a spirit of pacifism under present conditions. Joshua led the children of Israel for a generation until finally they were delivered into the hands of the Midianites and threatened with oppression similar to that of the Pharaohs. But Gideon was chosen as their leader and gathered his hosts together, and through a process of elimi-

nation selected an army of stalwart men, and with the sword of the Lord he destroyed the hosts of Midian.

Tyranny and treachery are not new vices. History is replete with examples of their downfall. Cataline formed a conspiracy that was about to destroy Rome, and but for the voice of Cicero he would have accomplished his purpose. Caesar ruled with might and power and attained a position of eminence and influence equal to the Kaiser, but the voice of the people declared itself and Caesar was destroyed by daggers in the hands of the senators with whom he was associated. Nero was possibly the most cruel and despotic of all the rulers of ancient time. He was the last of the family of the Caesars to come into power in Rome. His influence was great, his heart was cold and brutal. He sought to destroy the city of Rome in order to enjoy the conflagration of the destruction and build upon the ruins a yet greater city. But at the time when Nero reigned over Rome and was at the zenith of his power there appeared upon the scene, leading a small band of Christians, Paul of Tarsus. The resentment of the people at the atrocities of Nero forced him to destruction, and history has given him a place of calumny and shame. Both Paul and Nero disappeared, cut off by the violent current of their epoch. As the centuries have gone by the name of Nero has grown infamous, while that of Paul has radiated glory. Napoleon overrun Europe and seemed invincible in the power of his conquests, yet Napoleon met his Wellington and his Waterloo. That great battle ended the 23 years' war of the first French Revolution and quelled the man of genius and ambition who had so long disturbed and desolated the world.

The Kaiser has summed up all the insidious ingenuity of the military spirit of history in his attempt to work out a propaganda in defiance of civilization; but he, too, has met the embodiment of the spirit of right pitted against his program of might. Against the spirit of this leader of world destruction and desolation is matched the leadership of Christian civilization and freedom in the person of Woodrow Wilson.

On the field of France the final blow that will bring the spirit of Prussian militarism to its knees, whether it be from the sword in the hands of the semisavage from the heart of Africa or the Hindu from India or a Missouri boy from this country, it will be the sword of Gideon, the sword of the Lord.

In its last analysis this is a conflict between kultur and Christianity. The most deadly enemy that Christianity has ever had to contend with is kultur. Christianity stands for brotherly love and human kindness; kultur claims that such is the spirit of weakness. Christianity stands for chastity and virtue; kultur claims that regard for such is mere conventionality. Christianity says, "Suffer little children to come unto Me"; kultur cuts their hands off in order to terrorize the community. Christianity says that the greatest thing in the world is love; kultur says that there is no more virtue in love than there is in hate—that the greatest thing in the world is might. Christianity stands for perpetual peace; kultur stands for continuous war.

Germany has fed upon the war spirit for generations and has spent 50 years preparing for the battle which is now absorbing the attention of the world. It is dominated by a national sentiment of intolerance, guided by a despotic tyrant whose reckless abuse of power has wrecked the continent of Europe and threatened the safety of humanity. We will fight that Government with all its resources until we are convinced that the German Government is ready to enter with us and the rest of the world into negotiations of peace upon the basis that will insure the world a mutual understanding of human obligations. The helpless men and ravished women whom Germany has wrested ruthlessly from their homes must be restored to liberty and freedom. Human government must be established and maintained by and with the consent of the governed. We are fighting to make the world safe for democracy and safe for individual liberty under every form of government. That is what we stand for in peace; this is what we fight for in war. This is what we live for, and for this we are willing to die. We are rallying the resources of our land in order that we may throw the whole force of the Nation in defense of its sovereignty and the rights of humanity. Our destiny depends upon the success of this war. This brings the issue directly home to us. This is our war.

Soon we will have a million men on the battle front. They will be thousands of miles from home. They will be helpless and defenseless without we provide them with ammunition and supplies. That is the object of this meeting to-day. What will we do? Brutal as is the propaganda of Prussianism, it is not less cruel for us to send our soldiers to fight for us and fail to provide them food and clothing and munitions. Every single individual of our great State of Missouri must make substantial sacrifice to buy securities of the Government to win this war. The spirit of the American soldier reflects the democracy of

Galilee. He became obedient unto death, even the death of the cross. If our soldiers and sailors are willing to die for us, we should be willing to make the utmost sacrifice for them.

The spirit that dominates the soldier on the battle field of Flanders was appropriately expressed in the words of the late Lieut. Col. John McCrae, who, when mortally wounded, wrote:

In Flanders fields the poppies blow
Between the crosses, row on row,
That mark our place; and in the sky
The larks, still bravely singing, fly,
Scarce heard amid the guns below.
We are the dead. Short days ago
We lived, felt dawn, saw sunset glow;
Loved and were loved; and now we lie
In Flanders fields.

Take up your quarrel with the foe!
To you, from falling hands we throw
The torch. Be yours to hold it high!
If ye break faith with us who die
We shall not sleep, though poppies grow
In Flanders fields.

An answer was written by a distinguished citizen of Ohio, who said:

On Flanders fields the cannon boom
And fitful flashes light up the gloom,
While up above, like eagles, fly
The fierce destroyers of the sky:
With stains the earth wherein you lie
Is redder than the poppy bloom
In Flanders fields.

Sleep on, ye brave. The shrieking shell,
The quaking trench, the startled yell,
The fury of the battle hell
Shall wake you not, for all is well.
Sleep peacefully, for all is well.
Your flaming torch aloft we bear,
With burning heart on oath we swear
To keep the faith, to fight it through,
To crush the foe or sleep with you
In Flanders fields.

Manufacture of Sugar.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

Mr. AUSTIN. Mr. Speaker, I avail myself of the opportunity to extend my remarks on the conference report on the Agricultural appropriation bill by offering for the consideration of the members of the Committee on Appropriations and my other colleagues the following correspondence, which I believe worthy of their favorable consideration. The subject so ably presented is full of interest to the American people, especially the farmers:

UNITED STATES SUGAR MANUFACTURERS' ASSOCIATION,
Washington, March 20, 1918.

Hon. R. W. AUSTIN,
House of Representatives, Washington, D. C.

DEAR SIR: The Secretary of Commerce has asked for a small appropriation with which to establish a division in the Bureau of Standards for the purpose of working out unsolved problems in the manufacture of sugar. (See H. R. documents, inclosed.) In the light of the information contained in the inclosed memorandum, it is sincerely hoped that you may see your way clear to support this measure when the opportunity presents itself.

The posters and billboards of our newly created Food Administration bear the slogan "Food Will Win the War." Unfortunately, the war was upon us and had progressed several years before this fact dawned upon us. It is an old story with German statesmen. It dawned upon them nearly a century ago, and in 1836 they enacted legislation designed to develop this greatest of all war preparation.

As a result of carefully thought out plans, which were given force and effect in direct legislation, Germany has increased her average yield of cereals from 12 bushels to 43 bushels per acre, which has enabled her to reverse her policy of emigration, thereby more than doubling the population she could maintain, doubling the number of soldiers which she could call to the front, and, with her ports blockaded for three and one-half years, it has enabled her to keep both soldiers and civilian population from starvation.

When Germany commenced to increase her yields per acre the States which are now comprised in the German Empire were assisting emigration because of inability to feed or give work to a population of 31,000,000 people; but when the war broke out this same area was supplying 75 per cent of all the food requirements of a population three-fourths as large as that of the entire United States, which has fourteen times the area, and, in addition, Germany was importing 800,000 seasonal laborers each year from Russia and Galicia to work in her fields and factories.

We hear of Germany's subsea boats, aeroplanes, 42-centimeter guns, poisonous gas, and numbers of other murderous appliances, but all of them put together pale into insignificance as a war measure when compared with this one matter of increased food production, without which all else would count for naught.

In the inclosed memorandum, beginning on page 2, I am taking occasion to invite your attention to the manner in which Germany accomplished this greatest of all military feats, and I hope in it you may find something of interest.

Very truly, yours,

TRUMAN G. PALMER.

[Memorandum in re the establishment of a division in the Bureau of Standards for the purpose of working out unsolved problems in the manufacture of sugar, with a view to reducing its cost of production.]

The Department of Commerce has recommended that the present session of Congress make an appropriation of \$30,000 with which to establish in the Bureau of Standards a division to be devoted to working out the strictly scientific problems of the factory end of the domestic sugar industry, beet, cane, maple, glucose, and refining.

The Bureau of Standards, patterned after a German Government institution, is rendering great service in its scientific research work to the iron, steel and other metal industries, cement and stone, clay products, paint manufacturing, rubber, textiles, leather, soap, roofing and waterproofing, writing and printing inks, paper, adhesives, and many other industries of lesser importance. Although the production of sugar to-day is one of the most scientific industries extant, up to this time the bureau has done nothing for the sugar industry aside from a limited amount of work in the field of polarimetry.

Sugar can be produced from cane without the application of scientific knowledge, and as long as it was produced in this manner, world prices of sugar remained high. On the other hand, the production of sugar from beet roots requires strictly scientific work from beginning to end. During the past century, most of the scientific methods and practices originally devised for and first applied to the manufacture of sugar from beet roots have been applied to the production of sugar from cane. In consequence of the added source of supply and the application of scientific methods in cane-sugar production the price of sugar has been so materially reduced that except in rare instances where exceedingly low wage rates prevail, sugar no longer can be produced from cane at a profit without the application of up-to-date appliances and methods.

Because of our diversified sugar interests, the need of governmental effort is greater here than in any other sugar-producing country. Where European countries have only the beet-sugar industry we have the beet, the Louisiana and insular cane, the maple, glucose, and refining industries. Some of the larger companies maintain extensive research laboratories at great expense, where many problems are worked out, but the establishment of the proposed sugar division in the Bureau of Standards, with Government experts of acknowledged ability, not only would augment the work already being done by some of the larger companies but would render invaluable service in the dissemination of information among all the sugar-producing and refining companies in the country.

The Governments of European sugar-producing countries generally are active in this work. The Government-aided "Sugar Institute" at Berlin has been largely instrumental in making Germany the greatest sugar-producing country in the world. In addition to having the finest-equipped laboratories and testing apparatus, they have a perfectly equipped beet-sugar plant in miniature, where beets are put through every factory process, and it is here that the chemists and managers of the sugar factories of the empire have received their training. During the dead season the young men are schooled at the institute by a corps of the ablest sugar experts in the world, and when the factories open they are given factory positions, where they secure practical experience at the different factory stations, with the result that when they graduate from the institute and are ready to accept positions they know all that is known regarding the production of sugar from beets.

Unfortunately, the work which the Bureau of Standards would conduct is of such a technical nature that it is difficult for the layman to understand it, but, considering the importance of the domestic sugar industry in our national economy, considering the scientific work required in the industry, considering the results achieved by foreign Governments, considering the number of problems still confronting the industry, and considering the aid which the Bureau of Standards has been able to render other American industries, a modest appropriation with which the inaugurate this work would seem to be fitting.

The Department of Agriculture has rendered both the domestic beet and domestic cane sugar industry invaluable service in the field, but in technical factory work the Government has done but little. If we are to keep pace with other sugar-producing countries, the diligent, plodding, never-ceasing research work of Government scientists has become a necessity.

The above remarks relate to all classes of sugar, regardless of the plant from which they are derived. There are two features which apply specifically to the production of sugar from beet roots which are worthy of special consideration:

First. The beet-sugar crop comes onto the market in the autumn, when no cane sugar is being produced, when the market is apt to be bare of sugar, as was the case last year; and the stabilizing influence of the domestic crop of beet sugar on the price on all sugar is of inestimable value to the public. Food administrator Hoover testified under oath before the Senate Sugar and Coal Investigating Committee that but for this 1917 beet-sugar product of 820,000 tons and the contract which he made with the beet-sugar producers to market their entire crop at 74 cents, seaboard refining points—at which time cane sugar was selling at \$8.23 at the same points—his best judgment was that the price of sugar in the United States would have gone from 20 to 30 cents per pound. But for the production and marketing of this domestic crop of beet sugar, which Mr. Hoover estimates saved the American people from \$50,000,000 to \$60,000,000 in 1917, sugar again would have been classed as a luxury instead of a necessity.

FOOD AN IMPORTANT FACTOR IN THE PRESENT WAR.

Second. Next to the war, the most general topic of conversation to-day is food. Daily and hourly we are told that "food will win the war," and, conversely, lack of food will lose the war. The cry of our allies is for food and yet more food. They long since have been rationed by food cards covering sugar, flour, meat, and all other principal foodstuffs, and we, by inaugurating wheatless and meatless days and using substitutes for wheat flour, are trying to keep them from starvation. Our farmers are urged to increase their cultivated area, and our urban population is urged to plant every vacant lot to food crops. Prices have increased as never before, and for once our urban population is as absorbed in the subject of our food supply as are the farmers who produce it.

In times of peace, when the products of our soil were sufficient to feed our population and allow for limited exports to foreign countries, little attention was given to the subject of our food supply; the thought that

conditions might arise whereby we would be compelled to reduce our consumption of foodstuffs, to inaugurate wheatless and meatless days, never seemed to have entered the minds of the American people; and while, owing to the vastness of our cultivable area, we produced immense quantities of food products, the American farmer never has given thoughtful consideration to extracting the maximum yield from the soil. As a consequence, with the world's food supply to draw upon, at the present moment we, as well as our allies, scarcely know which way to turn to prevent the people suffering from hunger.

It is a fact long since recognized in Europe, and now recognized in the United States, that for three to five years after a field has been devoted to sugar beets it will produce an excess of from 30 to 50 per cent in the yield of other crops sown on the same soil. Thus the production of sugar from beets increases the supply of all other foods, lowers the cost of producing all farm crops grown in the rotation, and this favorably affects the price to the consumer of all other food commodities.

This being true—and the following pages will demonstrate conclusively that it is true—it would seem that the present is an opportune time to give consideration to sugar-beet culture as a permanent means of increasing our domestic food supply.

WHY EUROPE PRODUCES 2 BUSHELS OF GRAIN TO THE ACRE TO AMERICA'S 1 BUSHEL.

Prior to the beginning of the last century Europe practiced what was known as the "three-crop system of rotation"—three years of cereals, followed by one year of "fallow." Fields were allowed to be fallow one year in three in order to rest the land and afford opportunity to get on to the fields and pull up the weeds and other foul growth by hand.

As a result of this system and of poor cultural methods, the soils of Europe had become so depleted that they yielded an average of but 12 bushels of grain per acre. While thinkers generally were pondering as to how the ever-increasing population was to avoid starvation, the celebrated agronomist, Thaeer, solved the problem. As a result of extended investigation and practical experiments, Thaeer demonstrated the fact that rotating cereal crops with root crops greatly increased the yield of cereals grown on the same soil for several years succeeding the root crop.

Then, as now, there was no market for great crops of such roots as turnips, Swedes, and mangolds. They only were valuable for stock feed on the farms where they were produced. Their production involved more labor than the roots themselves were worth, but Thaeer showed that the value of the extra yields of cereals, which followed in the rotation, far more than compensated for the loss involved in growing the roots.

Thaeer wrote a book on the subject in 1805, and as a result of his work the turnip became the basis of British agriculture. To-day, out of 8,500,000 acres of tilled fields in Great Britain, 2,000,000 acres are devoted to root crops, principally turnips and mangolds, which accounts for the high British yields per acre. For some years after Thaeer's book came out, German and other European thinkers endeavored to induce their farmers to adopt Thaeer's methods, as practiced in Great Britain, but without success.

By 1811, Napoleon Bonaparte's scientists had discovered that the culture of sugar beets improved the soil to an even greater extent than could be secured by growing other roots in the rotation, and by imperial edict Napoleon created a beet-sugar industry. In two years France had 334 beet-sugar factories in operation, and by 1836 was producing 35,000 tons of sugar from beets.

ECONOMISTS AND AGRONOMISTS AGREE THAT TO THE SUGAR BEET BELONGS THE CREDIT OF INCREASED CROP YIELDS IN EUROPE.

If verification be desired of the statement that the culture of sugar beets increases the yield of all other crops from 30 to 50 per cent, I refer you to United States Department of Agriculture Bulletin No. 260, "The American Beet Sugar Industry in 1910 and 1911," pages 30 to 42, wherein will be found translations of the statements of leading German agronomists relative to this subject; also a summary of reports from 115 American sugar-beet farmers. Humbert, a German agronomist, shows that the yield of other crops on a large number of nonbeet and beet farms was 20.96 bushels of wheat per acre on nonbeet farms, 39.56 bushels on beet farms; rye, 27.25 and 30.25 bushels, respectively; barley, 28.81 and 45.02 bushels; oats, 43.03 and 69.16 bushels. Woge, another noted agronomist, shows an increase of 24.55 to 41.25 bushels per acre in wheat; rye, 28.36 to 40.76 bushels; barley, 23.20 to 43.50; oats, 61.74 to 73.30 bushels. The summary of reports of 115 American sugar-beet farmers shows an average increase of 28.88 to 43.07 bushels of wheat per acre; barley, 38.97 to 59.14; oats, 40.90 to 60.60; corn, 41.60 to 53.10 bushels. A general increase of such proportions from our 218,000,000 acres devoted to these four crops in 1917 would have given us an additional 3,000,000,000 of grain with which to feed our allies, without planting an additional acre. The increase alone in wheat production would have been 651,000,000 bushels, or more wheat than all we actually produced.

For over a century the writings of European statesmen, agronomists, and economists have attributed the marvelous progress which Europe has made in agricultural methods to the introduction of sugar-beet culture. In 1811 Napoleon Bonaparte said to his minister of the interior: "The minister will also advise the cultivators that the growing of beet roots improves the soil and that the residue of the fabrication furnishes an excellent food for cattle." In 1842 Louis Napoleon gave these words to the sugar beet: "Respect me, for I enrich the soil, I fertilize lands which without me would remain uncultivated." In 1861 Ferdinand Knauer, first president of the German Farmers' Association, said: "The complete changing of the entire system of agriculture was reserved for the beet germs." In 1878 Gustav Humbert, one of Germany's most distinguished agronomists, said: "The increase of cereal harvest has been due to the cultivation of the beet." In 1906 Prof. Dr. von Runkler, of Breslau University, said: "Sugar-beet culture is, without doubt, the direct and indirect cause of the increase of gross and net yields of the entire agriculture and, therefore, also of the soil values in the regions touched." In 1892, Richard Woge, doctor of philosophy, Leipzig University, said: "The extraordinarily great influence which the sugar industry exerts upon agriculture has been numerically demonstrated in the preceding work." In 1904 Gen. Sekretær Zurn said that "the loss of the beet-sugar industry would be disastrous to a large part of German agriculture." Statements of this sort could be repeated ad infinitum. I have gathered and had translated the works of a large number of European economists who, for a long period of years, have written on this subject, and from them could make a huge volume devoted solely to increased yields of other crops by reason of rotation with sugar beets.

The following table shows the average percentage increase in yields as given by Humbert, Woge, and me in United States Department of Agriculture Bulletin No. 260; also, the average percentage increase as shown in the reports I since have gathered from 500 other American farmers who had introduced sugar beets in their crop rotation:

Percentage increase in yield of other crops due to rotation with sugar beets.

A SERIOUS ERROR CORRECTED.

As a general proposition the growing and harvesting of farm products removes more or less of the elements which make soil fertile. On the other hand, inasmuch as sugar comes wholly from the atmosphere, the growing of a crop of beets takes nothing from the soil, provided the by-products of the factory be fed and returned to the fields. In addition to this, it is a fact now universally recognized that not only do sugar beets take nothing from the soil but, as alluded to in the writings of agronomists and economists above quoted, and as demonstrated by the experience of practical sugar-beet farmers, sugar-beet culture greatly increases the yield of all cereal crops when grown in rotation.

State papers show that Napoleon Bonaparte was possessed of this knowledge before he issued his celebrated edict which created the beet-sugar industry; indeed it was one of the main reasons for his action. It has been known to all European economists since Napoleon's time and has furnished the main incentive for building up the indigenous sugar industry throughout Europe. American literature on the subject shows that this fact was known to the men who in the early days endeavored to establish the beet-sugar industry in the United States.

When, in the nineties, the beet-sugar industry began to take root in the United States, the indirect agricultural benefits arising from sugar-beet culture had become so universally known in Europe that their writers on economics and agronomy rarely alluded to the subject. Unfortunately this, by far the most important consideration in beet culture, appears to have been entirely lost sight of in this country at that time. No one had gone to the trouble of searching the older European literature on the subject and, for reasons which I will explain, the culture of beets soon came to be considered as positively injurious to the soil.

This idea prevailed at the time my attention first was directed to the industry. Scores of farmers, both east and west, told me that the injury to the soil was so great that they could not afford to grow beets at any price, as their culture ruined their farms; indeed, one of our leading agricultural papers so advised them at the time a new factory was erected and put in operation. Factory managers reluctantly admitted to me that the farmers were telling the truth, and it was exceedingly difficult for the few operating factories to add enough new recruits to replace the farmers who were dropping out. The outlook for the future was not promising either for the industry or from the viewpoint of national economies.

Failing to harmonize domestic conditions with the fact that practically all European nations were doing all in their power to expand their domestic sugar industry and that their acreage yields of cereal crops were constantly increasing, I visited the beet-growing sections of Europe to ascertain, if possible, the cause of the different viewpoint of their farmers and ours. The cause was soon found.

European farmers were growing beets as a means to an end rather than for the direct money they received for the crop. They were planting beets on the same soil but one year in three to five, using the beet crop to rid their fields of foul growth and to open up and aerate their land. After the sugar had been extracted from their beets they were hauling the pulp and other by-products back to their farms and feeding it to stock, thereby not only securing the full food value of the beets but returning to the soil all the elements which the beets had drawn from it.

In the attempt to save labor the contrary rule was being followed in the United States. By the aid of the light which falls on their leaves beets gather their sugar from the atmosphere, and in order that they best may gather this sugar beet fields must be kept free from weeds and other foul growth. All of our fields were foul with weed seed, and if beets were planted on a different field each year there would be no let up in the work of weeding, whereas inasmuch as a field once rid of weeds would require but little weeding the following years our farmers immediately formed the habit of devoting the same field to beets year after year. It did not seem to occur to them that the weeds reduced the yield of all other crops and that for the benefit of other crop yields they should be removed. In addition to this, although the pulp was offered them free of charge for stock-feeding purposes, they refused to haul it home as a gift, and millions of tons of this valuable stock food rotted at the factories.

Then they lost the beneficial effect of the root rotation, they robbed their soil by devoting it to the same crop year after year, they lost the feeding value of the pulp, and by failing to return the elements drawn from the soil they robbed it of its nutrient. After a few successive crops of beets the beet tonnage naturally decreased to a point where beet culture was unprofitable, the soil was unbalanced for the production of any other crop, and it required years to bring it back to its former state of fertility.

Through the publication and description of several hundred thousand pamphlets these conditions have been laid before beet farmers generally, with the result that beet pulp now is recognized as a valuable stock food and brings good prices. Thousands of farmers are practicing a proper system of rotation, and American beet farmers now recognize the fact that the culture of no other crop will so greatly increase the productivity of their soil.

OLD AND NEW METHODS OF CROP ROTATION.

Unless occasionally devoted to a hoed crop, fields become foul with weeds and other noxious growth, which rob the soil of nutrient and moisture, choke the grain, and reduce the yield. Prior to the introduction of a hoed crop in the rotation the custom in Europe, as stated before, was to follow three successive crops of cereals with a year of fallow in order to rest the land and to enable the workers to pull the weeds out by hand. The method of root-crop rotation is to substitute a root crop for the nonremunerative fallow, grow four instead of three crops every four years, and use the roots or their residue for stock food.

WHY SUGAR BEETS ARE THE GREATEST SOIL BUILDER.

The greatest improvement to the soil is secured from planting sugar beets because the plowing required is deeper than for other roots, the fertilization and cultivation is more thorough, and when plowed out they leave more and deeper fibrous roots, which add humus to the lower strata of soil, open it up, aerate it, and make it fertile and increase the underground storage of winter moisture with which to nourish the roots of succeeding crops during their growing season.

WHY FARMERS WILL GROW SUGAR BEETS BUT NOT GROW OTHER ROOTS.

Sugar beets possess the additional and overpowering advantage over other root crops in that the sugar they contain is worth all it costs to produce the crop, and extracting the sugar does not materially reduce their value for feeding purposes. Hence the farmer who feeds the by-products secures all the advantages to be derived from growing other root crops, and the cash he receives from the sugar factory is so much additional net profit. American farmers can not be induced to grow hoed crops for stock-feeding purposes, and aside from sugar beets and potatoes the quantity of hoed crops grown in the United States is negligible, which accounts for our pitiable low yields per acre.

THE FOOD SUPPLY OF THE UNITED STATES AND GERMANY.

In drawing numerous comparisons hereafter between the United States and Germany, it is not to be understood that Germany alone has so greatly profited by reason of introducing root-crop rotation or that I do not abhor her total disregard of all that appeals to the better instincts of humanity. On the contrary, Belgium, Holland, and Denmark each produce greater yields per acre than are produced in Germany and there is no country in Europe that has not had a like experience as a result of root-crop rotation. But while Germany has become the outcast renegade nation of the world, her area, statistics, writings, etc., are such as to afford the best comparisons, and I see no reason why, ostrichlike, we should bury our heads in the sand and refuse to consider the agricultural methods which have been such a potent factor in enabling Germany to carry on the war.

Comparing our conditions with the conditions which surround Germany, we must conclude that Germany has evolved or developed something of note which we do not possess, else her people long since would have been starved into submission. The total area of Germany is but one-fourteenth as great as is that of continental United States. Germany's total area is no greater than that of the New England States, New York, Pennsylvania, New Jersey, and Maryland, or of Iowa, Kansas, and Nebraska, or of Wyoming and Colorado, or of California and Oregon, and it is 50,000 miles less than the area of Texas.

The total area of Germany, Belgium and all the French Provinces occupied by Germany is less by 22,000 square miles than is the area of the State of Texas, yet with 8 or 10 million of her best workers withdrawn from her farms and factories and placed on the battle line where they consume but do not produce, and with her ports blockaded for nearly four years, Germany has been able to produce from this restricted area the food with which to sustain a population three-fourths as large as that of the entire United States.

Germany's ability to maintain her population for a series of years, under conditions which would have starved us out the first season, is due to her heavy yields per acre, and these heavy yields are in no way due to the natural fertility of German soil, a large portion of which is no more than a sandy plain. Originally thin, light, and low in fertility, constant cropping for centuries reduced them to a point where they yielded an average of but 12 bushels of cereals per acre. At last a new system of culture was introduced and these same soils averaged to yield 43 bushels per acre in 1913, the year preceding the outbreak of war.

During the 30-year period 1879-1909 the German collective average yield per acre of wheat, rye, barley, and oats was increased 80 per cent, and during the same period the yield per acre of the same crops in the United States increased but 6.6 per cent.

In 1913 the total area devoted to wheat, rye, barley, and oats in the United States was 98,639,000 acres; in Germany, 35,781,000 acres. From our 98,639,000 acres we harvested 2,104,718,000 bushels, and from her 35,781,000 acres Germany harvested 1,540,184,000 bushels. Our average yield per acre was 21.30 bushels, while Germany's average was 43.04 bushels. Had we harvested as many bushels per acre as did Germany, our yield would have been 4,245,422,000 bushels, or more than twice as many bushels from the same acreage.

In 1917 we produced 650,828,000 bushels of wheat, and if our yield per acre had been as great as it was in Germany in 1913, the last year in which accurate German figures are obtainable, without sowing an additional acre to that crop, we would have harvested an additional 964,761,000 bushels of wheat for export to our allies.

In potatoes, the disparity in yield per acre is even more marked. In 1913 Germany harvested 1,988,591,000 bushels of potatoes from 8,432,000 acres, while we harvested only 331,525,000 bushels from 3,668,000 acres. Germany's yield was 235.8 bushels per acre, compared with our 90.4 bushels. We would have harvested an extra 865,000,000 bushels from the area we devoted to this crop had we secured a yield equal to the yield secured in Germany.

GERMANY'S FORESIGHT IN FOSTERING HER PRODUCTION OF FOODSTUFFS.

Germany turned her attention to the subject of food supply as a war measure many years ago, and it has been her first and most important preparation for war. Whether or not German statesmen foresaw that some time her ports might be blockaded for nearly four years and that unless she were able to feed her people from her own soil they would be starved into submission, it is a fact that all other German preparations for war pale into insignificance when compared with the building up of her food supply.

Frequent mention is made of Germany's preparedness in military organization, in munitions, in industrial enterprises, in chemistry, and in the construction of strategic railways, but inasmuch as an army "marches on its belly" and the civil population also must be fed, no other result of science, economy, or statesmanship has been of such

fundamental importance to the German Empire at this hour as the introduction of sugar-beet culture, by means of which Germany doubled and quadrupled her entire food supply, both grain and meat.

HOW, AFTER 36 YEARS OF FUTILE EFFORT, GERMANY FINALLY MANAGED TO COAX HER FARMERS TO GROW SUGAR BEETS.

Even since Thaeer enunciated his doctrine of root-crop rotation and France had improved upon Thaeer's methods, Prussian statesmen, agronomists, economists, college and university professors had been watching the constantly increasing cereal yields in Britain and France, and having first failed to induce German farmers to emulate the British and grow turnips, later had been equally unsuccessful in inducing them to grow sugar beets.

Fortunately for Germany, an insignificant little beet-sugar industry had grown up, but because of inability to induce farmers to grow beets at a price which the factories could afford to pay, the annual sugar product, after the industry had struggled for 35 years, amounted to only 1,552 tons.

German thinkers finally concluded that if their farmers were to be prevailed upon to introduce a hoed root crop in the rotation, some inducement other than the stock-feeding value of the roots must be provided. Sugar beets afforded the only solution. If, by enabling the sugar factories to pay a price for their beets which would cover their entire cost of production and by feeding the by-products farmers could get back practically the full feeding value of the roots, their farmers would have the best of the British farmers by the full amount of cash received for the sugar.

As a result of several years of study and consideration, German statesmen worked out an elaborate system of cartels, bounties, and countervailing duties, which was adopted in 1836, and which since has been elaborated upon from time to time by all sorts of subventions and indirect bounties. The response was immediate, the area planted to beets jumping from 3,200 acres in 1836 to 15,000 acres in 1837.

So marked were the indirect agricultural advantages secured that German farmers finally were willing to grow beets at less than the cost of production, and the quantity of contracts offered by the farmers were so much in excess of the factory capacity that many factories were compelled to allot their acreage. The advantages derived by rotating cereal crops with root crops soon became so generally known that where sugar factories were not at hand farmers planted beets and other hoed crops for feeding purposes. Now no German farmer will farm without a hoed crop in the rotation, and one-fourth of all the cultivated area in Germany is devoted to hoed crops.

Ever since Germany began fostering the industry in 1836 the German Government has heeded the advice of its leading economists, agriculturists, and beet-sugar enthusiasts and has done everything possible to build up her domestic beet-sugar industry. As a direct result, preceding the outbreak of the present war, Germany had produced 54,000,000 tons of sugar, of which quantity the 26,000,000 tons exported drew \$2,500,000,000 in gold from other nations, mostly from Great Britain.

AS A RESULT OF SUGAR-BEET CULTURE, GERMANY WAS ABLE TO REVERSE HER POLICY ON EMIGRATION AND RETAIN HER SONS TO FIGHT FOR WORLD DOMINATION.

Increasing her yields per acre, enabled Germany to reverse her policy in regard to emigration. With a population of 31,000,000 people in 1837 the German States had felt compelled to assist emigration because of inability to feed or furnish work to the people. During a period of 66 years over 4,000,000 of these emigrants, or an average of 63,000 a year, came to the United States. Since the introduction of beet culture and the consequent increase in crop yields not only does Germany feed and employ her own people, but for several years prior to the outbreak of the present war, with a population of 67,000,000 people, she was importing for her fields and factories 800,000 seasonal workers a year from Russia and Galicia, and from her own soil was supplying her entire population with 75 per cent of their food requirements.

AN OPPORTUNITY GRASPED BY GERMANY AND OVERLOOKED BY GREAT BRITAIN AND THE UNITED STATES.

Conditions arising from the present war in Europe show that the three consecutive years, 1836, 1837, and 1838, were momentous years in the economic and political history of the three most powerful nations in the world—the United States, Great Britain, and Germany. In 1836 Germany commenced to build up its domestic beet-sugar industry; in 1837 the first beet-sugar factory was erected in Great Britain and failed because the British Government threatened to tax it out of existence; in 1838 the first beet-sugar factory was erected in the United States and failed because the American Government would not extend a helping hand.

What Germany has accomplished by reason of the policy she adopted in 1836 already has been shown. The same opportunity was presented to Great Britain the following year, when the first beet-sugar factory was erected in that country. The beets grown were of good quality and tonnage per acre, but because of the established rotation with turnips, cereal-crop yields already were large and the incentive for creating an indigenous sugar industry was not so great as in Germany. British statesmen, many of whom were interested in the British colonial sugar industry, determined to nip the beet-sugar project in the bud. Child says:

"The factory near London is said to have stopped in consequence of a notice from the Government of their intention to lay an excise of about 5 cents per pound upon beet sugar, equal to the duty on East and West India sugars.

What that action of short-sighted British statesmen has cost Great Britain can not be estimated. We do know that since that time, while Germany, by reason of the introduction of sugar-beet culture, has built up her agriculture to a point where, with her ports blockaded, she has been able to maintain her vast population, agriculture in Great Britain has declined as never before. Since 1836, when she destroyed her initial beet-sugar factory by threatening to tax it out of existence, 3,000,000 acres of fertile cultivated fields in Great Britain have been withdrawn from tillage and laid down to grass, the value of agricultural lands has declined \$5,000,000,000, the loss in the value of crops harvested has amounted to \$8,000,000,000. Great Britain has sent \$5,500,000,000 in gold to foreign countries, mostly to Germany and Austria, in payment of the sugar which 80 years ago her own people proposed to produce at home, and now that her German and Austrian sugar supply is cut off she is compelled to bid up the price of Cuban sugar, which ordinarily comes to the American market.

THE UNITED STATES SLUMBERED WHILE GERMANY WORKED DAY AND NIGHT.

During the first 63 years that Germany fostered and enlarged her domestic beet-sugar industry by tariffs, cartels, direct and indirect bounties, and every governmental subvention that German statesmen

could devise, the German Government paid out in sugar export bounties alone the enormous sum of \$353,000,000. Sugar export bounties of like proportions also were paid by all European sugar producing and exporting countries, it being estimated that a total of upward of \$1,000,000,000 was paid out in this manner in order to expand the area devoted to sugar beets. The practice enabled the European producers to market their surplus sugar at a profit at prices below the actual cost of production, and only was discontinued when, because the unfair competition had all but ruined the British colonial sugar production, Great Britain finally threatened to prevent bounty-paid sugars from entering her ports. During all this time, although the subject frequently was brought to the attention of American statesmen, they failed to comprehend the cause of the revolution in agricultural methods which was going on in Europe and declined to extend a helping hand to the industry at home.

During the first 43 years of Germany's exploitation of her domestic beet-sugar industry, when in export bounties alone she paid out as much as \$30,000,000 in a single year, Americans, whose better judgment was overcome by their enthusiasm and their confidence that sooner or later their Government must realize the agricultural importance of the industry, sank several million dollars in attempts to establish it in the United States. They erected factories at Northampton, Mass., in 1838; Salt Lake City in 1852; San Francisco in 1856; Chatsworth, Ill., in 1866; Fond du Lac, Wis., in 1868; Alvarado, Cal., and Black Hawk, Wis., in 1870; Brighton, Cal., and Freeport, Ill., in 1871; Sequel, Cal., in 1874; Isleton, Cal., and Edgemoor, Del., in 1877; Franklin, Mass., and Alvarado, Cal., in 1879. But try as they would, they failed to enlist the interest of their Government, and one after the other they passed into bankruptcy.

EARLY EFFORTS TO SECURE THE COOPERATION OF THE AMERICAN GOVERNMENT.

In 1838 the first beet-sugar factory was erected in the United States, but, unfortunately, American statesmen of this period followed in the footsteps taken the year before by their British cousins and scotched the enterprise instead of following in the footsteps of the Germans and building up a great industry with which to revolutionize our crop yields of all farm products.

The very year the German Government began to foster its domestic beet-sugar industry, the American Government had its attention directed to the same subject. Under the date line "Northampton, 10th December, 1837," Edward Church said in the preface to his book, "Notice on the Beet Sugar," published in 1837 by J. H. Butler, Northampton, Mass.; Hilliard, Gray & Co., Boston; D. Appleton & Co., New York; and William Marshall & Co., Philadelphia:

"We look with confidence to our legislature for every support and encouragement which our infant enterprise can fairly ask, the liberality extended to the indigenous silk producers will not surely be withheld from us; for if there is any one undertaking which deserves this special patronage of a wise and patriotic government, it is one like ours, which eminently promotes our first, best, and most permanent source of wealth and comfort—agriculture."

Coincident with the publication of Church's book there was issued "A Manual of the Art of Making and Refining Sugar from Beets, including the Cultivation of the Plant," a volume of 150 pages, by M. J. de Fontenelle, largely a translation from the French works of M. M. Blanchette and Zoga, published by Marsh, Capen & Lyon, Boston, 1836. James Pedder, of Philadelphia, also wrote a volume on this subject, which was published by the Beet-Sugar Society of Philadelphia. In 1838 Dr. D. S. Gans brought out "A Treatise on the Sugar Beet," which was published at Dayton, Ohio.

As a result of the enthusiasm aroused at that time, David Lee Child erected a beet-sugar factory in 1838 at Northampton, Mass., the first to be erected in the United States. The beets were grown from the best imported French seed, were of good quality, and the tonnage harvested per acre was 28 per cent greater than the average tonnage secured from the seven to eight hundred thousand acres of beets which have been harvested annually in the United States during the past five years. Child's little factory produced 1,300 pounds of sugar the first year, brought him an award of a silver medal from the Massachusetts Charitable Mechanic Association and a premium of \$100 in gold from the Massachusetts Agricultural Society. But the cost of production was too high to enable Child to compete with the slave labor in the cane fields and mills of Louisiana and the Tropics, no assistance could be secured from the Government, and the factory closed down.

In an effort to enlist the support of the Government in the enterprise over which he was so enthusiastic, Child wrote a 150-page book, "The Culture of the Beet and the Manufacture of Beet Sugar," which was published in 1840 by Weeks, Jordan & Co., Boston.

All of the five volumes mentioned were quite elaborate—some were illustrated, all were bound books, and all were copyrighted. Few, if any, of the numerous pamphlets, petitions, and appeals which were said to have been issued at that time have been preserved. But, with all these publications and appeals, the enthusiasm created was short-lived, the Government declined to take any interest in the matter, Child lost his investment, and the Government entered upon a prolonged sleep covering many decades, totally oblivious of the marvelous progress being made in crop yields in Europe by reason of the expansion of this industry.

For 63 years, while Great Britain and the United States peacefully slumbered, the German Government averaged to pay out in sugar-export bounties alone more than \$5,500,000 a year in order further to expand the industry which so greatly benefited their entire agriculture and thereby made them all but self-supporting. Since Child erected his factory at Northampton, in 1838, the United States has sent \$5,600,000,000 in gold to foreign countries for sugar which she was perfectly capable of producing at home, and her low-crop yields still are the subject of ridicule of the agriculturists of the world.

FOLLOWING THE "GRAVEL-PIT" METHOD OF FARMING.

For decade after decade American farmers have been allowed to pursue a "gravel-pit" method of farming, robbing the soil year after year and putting nothing back, it frequently occurring that the same farmer moves farther West several times in a lifetime, as he exhausts the soil of one farm after another. Our average returns per acre only have been maintained by bringing additional millions of acres of virgin soil under the plow from year to year. Even with the addition of immense cultivated areas of the richest lands, our farming methods have been such that our low yields per acre scarcely furnish enough food to feed our present population and since we have had to supply great quantities of food to our allies it is only by the practice of the utmost economy that the remaining supply can be made to sustain our own people.

Instead of directing the attention of our people to the abyss we were approaching by reason of insignificant crop yields per acre, our magazine writers have ignored actual conditions and have regaled millions of readers with articles published under such self-satisfying titles as "The United States the Granary of the World," "The United States Feeding the World," etc., the author of the latter article stating that when we export raw materials to Europe we export the food with which to feed the artisans who work the raw materials into finished products.

The fact is that for some years—if the one item of cotton be eliminated—our normal balance of trade in agricultural products has been on the wrong side of the ledger. As early as 1910, excluding cotton, the value of our agricultural imports exceeded the value of our agricultural exports by over \$180,000,000.

"Extensive," rather than "intensive," agriculture has been the slogan. It has seemed more profitable to open up and skim over new areas of virgin soil than to farm the present areas properly. A Harvard professor of political economy who recently assumed an important position in the Department of Agriculture contended that notwithstanding the fact that from the richest soils in the world we harvest the least number of bushels per acre of any great agricultural country except Russia, ours were "the best farmers in the world." The fact did not seem to occur to him that the natural richness of our soils had any bearing on our ability to produce cheaply and abundantly per man and that a continuation of present farming methods eventually would make gravel pits of all our farms, or that the cheapness of European farm labor resulted in a great wastage of man and woman power on their farms and consequent increase in their cost of production, or that by well-directed effort we could double the yield of our farms without materially increasing the expense of their tillage. One might as well contend that the farmer who allowed the wind to scatter a bag of oats over a 10-acre field and secured a sufficient crop to pay for the seed and the slight amount of effort involved was a better farmer, even though after a few years of such treatment the field would produce next to nothing, than the one who grew more bushels on a fraction of the quantity of land and so tilled it that it would produce more grain with each succeeding year. Our present crisis shows that while gravel-pit methods of farming may seem attractive to farmers in times of peace, they are not the best methods by which to feed our allies and win the war.

An 80-year Rip Van Winkle sleep by her antagonists, while Germany's crafty brain worked day and night, almost gave her the mastery of the world. Germany's cards now are on the table, and agricultural development is seen to be her greatest source of strength, the one consideration without which all the results of her cunning in other directions long since would have fallen to the ground. It remains to be seen if we will profit by our mistakes and Europe's acumen, if the richest soils in the world eventually are to be made to yield the most abundant harvests, or if after the war we will calmly pull down the shades, close our eyes, and relapse into another Rip Van Winkle sleep.

SUMMARY.

The agronomists of the world have discovered but one method of securing maximum yields of meat, cereals, and other food products of the farm, and that method is to introduce a hoed crop in the rotation. Outside of Great Britain, the only method by which the nations of the world have been able to coax their farmers to introduce a hoed crop and familiarize themselves with the result has been by making sugar-beet culture so attractive that they could not resist engaging in it. It is not to be presumed that tens of millions of people who had no direct interest either in beet growers or sugar factories willingly would submit to being taxed for their benefit alone.

There have been times when political events have ruined the beet-sugar industry of a country, but with the righting of the ship of state the industry has been revived by the statesmen of the country. Under Napoleon Bonaparte, France erected 334 beet-sugar factories in two years, but as a result of the taxes levied on the industry immediately after his downfall in 1815, but one factory survived. French statesmen were quick to see and correct their error, and by 1837 the little industry of less than 4,000 tons production had grown to a production of 50,000 tons, when the levying of an ill-considered tax resulted in closing down 166 factories. But remedial legislation soon was enacted. Referring to the merits of the industry, Louis Napoleon, while imprisoned at the fortress of Ham, in 1842, in his work "Analyse de la Question des Sucres," said:

"It retains workmen in the country and gives them employment in the dull months of the year; it diffuses among the agricultural classes good methods of culture, calling to their aid industrial science and the arts of practical chemistry and mechanics. It multiplies the centers of labor. It promotes, in consequence, those sound principles upon which rest the organization of society and the security of governments; for the prosperity of a people is the basis of public order. . . . Wherever the beet is cultivated the value of land is enhanced, the wages of workmen are increased, and the general prosperity is promoted."

Napoleon closed his book with the following paragraph:

"As to the native industry, let it raise its head: its enemies will hesitate before they give it the last blow. The Chambers, we hope, will cover it with their protection votes, and that daughter of the empire will return to life if, instead of abandoning herself and seeking arms, she proudly vindicates her rights and replies to her adversaries, 'Respect me, for I enrich the soil; I fertilize lands which without me would remain uncultivated; I employ hands which without me would remain idle. In a word, I solve one of the greatest problems of modern society—I organize and moralize labor.'"

Soon the laws were still further changed, the industry expanded, and by 1901 had reached an output of a million and a quarter tons.

Considering the facts herein set forth, it would appear that in the interest of the entire population of the United States it is high time that our Federal Government at least make a beginning in the direction outlined and establish a sugar division in the Bureau of Standards.

I will close by quoting the last paragraph of "The Sugar Beet," a textbook for German beet farmers, by Ferdinand Knauer, first president of the German Farmers' Association and member of the Prussian Landtag, written in 1861:

"We close our work with the wish that our readers will test all and retain the best, and that those not impressed with beet culture will be incited to busy themselves more with it, to the profit of their farms. Of those further progressed in culture than ourselves, we beg mild criticism; may they understand that in writing down our thoughts and experiences we aimed at the general good, since it is our firm belief 'increased beet culture is the greatest blessing for every land.'"

Respectfully,

TRUMAN G. PALMER,
Executive Secretary,
United States Sugar Manufacturers' Association.

Alabama's Oversubscription on the Third Liberty Loan is 79 Per Cent.

EXTENSION OF REMARKS

OF

HON. EDWARD B. ALMON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 8, 1918.

Mr. ALMON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a clipping from the Birmingham Age-Herald of the 5th instant, showing that each of the States in the sixth reserve district have largely oversubscribed their quotas for the third liberty loan, Alabama leading with an oversubscription of 79 per cent. The article is as follows:

ALABAMA LEADING ALL STATES IN SIXTH RESERVE DISTRICT—OVER-SUBSCRIPTION TO LOAN ON INCOMPLETE FIGURES IS 79 PER CENT.—SENSATIONAL FINISH IS MADE IN DRIVE—TAIL-END DIVISION THROUGHOUT CAMPAIGN CAME UNDER WIRE LIKE A THOROUGHBORED.

WASHINGTON, May 5.

The Atlanta district, which has been at the bottom of the percentage table during most of the third liberty loan campaign, made the most sensational finish of any district in the United States, said the Treasury statement to-night.

Based on late Sunday returns, the managers of the campaign at Atlanta predicted that the district might eventually show an oversubscription of 50 per cent. Every one of the 427 counties in the district oversubscribed. Camden County, Ga., recorded 300 per cent; Cobb County, Ga., the birthplace of Secretary McAdoo, exceeded its quota nearly 50 per cent. Chambers County, Ala., is five times over its quota.

WATSON'S TOWN RECORD.

The town of Thomson, Ga., the center of the antidraft activity early in the war, not only oversubscribed its quota, but on the closing day of the campaign organized a "President's Club" with a membership of 100 men who matched the President for an extra bond.

Georgia subscribed \$36,539,600, or nearly \$10,000,000 over its quota. Eastern Tennessee subscribed \$25,125,000, or nearly \$12,000,000 over its quota. Jacksonville, Fla., raised \$5,200,000, or more than \$1,000,000 over its quota. Birmingham subscribed \$6,750,000; Knoxville, \$2,750,000; Chattanooga, \$2,981,000; Nashville, \$3,607,950; Augusta, \$1,600,000; Macon, \$1,900,000; Columbus, \$1,000,000; Athens, \$815,000; Montgomery, \$1,500,000; Pensacola, \$900,000; and Jackson, Miss., \$750,000. All of these figures indicated large oversubscriptions.

Florida reported total subscriptions of \$17,411,500 and the State's quota was only \$10,249,850. The city of Atlanta showed a total of \$7,580,850, exceeding its quota by more than \$1,000,000. Atlanta raised its honor flag the last day of the loan. Subscriptions by States in the Atlanta district were as follows:

STANDING OF STATES.

Georgia, \$36,539,600, an oversubscription of 37 per cent; Florida, \$17,411,500, an oversubscription of 69 per cent; Alabama, \$23,528,650, an oversubscription of 79 per cent; Tennessee, \$25,125,000, an oversubscription of 59 per cent; Louisiana, \$26,300,000, an oversubscription of 26 per cent; part of Mississippi, \$7,500,000, an oversubscription of 29 per cent.

Atlanta reported that all of the banks in the district were deluged with oversubscriptions on the closing day, and that the participation of farmers had been largely responsible for the magnificent showing for the Atlanta district.

Liability to Military Service of Certain Registered Persons.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 26, 1918.

Mr. CARY. Mr. Speaker, in voting for this resolution I do so because I believe in the present crisis it is the duty of every Member of Congress to uphold the Commander in Chief of the Army and Navy in every effort to mobilize as quickly and as effectively as possible the man power of this country.

It is high time to cast off the futile illusions that this war is going to be won in any different manner from the wars of the past. We have heard too many foolish slogans already as to what will win the war, such as "Food will win the war," "Money will win the war," and so forth, and we had better make up our minds right now to adopt and stick to one motto, and that is: "Wallop will win the war." And to administer these good, old-fashioned Uncle Sam brand of wallop, we need a mighty and constantly increasing army of energetic, clear-eyed, hard-muscled young Americans, and I think that these resolutions are going to provide the right method to secure that army.

There is some difference of opinion as to some parts of this law, and although it would not in any way increase or diminish the number of men called to the colors I am in favor of the amendments which have been offered—one to base the quotas called from the various districts on the total number of men registered for military service instead of basing it on population, and the other amendment to give credit to the various sections of the country for voluntary enlistments.

Now, Mr. Speaker, I submit that the main purpose of this resolution is to get more men and to get them as rapidly as possible.

The purpose of raising armies is to get soldiers to fight the country's battles. It is immaterial to the Nation whether they come as volunteers or drafted men. But it is a vital thing to a community whether or not it is dealt fairly with as between other communities of like obligations in the matter of furnishing soldiers for the sacrifice of war. Under this law a draft district may have furnished voluntarily the entire number of soldiers required of it under a draft call, yet if its local board has put as many of its men in class 1 as has another district that has furnished no volunteers whatever, the county that has already given its full quota of men for the trenches of Europe will be required to give as many more as the county does that has furnished no volunteers.

I do not believe that this House or the country will accept as a just application of the principle of universal liability to military service a law that will result in some sections furnishing several times the number of men to go to France and die in battle while other districts of the same military population are way below in their quota.

Just, for instance, the following little table prepared by John R. Wolf, of Milwaukee, Wis., is very illuminating:

MEN.	
Volunteers-----	31,060
Made up as follows:	
Total accredited-----	23,560
Enlisted in special units-----	7,500
Draft-----	14,690

Total man power-----45,750

Wisconsin furnished 1,814 more men than were called for by the draft.

LEADS SURROUNDING STATES.

A comparative table of volunteer enlistments in States surrounding Wisconsin follows:

	Per cent.
Wisconsin's volunteer enlistment was-----	54.16
Iowa-----	49.76
Ohio-----	41.49
Indiana-----	41.40
Illinois-----	34.52
Minnesota-----	31.61
Georgia-----	32.43
North Dakota-----	31.69
Michigan-----	30.88
Louisiana-----	26.33
Oklahoma-----	21.78

Wisconsin's percentage of men of military age failing to respond to the draft was less than 2 per cent. The percentage throughout the country was 8 per cent.

Still more illuminating is the fact that, with only 3 per cent of the population of the United States, Wisconsin's sons number 7 per cent of the Army and Navy, and "over there," in the blood-stained trenches of France, one out of every fifteen soldiers is a lad from Wisconsin.

Now, Mr. Speaker, I do not mention these facts to criticize or make any invidious comparisons between Wisconsin and other States, and neither I nor any other citizen of the Badger State begrudges credit that belongs elsewhere, nor do we think we have done too much, for in everything connected with this war, as in every other, Wisconsin is going to do more than her share and do it willingly and cheerfully.

But, Mr. Speaker, I am in favor of the amendment giving credit for volunteers, because the one thing that Wisconsin wants and the one thing she is going to get is credit for what she has done and proposes to continue doing.

If there is one thing above everything else that is necessary in this supreme hour, it is that back of the boys "over there" we should have a united and harmonious country "over here" and eliminate that most detestable form of "poison gas" that seeks to foment jealousy and mistrust between different sections of the country and stir up racial hatreds amongst the various elements that have all helped to make us the greatest people in the history of mankind, who have just started in to do the biggest job that has ever been pulled off, and who will do it well and effectively in God's own time and manner.

Mr. Speaker, I trust it will not be necessary very many more times to call attention to the loyalty of the Badger State, but

I regret to state that ever since the beginning of the war there has been a most persistent and malignant effort to discredit Wisconsin and its people and to cast odium upon as loyal a citizenship as any who live in the United States.

As far back as June 9, 1917, I was impelled to make the following statements in the House of Representatives, which I will quote briefly:

"By their works ye shall know them." There has been a lot of cheap talk all over the country. There have been big parades, meetings galore, and speeches a-plenty, and there has also been a whole lot of superficial twaddle and bombastic buncombe about plots and conspiracies in some sections of the country, especially Wisconsin and more especially Milwaukee County; and now, when the test comes, what do the results show?

Here is a telegram I received from one of the most prominent citizens of Milwaukee, a man of reputation and of unimpeachable character, whose word has always been as good as his bond:

MILWAUKEE, WIS., June 6, 1917.

Congressman WILLIAM J. CARY.

House of Representatives, Washington, D. C.:

The press for months has been questioning loyalty of Milwaukee. Eastern papers and some ignorant speakers have been especially abusive. Total registration of Milwaukee County last presidential election, 77,691; registration on duty day, 55,969; no arrest; no trouble, except overenthusiasm and crowding of booths. Press reports riots in New York and trouble at various points all over the United States. New York beats Milwaukee in preparedness parade, waving flags and shouting, but Milwaukee will do more than its share with fighting men ready to go to the front just as stated in my Times-Playmate (New Orleans) interview of April 7. Ask the Associated Press to give equal publicity to Milwaukee's honorable record on June 5 as they have given to scurrilous statements against us. Liberty loan will be over-subscribed here.

GEO. H. RUSSEL.

I also insert here a clipping from the New York American of June 8, 1917, which is somewhat amusing when you compare the charges in the beginning with the results as described toward the end:

"Charges of an organized plot in the State of Wisconsin to defeat the draft were laid before President Wilson by L. W. Neiman, editor of a Milwaukee newspaper. He declared influences were at work to overthrow the entire military program of the Nation.

"The Wisconsin plot, as disclosed by Editor Neiman, included the use of pro-German newspapers in carrying on the propaganda against the draft.

"WISCONSIN FIGURES LARGE.

"The plot, according to Neiman, went beyond the mere urging of men not to register; it is designed to render the United States powerless and impotent in the war.

"Agents of the Department of Justice and United States Secret Service already are working on the case, it was indicated at the Department of Justice, and early arrests are likely.

"It was pointed out, however, that in Wisconsin itself the alleged plot apparently did not gain much headway, so far as registration was concerned, as complete figures for that State received at the War Department to-day showed it to have exceeded the census estimate by 15,000 names, or 7 per cent. The total State registration was 245,758, against an estimate of 229,597."

Compare these results with the figures from other States. Compare them especially with some of the States and cities that have been the most blatant shouters for war. I am willing to stake my reputation for veracity on an unqualified challenge that the State of Wisconsin, Milwaukee County, and the district I represent will furnish as good a quota of husky, patriotic soldiers as any section of the country and will go a lot of sections some better.

We still sing the Star-Spangled Banner out my way; we still celebrate the Fourth of July and believe every line of the Declaration of Independence, and in spite of all that slanderous tongues may say or evil minds imagine the "boys of the Badger State" will give the same good account of themselves in 1917 as they did in 1861 and in 1898.

This, Mr. Speaker, was nearly a year ago. Since then, Wisconsin has been vilified and abused, maligned, and slandered by the "kept press" of the country, and berated by leather-lunged windjammers from sections of the country that were lagging way behind her in everything that was tangible and real in loyal, effective work for the winning of the war.

Good old Wisconsin went steadily ahead. Never did she so well deserve the nickname of "Badger State." Unmoved by abuse from without or treachery from within, she stuck to her job, and after a year of war her record stands where all may read. She has "come clean" and proved to a candid world that she is American to the core and will stay so to the end of time. Let me give a little of her record. Let me here insert a clipping from the Milwaukee Daily News that shows a little of what has been said and what has and is being done:

CITY'S LOYALTY RECOGNIZED.

"On the morrow of the Wisconsin election, in which Antiwar Berger polled about 100,000 votes and carried the city of Milwaukee, there came from that puzzling sector a vindication of Milwaukee's loyalty. Some one in the town now famous in more ways than one rose to point out that Milwaukee had oversubscribed its liberty-loan allotments; that one out of every fifteen of our soldiers in France was a Wisconsin boy; and that the State had been free from strikes, riots, and other disturbances militating against the efficient conduct of the war. The argument has force. If there is such a thing as constructive disloyalty, shown in acts and not words, there is apparently, too, a constructive loyalty as shown, not in words but in acts."

The above is from Collier's. It is the amiable honorable of a magazine that has mistaken some slight surface indications for deep currents and passed by, in the heat of an election, the solid stuff of which our city is made.

To the recital as Collier's has it can now be added the splendid record made for the third liberty loan. That equals the record of any city of comparable size in the country and is far better than many of those which have said things about Milwaukee.

Thus the truth about our city is being spread throughout the country and the city placed in the position she has earned and deserves.

Milwaukee does not ask special praise for what is her natural duty and natural condition—her loyalty—she only asks justice, fairness, and that she be judged not by the wild words of a few sensationalists or an election, many of the conditions of which are not understood abroad, but by the earnest and worthy actions of her citizens of all classes, her soldiers, and her patriotic war workers.

Let me insert here a clipping from the Evening Wisconsin:

EAST PUZZLED OVER CITY—MILWAUKEE OUGHT TO BLOW ITS HORN, POLLOCK IS TOLD.

"They are surprised in the East that Milwaukee doesn't blow its horn more lustily." That was the significant comment of Willits Pollock, secretary of the Council of Defense, who has returned from the convention of the Academy of Political Science in Philadelphia.

"Milwaukee stands fine with the people of the Eastern States," he continued. "They do not understand why we are given a black eye on one hand and then make such excellent showing in our Red Cross work, our liberty loan, and other governmental activities."

"The East puzzled." They do not understand as well as we do in Wisconsin that "Brag is a good dog, but Hold Fast a better." Out in the Badger State it is deeds and not words that count.

Let me show briefly what Milwaukee has done in the liberty loans:

FIRST LIBERTY LOAN.		
Milwaukee's allotment	-----	\$13,700,000
Milwaukee subscribed	-----	\$16,164,700
Per cent of quota subscribed	-----	117.9
SECOND LIBERTY LOAN.		
Milwaukee's allotment	-----	\$24,948,000
Milwaukee subscribed	-----	\$32,761,950
Per cent of quota subscribed	-----	131.1
THIRD LIBERTY LOAN.		
Milwaukee's allotment	-----	\$14,880,000
Oversubscribed Apr. 27	-----	\$18,613,850

Milwaukee earned the honor flag in seven days. She went "over the top" by \$3,000,000. How many other cities did the same?

Milwaukee disloyal! With a population comprising every race involved in the great war, with every creed in Christendom represented in her churches, with every different brand of politics in her elections, she has not had a munitions strike, an incendiary fire, a case of sabotage, nor has she had a lynching bee, either.

It is for this reason that I favor the amendment giving credit to States and districts for volunteers.

"By their works ye shall know them." As I said earlier in my speech, there are those who believe that "food will win the war," "money will win the war," "ships will win the war," and there appear to be a lot of hot-air peddlers all over the country, including Washington, who think the Kaiser can be licked with the weapon that Sunson used against the Philistines; but I say to you that "wallops will win the war," and Wisconsin stands ready to send her full share of the lads to furnish the wallops.

Increased Pensions.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918,

On the bill (H. R. 9959) increasing rates of pensions of soldiers and sailors of the Civil War.

Mr. JOHNSON of Washington. Mr. Speaker, in addition to expressing my protest that this bill, H. R. 9959, increasing the rates of pensions of soldiers and sailors of the Civil War, has been brought to the House with section 3 a part of it, and also my protest that a parliamentary situation is taken advantage of, so that the Members of this House can not even move to strike section 3 from the bill, I desire to extend my remarks by printing in the regular type of the CONGRESSIONAL RECORD the text of the bill, as follows:

TEXT OF THE PENSION COMMITTEE'S BILL.

"Be it enacted, etc., That the rate of pension of any person who served in the military or naval service of the United States during the Civil War and was honorably discharged therefrom,

and who is now in receipt of a pension or shall hereafter be granted a pension under the provisions of any general law, or is now pensioned under a special act of Congress, and who is entitled to a pension less than \$25 per month, shall be \$25 per month.

"In case such person has reached the age of 70 years and served one year, the rate of pension shall be \$26 per month; one and one-half years, \$28 per month; two years, \$30 per month; two and one-half years, \$31 per month; three years or over, \$32.50 per month.

"In case such person has reached the age of 75 years and served 90 days, \$27 per month; six months, \$29 per month; one year, \$31 per month; one and one-half years, \$35 per month; two years or over, \$39 per month.

"That any person who served in the military or naval service of the United States during the Civil War and received an honorable discharge, and who was wounded in battle or in line of duty and is now unfit for manual labor by reason thereof, or who from disease or other causes incurred in line of duty, resulting in his disability, is now unable to perform manual labor, shall be paid the rate of \$39 per month, without regard to the length of service or age.

"Sec. 2. That any person who served in the military or naval service of the United States during the Civil War and who was honorably discharged therefrom, and who is now pensioned or shall hereafter be pensioned under any general law, or who is now pensioned under special act of Congress at a rate of \$20 per month or more, shall be entitled upon the passage of this act to receive in lieu thereof a rate which shall be fixed by the Secretary of the Interior, in multiples of 50 cents, nearest approximating 30 per cent additional to the present rate: *Provided*, That no rate of pension shall be granted under the provisions of this act in excess of \$50 per month: *Provided further*, That no pension heretofore granted shall be reduced by this act.

"Sec. 3. That no pensioner shall be entitled to receive any benefits under the provisions of this act for any period during which he shall be an inmate of any State or National soldiers' home; and the provisions of this act shall not apply to any pensioner whose net annual income from all sources, including his pension, is \$1,000 or more.

"Sec. 4. That the increased rates of pension provided by this act shall commence from the date of the approval of said act, or, in case of original pensions hereafter allowed, from the date of commencement of such pensions as provided by existing law.

"Sec. 5. That no attorney shall be recognized and no attorney fees shall be paid for the presentation or prosecution of any claim under the provisions of this act."

HALF A LOAF OR NOTHING.

This bill is called up under suspension of the rules and in such form as to permit no amendment. It is a case of taking a half loaf or nothing. Therefore I shall vote for it, hoping that later the Smoot bill will take its place. The majority of the Members of the House are opposed to section 3, and we all favor a greater increase of pension than the bill calls for.

Our only hope now is that the distinguished body at the other end of this Capitol will amend the bill so as to make it at least equitable. Mr. Speaker, I reserve the right to add to my statement the full text of the bill after it has been amended in the Senate of the United States, considered in conference between the two Houses, and signed by the President.

PAY OF SOLDIERS THEN AND NOW.

In conclusion, I desire to add a paragraph or two from the remarks made this morning by the distinguished gentleman from Illinois, Mr. CANNON, as follows:

I believe that a bill of this kind ought to have been considered in the House with opportunity for amendment. If so, I believe it would have been amended in at least two particulars. I believe the \$1,000 proposition would have been cut out, and I believe that the men in the soldiers' homes—19,000 or 23,000 of them, as the case may be—would be entitled to the benefits of the bill.

The men in the Army that preserved the Union received all the way from \$13 to \$15 a month. The men—privates—in the present great world's contest receive \$30 a month, and one-half, or \$15 more, for the dependent wife and from \$5 to \$8 more to the children. In addition to that, they get insurance at the rate of \$8 per thousand. Now, then, I am glad of it. We all voted for it. But let us recollect one thing, that there are less than, say, 300,000 men now surviving of that grand Army of 2,200,000 men that saved this Union. It was their force. They are now in their old age. We are spending money by the many billions. Dying, as they are, by multiplied thousands, it seems to me that it is good politics for all the people, Democrats and Republicans, men in the Army and in the Navy in this great war, from the sentimental standpoint as well as the just standpoint, that these people should not be cut out of this pension bill, and it ought to be amended. That is all I want to say.

Mr. Speaker, I desire to call attention to House bill 8934, introduced by me on January 18 of this year, as follows:

THE JOHNSON BILL.

[H. R. 8934, by Mr. JOHNSON of Washington.]

"A bill to amend an act entitled 'An act granting pensions to certain enlisted men, soldiers, and officers who served in the Civil War and the War with Mexico,' approved May 11, 1912.

"Be it enacted, etc., That the general pension act of May 11, 1912, is hereby amended by adding a new section, to read as follows:

"SEC. 6. That from and after the passage of this amendment the rate of pension for any person who served 90 days or more in the military or naval service of the United States during the Civil War, now on the roll or hereafter to be placed on the pension roll and entitled to receive a less rate than herein-after provided, shall be \$30 per month. In case such person has reached the age of 75 years and served six months, the rate shall be \$35 per month; one year, \$38 per month; one and a half years, \$40 per month; two years or over, \$45 per month: *Provided*, That this amendment shall not be so construed as to reduce any pension under any act, public or private."

While my bill is not quite as liberal as the Smoot bill, it is a far better bill than the one which passed the House.

The Espionage Act.

EXTENSION OF REMARKS

OF

HON. W. B. WALTON

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 7, 1918.

On the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8753) to amend section 3, title 1, of the act entitled "An act to punish acts of interference with the foreign relations, the neutrality, and the foreign commerce of the United States, and for other purposes," approved June 15, 1917.

Mr. WALTON. Mr. Speaker, I am most pleased to be able to see that the conference report on H. R. 8753, being an amendment to the so-called espionage bill, has been concurred in by the Senate, that similar action will undoubtedly be taken by the House within a very short time, and that the measure will in every probability become a law within the next few days.

The only criticism which I would make of this bill is that it is too mild in its terms. I have only one criticism to make of the conduct of the war so far, and that is that we have been too tender with the traitors here at home.

We are not playing tennis—we are at war. We are sending our sons and our brothers to France to be shot down in the holiest cause for which any nation ever took arms. There is not one of us who would not, if he could, stand by in the flesh and help bear the burden, help stand the shock of the Huns' onslaught, help stand the awful privations and sufferings of the trenches.

We can not do this, Mr. Speaker, but there is one thing that we can do. We can stand behind the men who are fighting our battles and see to it that no one here at home is allowed to stab them in the back. We can stay the hand that would murder our sons, our brothers, our friends. We can do what lies within us to stop the black treachery that would bring those boys to their death without a chance to fight back.

New Mexico has given freely and gladly in this war. She has sent her best blood to fight the battle of freedom, and she has not complained. Seven thousand five hundred sturdy young Americans—over sixteen hundred of them volunteers—attest the fact that New Mexico is no slacker. You have heard of no labor troubles, no draft riots, no pacifist demonstrations in New Mexico. New Mexico has not done her "bit"—she has done her best.

And I say to you, Mr. Speaker, that my constituents are demanding in no uncertain tones that we here in Washington do what we can to protect their sons from the serpent that would sting them. They can face with equanimity the thought of their boys being shot by German bullets. That is the fortune of war. German gas and German liquid fire have no terrors for them, for they realize that we are fighting a foe who does not recognize that there is any such thing as civilized warfare. But while they can think of their sons occupying unnamed graves on the blood-soaked fields of France, their souls revolt and cry aloud at the thought that we here at home are harboring and nurturing vipers who stealthily, in the dark, would strike down the arms that are fighting for you and me.

Twenty years! Twenty years in the penitentiary for men who ought to be shot within 24 hours after their crime is discovered!

When this bill was before the House for consideration I supported and voted for it because it was the nearest approach to the law that should be passed that was presented. I would have voted for it much more readily if it carried the death penalty for the offenses which it is designed to prevent.

Agricultural Appropriation Bill—Failure of Federal Regulations to Protect the Farmer.

EXTENSION OF REMARKS

OF

HON. JOHN R. K. SCOTT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 18, 1918.

Mr. SCOTT of Pennsylvania. Mr. Speaker, in the successful prosecution of every mercantile and industrial enterprise human ingenuity and foresight play a most important part, but it can be truly said that in the farming industry the success or failure of the farmer's efforts is dependent to a great extent upon the element of chance. No matter how ingenious the farmer, no matter how carefully he has husbanded his resources, no matter how well he has plowed his fields and sown his seed, the entire results of his labor may at any time be destroyed and utterly wiped out by a perverse period of that most uncertain thing in the world—the weather. A period of drought, a season of heavy rains, a few days of severe heat or intense cold, may at any time inflict untold damage upon a whole season's crops and the farmer has no recourse. No precautions that he can take will be of avail against nature's misadventures.

In endeavoring to protect the public in this great crisis of our country's history, legislation has been enacted with the view of giving to each man engaged in our mighty industries a fair return for the capital invested and the labor performed; but I submit that in so far as the farmer is concerned, our legislation, with its many restrictions and regulations, has utterly failed of its purpose. The farmer has been called upon to strain every endeavor and to use every means within his power to supply and increase the amount of sustenance for all, but he himself is left the burden of assuming all the risks of success or failure. Those engaged in manufacturing and supplying goods for the Government are even guaranteed a fair margin of profit, but not so with the farmer. No profit of any kind is guaranteed to him, but he is left to take his chance of success or failure with the natural elements. The weather can make or break him but he has no one to turn to for aid. If the farmer makes a profit, well and good; if not, the most that he can get is the thanks of the public, which oftentimes obtains food for less than it costs the farmer to produce.

My personal experience convinces me that the various regulations and provisions enacted to date by the Food Administration and by the other agencies of our Federal Government have utterly failed to protect the farmer in any way whatsoever. The importance of the work that he is engaged in has been heralded from coast to coast with loud, patriotic acclamations, but no measures have been taken that protect his interests. On nearly everything the farmer produces the prices have been regulated and fixed; but the prices on the articles he has to buy, such as farming machinery and the equipment required for the actual production of food, have been left to the manipulation of those determined to exact the highest profit obtainable. This is particularly true of the feeds that are indispensable on the farm.

I myself run a fairly large farm in the State of Pennsylvania, near the historic site of Valley Forge, and am in a position to personally observe and feel the effects of the regulations promulgated by our various bureaus and commissions as regards the farming industry. The failure of certain regulations, primarily intended to aid the farmer, to be of any benefit to him whatsoever leads me to thus address myself to the House.

On December 25 last the Federal Food Commission Grain Corporation placed a maximum price upon the cost of wheat mill feed. The purpose was to prevent the millers and others engaged in the business of milling flour and feed from wheat from obtaining unfair and exorbitant profits from their work, and, in fact, was intended primarily to protect the farmer. On January 28 last certain amendments and additions were made to these regulations, which permit the miller to sell the bran

obtained from wheat at a figure equal to 38 per cent of the cost of the wheat to the miller.

The best price that the farmer in Pennsylvania to-day can obtain from the miller for his wheat is from \$2 to \$2.15 per bushel. At this figure the miller pays the farmer \$70 per ton for his wheat, a ton consisting of 33½ bushels. Under the regulations promulgated on January 28, before mentioned, when the miller pays the farmer \$70 per ton for the wheat he is not permitted to charge more than 38 per cent of \$70 per ton for the bran—that is, he is permitted to sell the bran for not more than \$26.60 per ton. However, when the farmer himself comes to purchase the bran in the market he finds that the price has taken an enormous leap. At the present time there is practically no place in Pennsylvania where the farmer can purchase this bran for less than \$55 per ton.

Mr. Speaker, this is a most remarkable condition of affairs. Bear in mind that under the rules and regulations of the Food Commission the miller is supposed to sell the bran from his mill to dealers, wholesalers, and others at a figure not exceeding \$26.60 per ton, and yet we find that the farmer can not purchase this bran for less than \$55 per ton. Wheat middlings can not be bought for less than \$60 per ton. Who gets the difference between these figures? An enormous profit is being made by some one. The farmer who originally grew the raw product certainly has not shared in it.

Practically the same condition of affairs exists in our dairy interests. The farmer who maintains his herds of cattle at great expense, and who is compelled to pay exorbitant prices for feeds and all other articles that he requires, receives on the average about 6½ cents per quart, yet in the cities and towns the same milk is sold for 13 cents a quart. Our commissions tell us that one-half cent per quart should be allowed for transportation charges. The most liberal allowance for transportation costs and distribution does not justify such a great diversity in prices.

The acute shortage of labor with which the farmer is met at the present time is well known to everyone. We are calling upon him to make every sacrifice to increase food production, and as a matter of fact the farmer is straining every nerve and making every possible effort to answer the call of our Nation. His supply of labor has been curtailed, the labor that he does obtain is demanding wages unheard of in the past, both he and every member of his family have figuratively put their shoulders to the plow, they are working earlier in the morning and later in the evening than ever before, the prices for the products of his labor have been fixed and regulated under standards existing in the past, and yet he is left to the mercy of unfettered profiteers in the purchase of articles that he can not do without.

Some time ago a maximum price was placed upon wheat, and at the same time an earnest appeal was made to every farmer in the country to plant and raise as much wheat as possible. Before the regulation fixing the price of wheat was effected, the prices of all cereals, including wheat, oats, corn, barley, and rye, were governed by the law of supply and demand. Wheat brought the best price of any cereal. However, the Food Commission selected this one article, which was so very much in demand, and arbitrarily fixed its price. What was the result? Immediately the prices of the other cereals rose and kept on rising, until to-day the prices of corn, rye, barley, and oats have gone up until they actually equal and in many cases exceed that of wheat. The result has been that oats, barley, and corn are so high that it pays the farmer, instead of using these cereals with which to feed his live stock, to grind his wheat and use that for feed. He must feed his live stock; and if he is compelled to sell his wheat at a figure less than he must pay for feed, it is no more than natural for him to take his own wheat, grind it, and feed it to his live stock. In other words, the regulations of the Food Commission, instead of accomplishing one of its main purposes—an increase in the production of wheat for consumption—tempt the farmer as a matter of self-preservation to divert his wheat to his cattle and pigs.

Wheat requires a richer soil than any other cereal, and the prices of fertilizers at the present time are almost prohibitive. The regulations controlling the price of these fertilizers have been a failure. As a result, the unusually high prices of cereals other than wheat offer the farmer an irresistible inducement to plant these articles instead of wheat. No man with common sense will engage in an unprofitable industry very long, nor is there one who will fail to recognize existing conditions and produce that which promises no measure of profit. In Pennsylvania this spring, and I have no doubt in the whole country at large, there will be a greater acreage of corn and of rye than there has been in the past, and a corresponding proportionate decrease in the acreage of wheat.

The failure of the regulations of the various commissions to produce the results hoped for has been due to the arbitrary manner in which certain articles and commodities have been made subject to regulation, while other articles just as necessary and important have been left to be governed by the old law of supply and demand. An attempt has been made to prevent exorbitant profits in one direction, but in other directions the consumer has been left to shift for himself. The farmer has been caught between two fires. The prices of the articles he produces have been regulated and the margin of profit kept down to the very lowest, but the prices of the articles he buys have been left to run the gantlet of avaricious manipulation. Up to date no regulations have been effected that benefit the farmer or give him the protection that is being afforded other industries. We have called upon the farmer to make supreme sacrifices. He is patriotically responding to this call, and we owe him the aid and protection that we are extending to other industrial enterprises. It is no more than fair, it is no more than just—in fact, it is absolutely necessary—that we take immediate steps to regulate the price of farming implements and of other farming necessities.

Increase of the Military Establishment.

EXTENSION OF REMARKS

OF

HON. FRANK CLARK,

OF FLORIDA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 9, 1918.

Mr. CLARK of Florida. Mr. Speaker, there is being circulated throughout the district which I have the honor to represent on this floor a circular which grossly misrepresents the position I took and the remarks I made on what is commonly known as the selective-draft bill. I did oppose both in speech and by vote what was known as the Kahn amendment, which amendment provided for the conscription of the young men of America in order to raise an army for the present war. I took the position that the volunteer plan of raising an army was the traditional time-honored American plan, and as the volunteers had fought all the battles of the Republic and had fought them successfully I saw no reason why we should at this late day repudiate that plan.

In taking this position I followed the lead of such Democrats as CHAMP CLARK, that great Democrat who is with such signal ability filling the office of Speaker of the House of Representatives, and that other brilliant Democrat, CLAUDE KITCHIN, who honors the position of Democratic leader on the floor of the House of Representatives. Those who supported the draft system under the lead of that great Republican from California, Hon. JULIUS KAHN, said that they were opposed to the volunteer plan because under its operation the brave, patriotic young men who were in active business of one kind and another would volunteer, while the loafer, the tramp, the bum, the pool-room habitu , and others of that kind would not volunteer and would therefore escape military service; that they favored the draft system because under it we would force all the loafers, ragamuffins, bums, pool-room habitu s, and their kind into the Army to fight the battles of the country and leave at home the young men who were doing something for the general good and who were worth while. They argued that under the draft system they would leave the farmer, the mine worker, the mechanic, and so forth, at home, while they would force this loafing class into the Army.

In my remarks I ridiculed the idea that we wanted an army of loafers, ragamuffins, bums, and that class to fight the battles of America, and a reading of the remarks I made will show that my reference to this class was purely in that sense. Any statement or intimation that in that speech or anywhere else I have ever characterized the American Army, secured by the volunteer or draft system, as an army of "loafers and ragamuffins and ne'er-do-wells" is utterly untrue and has not a scintilla of fact to support it. I can not permit a slander like this to go unchallenged and an attempt to besmirch my patriotism to remain unanswered. When war was declared I, although 57 years of age, immediately tendered my services to the President in any capacity where he thought I could render the better service for my country. I wonder if those who, for their own selfish purposes, are now seeking to discredit me ever tendered their services to the President. Not

only that. I have two sons, and both of them were exempt from the draft—one because he was over the age and the other because he was a member of the State legislature. Both of them are married, and the elder one has two small children.

The younger one, although absolutely exempt because of the fact that he was a member of the legislature, and is also married, resigned as a member of the legislature and went into the Navy as an enlisted man, and is to-day serving his country in that capacity. With my own son serving as an enlisted man in the Navy of the United States, I hardly believe many people will think I would traduce the glorious young manhood of America, who are ready to follow Old Glory into the jaws of death.

Mr. Speaker, I have no patience with attacks like the one made on me by this circular. It is a cheap, small, mean attempt to injure me among my people in order that another may profit, but the good people of Florida have known me too long, and know me too well, to allow themselves to be influenced by such methods. In order that the world may know the exact truth I am going to insert here in my remarks just what I did say, and all I said, so that there can be no mistake about it. You can just as effectually misrepresent another by truthfully quoting a part of what he said as you can by misquoting him altogether. Here is what I said:

Mr. Chairman, it seems to me that with all of the talk that we have had for several days this whole matter when brought to its last analysis involves only two questions, one a very important question; the other, I think, not so important. The administration bill, or the bill of the War Department, as I understand it, provides for a volunteer system to fill up the Regular Army and to fill up the National Guard to war strength. If this should prove a failure in those two branches of the service, then conscription is to be resorted to. The bill reported by the majority of the committee also provides for volunteer service to fill up the Regular Army and to fill up the National Guard to war strength, and if that shall prove a failure, then resort is to be had to conscription.

So thus far the two propositions are identical. It is only when we come to raising the additional army of 500,000, or perhaps a million of men, that a difference of opinion arises.

Now, Mr. Chairman, it seems to me as an ordinary layman, with no military experience and no military knowledge, that if a system is good for the purpose of raising about 150,000 men to bring the Regular Army to its war strength and for raising about 500,000 men to bring the National Guard to its war strength, it ought to be good enough to raise an additional army of 500,000 or 1,000,000 men for the purposes of this war. I can not understand the reason which prompts gentlemen to insist that the volunteer system is right to raise 650,000 men for the Regular Army and the National Guard, but is all wrong when you come to raise 500,000 men for an additional army.

But there is a reason for that in the Army bill—and it is the Army bill. The reason is, or the purpose is, to make volunteering obnoxious to the people of this country. They know that men will not volunteer to go into the Regular Army. They know that a large proportion of our citizenship will not volunteer to go into the National Guard. It means practically seven years of service. The men of America are willing and anxious to volunteer to go into the Army to fight this war, but they are not willing to tie themselves up for seven years of service in the Regular Army or the National Guard.

Mr. OLIVER of Alabama. Will the gentleman yield?

Mr. CLARK of Florida. Yes.

Mr. OLIVER of Alabama. Is the gentleman informed that more than two weeks ago orders were issued by the Secretary of War, to give to all the recruiting officers, that all enlistments since the beginning of the war would be for the term of the war?

Mr. CLARK of Florida. I do not understand how they can issue an order of that character when the law is otherwise.

Mr. OLIVER of Alabama. I will state to the gentleman that that is the order.

Mr. CLARK of Florida. It may be the order, but as I understand the law to-day when you enlist in the Regular Army you enlist for three years, and then you go out into civil life, but you can be recalled into the service at any time during four years. That is the law as I understand it, and it makes no difference what orders they may issue such orders can not change the law. The gentlemen say, and the gentleman from Missouri [Mr. BORLAND] has been harping upon the proposition, that the volunteer system is having a fair test now, because men can volunteer in the Regular Army and in the National Guard, and they are not doing it as rapidly as they ought to do it.

It has been asserted that the volunteer system is having a fair test now in that respect, and they say it is a failure because we are getting only about 1,000 men a day; but the fact remains that while men may be willing to volunteer to fight this war, they are unwilling to bind themselves to a humdrum existence in the Regular Army or in the National Guard for a period of seven years.

I hold in my hand a clipping taken from the Washington Post of this morning, and I want to read it to those gentlemen. It says:

"FLOCK TO ENLIST UNDER ROOSEVELT—OF 123,000 APPLICANTS 60 PER CENT ARE FROM THE SOUTH.

"NEW YORK, April 25, 1917.

"Approximately 123,000 men have applied thus far and been found to meet the necessary requirements for membership in Col. Theodore Roosevelt's proposed army division. It was announced here to-night at enrollment headquarters, which were opened some time ago with the former President's approval."

One hundred and twenty-three thousand, one-fourth of the 500,000 desired, have already volunteered to go with Roosevelt to France. [Applause.] And yet these gentlemen tell us that the American spirit is dead and you have got to conscript your men to get them into the Army. "Conscript" sounds like "convict" to me, and it carries on its very face the stigma of disgrace.

Mr. DALE of New York. Has the gentleman from Florida any knowledge of the number of men who reside in the State of New York who have volunteered for this Roosevelt army, so called?

Mr. CLARK of Florida. To the shame of the gentleman's State, I will say that this article says:

"Only 50 of the applicants, it was said, were under 25 years old. None below this age are now being accepted."

"Sixty per cent of the volunteers are from Virginia, North and South Carolina, and other Southern States, while in New York City not more than 1,000 have enrolled."

One thousand! I say it is to the shame of the gentleman's State.

Mr. DALE of New York. Will the gentleman yield?

Mr. CLARK of Florida. For a question only.

Mr. DALE of New York. Is there any doubt in the gentleman's mind that when the real call comes it will not be well answered by the people of the State of New York?

Mr. SHALLENBERGER. When it comes to the draft; yes.

Mr. CLARK of Florida. I do not know whether the gentleman means by the "real call" conscription or volunteering. If it means volunteering, they have been given a chance now with Roosevelt.

Mr. DALE of New York. Either call.

Mr. CLARK of Florida. And, say what you please about Roosevelt—I do not agree with him in his political ideas—but he is a red-blooded American and he is ready to go. [Applause.] And the solid Americans of this country will go with Roosevelt and other men of that character if volunteers are allowed to go.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. CLARK of Florida. Yes; for a question.

Mr. LAGUARDIA. In the figures quoted by the gentleman, do you take into consideration the number of men in the National Guard of the State of New York?

Mr. CLARK of Florida. I am reading simply what the Washington Post, the great advocate of conscription, said.

Mr. LAGUARDIA. In quoting the figures concerning men who have enlisted from the State of New York, please take into consideration the National Guard of the State of New York, as well as the number of men they sent to the border, compared with those from other States.

Mr. CLARK of Florida. I beg your pardon, but I did not yield for a speech.

Mr. Chairman, it has been said here better than I can say it that every war that this country has ever been engaged in has been won by the volunteer soldiers of America. Take the War between the States. The Regular Army of the Union—the flower of the Regular Army—went down in Virginia to Bull Run to meet the undisciplined, untrained volunteers of the South. When they met them this Regular Army went flying back to Washington in wild confusion and disorder. And so it was all during that struggle. And the Union soldiery never began to touch the Confederate soldiers until the volunteers from Ohio and Illinois and Indiana and these other States went into the ranks. Your Regular Army did not faze them.

And yet we are told that conscripts must fight our wars, and, as has been so well said, you are going to conscript, but you are going to release the farmer, you are going to release the mine worker, you are going to release any man working in an industrial enterprise. The man who is needed at home, the man who is doing something, is not going to the front. You are going to excuse them and send an army of loafers and ragamuffins and ne'er-do-wells to fight the battles of this country against the trained soldiers of Germany. The flower of the English Army and the flower of the French Army and of the Russian Army and of the Italian Army and all those nations have not been able to conquer the indomitable spirit of Germany yet. When it comes to America to take her stand and go into this great world struggle, instead of sending the brave, the noble, the true, the patriotic, you are going to send the loafer, the barroom bum, the tramp, those who do nothing and who are worth nothing, to fight your battles—

Mr. SMES. And the knights of the pool room.

Mr. CLARK of Florida. Yes; as suggested by my friend from Tennessee, the knights of the pool room. My God, what a commentary upon America!

Oh, they say, the volunteer system is going to cause some one to sneer at somebody else. They contend that conscription will work more smoothly. They say there will be no trouble about it at all. Let me call your attention to an instance to-day: You will remember that the National Guard was on the border for nine months. There was a regiment from my State down there. They have been sent home. They have been disbanded. Those boys to-day are expecting the call every hour. What is the result? They can not get employment anywhere. Everywhere they go and apply for employment the prospective employer says, "I can not take you because you are liable to be called into the service to-morrow. I must have somebody that I can rely on, somebody who is going to stay here in my business." The result is that those boys are down there to-day without employment and depending upon their friends for support until they are called into the service again.

What will be the result if you adopt a conscription law? Every man in this country between the ages of 19 and 25 will be denied employment until it is determined whether he is to go into the service or not. Let him apply for employment where he pleases, and his prospective employer will say, "No; you are of military age; you are under the ban of this conscript act. You are liable to be called into the service any day. I have got to have men upon whom I can rely, who will stay with me, and therefore I can not give you employment." [Applause.]

This uncertainty will disorganize our economic system and leave the industries of this country at the mercy of some little military martinet who happens for the time being to be in charge of this merciless and conscienceless draft.

Mr. Chairman, the bill proposed by the War Department and advocated by the minority of the Committee on Military Affairs is the beginning of an era of militarism in this Republic which bodes no good for republican institutions. Let no man null his conscience to sleep with the thought that this conscription plan is temporary and only intended for the period of the war with Germany. Once fastened upon our system of government it is there to stay for all time, and we might as well face this fact right here and now.

Mr. Chairman, I stated in the beginning of my remarks that one very important question was involved in this controversy, and I now desire briefly to refer to that important question. I sincerely and honestly believe that the further existence in this Republic of representative government itself depends upon the conclusion which Congress shall reach on this bill. If the views of the minority shall be adopted, then there will be no further need for a Congress. Why should we be here if our only function is to swallow each and every measure sent here by a department without the dotting of an "i" or the crossing of a "t"? Has Congress lost its every sense of independence? Are we no longer the chosen Representatives of the people? Have we degenerated to mere legislative eunuchs? Are we simply rubber stamps in the hands of a bureaucrat? If these things be true no one should wonder that the House of Representatives has sunk to such a level that it no longer claims the respect of the average American citizen.

It has been said that "there is only one greater coward than a Member of Congress, and that is two Members of Congress." How long will we allow this thought to be prevalent in the public mind? How long, oh, how long before the American Congress will assert itself and rise to the summit occupied by this body in the old days?

We are told we must stand by the President. I want to stand by and act with the President. But if he is the honorable, brave, high-minded, and patriotic man I believe, yea, that I know, him to be, he would despise me if he thought that I deliberately sacrificed my honest, conscientious convictions in an effort to curry favor with him. I voted for the war resolution. I voted for the issue of \$7,000,000,000 of bonds and shall vote for each and every measure necessary to bring this war to a successful conclusion, but, so help me God, as long as I am a Member of this House I shall think and act as the chosen Representative of a free people, uninfluenced and unawed by any outside consideration.

Mr. Speaker, that speech was delivered in this House on April 26, 1917, and on April 28, 1917, the House still having the "draft bill" under consideration, I offered an amendment, which can be found on page 1440 of the RECORD, as follows:

Page 6, line 25, after the word "act," insert:

"Provided, That legislative officers of the United States and the several States and Territories and the District of Columbia shall be subject to draft, regardless of age."

In support of this amendment I made the following remarks, which can be found on the same page of the RECORD:

Mr. Chairman, the question of conscription has been settled. We are committed now to that policy, and the only question now before us is who shall be conscripted. I am an American citizen, and when a majority has spoken I cast my fortune with them, however unwisely I think they may have spoken. But now I am confronted with the proposition as to who shall fight this war that we have declared and for which we are providing an Army. I do not hesitate to say that I believe it would be cowardly in Congress, in the membership of this House, to declare this war and then exempt themselves from its provisions. [Applause.] Some men have even stood on this floor advocating the drafting of boys of the age of 19 and 20 years to fight the battles of America, boys who had nothing to do with the declaration of war, who did not bring it about and had no part in it, and yet we will stand here in the Congress of the United States and tear from the families of America young boys to go out and fight the battles of the country. Shame upon a Congress that would do that. It is a disgrace to our American manhood. It is a disgrace to us if we let this bill go through with an exemption in our favor. [Applause.]

I did my best to secure the adoption of this amendment, and if it had been agreed to it would have made every Senator and Member of Congress subject to the draft, and likewise the members of every State legislature.

Mr. STEPHENS of Mississippi offered an amendment making all men under 50 years of age subject to the draft, and I voted for and actively supported this amendment. I did this because I did not believe we ought to make the whole burden of this war fall on the young men of this country.

Mr. Speaker, the original bill as it came from the War Department fixed the age of those who should be subject to the draft at from 19 to 25 years, and I could not get my conscience to approve such a provision. I have stood for this war. It is a righteous one. I have supported and will support every measure to carry it to a speedy and a successful end. I am ready to serve at any place where the Commander in Chief desires me to serve. Politics should not be allowed to interfere with our one great purpose of winning the war. Partisanship should be buried, and the infinitesimal mortal who seeks to rise by misrepresenting others should be lost beneath the waves of oblivion while triumphant democracy makes the world safe.

American Seamen.

EXTENSION OF REMARKS

OF

HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 30, 1918.

Mr. RAKER. Mr. Speaker, pursuant to the permission given me by the House to extend my remarks on "American seamen," I take this opportunity of presenting the five articles by Mr. Andrew Furuseth, president of the International Seamen's Union of America, explaining his point of view in regard to the manner of the growing American merchant fleet, and setting forth the conditions which, in his opinion, now operate to discourage the young American from following the sea as a means of livelihood.

These articles by Mr. Furuseth are as follows:

SEAMEN FOR OUR MERCHANT FLEET—ARGUMENT AGAINST REPLACING SKILLED SAILORS WITH NAVAL RESERVE MEN WHO ARE TRAINED LARGELY ON SHORE—PREDICTION THAT THE PRESENT SYSTEM WILL BREAK DOWN.

[By Andrew Furuseth.]

Sea power is in the seaman. Vessels are the seaman's tools. Tools always belong to the races or nations that can use them. No nation developed sea power unless it furnished the seamen from its own popu-

lation. No nation ever long retained sea power after its men quit the sea. The United States can not become a power on the sea, commercially or otherwise, unless the American shall again become a seaman. And he must become a seaman in the real sense of the word. The sea, being in itself real, has little toleration of inefficiency or imposture.

"An able seaman is a skilled mechanic with great abilities. On sailing vessels his place in calm and storm never can be adequately filled by the unskilled, however numerous, nor in steamships in emergencies." (Bullen's Men of the Merchant Service.)

The United States is in an emergency, and its vessels are subject to conditions which will try its seamen to the uttermost. And yet it is seriously proposed, nay, practically determined, that such skilled merchant seamen as available are to be replaced by men nearly all of whom know nothing of the sea. Officers grown gray in service at sea are to be displaced by young men with a smattering of sea training and some theoretical knowledge of navigation.

The proposal ought to be rejected. If determined, the determination ought to be reversed. This ought to be done and done quickly, and for the following reasons:

(1) It would be a waste of man power. Experience proves that three times as many men are required to man a merchant ship when operated by naval men as when operated by merchant seamen. This is the record of ships taken over and operated by the Navy in this war. This increase is in the operating crews of the vessels, and is not due to the carrying of gun crews.

CALLS WASTE OF TONNAGE AND SKILL.

(2) It would be a waste of tonnage. The additional men must be furnished with accommodation for sleeping and living on board the vessels. Such accommodation can only be provided by appropriating the cargo space.

(3) It would be a waste of skill. The officers and men now sailing are highly skilled. The officers have been gradually advanced because of their skill and experience. A very large number of these officers would be lost to the service. Age and physical defects would prevent them from joining the Naval Reserve, and yet they are the most valuable men in the merchant marine, where such defects in no way interfere with the performance of their duties. The sailors were good, able seamen when this war began. For more than two years the majority of them have faced the submarine. Many of their shipmates have lost their lives. They know the danger. Many have been on vessels that were torpedoed, and have saved themselves and others in the boats.

It would be a high estimate to assume that 25 per cent of these highly skilled seamen could be utilized by the Navy as enlisted Naval Reserves. The 75 or more per cent ought not to be wasted because they can not or will not enter term enlistment.

(4) It would be a waste of loyalty. While more than 60 per cent of these men are not citizens of this country, and while they are subjects of neutral or allied nations, they are loyal to the United States. They were grown men and trained seamen when they came here. They owe this country nothing except gratitude for freedom conferred through the seamen's act. This gratitude is an impelling force. They are willing to continue sailing. They want to prove to the world that free seamen are better and more reliable than bond seamen. If their willing service be rejected in favor of men whom they know to be their inferiors in skill, these seamen will feel that they are not trusted. They will find other work. They will be lost to the sea.

QUESTION OF SAFETY RAISED.

(5) It would be unsafe. The Navy was, according to reports, some 18,000 men short when the war began. Allowing for a goodly number of men with previous service in the Navy returning, these would reasonably be placed on the active fighting vessels—cruisers and destroyers—and the merchant vessels will be manned by Naval Reserve men. While a few of these came from the merchant service, the great majority are directly from shore life or from that Sunday sailing called yachting—men who sailed on yachts without sailing them. They are in no real sense seamen. Men can not be made into seamen in training camps on shore. Seamen are not made in that way. Other nations have tried that in the past and have suffered from the failure. Experience has taught the men sailing that, so far, the best defense against the submarine is speed in the vessel and skill in the crew.

(6) It is unnecessary. There are now more than 6,000 certificated masters and chief mates, and original licenses are being issued to third and second mates at the rate of about 70 a week.

According to the report of the Commissioner of Navigation, there are on the ocean, under the United States flag, about 2,500 vessels, sail and steam, of 100 gross tons or more. According to the report of the supervising inspector general, about 36,000 certificates have been issued to able seamen. This gives more than, or slightly above, 13 able seamen for each vessel. As a matter of fact, the average number of able seamen necessary to man these vessels would be seven. The large number of able seamen now employed on United States merchant ships arises from the fact that the shipowners have carried able seamen exclusively and have refused to carry ordinary seamen and boys.

If the vessels be manned as directed by the seamen's act, there are able seamen enough now certificated to furnish not only able seamen for existing vessels, but for all the vessels that can possibly be launched during the present year. If the boys and ordinary seamen had been carried as contemplated by law, we would now have more than 20,000 Americans on the sea, partly able seamen and partly in training. The question is not, Are there enough officers and skilled seamen? But are they willing to continue at sea, and are those not at sea willing to return? Are the Americans willing to come to the sea? We know that they are.

THE ORIENTAL SEAMEN.

Notwithstanding the fact that the Department of Commerce has construed the foreclose clause of the seamen's act as having no application to vessels built prior to November 4, 1915, and the housing in the old vessels is abominable, and notwithstanding the fact that the clause of the act which provides that 75 per cent of the vessel's crew in each department thereof must understand all orders has been so construed as to be inoperative and has permitted orientals and others unable to understand orders to continue sailing, yet since the seamen's act was passed the number of native Americans sailing out of Pacific ports has increased from less than 1 to more than 10 per cent of the men sailing.

And out of the Atlantic ports the increase has been from 10 per cent when the act was passed to 25 per cent at present. We know that the American will sail. As in the shipbuilding, it is a question of wages, of treatment, of housing, and of the association to be endured. The American youth, however, will not sail with orientals.

By order of the seamen's union it was suggested to the Shipping Board that it would be possible not only to induce young men to come to the sea, but to induce men who have left the sea to return. Under the leadership of the Shipping Board the shipowners and the seamen of the Atlantic arranged for a specific wage for one year, for a bonus for going into the war zone, for the reorganization of the vessels' crews so as to require fewer able seamen and make place for young men to come and learn seamanship; it was further agreed that the shipowners, the seamen, and the Shipping Board should join in a "call to the sea," addressed to the young men and to those who have left the calling. This was perfected on August 8, 1917. The shipowners and seamen on the Pacific declared their willingness to join in the "call of the sea."

The seamen on the Lakes have been and are now willing. The shipowners, the Lake Carriers' Association, refused to cooperate, and give as their reason a fear that the men might become members of the seamen's unions. The call has not received the needed signatures and has not been sent out.

The convention of the seamen meeting in Buffalo during the first days of December unanimously adopted the following call coming from seamen to seamen:

"The Nation that proclaimed your freedom now needs your services. America is at war. Our troops are being transported over the seas. Munitions and supplies are being shipped in ever-increasing quantities to our armies in Europe. The bases are the ports of America. The battle fields are in Europe. The sea intervenes. Over it the men of the sea must sail the supply ships. A great emergency fleet is now being built. Thousands of skilled seamen, seafaring men of all capacities who left the sea in years gone by as a protest against the serfdom from which no flag then offered relief, have now an opportunity to return to their former calling, sail as free men, and serve our country.

"Your old shipmates—men who remained with the ship to win the new status for our craft—now call upon you to again stand by for duty. Your help is needed to prove that no enemy on the seas can stop the ships of the nation whose seamen bear the responsibility of liberty.

"America has the right, a far greater right than any other nation, to call upon the seamen of all the world for service. By responding to this call now you can demonstrate your practical appreciation of freedom won."

All others being ready and willing to cooperate, surely there must be some way to induce the Lake Carriers' Association at least to forget temporarily its absurd prejudices and to cooperate now for the benefit of the Nation.

The Shipping Board has manned the vessels controlled by it in accord with the arrangement, which is substantially in accord with the law. The shipowners have not thus far complied with this point of the agreement. If they had, we should now have about 15,000 young Americans at sea learning seamanship. For some reason it was not done. The months have been wasted on the ocean as they have been wasted on the lakes by the refusal of the lake carriers to cooperate, so that the young men sailing there could learn. As it now stands, the training school operated in Boston under authority of the Shipping Board is a necessity, and will be a success if the young men can be sent from that school to all kinds of merchant vessels, to serve as coal passers or ordinary seamen. The Department of Commerce has ample authority under existing law to reorganize the crews of all steam vessels. There can be no doubt that the owners of sailing vessels will cooperate. Thus we shall have an efficient, and gradually an American, personnel for the merchant marine during the war and after the war.

The Navy can not furnish men of sufficient skill. The system suggested will inevitably break down and will then leave the United States without seamen to carry on its needed ocean transportation, either during the war or after the war. When the war is ended the Naval Reserve men will go back to their shore employment. We shall then have vessels, no men, and very few officers. We shall again be driven from the sea commercially. We can have no sea power without national seamen. Sea power is in the seaman. Vessels are the seaman's tools, and the tools will always belong to the nation or race that can use them.

II.

FORECASTLES THE PRISONS OF THE SEA—SELF-RESPECTING AMERICAN BOYS, BROUGHT UP IN DECENT HOMES, HAVE BEEN DRIVEN FROM OCEAN BY WRETCHED LIVING CONDITIONS—NEW LAW HALTED IN COURTS.

The share which any particular nation had in the use of and the power on the sea depended always on the number of its people who obtained their living by following sea occupations. Fishermen on the coasts, later on the banks, whalers, first in small boats along the coasts, later in large vessels, following the whale or seeking him, trading in their own produce, or carrying the produce of others—these are merchant seamen. Valuable cargoes tempted others into piracy, and the merchant vessel was armed to resist the pirate. These were the early fighting vessels or men-o'-war. In all instances the men employed were seamen. Seamen were always considered a special part of the national defense.

To develop a large number of trained seamen, to foster and develop a tendency to the sea in the population, has ever been the care of statesmanship. Nations have fought over fishing grounds, not because of the fish to be caught but the seamen to be trained in the use of those grounds. The increase in the trend to the sea has always been found to be identical with periods of national expansion, be that expansion in trade or in other directions. Any steadily decreasing trend to the sea has been a symptom of national decay. This does not mean a decay in wealth. That might be increasing while the vitality of the people was ebbing away. When, for one reason or another, the men of a nation ceased to seek the sea, and the nation had to seek its seamen from elsewhere, the decay in sea power began. If the trend from the sea was not checked and stopped, sea power passed away. The barest look into the histories of the Hanse League of Venice or of Genoa, of Spain, or of Portugal, and of the Netherlands should convince anybody that sea power flows from the seamen.

The merchants of the Hanse League treated their seamen in such manner that the men and boys from either the united cities or their vicinity refused to serve. Desertions were punished by branding the deserter's face with a red-hot iron. Of course, desertions to some extent stopped; but so did the trend of the population to the sea. The keelhauling of the Dutch had as much to do, nay more to do, with the Dutch decay in sea power as the sea battles lost to England. Dangers and defeats never stopped the trend to the sea. It was harsh treatment, insufficient remuneration, and the feeling of failure to be able to follow

the upward trend of society that checked the trend of any given people to the sea. Of course, all these things are comparative. The treatment and condition accepted as tolerable in one period will be felt as the rankest kind of injustice in another. The standard is changed.

SPAIN'S EXPERIENCE.

Spain, once all powerful on the sea, could not man the battleships which fought under her flag at Trafalgar. (Mahan, "Sea Power in History.") The Spanish Armada is often said to have been overcome by the elements, and the proud Phillip so declared; but Prof. James Anthony Froude in his lectures, "English Seamen in the Sixteenth Century," gives the true explanation. England was sending some of her best blood to sea, and her seamen so improved the rig and sailing qualities of their vessels that they "could work to windward with sails trimmed fore and aft." The foremast was changed into a jib boom; the aftermast into a spanker boom; fore and aft sails were put on them; the trusses were improved and the English vessels could fight under sail. "The English ships had the same superiority over the galleons which steamships have now over sailing vessels. They had twice the speed; they could lie two points nearer to the wind."

Favored by a brisk wind, they chose their own positions from which to use their guns. They had discarded the high forecastle and the high sterncastle and furnished a poor target for the slow Spanish vessels' guns. The high freeboard of the Spanish galleons and their higher fore and after castles made them the best of targets for the English guns. It was better vessels, designed and handled by better seamen, that destroyed the Spanish Armada. "It was to the superior seamanship, the superior qualities of English ships and crews, that the Spaniards attributed their defeat."

FRENCH AND ENGLISH FLEETS.

When the revolutionary wars opened the fleet of France was, in vessels, men, and guns, about equal with the English, but England could remain her vessels five or six times, while France could not do so once. France had to resort to landmen, whom she trained in harbor until they could dismantle and reerig the vessels with remarkable speed, but after a gale at sea the vessels were like wrecks.

The English vessels might leave the harbor looking like wrecks, but after a couple of days at sea they were in the very best of trim and fitness.

For reasons so many that it would take too much space to mention them, sea power passed from those peoples. The most direct reason was the loss of seamen and failure to develop seamen of their own.

America had its full share of the world's carrying trade. The decline set in in the early fifties. The Civil War made it convenient to place the vessels under foreign flags, and much tonnage was lost, but if other false steps had not been taken and the Americans had remained at sea, vessels would have been replaced and the former status restored.

The thirteenth amendment was adopted. Slavery was abolished on land; on the sea it was continued. The seaman fought for the freedom of others; he failed to obtain it for himself. To become a seaman was to surrender all rights of citizenship, and the freedom-loving American boy refused to enter sea life. Through the crimping system the seaman was deprived of the wages earned, as he was of his freedom. The American who went to sea was compelled to live in the forecastle with men whose language he could not understand; he was compelled to accept wages upon which a family could not be sustained; the competition with all the world's derelicts set his wages, and when at sea he was compelled to do the work that the derelicts could not do. The American quit the sea and the vessels were manned by men from all the nations and all the races. When the seaman's act was passed America had practically no seamen of her own. We have very few now. We could by this time have had quite a large number of native seamen, but the act has not been given a chance to function, and the trend to the sea, which set in when the act was passed, has been checked by the failure to enforce it.

SEAMEN'S ACCOMMODATIONS.

One of the glaring evils that have kept the American from the sea is the accommodations on board vessels. They are called forecastles, and located so far forward as to interfere in the least possible way with the cargo or passenger space. Seventy-two cubic feet per man. Twelve square feet on the floor or deck. It is usually an abominable disease-breeding place. Six feet high, 6 feet long, and 2 feet wide. "A little too large for a coffin, not large enough for a grave."

This space has come down to us from the old line-o'-battle ship. It is the space needed for slinging a hammock. Two, three, even four bunks are placed one above the other. The height between them makes it impossible to sit up in the bunks. You slide in and you slide out. The air necessarily becomes very foul, because the usual ventilation is through the door or through small round openings, which in bad weather must be closed to keep the water out. There are no provisions for cleanliness. The result is best expressed in the figure of the reports from the Surgeon General of the Marine Hospital Service. In years passed the number of men entitled to marine hospital relief were about 120,000, and the number receiving treatment was for years between 50,000 and 60,000, and these men were between the age of 18 and 45. There are very few seamen sailing before the mast above the age of 45.

In passing the seamen's act Congress provided that the space per person should be 120 cubic feet; that is, the width was increased from 2 feet to 3 feet and about 8 inches, with the further proviso that there must be at least 16 feet on the floor for each person and that there must be no more than one bunk above another. The act further provided for conveniences for keeping clean. These changes are very important in the modern steam vessel with the eternal soot, coal dust, and all the dirt and grease from the engines.

ACTION BY CONGRESS.

Congress took a law passed in March, 1897, and amended it so as to read that after the passage of the act the forecastles must be improved as above described. Congress gave the shipowners from March 4 to November 4 to comply with the act. The seamen very naturally thought that any vessels built after March 4, 1897, would be compelled to improve the forecastle. The Department of Commerce ruled that the law had no application to vessels built prior to November 4, 1915. The matter was placed before the President, who submitted the question of construction of the statute to the Attorney General. The Attorney General held that the new law applied to all vessels built after March 3, 1897. This was overruled by Judge Manton in New York. An appeal was taken to the circuit court of appeals, where the question is now under consideration.

In the meantime the old forecastle is unaltered. The dirt, the misery, and the sickness continue. No self-respecting American boy, brought up in an American home and school, will go into such a place, especially

to live there with men whose language he can not understand and whom he rightly or wrongly considers his inferiors. When the court shall have passed upon this statute and shall have given to it the construction plainly intended by Congress the forecastles and other evils that stand in the way of the American going to sea will pass away. One rather remarkable fact is that nearly all European nations, especially the real maritime nations, have years since passed just such laws about improved accommodations for seamen on vessels as our Congress adopted in the seamen's act.

AN ILLUSTRATION.

Perhaps an illustration might be needed to cause the reader to understand this legal tangle about the forecastle. A municipality has permitted a certain kind of building to be erected. Experience teaches that these buildings are dangerous to health and to life. The law under which the buildings were erected is amended so as to compel more space, more doors, more fire escapes. The owners of the buildings insist that such law might apply to new buildings, but that it can not be made applicable to buildings already erected. If their contention is sustained the danger to health and life continues. There has been an improvement on paper, but none in fact. The cost of renovating the forecastles is in fact insignificant. It is the peculiar superstition about the extra sacredness of vessel property that seems to stand in the way.

The very first thing to do to get the American to sea and to keep him there is to give him—not the space for accommodation on the vessel that a prisoner gets in any modern prison, but about one-third of that and some little chance to keep clean. Physical cleanliness is known to promote mental cleanliness. You are asking the seaman to keep mentally clean, and he, at least the great majority of them, really wishes to; but he is compelled to live under conditions which are conducive neither to physical nor mental cleanliness nor to health. While this and other evils with which I shall deal later are permitted to continue, we need not expect the American to come to the sea or to remain there if need should drive him there. Let us have the seamen's act enforced and we shall have seamen and sea power.

III.

CRIMP, SAILOR, AND HIS WAGES—SEAMEN'S ACT HAS HELPED TO GIVE PROTECTION AGAINST THOSE WHO PREY UPON THE INNOCENT SEAFARER, BUT ABUSES STILL EXIST—A VITAL QUESTION PENDING IN THE COURTS.

To crimp is "to decoy and detain for impressment as sailors." There can be no crimping as long as the sailor is at all times free to quit his work while the vessel is in the harbor. The crimp decoys the victim into his house or the victim's need drives him there. The victim pawns his body for food or drink. The crimp makes arrangement with either the master or owner of the vessel to furnish sailors at a certain wage. The victim is compelled to accept the wages and go in the vessel selected for him by the crimp. He can get no other vessel. His necessity drives him.

The victim is signed on the shipping articles—shipping contract to labor on a vessel—the crimp delivers the victim and gets the advance note or the money, and the Government through its laws and police power sees to it that the victim does not get away.

Section 2 of the seamen's act provides "that it shall be, and is hereby, made unlawful in any case to pay any seaman wages in advance of the time when he has actually earned the same, or to pay such advance wages, or to make any order, or note, or other evidence of indebtedness, therefor to any person." The statute then provides a criminal penalty; but recognizing that it is difficult to enforce penal laws, especially when, as in the case of seamen, the testimony is lost or unobtainable, because the witness has been left in some foreign country, the statute further provides a civil penalty by enacting "that the payment of such advance wages or allotment shall in no case, except as herein provided, absolve the vessel or master or the owner thereof from the full payment of wages after the same shall have been actually earned, and shall be no defense in a libel suit or action for the recovery of such wages."

Workmen on shore are compelled to organize, to strike, and to seek legislation to compel the employer to pay every week or every two weeks; the employer wants to keep the money as long as he can; he has some use for it. The bondage of the seaman makes it safe to speculate in his body—in his labor power—and the seamen had to seek for years to rid themselves of the incubus of having their wages paid before it was earned.

SAILOR'S WAGES EVAPORATED.

Prior to the enactment of the so-called White Act, an act passed through the efforts of Senator White, of California, in 1898, to improve the condition of seamen and to improve commerce, the advance paid was limited only by what the seaman might be expected to earn during the voyage. Thus, on a voyage from San Francisco to England—usually four months—the advance that the seaman was compelled to sign for was three months' pay. The seaman arrived in Liverpool with less than one month's pay after working four months. He then left Liverpool for San Francisco or Portland, Ore., was again compelled to sign for three months' advance, to again arrive on the Pacific with less than one month's pay to take from the vessel. In neither case did he receive even one-quarter of the advance, either in money or any equivalent. The advance going from New York to England was usually one month's pay. The seaman, or the man called a seaman, arrived on the other side of the Atlantic with nothing to take from the vessel. He was compelled to go into a boarding house and again pawn his body.

Congress finally passed the law limiting the amount of "allotment to original creditor," to one month or less, and prohibited the advance altogether. Some shipowners violated the law in every way, and the prohibition against the payment of advance would have meant nothing but so much waste paper except for the civil remedy.

Under the part of the law giving the seaman the opportunity to recover the wages regardless of and including the advance, the system passed out of the coastwise trade, but not until the law had been tested in the Supreme Court. The court upheld the law, and in so doing used the following language in describing the advance:

"The story of the wrong done to sailors in the larger ports, not merely of this Nation but of the world, is an oft-told tale, and many have been the efforts to protect them against such wrongs. One of the most common means of doing these wrongs is the advancement of wages. Bad men lure them into haunts of vice, advance a little money to continue their dissipation, and, having thus acquired a partial control and by liquor dulled their faculties, place them on board the vessel just ready to sail and most ready to return the advances. When

once on shipboard and the ship at sea the sailor is powerless, and no relief is availing. It was in order to stop this evil, to protect the sailor, and not to restrict him of his liberty, that this statute was passed. And while in some cases it may operate harshly, no one can doubt that the best interests of seamen as a class are preserved by such legislation."

HOW THE SEAMAN WAS FLEECEED.

Rapacious managing owners and masters of vessels knew well how to use the opportunity given them by the advance system. There were many managing owners of vessels who had regular contracts with the crimp to the effect that he was to pay part of the advance back to the owner for the privileges of furnishing their particular vessels with men at a specific wage. Sworn proof of this was furnished to the committees of Congress. Masters whose salaries were low felt that they had a perfect right to make what they could on the side, and they drove the sailors out of the vessel in order that they might share, first with the tailor in the wages which the deserter left behind, and then in the advance which the vessel paid to the crimp to furnish substitutes for the men driven out.

Some explanation may be needed at this point to explain the reference to the tailor. In practically all seaports there are so-called tailors who make a business of furnishing clothes to seamen. In all parts of the East this tailor is called a "bumboat man." The tailor, or bumboat man, obtains from the master the special privilege of selling clothes to the crew. The seaman is sent to that tailor to get what he needs. When the tailor has the man's signature at the bottom of a long bill, upon which but one or two items are enumerated, this bill can be filled out above the seaman's signature, and the man is ready to be driven out of the vessel. He is then driven out.

The bill is filled up to cover nearly all the wages due, the amount is divided as per agreement, the master certifies to the correctness of the deserter's tailor account, and the tailor collects when the agent of the vessel has the bill, properly certified, presented to him.

The American who had lived in an American home and attended an American school could, of course, not be induced to accept this kind of life. White men from anywhere refused to accept it, and the crews of American vessels grew to be of a poorer and poorer quality—Greeks, Portuguese, and other South Europeans, mixed with West India Negroes—and sailed more for the money that might be made in smuggling than for the wages which they could earn and keep. Some of these men were fairly good seamen, some of them excellent seamen, and, aside from their smuggling, were decent enough men; but, of course, the American neither would nor could sail in that atmosphere. On the Pacific Chinese were employed. They had to be given a full right to run gambling tables and to smoke opium—some vessels had special rooms for this purpose. They smuggled anything from silk or opium to Chinese into this country.

The seamen's act was passed by Congress to get the American to come again to the sea. To accomplish this purpose the crimping had to be abolished. Simply to prohibit advances would lead nowhere. The system had to be made unprofitable. The managing owner, who knew all about the crimping and what an unscrupulous man might make out of it, would not continue to permit his shipmaster to break the law and pay advance if the advance had to be paid over again, and in the final instance to the seaman who had earned the money as wages. It was for such reasons that Congress prohibited the payment of all wages before they were earned, and further prohibited all allotments except to near and dependent relatives.

A LONG-LIVED ABUSE.

Crimping, however, is a long-lived abuse, and is able to find many means to continue as long as the seaman's body belongs to the vessel. This became thoroughly understood by members of the Committee of the Merchant Marine and Fisheries, and especially by Mr. HARRY, of Texas, chairman of the subcommittee in which the seamen's bill was licked into the effective legislation for the building up of the sea power of America that it will prove itself to be when given the opportunity to effectuate.

Actually to destroy the crimping system the seaman had to be made a free man. He must be within his right if he chooses to leave the vessel in any safe place, and he must have the right to draw at least half of the wages due him in any harbor. To prohibit advance and abolish imprisonment for desertion would not liberate the seaman in fact unless he was permitted to collect a part of his earned wages. The seaman's physical needs would hold him to the vessel with a stronger grip than the threat of imprisonment. In a strange place, without acquaintances and unable to pawn his body for food, he could not live long enough to find some other vessel. The representatives of the shipowners, especially the foreign shipowners, who appeared before the committee knew this perfectly, and they were willing to abolish the imprisonment and the advance, but they protested most earnestly against any part payment of wages in ports.

With one-half of the wages earned and not paid being made payable in port, the seaman need not go to the tailor selected by the master; he need not pay double or treble price for things that he wants; he will not be driven out of the vessel to make it possible for the master to collect part of the wages left behind or for the purpose of the managing owner sharing in the advance supposedly paid to the substitutes. If no advances can be paid, and especially if any advances paid to crimps must finally be paid to the seaman who has actually earned it as wages, the whole system must cease.

The Department of Commerce, with a fatuous twist of mind that is almost incomprehensible, insists that advance may be paid by American vessels in foreign ports, and thus compels the seaman to enter suits for the recovery of his wages under the law. Up to the present all the district courts have sustained the law and have ordered the advance repaid, but this question is now on appeal in the Circuit Court of Appeals, and we shall see if the law is understood there. If the court will hold to the letter of the law and enforce it in letter and spirit, the shipowners will no doubt take it to the Supreme Court, and then we shall have the law nulled down again. We seamen fully expect that the owner, who evidently is reimbursed for his loss in paying the cost, fees and the attorney's fees, will carry the case to the Supreme Court on the question of constitutionality or on the question of comity between nations.

Let the La Follette Seamen's Act, as it is sometimes called, be enforced and the American will again become a seaman. The American shipowner will have to meet only such competition as is fair and arises from skill in management. The impossible competition which arose from antiquated navigation laws and treaties that were fundamentally unconstitutional will pass away.

IV.

ENFORCING SAFETY AT SEA—SKILLED SEAMEN ARE NECESSARY IF SHIPS AND THEIR PASSENGERS ARE TO BE ADEQUATELY PROTECTED—HOW THE LAW REGARDS THE QUESTION OF TRAINING SAILORS.

"Bear in mind, when a ship is lost the shipowner may make a profit, the owner may get more than the value of his ship; the merchant may lose nothing, but may, and very often does, get more than the value of the cargo back. In the same way the underwriter averages his losses, and, on the whole, makes a profit on the insurance of the ship out of his premium."

The above is a quotation from one of England's great statesmen, Joseph Chamberlain, of Birmingham, and the utterance came when, as president of the board of trade, he sought to stem the downward trend in skill and safety in the merchant marine of Great Britain.

Skill is that coordination of mind, eye, and hands needed to do any difficult act or thing with speed and efficiency. It is the result of training, experience, and native adaptability. Some men learn some things quickly; other men can not learn the same thing at all. Skill in seamanship is never attained except by experience and native ability or adaptability. In the young man of even the greatest adaptability it is a slow and at times a painful process. It is never acquired except at sea.

Let me suggest something by way of a kind of comparison. How long will it take to make a street-bred boy from New York sufficiently expert as a horseman to break a bronco? Suppose you try to teach him by drilling him in infantry tactics, or suppose you try to teach him by permitting him to ride a wooden horse. Now, please try to understand that when a boy goes to sea it is not the bronco that is to be tamed or broken. The antics that a vessel performs in an angry sea are even more diversified than the antics of the unbroken bronco, and yet the boy going to sea must get so accustomed to the antics of the vessel and the sea that he can stand on his feet, see with his eyes, think and determine with his mind, and execute the act determined and willed. He must be inured to the sea. He must learn to understand it and to work with it or there can be no safety for either the vessel or those on board.

THREE YEARS TO MAKE A SEAMAN.

Skill in seamanship is not a matter of a few weeks of intensive training, even if part of the training is done at sea. The lowest or shortest time accepted and made part of the law of any nation is three years. This is the standard set by English, Australian, and American law. It was part of the recommendation by a Norwegian commission instructed to investigate and report, and it is the time set by the German shipowners under authority granted by German safety regulations and compensation laws.

When the shipowner was not protected by laws providing for limitation of liability to the traveler or his heirs, and when he was not, as now, covered by insurance of ship and cargo, when the loss of the argosy meant bankruptcy, he insisted upon real skill in the seaman. He then determined that four years of training was barely enough; he further insisted upon and obtained the right to reduce in rating and pay any inefficient man in accordance with his demerit.

Lack of skill in the seaman (sailor) was recognized as being dangerous to the vessel, the cargo, and passengers. It found no apologist, because all were equally interested, and the shipowner had an especial interest, because his property was ever in danger. He had not, at that time, succeeded in transferring his risk, through insurance, to others, or in shedding his liability through the enactment of limitation-of-liability laws.

Skill necessarily presupposes a sufficient knowledge on the seaman's part of the language used by officers to understand orders without any interpreter or any explanations. There is no time for such at sea in an emergency. The safety of the vessel and hence of all on board depends on immediate obedience. Let me try to illustrate. Suppose your fire chief and his lieutenants, speaking English only, were to be given a crew of men who could not understand English, and that the chief and his lieutenants were compelled to give their orders through an interpreter, how long would you people of New York stand that kind of fire-fighting force? The absurdity of it would at once appear, and you would all insist that the men must be able to understand all orders. And yet the law which was supposed to compel the vessels to have at least 75 per cent of the crew capable of understanding all orders is permitted to sleep.

This is not skill. It is not patriotism. It is not safety. We seamen pleaded for more than 20 years to have this absurdity abolished. When it was abolished on paper we thought that we should see this danger pass away. Now we shall have Americans coming to the sea. We shall have skill and efficiency at least on the deck. We shall have Americans on deck at sea.

"TITANIC" DISASTER RECALLED.

When the *Titanic* went down, and took with her a host of very wealthy and influential people, we expected to find the bereaved ones come forward to help us get laws which would make any recurrence of that kind of disaster humanly impossible. We were wrong. We heard from none of them in this country. We failed to appreciate the resourcefulness of the legal mind. The power to construe is sometimes equal to the power to legislate. Some day we shall, if we can keep the law on the books, find the way to get the law enforced. In the meantime our soldiers ought not to be sent across a submarine-infested ocean with a lot of so-called seamen who have had about as much chance to learn the duties of seamanship as the infantryman has to learn horsemanship by practicing on a wooden horse.

The world's experts, sitting on and reporting from commissions appointed by Governments, have united in treating the able seaman as the unit of efficiency and as the unit in the safe manning of vessels. First, the boy to get some little experience, then rated as ordinary seaman, then more and more knowledge and experience, until he knows the work of a seaman, and then is rated able seaman. From the brightest of these are gradually culled those who become officers. Beginning with third mate some more experience, some selection, and a second mate is made, some more and the first mate is made, then again some more and the master is selected. Thus are skilled officers developed for the sea.

Without skill in the seamen there can be no safety in ocean travel. It was the recognition of this as one of the factors that caused the La Follette seamen's act to become law. This is its distinctive humanitarian feature. The seamen must be skilled. Looking over the record of losses, they were found to be growing during each half decade of the last 50 years. The growth was so steady that it suggested a general underlying cause. A serious study of the passing of skill in seamanship linked the loss of life and of skill together. It was found that improved vessels, marking of channels, placing of lights, and the study

of meteorology were all good, but these things could not replace the waning skill, and the nations acted accordingly, in so far as their shipowners would permit or their power could be overcome.

Undermanning and unskilled manning of merchant vessels could not be permitted to continue. Safety at sea depends on the human element even more so than safety on shore. Whenever or wherever self-interest can be placed at the service of safety, other forces or laws may be dispensed with, but the shipowner, having shifted his risk, arising from the dangers of the sea, to the general public, and having rid himself of liability to the traveler, was no longer vitally interested in safety. His vital interest had become the cost of operation as distinct from safety, and law had to step in. Law itself divorced from self-interest is but a poor makeshift, but it is better than nothing.

THE QUESTION OF UNDERMANNING.

Regardless of the number of persons composing her crew, a vessel which has not enough skilled men to manage her in ordinary conditions of weather and sea without calling the lookout or the watch below is undermanned. It is not sufficient that the vessel has the skill on board; it must be at all times available. Undermanning imposes on skilled seamen inordinate toil, and endangers life and property not only in the case of the vessel undermanned but in case of other vessels. The old system of watch and watch—one-half of the crew working while the other half sleeps or rests—was born of self-interest taught by experience. It was gradually getting out of use in our vessels. Some swift reminders were sent by chance, and Congress, heeding the warning, made the age-long system of watch and watch a matter of statute law. That the law has not been respected up to the present arises from the fact that it has no help from self-interest. When one day some court shall refuse limitation of liability because the law enacted for the better protection of life at sea has been disobeyed the law will be obeyed.

With one-half of the crew on deck, their eyes accustomed to the light, seeing and understanding the situation, ready to obey the order when but half uttered, many a disaster has been avoided, thousands of lives saved. With the men in their berths, except the wheelman and the lookout man, the men must get out of their berths, they must come from one kind of light into another. Their eyes are for the moment blinded, they are not able to obey promptly, even if skilled, and the precious first moments are lost.

This nearly always makes the difference between the vessel saved or lost—the people on the vessel saved or lost. With half the crew on deck, when the disaster occurs the watch does what is most immediate, and then leads the watch coming on deck into new light and not knowing except in a mechanical way how to obey the orders given.

No time, then, for the interpreter. Besides, he may have lost his nerve or his life. Suppose it be a fire. The question is not how to get out of the building and into the street and to safety. The question is how to get into boats with some chance of safety. But the boats must be lowered, they must be kept on even keel in the lowering, they must be kept free from the side of the vessel in a heavy sea, and when water borne and free from the side of the vessel the boat must be so managed that it can remain buoyant in the rough and angry sea. Such work is never done successfully except by men who know the sea and who know how to work with it. The boy is on the living bronco instead of on the wooden horse, and you need no further information of what will happen.

Safety at sea must, however, always be cooperative. There are times when no skill can help. There may be temptations placed in the way of men sitting snugly on shore that will so darken their sense of right and wrong that a vessel may be sent out to sea so poorly constructed and equipped that she has no chance in a real gale. Self-interest used to take fairly good care that the vessels were not only well manned but that they were well built and properly equipped. The insurance has stepped in with its temptations, and law and rigid inspection are needed.

No crew can save a vessel sent to sea to be lost. And such things have happened. Those on board must then depend on boats alone, and boats must also be provided by law and enforced by honest inspection.

The most important of all safety is, however, the safety of a whole people, and if the nation has a seacoast there can be safety to the nation only through highly skilled seamen. It was the seamen of England that protected the English people against the Armada. Carthage was only overcome by Rome when Rome obtained control of the sea. English seamen had much to do with preventing Napoleon from crossing the Channel; English seamen are guarding England to-day. German seamen, using the new sea weapon, are guarding Germany. Our shore line is long, our harbors many; stationary defenses are inadequate; and unless we shall have skilled seamen of our own our people may taste bitter fruit. Let the control over the sea pass from the white to the yellow race and humiliation and danger will some day be suffered by our people. We must have seamen of our own blood, of our own Nation, and we can not have them unless the ideals and standards nursed in American schools find expressions in sea life. This is the aim of the La Follette Seamen's Act. Before condemning it, before mutilating it, please give it some study, and your patriotism will hold your hand.

V.

SEAMEN'S ACT IN OPERATION—CONTENTION THAT IT HAS EQUALIZED THE SAILOR'S WAGES AND ALSO PUT THE AMERICAN SHIPOWNER ON A BASIS OF EQUALITY WITH HIS FOREIGN COMPETITOR.

"We have established a great and elaborate machinery; we have set up a complicated system under which we have pretended to supervise every shipowner, good or bad alike, and under which we have tried to make negligence, carelessness, and apathy impossible. But we have never tried to make it unprofitable."

This is another quotation from the late Joseph Chamberlain, of Birmingham; and while it is specifically directed at the gradually decreasing safety measures, it is equally applicable to the controlling question in the matter of the comparative wage cost of operating American and foreign vessels—the crux of competition.

We have entered into elaborate treaties under which the several nations agree to arrest, detain, and return each other's deserting seamen; we have passed laws forbidding shipowners to pay to the seaman any of his earned wages in foreign ports; we have tried to hold the seaman to imprisonment by punishments, ranging from branding with red-hot irons to imprisonment; we have tried to prevent desertions by penalizing the seaman on his return. We have done all of this and more, and with the purpose of keeping the wages as low as possible. Ocean commerce is highly competitive and legislatures and courts have in the past united with the shipowners in trying everything to accomplish the purposes

outlined above. Never until the passage of the seamen's act was there any effort to equalize the wages by raising the lower to the higher and to make violations of this policy unprofitable.

The British shipowner, finding that some other European shipowners paid less wages than he could pay and yet obtain men, caused the repeal of the laws under which he was compelled to carry British seamen, and when this did not accomplish the purpose he sought and obtained the right to employ lascars, Chinese, and South African Negroes. We here in the United States followed his example. We lost our native seamen; he was losing his, and to no purpose, because other shipowners of other nations could and did obtain permission to do likewise. The sum of all the efforts was to drive the men of the Nordic race from the sea. The spirit of this race, together with the spread of education, made it impossible to hold them to the sea. Other races were taking their place.

The American was leaving the sea. The American boy was shunning it. Sea life was passing from our people until we had neither vessels nor seamen.

FACTORS TO BE CONSIDERED.

It is a matter of common knowledge and general agreement that the over-sea merchant marine of the United States was steadily decaying from about the time of the Civil War to the beginning of the present European war. The reasons were economic, but they were created by law. The causes for this decay have been variously stated to be:

- (1) Our antiquated navigation laws.
- (2) Excessive building cost of American vessels as compared with foreign vessels.
- (3) Excessive cost of operation of American vessels as compared with foreign vessels.

When those who use the phrase, "Our antiquated navigation laws"—a phrase so widely disseminated and so generally used that it is assumed to need no explanation—are asked for specifications, they say, "We furnish better accommodations for our seamen than do other nations." But when our laws dealing with seamen's accommodations are placed side by side with those of England, France, Germany, and Norway we find that our laws are not as liberal to the seamen as the laws of those countries. Then they say, "We furnish a better scale of food." But when we compare the English scale of food as it existed up to 1906 we find it identical with the scale of food on American vessels up to February 21, 1899, and that the present scale of food of the two nations is about the same. We further find that the scale of food in vessels of Norway, Denmark, Germany, and France differs very slightly from our own and that there can not be very much distinction in "the cost of food per person" in either of them.

Then it was claimed that American vessels carry more men. Comparing the same class of vessels belonging to any of these nations with similar vessels under the American flag and employed in the same trade it will be found that there is no real difference in the number of men employed and that the American vessels sometimes carry one or two men more, sometimes two or three less.

Finally, it was suggested that it was a question of wages; and this is true, in so far as it applies to vessels sailing from ports of the United States. The only difference in wages between foreign and American vessels trading between ports of other countries is in the wages of the officers, and this is not by any means an important amount.

Excepting the wages and the number of men carried, the Department of Commerce has, after careful investigation, reported that the several maritime nations are on almost perfect equality.

Summing up the testimony of the shipowners as it has been given to the committees of Congress and to the Merchant Marine Commission, we find that some of the witnesses testified that the cost of an American vessel is about 33 per cent higher; others claimed that it is 50 per cent higher. One of these contentions is as correct as the other. If an American-built vessel costs \$900,000, the claim is made that it can be built on the Clyde for \$600,000. This would make the differential about 33 per cent; but if the vessel were built on the Clyde at \$600,000, and the same vessel would cost \$900,000 if built in an American yard, it would be correct to say that the difference is 50 per cent.

Of course, the more expensive vessel carries a financial burden throughout her normal life—that is, in proportion to her higher original cost. Given 6 per cent interest on money invested, 6 per cent insurance, and 5 per cent depreciation, if the vessel costs \$300,000 more she will have to earn annually about \$50,000 more than the vessel that costs \$300,000 less before she can begin to pay dividends.

The origin of this difference is in the monopoly of the American shipbuilder. The cure is free ships. Let the shipowner buy his vessel where he can buy it cheapest and sell it where he can make the most money. The emergency-shipping act furnished a remedy, though it is not a complete one. In order to make it complete those vessels so registered must be admitted to the coastwise trade. When this is done the cost of construction will be equalized, and the privilege of participating in the coastal and the intercoastal trade will be such as to induce foreign vessels to come under the American flag.

THE COST OF OPERATION.

Aside from the difference in operating cost arising from the initial building cost—interest on money invested, insurance, and depreciation—the cost of operation is in taxes, port dues, fees for services by Government officials, fuel, lubricating oil, waste, repairs, food for the crew, and wages.

Let us assume that two vessels, one under Belgian, the other under American, flag, are trading between Antwerp and Boston. These vessels will buy their supplies in either of the two places where they can be bought cheapest. The same situation exists between San Francisco and Sydney or between Puget Sound and Japan, so that the only difference is in the wage cost, and we have only to deal with the question of wages.

The wages of the seamen have been and are now the going wages of the ports of shipment. The wages of the port of shipment are very largely determined by the wage level of the country tributary to the port in question, modified, if at all, by the wages of the port to which the vessel is bound.

The United States is a high-wage country, and the wages paid here are higher than in other countries, except in New Zealand and Australia. Vessels, regardless of their flag, if in the same or similar trade and shipping their men in any port in the world, pay substantially the same wages for the same kind of work, so that the Boston wage rate is paid by the Norwegian, the English, or the French if they hire their men in Boston; the Liverpool wage rate is paid by the Norwegian, French, or American if they hire their men in Liverpool.

This has been so clearly understood that in 1884 the Congress of the United States made it the basis of an act "to remove certain burdens on the American merchant marine and encourage the American foreign-carrying trade, and for other purposes."

One of the main features of this act was to permit the American shipowner to discharge the crew hired in an American port, to hire another crew in the same port with his competitor, to come to the United States and go back to a foreign port without reshipping in the United States, and thus get away from the American wage rate. This was an effort to equalize the cost by leveling the American wage down to the rate paid by the competitor. The act was approved on June 26, 1884, and was enacted upon petition from the American shipowners. It is still the law.

EFFECT OF THE LAW.

This law resulted in equalizing the wage cost of American and foreign vessels trading between foreign ports. It, however, failed of its purpose in American ports—first, because it contemplated and provided for the imprisonment of seamen coming on an American ship from a foreign country to the home port of the vessel, an innovation contrary to the time-honored conceptions of maritime law; second, because this innovation found no sympathy either from the judges, the lawyers, or the public; thirdly, it had the entire trend of American life against it. Its chief result was to increase the drift from the sea on the part of Americans.

The imprisonment of seamen for leaving American vessels in American ports was abolished by the act of December 21, 1898. From that time the seamen had a right to quit; they could not be held against their will unless they were Chinese, who were prevented by the exclusion act from coming on shore, and this gave to the vessels of the Pacific Mail and to the Dollar vessels engaged in the oriental trade an advantage above all other vessels—even over the Japanese vessels—in the wage cost of operation. These vessels shipped their men in Hongkong at about \$15 Mexican per month; the Japanese shipped their men in Japan, paying 25 yen per month.

The differential in wages against the American vessel continued, and it ranged from 20 per cent in British ports to 30 or 40 per cent in some Baltic and Mediterranean ports, and then rose to more than 200 per cent in ports of India or China. These facts are testified to by the shipowners and their spokesmen.

Taken together with the difference in the cost of construction, the difference in wages was fatal. The American ship could not compete. To overcome these handicaps, the American shipowner was exempted from taxation of floating property, from payment of fees levied in the enforcement of the navigation laws, and was further permitted to disregard any safety line in loading. He can now load his vessels to any depth he thinks proper.

He can carry as much of a deck load as he may think safe. There are no laws restraining him. He has shed practically all liability to traveler and shipper through limitation of shipowners' liability, which has been reduced to the "freight money pending" and the income from sale of the wreck. While this is conditioned on having an efficient crew, he escapes by organizing a separate corporation for each vessel, so that when the vessel is lost the corporation has no assets.

He was permitted and encouraged to obtain and employ the cheapest men that could be found. With the exception of the licensed officers, he could and did disregard any question of skill or experience, or even of a knowledge of the language of the officers, in the men employed. Experience, age, nationality, and race were disregarded to obtain the cheapest men, and yet the wage cost of operation continued against the American vessel. This had its origin in the wage level on shore and in treaties with other countries.

TREATIES WITH OTHER NATIONS.

In treaties entered into with other maritime nations we had agreed mutually to arrest, detain, and surrender seamen who might desert or refuse to continue to labor in our high-wage ports under contracts which they had signed in low-wage ports. These treaties were further assisted by statutes, enforceable upon demand made by the consul of the nation to which the vessel belonged. When such demand was made we used our police officers to hunt down the deserter and to deliver him back. In other words, we used our police power to keep the wage rate of our competitor below that of our own. He hired his men in the cheapest wage ports and compelled them to stay by their contracts in our high-wage ports, thus gaining an advantage which enabled him to drive the American flag from the ocean.

To assist in meeting this condition Congress passed the laws of June 26, 1884, of June 19, 1886, and the mail-subsidy act, but these laws were not sufficient. American money went into foreign vessels, and because "the heart of man is with his treasure" its interest was to prevent any real change, except such as could be met by other nations without increasing their wage cost.

But this war has taught us many things, and it has brought most of the American-owned vessels operated under foreign flags back under the American registry. The vessel could earn as much money and it was safer. Where will they go when the war is over and reasonably normal times return? That is the question which is being considered by men who have not made themselves properly acquainted either with the causes of the decay of our shipping or who have not taken the time to study and understand the seamen's act. The American was driven from the sea because of the difference in the cost of operation between American and foreign vessels. If the difference can be overcome the vessels will remain under American registry; if not, the vessels will pass to those who can operate them more cheaply and efficiently. The remedy is in the La Follette Seamen's Act.

This act provides for the abrogation of the treaties and the repeal of the laws under which this country served as the slave catcher for shipowners of other nations. It provides in ports of call for the payment of one-half of the wages earned, in order that the seaman may have the means with which to exercise and protect his new freedom. This act abolishes the ancient status.

In reshipping her men the foreign vessel comes under the same law as American vessels, which law prohibits any payment of wages before they have been earned, a standard of efficiency is imposed upon men shipping as able seamen (part of deck or navigating crew), and the law further provides that in all vessels of more than 100 gross tons leaving ports of the United States at least 75 per cent of the crew in each department of the vessel must be able to understand any orders given by the officers of such vessel.

Foreign vessels coming to ports of the United States will thus be compelled, if their crews shall quit them, to hire men of the same skill and under the same law as men are hired by American vessels. As a result the wages paid by them will be the same.

This is an effort to equalize the wage cost by permitting the economic law of wages to level foreign wages up to the rates paid in our ports. Of course, the struggle against such legislation was bitter and it is by no means ended.

EXECUTION OF THE LAW.

The Department of Commerce is authorized and instructed to make rules for the enforcement of some of the most important sections of this act. Of course, the drafting of these rules is done by the Bureau of Navigation and the Bureau of Inspection, subject to approval by the Secretary of Commerce.

The department whittled at the forecastle clause. Through the intervention of the President it went to the Attorney-General and then to the courts, where it yet remains. It proceeded to whittle at the crimping clause. The district courts gave a construction against crimping; the court of appeal, quoting the department, gave a construction in its favor; we hope to get it to the Supreme Court, but can not tell. One court holds that under the law the seaman must be paid half of the wages earned or due and not collected; others that half of all wages earned must remain with the vessel to induce the seaman to remain with the vessel. Prevention of desertion is destructive of equalization and contrary to the purpose of Congress in passing the bill. It would seem too plain for discussion that Congress intended that the seaman should desert until wages were equal and desertion stopped, because there was nothing to induce the seaman to desert. If this was not the purpose, why abrogate the treaties?

There can be no fair competition without equal wage cost. There can be no equalization of the wage cost unless the seaman is free. Not simply legally free but economically free by being permitted to draw a part of his wages in any port. Equalization will, however, fail if it stops at our own ports. But it will not; it can not, if it be permitted to operate. The same selfish instinct that causes the seaman to desert in a high-wage port will compel the shipowner to pay, if going to a high-wage port, such wages as will induce the seaman to remain voluntarily by the vessel. But this means New York wages in Liverpool and to all vessels, regardless of where the vessel is bound. This is exactly what has taken place. First equalization in our ports, then an increase in British ports to the American standard.

Some will say that this is the war. They will be entirely wrong. The war began in August, 1914. There was no change in seamen's wages until the seamen's act got into force in foreign vessels, and this was not until August, 1916. The last men arrested under the old laws and expiring treaties were arrested at Norfolk, and the vessel was compelled to let them go again because she could not get to sea before the treaties were dead. Just as soon as the seaman was free to quit his vessel he did so, and equalization came with a rush. For the first time in 60 years the American shipowner was on equality with his foreign competitor.

Within the last six months there have been strong representations from foreign Governments against the seamen's act. It was claimed that the operation of the act interfered seriously with war efficiency. The seamen were deserting and vessels were delayed, so it was alleged. Upon inquiry it was found that the men were deserting, but they promptly signed on again in other vessels going into war zone, and there was no delay that was not readily cured by paying the wages of the port. The complaining Governments were informed that the remedy was in their own hands. If the seamen were paid the wages of the port, they remained with either the same vessel or shipped on some other vessel. Pay to them the American wage and there evidently will be no trouble. The most important of them has taken this advice.

The wages out of English ports are now the same as from Atlantic American ports. There are no longer any desertions, except from vessels which have been away from England so long that they are not being paid the new English rate. Let the seamen's act be understood and enforced and there will be no difference in the wages of seamen, and there will be no desertions except of a few individuals who, for some reason, can not get along in that particular vessel, while they can get along in any other vessel. The American man and the American dollar will both come to the sea and the vessels now built will remain under our own flag.

To accomplish this the La Follette Seamen's Act must be enforced. The act was passed to remedy serious national and personal evils; it is highly remedial and it is entitled to be so construed that it will effectuate. The whittling process must be stopped and reversed. The seamen are patient. Their life has taught them to wait and hope. Their hope is in the Supreme Court. They all, or nearly all, feel that, when properly presented, the act will stand the test in that court.

Increase in Pensions.

EXTENSION OF REMARKS

OF

HON. ELIJAH C. HUTCHINSON,
OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

Mr. HUTCHINSON. Mr. Speaker, under general leave to extend remarks on House bill 9959, which provides for increasing pensions paid to the survivors of the Civil War, I want to go on record as favoring the proposition. As an obligation rather than a tribute to the few remaining veterans of that great struggle, I would prefer voting for a still larger increase in pension and hope the time may soon come when the Government will show in a more liberal way that their service was appreciated and does not intend to neglect them in their old age.

The sacrifices made by those brave men in the hour of need has been an inspiration to the youth of this generation, and the patriotic spirit that prevailed in 1861 has increased during the intervening years until to-day we have millions of men ready to fight and die that the Nation saved by those heroes may be preserved.

Civil War Pensions.

EXTENSION OF REMARKS

OF

HON. EDWARD VOIGT.

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

Mr. VOIGT. Mr. Speaker, in voting for this bill I do so not because I believe that it is a bill which does justice to the veterans of the Civil War, but because I believe it is the only bill which will stand a chance of passing at this session of Congress. This bill was reported on February 27, 1918, and it is apparent that if it is rejected that there will be a considerable lapse of time before anything can be done for the soldiers and sailors of the Civil War. I regret very much that the bill came before the House under suspension of the rules, which creates a situation wherein the bill can not be amended and must be voted for or against as it stands. I should like to have seen the bill come up in such a manner that it would have been possible to vote for an increase in some of the rates provided in it.

This Nation owes a debt of gratitude to the men who by their devotion and sacrifices saved the Union during the critical period between 1861 and 1865. I have voted with pleasure for the increase in pay to our soldiers of the present war, and stand ready to do what I can for their comfort and prosperity. Nothing is too good for them, and I have like feelings for those who gained our victories in the sixties. This country is the richest in the world, and without the services of those who saved it in the darkest period of the Republic it would not be in existence to-day. Surely we can afford to be generous with the old soldiers who are rapidly passing to the other shore. The high cost of living is such that a dollar has about one-half the purchasing power that it had a few years ago, and as practically all of the old soldiers are dependent upon their pensions it seems to me fair and equitable that pensions should be increased so as to offset in a large measure the high cost of living.

There are now something like 300,000 Civil War soldiers and sailors on the pension rolls. In the year 1917 a little over 33,000 of them died, and since this bill was reported over 6,000 of them have died. In 1898 we had 745,822 Civil War soldiers on the pension rolls. This shows that the number of pensioners is rapidly decreasing, and we can afford by liberal pensions to add to their comfort in their declining years.

I shall now briefly state the provisions of the present bill: Section 1 provides a minimum pension of \$25 per month to all soldiers and sailors of the Civil War who served 90 days and were honorably discharged. It is also provided that in case such person has reached the age of 70 years, and has served 1 year, the rate shall be \$26 per month; 1½ years, \$28 per month; 2 years, \$30 per month; 2½ years, \$31 per month; 3 years or over, \$32.50 per month. This section also provides that in case such person has reached the age of 75 years and has served 90 days, \$27 per month; 6 months, \$29 per month; 1 year, \$31 per month; 1½ years, \$35 per month; 2 years or over, \$39 per month.

The bill makes a special provision for those who were wounded in battle or in line of duty and who are now unfit for manual labor by reason thereof or who from disease or other causes incurred in line of duty, resulting in disability, and who are now unable to perform manual labor. Such veterans are to receive \$39 per month, without regard to length of service or age.

Section 2 of the bill provides that—

Any person who served in the military or naval service of the United States during the Civil War and who was honorably discharged therefrom, and who is now pensioned or shall hereafter be pensioned under any general law, or who is now pensioned under special act of Congress at a rate of \$20 per month or more, shall be entitled upon the passage of this act to receive in lieu thereof a rate which shall be fixed by the Secretary of the Interior, in multiples of 50 cents, nearest approximating 30 per cent additional to the present rate: *Provided*, That no rate of pension shall be granted under the provisions of this act in excess of \$50 per month: *Provided further*, That no pension heretofore granted shall be reduced by this act.

Section 3 provides that no pensioner shall receive an increase while he is in a State or National soldiers' home, and also that the increase shall not apply to any pensioner whose net annual income from all sources, including his pension, is \$1,000 or over.

Section 4 provides that the increased rates shall commence from the date of the approval of the act, or, in case of original pensions, from the date of the commencement of such pensions as now provided by law, and section 5 provides that no attor-

ney shall be recognized and no attorney fees shall be paid for the presentation or prosecution of any claim under the provisions of this act.

By the law of October 6, 1917, all soldiers' widows who married prior to June 27, 1905, were given \$25 per month pension, which is more than some of the veterans who did the fighting are receiving. I am in full accord with the raise of widows' pensions to \$25, but the raise of the widows' pensions is a forcible argument for a substantial increase to the veterans themselves.

The increases provided by this bill will cost the Government between \$22,000,000 and \$23,000,000 per year. While this is a large amount, the Nation will pay it with pleasure.

I hope that when this bill goes to the Senate and is finally passed that the rates will be somewhat raised, so as to give us the rates, or nearly the rates, provided in the bill introduced by Senator Smoot. This bill provides for a minimum of \$30 per month for a soldier or sailor who served 90 days or more, and the rates are graduated up to \$40 per month, depending on the length of service, and conditioned on the soldier's attaining the age of 72 years.

I am not in favor of the provision that the increase shall not apply to any pensioner whose net annual income from all sources, including his pension, is \$1,000 or more. If a soldier has by economy or business ability managed his affairs so as to have a few hundred dollars income aside from his pension, he should not be penalized for his thrift. Furthermore, the number of soldiers to whom this provision will apply is very small, indeed, and I fear that a great deal of red tape will have to be gone through with before the increases go into effect. This provision means that every soldier drawing pension will have to render an income account which will have to be investigated by the Pension Bureau.

The provision that the increase shall not apply to veterans in State or National soldiers' homes looks fair to me. It costs about \$400 per year for taking care of a veteran in one of these homes, and where he is not obliged to pay for his living he should be content without the increase. To give him the increase would give him undue advantage over other pensioners.

As I have stated, I am going to vote for this bill, because it is an improvement over the present law and the best which, in my judgment, can be passed at this time, but I hope that when the bill finally becomes a law that the rates will be increased to a minimum of a dollar a day and increased up to \$40, depending on age and length of service. In the case of veterans who were wounded or who contracted disease in line of duty, and who are now unable to perform manual labor by reason thereof, I favor rates between \$40 and \$50. If we are going to make any mistakes in granting pensions I hope that they will be made on the side of liberality to the veterans of the Civil War.

War-Risk Insurance Bureau.

EXTENSION OF REMARKS

OF

HON. JOHN A. STERLING,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 11, 1918.

Mr. STERLING of Illinois. Mr. Speaker, all the Members of this body no doubt are being called upon by some of their constituents to help them obtain the benefits to which they are entitled under the war-risk insurance act. I have had letters from wives and parents of soldiers asking that I assist in securing their claims. All these I have submitted to the bureau, with the result that they have had prompt and careful attention. I presume the experience of all of us has been about the same in that regard. Indeed, knowing something of the conditions under which the bureau has had to act, the great variety and multiplicity of duties it has had to perform, and the magnitude of the work imposed on it, I say frankly at the outset that the manner in which the bureau is conducting the business imposed on it has elicited my admiration.

There have recently appeared in some of the newspapers of my State, and maybe elsewhere, so far as I know, articles which doubtless were published with the best of intent, but which are calculated to do a great amount of harm if published in the press generally throughout the country. I have one of these before me in which it is stated, among other things, that "there has been much confusion in the Bureau of War-Risk Insurance at Washington. It is reported that some records have been

lost and that there is danger of some beneficiaries losing their allotments or insurance, or being delayed in its collection." In this article mothers, wives, and other dependents are urged to check up their allotments and insurance and in cases of doubt to write to their Congressman or Senator. I am aware that Members are always willing to look after the interests of their constituents in matters connected with the Government, and they do so cheerfully. But it is not in their behalf that I speak. It is in behalf of the soldiers themselves and of their dependents, and in the interest of continued efficiency in the bureau that I offer these observations. If the press should carry the alarm contained in the foregoing to the homes of the country, it would certainly cause a great deal of distress to those people who are dependent on the Government while their supporters are in camp and field defending the country against its enemies. If the idea conveyed by the article should become prevalent in the minds of the soldiers and they should be led to believe that the Government has failed to care for their families as it agreed to do, the effect would be most hurtful to the morale of the Army. It must be a great comfort to our men in France to know that a grateful Government is diligent and generous in its care of those dependent on them. Anything which creates in the soldiers' mind an impression that the Nation for which he is fighting is in any degree faithless to its promises is bound to reduce his efficiency as a soldier. I am sure there is nothing to warrant even a suspicion that anyone entitled to benefits under the law will lose them or that they will be unnecessarily delayed in reaching them, and both the soldier and his family should know that fact.

Let me ask, What good can come of inciting persons to become impatient and apprehensive about their benefits? If such a propaganda should become general, the result would be thousands upon thousands of additional letters to the bureau from the persons made fearful by such reports. It would add immensely to the work of the bureau and would tend to cause the confusion and delay which it charges. There is no just ground for apprehension. The bureau is considering these cases with great rapidity and is making awards and sending checks to the dependents of our soldiers at a rate that is little short of marvelous when you consider the conditions under which it has worked and the magnitude of its task.

Permit me to call your attention to a few facts which will give some idea of the difficulties under which the war-risk insurance act has been administered and the immensity of the work which it entails. The force making up the organization had to be collected largely from untrained and inexperienced material. The bureau now has more than 4,000 persons in its employ. At no time has the different branches of the organization been located together under one roof. It is now occupying eight different and separate buildings, several of which are far removed from and none conveniently located with reference to the main offices. The organization is thus broken up into parts and scattered throughout the city. This condition has a tendency to retard the business and reduce the efficiency of the force.

The law imposes on the bureau a multiplicity of duties. It has charge of all allotments made by the soldier out of his pay, of allowances paid by the Government to dependents, of compensations to be paid to the injured soldier or to his dependents in case of his death, of the life insurance which the law affords to every soldier desiring it, and of the insurance against marine losses provided for by the law, and all these require the keeping of millions of separate records. When cases are once passed on and allotment and allowances made, there are changes to be made in many cases. These changes are occasioned by many things. If a soldier is promoted or demoted, a change must be made in the adjudication, or if a wife or child dies or if a child is born to the soldier, all these involve a new adjudication of the case. If a soldier dies or is discharged, or if the allottee changes her address, these things all require much correspondence to secure verification and identification. Changes occasioned by these things are more than 200,000 per month, and, of course, impose immense burdens on the bureau, which one on the outside is very likely to leave out of his considerations in contemplating the labors and activities of the bureau. In the allotment and allowance division 760,000 awards have already been made, and thousands of applications are coming in every day. This enormous business requires a vast amount of correspondence, and the mail of the bureau averages more than 10,000 letters received each day.

There are now more than 2,000,000 men in the Military Establishment. Every one of these is entitled to the war-risk insurance, and on May 4 the bureau had received under the allotment and allowance provisions of the law 1,864,416 applications for the benefits under those provisions. Many applications have come in from persons claiming to be dependents of sol-

diers who have alleged that they have no dependents. In all these cases the bureau is put to the burden of proof of the relationship, the fact as to dependency, and in many cases the comparative merit of different claimants for the same allotment or allowance. The workers in the bureau, of course, have to determine from the records in any case as to who is the beneficiary, the amount of the allowance, and the address to which the checks shall be mailed. It is to be expected that many of the orders for allotments and applications for allowances are poorly made out, and the names and addresses on many are not clearly legible. These imperfect applications greatly add to the work of the department and are responsible for no small part of the delay in many cases. Due to insufficient address in some cases and change of residence in some, where the allottee has neglected to give notice of the change, there are now in the disbursing division of the bureau approximately 40,000 checks that have been returned by the Post Office Department undelivered. Each one of these necessitates an investigation, requiring time and labor. Of course, the bureau should not be charged with delay in such cases.

The business done by the insurance branch of the bureau during the six months the law has been in operation is appalling. The records show that 1,916,153 applications have been made for insurance and have been received at the rate of an average of 10,000 per day. The bureau is considering applications and issuing policies at the rate of about 13,000 per day.

When this insurance feature was being considered in the House, I am sure that many Members thought there would be but few of the soldiers insure for the maximum amount of \$10,000 allowed under the law. I well remember gentlemen predicted that the average policies would range from \$2,000 to \$3,000. I am advised that a majority of the applications are for the full amount, and the applications received so far average \$8,167.

Of the 1,916,153 applications received up to May 4, 590,000 have been considered, the certificates issued and mailed. Many more are retained in the bureau on account of the failure of the applicant to indicate to whom he desired it sent.

The insurance applied for on the date mentioned was \$15,649,249,000, and by this time it is doubtless well above \$16,000,000,000. We can now begin to realize the enormity of the undertaking we imposed on the country when we enacted the insurance law. If the war continues and the United States raises such an Army as I have heard predicted on this floor, the insurance obligations of the Government may approach \$100,000,000,000. I am sure such a possibility is apparent now, although no man in this House ever dreamed of such a result at the time the law was passed.

To arrive at a somewhat more comprehensible idea of the business already done by the insurance division let us compare it with other insurance enterprises. The outstanding insurance obligations of all companies of every kind—old line, mutual, fraternal, and all other companies issuing insurance—at this time is approximately \$34,000,000,000. This insurance law was passed October 6, 1917. Some time was consumed in preparing blanks and in forming an organization, yet at the end of six months after the passage of the law the Government has taken on \$16,000,000,000 of insurance, or but little less than one-half as much as all other insurance concerns in the country. During the last year the insurance companies wrote approximately \$6,000,000,000 of insurance, while in less than six months the Government wrote nearly three times as much as all of them combined.

The organization formed to administer this law is not yet perfect. The men on whom rests the responsibility of creating this organization do not claim it to be. It had to be built from the beginning and almost wholly out of the raw material, as most of the persons composing it were wholly inexperienced and without training. Taking these things into consideration, together with the great variety of duties imposed by the law and the vast volume of business that has poured in even before the organization was started and up to the present time, I have reached the decided conviction that the law is well administered and that complaints of delay at this time are not justified.

In addition to what I have said I desire to insert here a letter from Mr. De Lanoy, director of the bureau, which he kindly wrote in answer to inquiries concerning the administration of the law.

TREASURY DEPARTMENT,
BUREAU OF WAR-RISK INSURANCE,
Washington, May 6, 1918.

HON. JOHN A. STERLING,
House of Representatives.

MY DEAR CONGRESSMAN: Referring to your visit to the bureau on the 4th instant, at which time (by your request) you were given an opportunity to learn personally of some of the problems with which

the War-Risk Bureau has to contend, and confirming my promise to give you some official figures relating to the work of this bureau, I am pleased to advise you as follows:

The various branches of the War-Risk Bureau are widely separated at present, as you have been shown, and the rapid growth of its activities has been such that not one move but several have had to be made in order to accommodate the working force and the record files, the quarters of which at this time are greatly congested.

The War-Risk Bureau has a day force and a night force; but, in addition to this, a very goodly portion of the day force work overtime.

We have incoming mail totaling 8,000 to 15,000 letters daily, all of which must be opened, stamped, and carefully read to determine the question at issue, and then routed in the proper channel. You may well understand that this in itself constitutes a task of no small proportion.

One of the principal causes of delay in acknowledging communications addressed to the bureau asking for information relative to an allotment and allowance, compensation, or insurance question is the fact that the correspondent fails to state the full name of the soldier, the full designation of his organization, and the full name and post-office address of the prospective beneficiary or the inquiring party. This frequently causes the passing of several communications between the bureau and the original writer before definite information is obtained upon which to base an intelligent search of the records of this bureau in order to make a proper reply to the inquiry.

Under the allotment and allowance feature of the law approved October 6, 1917, there have been filed to date (May 4) 1,864,416 applications. Of this number, 1,110,371 persons have alleged that they have no dependents who would come within class A (which class includes a wife, child, or wife divorced to whom alimony has been decreed), nor have they made an allotment or asked for the Government allowance to any class B dependent (which class includes a parent, brother, sister, grandparent, and grandchild).

From the above it will be seen that nearly two-thirds of the enlisted Army and Navy personnel have failed to acknowledge or claim the benefits granted under article 2 of the law, which makes provision of allotments of pay and the family allowance granted under said law. It develops in quite a number of cases that there are beneficiaries under class A, as is shown by the filing of a wife's application, upon receipt of which steps are immediately taken to identify the man's military service, and the wife is called upon to establish her relationship to him, as provided under the law.

The records of the bureau show (as of May 4) that 760,000 allotment and allowance awards have been made; and just here it would be well to call your attention to the fact, as explained and shown to you on the occasion of your visit to our accounting section, that considerable confusion ensues as a result of poor writing in giving names and improper addresses and the consequent failure of delivery of check.

There are now in our files approximately 40,000 checks representing awards made which have been returned by the post office to which addressed, the address having been previously given by the soldier and the beneficiary having since moved and his present whereabouts being unknown to the bureau. These checks are being held and forwarded to the payee as rapidly as it is possible to locate the owner.

Checks are not delivered at an address in the "care of" any person, but addressed directly to the beneficiary. The number of checks that are daily returned by reason of failure to deliver average between eight and nine hundred. Checks are forwarded to the beneficiaries the month following the one for which they are due; for example, payments for May will not be due until June 1, and payments are sent out immediately after the first of each month, commencing with the letter "A," and so on through the alphabet.

The records of the bureau show (as of May 4) that 1,916,153 applications for insurance have been made by persons who come within the permitted class of those entitled to apply for insurance. These applications total in amount the sum of \$15,649,249,000, with an average per person of \$8,167.

The number of applications for insurance received average 10,000 per day. Insurance certificates are being issued at the rate of about 12,000 to 13,000 per day, and in the immediate future it is expected that the rate will be raised to 25,000 per day.

As of May 4, the records show that certificates to the number of 590,000 have been mailed, and these are now being issued as nearly as possible in the order in which the applications were received. Due to the large number on file, it will necessarily be a considerable time before all can be forwarded. If the insured did not indicate on his application where he wished the certificate sent when issued, it is retained by this bureau subject to instructions.

I invite your criticism and suggestions, and before I close let me thank you for the interest shown on the occasion of your visit to us on Saturday.

Very sincerely, yours,

WILLIAM C. DE LANOY,
Director.

Increase of the Military Establishment.

EXTENSION OF REMARKS

OF

HON. DENVER S. CHURCH,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 9, 1918.

Mr. CHURCH. Mr. Speaker, I am in favor of the States being given credit for their volunteers, because to follow the other course would work an unnecessary hardship upon the business industries of those sections from which most of the volunteers have come.

It is just as important for the ultimate result of this war that the farming and business interests of our country should be kept in a normal condition as it is to raise an Army to fight in France.

It would not be fair to the business interests of a certain section to supply twice as many men as some other section containing the same population and of the same business importance to the country. I will not, however, undertake to go into any detailed discussion of this matter but I will take this opportunity to say a few words in regard to another matter which I have in mind.

Mr. Speaker, following a determination reached before my last election, I shall voluntarily retire from this body with this Congress.

I deem it appropriate to place in the Record some observations concerning the relations of the Members of Congress to the country at this time.

In ordinary times, other things being equal, there are weighty reasons apparent to all why a district should retain in Congress its Representatives of proven worth. As Speaker CLARK has said, "A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor. It is an unwise performance for any district to change Representatives at short intervals."

But there are now reasons of no ordinary importance why worthy Members of Congress should not only be retained but also without serious opposition.

That narrow partisan purpose that now seeks to defeat all Representatives of other political affiliations, encourage political strife, force faithful Members of Congress to devote their time in a political campaign that could best be devoted to serving their Government, and in the hope of partisan advantage seek to deprive the country of the benefit of their war-legislative experience for the continuation of the Nation's terrific struggle can scarcely claim to be actuated by the best interests of our country in the hour of its transcendent need.

As especially appropriate at this time, I present the following excerpts from an article recently appearing in the *Paris Mercury*, of Paris, Mo.:

NO TIME FOR PETTY POLITICS.

"Come to think about it, is not it rather a reflection on our political system that, with the country at war to maintain its very existence and the thought and effort of the Nation focused on winning that war, we must turn aside to engage in our biennial congressional wrangle, with its irritancies and aggravations? There is not a single question, partisan or personal, that should be allowed at this time to divide us or destroy our unanimity as a people. Our whole thought should be on fighting the war and winning it.

"As to loyalty, there can be no questioning that of the present Congress. Republicans and Democrats alike have shown patriotism and zeal. The alacrity with which they have put over a huge war program has astonished the world. No set of men the Nation could have gotten together could have acted more swiftly or more intelligently, certainly not in more thorough accord with the President and the lofty aims he has voiced.

"That for no other reasons than that the new and inexperienced men want the honor and the salary attached to the job we should enter upon a petty personal scramble for power and place is unthinkable. With outgoing ships daily carrying thousands of our boys to European battle fields to fight and die for human freedom, partisan and factional political wrangling here at home would at least seem to be out of keeping with the time and circumstances and certainly beneath our dignity as a people with events so tremendous in their significance to engage our attention.

"The present Congress has had its training on the job. Like soldiers who have been in trenches it has seen service and is seasoned, has familiarized itself with a task, and is equipped as a new body could not be to deal with the yet greater problems of economic reconstruction awaiting us.

"England, to preserve the solidarity of its own people, keep down internal discord, and keep the public mind free from petty distractions, has held no election since the war began. That we can not do under our system, nor would it be advisable. Yet the people themselves can accomplish the same by frowning on personal ambitions at this time and by discouraging opposition to capable Congressmen. Every fit man should be returned to his seat. A change of any kind, with the unknown element to bother, would be fraught with certain peril, as Mr. Taft has already pointed out. To change Congress at this time would be like withdrawing seasoned troops from the trenches and replacing them with raw and untrained recruits. It would be almost as foolish as taking control of the war from the President, with whom the present Congress has cooperated at every step.

"By the time August arrives and the date for our popular primaries approaches the soil of Lorraine and Flanders will be soaked with American blood. Our bravest and best will be

fighting and dying and the world will be vibrating amid the thunderings of the final and greatest conflict between might and right.

"Is not it all unthinkable that while viewing and being partakers in this great sacrament of freedom we should be called on to turn aside to listen to petty harangues and witness small rancors, with no possible issue at stake except jobs and personal ambitions—pie and post office? Do not you think that in indulging these petty discords at such a time we shall earn the everlasting contempt of that fine body of young men who are giving their bodies as a living sacrifice for us? Could anything furnish a more sardonic satisfaction to Germany's booted and sabered devils? We think not. Yet this is what will happen unless the people themselves protest."

A Proud Day for Massachusetts.

EXTENSION OF REMARKS

OF

HON. WILLFRED W. LUFKIN,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 3, 1918.

Mr. LUFKIN. Mr. Speaker, in the House a week ago last Wednesday my colleague from Boston, Mr. GALLIVAN, paid a handsome and eloquent tribute to Massachusetts and to her 122 sons who have recently been decorated by the Government of France with the Croix de Guerre for gallant action in the face of the enemy.

The men who received that initial honor to be bestowed upon American fighting men were, with a few exceptions, members of the One hundred and fourth Infantry, the sister organization on the battle front to the One hundred and first Infantry, made up of many of the constituents of my colleague from Boston, Mr. GALLIVAN, commanded by one of his most distinguished neighbors, Col. Edward L. Logan, and known to every man familiar with the history of the National Guard in Massachusetts as the "Fighting Ninth."

Both of these regiments were in the first contingents of National Guard troops to go across the sea, and both have been in the front-line trenches for some months.

My colleague from Boston in his address last week stated that the One hundred and fourth Regiment, whose men have recently been so signally honored by the Government of France, practically all came from the district of the distinguished minority leader of this House [Mr. GILLET]. That is an error, which I am sure that the gentleman from Boston desires rectified. While it is true that the base for the new One hundred and fourth Regiment was the old Second Massachusetts Regiment, from the western part of our State, just as the base of the new One hundred and first Infantry was the old Ninth Massachusetts Regiment, with headquarters at South Boston, in the reorganization which preceded the over-sea duty these two regiments were so enlarged as to include the best that could be found in two other organizations of National Guard Infantry in the old Bay State.

The new One hundred and fourth, recently so signally honored, is now composed of portions of the old Second Massachusetts, of Springfield, and the old Eighth, originally known as the Essex County Regiment, of which county my congressional district forms a large part. Three companies from my congressional district are now with that regiment on the firing line, and it was with pride that I read in the newspapers last week that one small city in my district had supplied no less than five of these heroes, a neighboring town a sixth, and another town and city one each, making a total of eight in all. The following newspaper dispatch gives the honor roll:

Pvt. David Stambler, Company H, One hundred and fourth United States Infantry, son of Mr. and Mrs. Herman Stambler, of 87 Maple Street, Danvers, Mass.

Pvt. Joseph F. Campbell, headquarters company, One hundred and fourth United States Infantry, brother of Mrs. E. Francis de Lara, 151 Bridge Street, Beverly, Mass.

Five Gloucester boys and a former resident of that city are among the 122 Massachusetts heroes. They are Corps. David A. Cassagrande and Richard M. Hull and Pvts. Roland E. Cole, Charles B. Knutson, and Hugh D. Savage, all members of headquarters company, One hundred and fourth Infantry. The sixth is Corpl. Frank B. Amaral, of Manchester, Mass., formerly of Gloucester, a member of Company H, One hundred and fourth Infantry.

Pvt. Amaral was one of those Massachusetts boys who gave his life on the battle front a few weeks ago.

Corpl. Cassagrande is the son of Mrs. Anna M. Cassagrande, of 947 Washington Street, Gloucester, and enlisted in Company G of the old Eighth Infantry in June, 1916. He is 35 years of age.

Corpl. Hull is the son of Mr. and Mrs. J. Murray Hull, of 8 Oak Street, Gloucester, and also a former member of Company G of the Eighth. He is 22 years of age.

Pvt. Savage is only 19. He is the son of Mr. and Mrs. Edward J. Savage, of 30 Green Street, Gloucester.

Pvt. Cole, who died on April 15 of wounds received in action, was the son of Mr. and Mrs. Jesse F. Cole, of 202 Magnolia Avenue, Gloucester, and was one of four sons in the United States service.

Pvt. Knutson died on April 15 of wounds received in action. He enlisted in Company G last July. He formerly resided at 147 East Main Street, Gloucester, and leaves a sister in Sweden. His parents are dead.

Gloucester has long been known as the nursery of the Navy. In every war in which we have engaged her hardy fishermen have nobly responded to the call for "fighting men on the seas." A new honor now comes to the old city. She proves to the country that she can produce fighting soldiers as well as fighting sailors, and mingled with her pride at this last achievement of her representatives across the sea is the shade of sadness that three of her sons could not have lived to receive in person the decorations of honor so dearly and gallantly earned.

Yes; Massachusetts has again gained signal honor. As the gentleman from Nebraska [Mr. SHALLENBERGER] said last Wednesday, "The first body of American troops to be complimented for bravery in battle by a foreign commander was a Massachusetts body of soldiers." But, after all, such honors are not new to Massachusetts. Massachusetts troops have been among the first to go in practically every war in which this Nation has engaged. It was Massachusetts men, the farmers of Concord, who fired the first shots in 1775, reechoing, as they did, around the world and announcing the birth of a new nation. Again in 1861 it was Massachusetts blood which was the first to be shed, as the old Sixth Regiment of that State marched through the streets of Baltimore on their way to the front. Again in 1898 it was the old Second Regiment of Massachusetts, containing some of the officers and men of the organization which has recently been decorated in France, which was among the first to set foot on Cuban soil. And again in this war does history repeat itself. Massachusetts troops were among the first to answer "we are ready," and the New England division, composed largely of men from my State and commanded by Maj. Gen. Clarence R. Edwards, was the first National Guard division to go across. And as a further evidence of the fact that these Massachusetts men were fit for anything which might present itself is the fact that at the first opportunity for a fight they were in the thick of it, and so well did they acquit themselves as to win not only the commendation of their own commanding officers, but the decorations of honor of the country for whose preservation they were fighting and in whose behalf in that gallant action many of them gave their lives.

In conclusion I append an editorial from the New York Times of Monday, May 6, which shows the appreciation which that great metropolitan journal feels for these gallant soldiers Massachusetts:

A PROUD DAY FOR MASSACHUSETTS.

The decoration of 122 Massachusetts soldiers with the coveted war cross by a French general in the sound of German guns, while Stars and Stripes and tricolor fluttered in the breeze together and the strains of the Star-Spangled Banner and the Marseillaise stirred the blood—one here fainted from awe and excitement—was not a ceremony of courtesy, no mere complimentary tribute to flatter comrades in arms. The Americans from the hill towns of old Massachusetts, from the Connecticut Valley and the neighborhood of Bunker Hill, had fought in the Apremont Forest on April 12 with the gallantry of French and with the resolution of British veterans, winning imperishable glory for the One hundred and fourth Regiment. They proved themselves better men in hand-to-hand combat than the storming troops of a confident enemy. "We have met them and taken their measure," these New Englanders could say. It must have been a proud moment when they heard a famous French general recite the achievement of their regiment:

"It showed the greatest audacity and a fine spirit of sacrifice. Subjected to very violent bombardments and attacked by large German forces, it succeeded in checking the dangerous advance and took at the point of the bayonet in a most vigorous way prisoners and some demolished trenches from which it had fallen back at the first assault."

These soldiers—five of them belonged to the One hundred and first Massachusetts and distinguished themselves at Soissons—went early overseas, and it was because they were hardened by training and steadily by discipline that they proved a surprise to the scornful Germans, who will now have to bracket them with the "Ladies from Hell" (the Scotch Highlanders) and the "Devil Dogs" (the American marines).

Nothing seems too good to say about these New England Yankees. Look at the deeds which won the luckiest of them the French war cross. Pvt. Joseph J. Gannon, of Cambridge, "held the enemy in check with a machine gun and prevented the advance until his comrade, Corpl. Russell A. Hoyt, was killed and himself seriously wounded." Sergt. John T. Courtney, of Waltham, "volunteered to cross the shelled areas to carry a wounded comrade more than 50 meters under a violent bombardment." And with an unyielding valor that makes the eyes dim to read about it, Corpl. Henry F. Caron, of Adams, "when mortally wounded, passed the remainder of his grenades to his comrades, saying, 'I can't use these; you take them.' Americans 'over here' have kindled at stories of daring and sacrifice that have won the Victoria Cross. Their own countrymen are now doing deeds as splendid as any chronicled of those British heroes or of the undaunted Frenchmen who have gained the Croix de Guerre. Such allies can not be vanquished in the great war; they will always vie with one another in courage, in fortitude, and in the will to bring victory to their flags.

Address by President Edwards, of Rhode Island State College.

EXTENSION OF REMARKS

OF

HON. WALTER R. STINESS,

OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 10, 1918.

Mr. STINESS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the address of President Edwards, of the Rhode Island State College.

The address is as follows:

COMMENCEMENT ADDRESS, RHODE ISLAND STATE COLLEGE, APRIL 28, 1918.

[The quotation below is not a text. It is intended to serve simply as an undertone, recurring to the mind from time to time in the course of the address:]

"These six things doth the Lord hate; yea, seven are an abomination unto Him: A proud look, a lying tongue, and hands that shed innocent blood, a heart that deviseth wicked imaginations, feet that be swift in running to mischief, a false witness that speaketh lies, and he that soweth discord among brethren." (Prov. vi, 16-19.)

A CIVILIZATION IN PERIL.

There came to me not long ago a most vivid and terrifying dream—so real and so dreadful that it left me shivering with horror, and for days thereafter I could not free my spirit from the feeling of impending doom.

It seemed to me in my dream that I was awakened by a voice as of one rushing past my window, a voice weird and wild and full of fear and wretchedness, a voice that "shivered to the tingling stars" as it wailed, "It is fallen; it is fallen!" And I went out, and there the air was filled and possessed with an ominous, droning sound; and the farther I went the more the atmosphere vibrated with sound, until abruptly I came out upon the edge of the land. Below was a raging sea, red and angry, and the sea was devouring the land. On my left arose a great promontory, on the top of which there stood an age-old castle, strong and with walls and towers and wide-flung battlements, and even as I looked the foot of the promontory melted like sand and the cliff and the castle, with its walls and towers and battlements, sank helplessly, toppled over into the angry sea, and quickly vanished from sight. The rushing waves struck again and green fields and clustered houses sank into the boiling flood below, even as men attempted to rush out of them away from the swift devouring destruction. Before my eyes the very foundations of the hills were being dissolved; the whole earth was sinking, sinking beneath the formless waters, and nowhere did there remain any refuge, firm and solid and strong, to which I might flee. As the full horror of a sentient soul suspended in a universe resolved into the primal elements of restless sea and clouded sky fastened itself on my consciousness, I awoke and realized it was but a dream.

DISINTEGRATION OF THE MORAL UNIVERSE.

Yet in my waking hours, as I have pondered over world events, it has seemed to me rather a vision than a mere dream. It is true that the solid physical earth still stands fast and the sea still knows its appointed bounds; but in the realm of the civilization that the human race had believed itself to have built up, with landmarks firm and fixed and principles broad and solid, there is the tumult of destruction and the uncertainty of a fading mirage. Mr. Read is said to have remarked of Theodore Roosevelt that he had all the air of having discovered the Ten Commandments. He meant thereby to indicate that Mr. Roosevelt wasted effort because he argued and harangued over that which everybody already accepted and about which there was no dispute. Yet we are come upon a day when, on a gigantic scale and in organized fashion, with marching armies and thundering cannon, the Ten Commandments are called in question and their authority and truth are flatly denied. This war in which we are engaged is a war to determine whether the Ten Commandments shall be the basis of human conduct or not. There is no single principle either of political or of moral and spiritual life hallowed and consecrated by our history and traditions that the German has not contemptuously repudiated and denied, refusing either to live by it himself or to permit us to live by it. Worst of all is it that he has found among us ourselves those who applaud his conclusions and defend his conduct. And so in my waking hours I have found myself grasped and held by the horror of a vision where the foundations of the moral universe were disintegrating and the wailing cry, "It is fallen!" rose over a civilization that was crumbling beneath the waves of barbarism and bestiality.

But a vision in the olden days was not always a prophecy, but rather a warning. It did not necessarily come true; it served to prevent that which was imminent and threatening from coming true. So now let us take warning from the vision. Our political doctrines are in danger; we must defend them with argument and exhortation. The Ten Commandments threaten to succumb; we need a Roosevelt to preach them once again and to pound them into the conscience of the world. We have to-day a great propaganda for a new religion which abhors mercy and pity and brotherly kindness and exalts in their place the doctrines of frightfulness and the will-to-power. With all our might we must maintain the conscience of humanity. Borne on the bayonets of marching millions, proclaimed by bursting shell and poisonous gases, thrust upon us with the violation of womanhood and the torture of innocent childhood, with treachery and knavery as his sceptre and lust and cruelty as his crown, the old tribal god Thor is resurrected once again and challenges the supremacy of the one God of all the universe whose throne is based on justice and mercy and truth; against his domination, to put down forever his insurrection, we must summon every resource we possess of physical man power, of wealth, and of brains.

SLOWNESS TO REALIZE THE MORAL NATURE OF THE STRUGGLE.

Two things have greatly astonished me in this supreme crisis of the race. The first has been the extreme slowness of our leaders and our people to realize the moral nature and significance of the struggle that began in 1914. In the days when we were admonished to be neutral

"even in thought," and when to our everlasting shame a very popular song was "I didn't raise my boy to be a soldier," the monstrous moral obliquity of the Hun and the colossal assault which he purposed upon the liberties and the spiritual standards of the nations of the earth were as baldly and brutally and shamelessly proclaimed as they are to-day. Yet high and low among us remained blind and deaf, with consciences lulled asleep by the softness of accumulating wealth, and with flesh that shrank from the physical pain and hardship that a bold and courageous course would have entailed. Meanwhile the fateful years went by, the golden years of opportunity which the most obvious and elemental prudence dictates should be used to put the Nation in shape for the eventualities that did finally arrive. The mystery of the failure of leadership during all these years is excelled only by the mystery of the perverted intellect that can in this day and hour proclaim its thankfulness to God because we entered on this war unprepared, and the further mystery of governmental exigency that can for a moment tolerate such a perverted intellect in important office. Had we been even moderately prepared, prepared merely for the most obvious contingency, we could have by now been able to throw into France a force of decisive weight. What shall we think of the mental processes of the American official who thanks God that we can only look on during this crucifixion of humanity, who rejoices that our boys must face the Hun with the disadvantage of lack of training. Says a German reporter of a recent encounter at the front: "Our losses were slight, while those of the untrained Americans were severe." And Mr. George Creel thanks his God that our unpreparedness necessitates these losses.

IMMINENCE OF PHYSICAL DANGER TO AMERICA.

It would be useless to mention this unfortunate past and my horror of it were it not that a realization of that error may help to avoid another disastrous mistake. I said that two things had astonished me, and one—the failure to realize the nature of the conflict—I have already touched upon. The other is the failure of so many of us to realize our own actual physical danger in this war. Many most intelligent people cherish the idea that the conflict can not touch us; that the broad Atlantic bars all danger, and that, anyhow, the allies are bound to win. There are many who still insist that we are at war in the cause of other nations—Belgium or Great Britain—and who, according to their predilections, either applaud what they consider a fine and noble altruistic crusade in behalf of oppressed innocence or condemn what they call the sentimental folly of sending Americans over to fight in Europe's quarrels.

The truth is that for long America failed to fight her own battle and depend upon European nations to fight it for her, and that, too, without even so much as giving them thanks for it. The truth is that we either win this war or we shall experience the same horrors and undergo the same shame as Russia is now experiencing. And all this was just as true in the beginning of the war as it is now, so far as Germany's intentions are concerned. Germany victorious over England and France would mean an immediate attack on this country, and with every prospect of success. Consider just three points: (1) Germany has bankrupted herself and her people in this war and she has done so deliberately, planning to recover her losses and much more besides from other nations. To-day the only large nation that has in any large measure the wealth she needs is America. Germany's motto is, "What I want I take." She has profited by every war she has waged since the time of Napoleon. Just as surely as the sun rises she will come after the wealth that has now become a necessity for her existence as a nation. (2) She will have added to her own strength that of England and France. To her own navy will be added that of those two countries. The shipping of the world will be hers; the resources of practically all Europe will be hers. All the products of all the factories of England and France, their mines, their fields, their people—exploited just as those of little Belgium have been—all these resources will be hers. And (3) she will have a veteran army of 5,000,000 troops, not to be created, but already in the ranks trained to the minute, experienced in warfare as no other army in existence can be trained, inured to the hardships of campaigning and flushed with the prestige of a victory such as no other nation has ever won. With such an army and navy what more delightful prospect could be offered to Germany's fighting men than the pillage and booty of an American expedition. Will she attack us? We do not need to be in doubt about it. She tells us so herself. It has been a favorite exercise of fledgling young officers in the war office of Berlin to work out in detail the plans for an attack on America. Selected plans for it are ready on file and merely await the favorable occasion. Before such an attack, thanks to Mr. George Creel and men of his kind, America, this dear land of ours, would be like a dumb sheep before her shearers.

LOSSES INVOLVED IN DEFEAT.

What I want to have you realize this afternoon is the extent of the loss involved in such a catastrophe. Let us pass over the physical agonies of our country overrun by a German Army—the nameless horrors of Belgium transferred to our own land, you and I frantically seeking some remote corner where our loved ones might be hidden in safety, the desolation of all that we hold dear and sacred, this proud Nation, humiliated and broken, bending beneath the weight of an indemnity that would mean economic slavery—let us pass over all these things to consider certain intangible but even more serious losses.

And first let us consider that with this victory would die for a thousand years the hope of the race for liberty. All the slow climb up in the days of feudalism, when men were but dumb, driven cattle, to the liberty of self-determination that our Republic has developed would at once be overthrown and mankind would sink back into practical slavery. For in this matter we carry not merely our own destinies, but those of all the world. The Government of Germany is the government of absolutism, the government of a dangerous paranoia, instigated and directed by a coterie of ambitious and utterly unscrupulous men, who, calling themselves the State, seek to aggrandize themselves and extend their power. It is a government that values men merely as the tools and implements of the State, caring for them and providing for them just as the landowner provides for and rations his stock or his horses in order that through their well-being they may be able to perform more surely and more effectively their master's farm work. It is a government of caste, where hereditary princes and noblemen wield power and usurp all privileges while the common man grovels before them and finds his only safety in obedience or in seeking remoteness and insignificance. It is a government where every agency—school, church, social organization—has for generations been consciously controlled and directed to the one end of inculcating absolute and unquestioning obedience among the masses of the people.

This is the government that among us would dominate thought and proceed remorselessly to stamp out the pestilential ideas previously prevailing of the dignity of the human soul, that enables even the

humblest among us to stand upon his rights and to face his antagonist with level eyes. It has been a primary tenet of our political philosophy that class government is inevitably bad government; that no man and no class or caste of men is good enough or wise enough arbitrarily to determine year by year what is best for other men or classes of men; but German dominance means that you and I would soon recognize the superior wisdom of these supermen, would readily resign our own puerile ideas of things noble and desirable and would in the end accept, like the Israelites, the slavery of Egypt and even the hard requirement of bricks without straw if we might rejoice after the day's tasks were done in the savory Egyptian fleshpots. The dream which we had all deemed so nearly realized of a world of governments deriving their just powers from the consent of the governed and firmly based on individual liberty, equality before the law, and freedom of opportunity will have faded quite away and government of the people, by the people, and for the people will really have perished from the earth. In its place will have come a governmental system that originates with and commends itself to the distinctively predatory nations of the world—Germany, Austria-Hungary, Bulgaria, and Turkey.

BREAKING UP OF MORAL CONCEPTS.

But not merely does civilization totter under these blows from the political side, but the moral foundations of its social life are also undermined. The German is openly teaching to-day that the old time-honored virtues of truth, honesty, justice, mercy, kindness, and chivalry are simply forms of weakness and that the one great human virtue, the will-to-power, will not for a moment permit such weaknesses to stand in the way of achievement. It is true that these doctrines have been taught in the interest of the State and are reprobated as between Germans within the State. Indeed, the laws of the German State itself condemn as penal offenses between individual Germans exactly the same actions that done in behalf of the State are exalted as in the highest degree commendable.

But you can not found the State on lying, and treachery, and monstrous inhumanity, and at the same time expect the statesmen and citizens of the State to practice toward each other the virtues of good faith, honesty, truthfulness, and brotherly kindness. Thieving pirates may stick together and show loyalty to each other while they are looting their victim ships, but when the time of dividing the loot comes then each can trust the other not at all, and they inevitably seek by sheer strength or by treachery to cut each others' throats. So, while the German nation is being held together for the present by the promise of booty and loot, at the end, whether the victory is won or lost, it is sure that the individual Hun will learn and apply individually the lessons his leaders have been teaching him to apply, for the fatherland's sake, to the alien and the enemy. It is simply unbelievable that you can deliberately train and exercise millions of men for years in murder, rape, rapine, and destruction, and have them return quietly and peaceably to their homes to take up their usual occupations as law-abiding citizens. Successful and profitable knavery propagates itself. The Germans are causing their armies to believe and practice that the basest treachery is highly commendable toward an enemy. They are causing individuals to practice toward their enemies the same principle that they have so brazenly avowed through their Government, viz, that no law or treaty is binding on Germany which it is for the interest of Germany to violate. In order that the German State may extend its borders the soldiers are taught and even ordered to practice the most diabolical cruelty, to give loose rein to their most beastly lusts. They are used to desolate whole regions; they are hardened to look on impassively while great masses of people starve; they are employed to conduct great columns of wretched men into exile and slavery far from their homes, while their women are held in those homes in a worse form of slavery. Said a German general: "By starvation we can accomplish in two or three years in East Poland more than we have in West Poland (which is East Prussia) in the last hundred years. . . . We propose to remove the able-bodied working Poles from this country. It leaves it open for the inflow of German working people. By and by we shall give back freedom to Poland. When that happens Poland will appear automatically as a German Province."

I shall not stop to exclaim over the monstrous cruelty of this program. What I am considering is its effect on the men who carry it out. If success crowns the German plans it is inevitable that the German man, when he returns to his home or settles in some new German Province, will regard lying and treachery as the royal road to success. His passions, long accustomed to the wildest indulgence, will have long ago dominated his will toward restraint, and his conscience, thoroughly seared by the horrors of cruelty that he has accustomed himself unmoved to perpetrate, will make no protest against any means necessary to obtain further indulgence. The German to-day is training millions of fiends in human shape, and when the time comes to turn them back again into human society the bounds of society itself will be dissolved. For no man will be able to trust his neighbor in any way, and without human trust human civilized society is impossible.

The human race has painfully struggled forward from utter savagery to the point where it has regarded certain moral characteristics as the highest manifestation of the divine in man—honor, chivalry, truth, justice, mercy, pity, sympathy, and the rest. Comes the Hun at this year of grace 1918 and tells us these things are all pitiable weaknesses. "He that sweareth to his own hurt and changeth not" is a fool; nay, even worse: he is inefficient; he lacks kultur. Away with him and all his kind. Let them give place to us who know not the weakness of truth and good faith and have no scruples about our pledged word.

These people it is who in the event of victory shall tread our honor in the dust, shall literally dash our little ones against the stones, shall lead our young men and maidens into the depths of moral degradation with themselves. Are not, as in my vision, the foundations of our moral universe breaking up?

A NEW GODHEAD AND A NEW RELIGION.

But beneath this deep a lower depth profound still yawns. Driven by their political and moral philosophy, these people must needs mount into the heavens and pluck God from His throne. The God whom Jesus taught, the God of all the universe who must needs by His very nature do right, the God who condemned lying and treachery and fraud and who exalted justice and mercy, and truth; who revealed Himself as a God slow to anger and plenteous in mercy, a God who pitieth those who fear Him like as a father pitieth his children—such a God does not fit in with the doctrine of frightfulness or with the ruthlessness of the "will-to-power." Hence the German must invent a new God of the own. In his diseased fancy he attempts a parallel of Jewish thought; he calls his race the chosen people—chosen by the right of their superior intellect and will power to inherit the earth. "The meek shall inherit the earth?" By no means. Just the opposite. Such a baseless

phrase discredits the whole book in which it is found. It should read that "The German superman shall inherit the earth." Convinced of his being chosen, he must create some being to choose him; and so he pictures out a resurrected tribal war god, Thor—"The good old German god up there who will give us the victory." And here the brief parallel with Israel ceases. For this German god is, after all, only a war god, a sort of fetish to give victory in battle. Nowhere is there anything of the majesty of the Great Creator of the universe or of His righteousness and purity. There is lacking from this German Thor all that realm of thought and feeling conveyed in the sentence, "A broken and contrite heart, O God, Thou wilt not despise." All this must be vigorously excluded from the character of the god that the arrogant Hun creates for himself. But this god he does not create merely for himself. Sword in hand, he comes before us with terrible men and demands: This be your god, O peoples of the earth.

I have tried to present to you my vision of a moral and spiritual universe in peril—a universe where all the powers of hell have arrayed themselves together to overthrow and destroy all of spiritual life and truth and beauty that the human race has so far attained to. This it is that this war means for us. To lose the war means for America infinite material loss. It means humiliation and shame and horror for those we love. This, indeed, is sufficient to cause us to sacrifice all that we have and are to defeat our foes. But more than this, its consequences reach into the far-distant future. It means the overthrow of the citadel of human liberty, the destruction of our recognized moral principles, the banishment of God from His realm in the hearts of men.

SINGLE-HEARTED DEVOTION ONLY CAN SAVE US.

In the course of human history the fate of the race has more than once turned on the valor and steadfastness of men in serried ranks in battle. To-day the most tremendous battle of all is set. The whole earth is in arms, the conflict sways to and fro in deadly uncertainty. Everything that is of value to the race hangs trembling in the balance. Only America has not yet brought up her full weight to throw into the warring scales. Oh, let us hurry, hurry; let each of us give all that he has, the utmost of his strength, to decide the conflict that our loved ones may be protected and that the spiritual values of a thousand years may not be lost.

HOWARD EDWARDS.

Increased Pensions.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

On the bill (H. R. 9959) increasing rates of pensions of soldiers and sailors of the Civil War.

Mr. BROWNE. Mr. Speaker, the attention of this Congress has been directed almost exclusively to legislation affecting the great war in which our country is now engaged. The fires of patriotism are burning brightly throughout the land. From the smallest hamlet to the largest city, the single and overpowering purpose of every man, woman, and child seems to be to do his part in bringing the great conflict to a speedy and successful termination. In the midst of the excitement of war and without abating our zeal in accomplishing our purpose, we should not neglect other sacred duties and obligations. Back in the sixties, when the life of our country was imperiled and she needed brave men to fight for her preservation, the people of this country made a solemn pledge that the soldiers, their widows and dependents, should be the wards of the Nation and should never come to want. I am glad, therefore, that the rules of this House have been suspended to allow the consideration of the bill increasing the pensions of our soldiers and sailors.

I am glad that we have with us as chairman of the Committee on Pensions that sturdy old veteran of a hundred battles, Gen. SHERWOOD, now in his eighty-fourth year, hale and hearty. I am glad that we have a Speaker like CHAMP CLARK, who is always ready to help in a worthy cause, and who is the soldier's friend, and who has recognized his colleague, Gen. SHERWOOD, to give him an opportunity to bring this bill up for our consideration.

DEATH RATE OF VETERANS.

The great Army of the Union was disbanded 53 years ago. Crowned with victory, they were hailed as the "saviors of our country." There are now only 300,000 survivors of that grand Army of over 2,000,000 men, and they are passing away at the rate of over 2,500 per month. At the close of the war, when this great fighting citizen Army was about to be disbanded, some of the foremost statesmen of Europe predicted that we would have trouble; that a military autocracy would be established. When the order came for the Army to disband, the citizen soldier quietly went back to his work in civil life. The road that these veteran soldiers have had to travel in the last 50 years has been a hard one. The profession, the business, or occupation which was flourishing when the young soldier left it was in most cases ruined when he returned. The farm was

run down and the interest had accumulated on the mortgage. The sturdy youth, who had never felt fatigue, soon found that the forced marches, the exposure, and hardships of war which he endured were telling on his vitality. As the years went by, the old wound or disability began to trouble more and more. Nature was exacting her toll that baffled the aid of doctors and medicine. An eminent physician who had once been a surgeon in the Army told me that no veteran of the Civil War who had been in actual service any length of time came out of the service with as good a constitution as when he went in.

WAR-RISK INSURANCE.

The war-risk insurance, which was passed by Congress to apply to our soldiers in the present war, makes more adequate provision for the soldier than the pension system. I gave this measure my hearty support and believe it is a just measure. The Government has written up to this time nearly \$15,000,000,000 insurance on its soldiers against disability and death.

BILL INADEQUATE.

This bill, Mr. Speaker, in my judgment, is inadequate to meet the demands of the soldiers. We have not increased pensions as much as the increase in the cost of living. Therefore, as a matter of fact, we have not increased pensions. While we have not lowered the pensions, we have allowed the high cost of living to lower them without coming to the rescue with adequate legislation to meet the increased cost of living. Under the parliamentary status, this bill coming up under the suspension of rules, no amendment can be made, and one is placed in the position of either having to vote for the bill or against it. I am therefore following the leadership of Gen. SHERWOOD, a Civil War veteran, and hope that the Senate will substitute the Smoot bill, which is more liberal in its provision. This bill, if passed, can be worked out in conference by the Senate and House conferees. If we fail to pass this bill, it is very doubtful whether we can have a chance to get any legislation on this subject.

The effect of this bill is to increase pensions approximately 30 per cent, with a minimum of \$25 per month and a maximum of \$50 per month. I am very strongly opposed to section 3 of this bill, which excludes inmates of State or National soldiers' homes or pensioners who receive a net income, including the pension, of \$1,000 per year. I think this discrimination is unjust, and I sincerely hope the conferees will strike it out. It is argued that there is a great demand on our Treasury at this time. This is true, but there are many enterprises that ought to side-step for a measure like this. It has been said that Republics are ungrateful. A number of years ago Congress passed a resolution commending the services of that distinguished soldier and explorer, George Roger Clark, whose services gave this Nation almost an empire of land. A committee was designated to convey the resolution to this distinguished American and present him with a sword as a token of the appreciation and esteem of his countrymen. The committee located the old gentleman in a little hamlet in the West and after making the presentation speeches asked him if he had anything to say. His reply was, "Take back the trinket and tell Congress that when I needed a sword in the defense of my country I found one; now I need bread."

All the surviving veterans of the war have lived more than their allotted time of three score years and ten. They have not long to live, and I feel that it would be an everlasting blot on the fair name of our country to have a single veteran suffer for lack of money to buy the necessities of life in his declining years.

Shoot the Spies.

EXTENSION OF REMARKS

OF

HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 11, 1918.

Mr. CLARK of Florida. Mr. Speaker, under the leave granted to extend my remarks in the Record I include the following petition signed by numerous constituents of mine:

APRIL 6, 1918.

HON. FRANK CLARK,
Washington, D. C.:

We, the undersigned citizens of Williston, Levy County, Fla., contend that we are loyal and patriotic to our Government and beloved boys who are to go and who are now in the trenches in France by petitioning you and our Florida Representatives now in Congress assembled to work for and advocate most emphatically a proclamation

from the President of these United States, or a law enacted by Congress and immediately put in force, to execute by shooting all conspirators or spies of our enemies, after their conviction by a civil court or court-martial of such offense, whether they be citizens of these United States or not.

We do this on April 6, 1918, the first day of the third liberty loan drive, and contend we are as loyal and patriotic as when we buy a liberty bond, which we do.

Mr. Speaker, I have asked leave to print in the RECORD this petition so liberally signed by the good and true men of the little city of Williston, Fla., because I believe it gives voice to the sentiment of the loyal American patriots who constitute the citizenship of the second congressional district of the State of Florida, which I have the honor to represent in this historic Chamber. Mr. Speaker, I believe I can claim what very few Members of this House can claim, and that is that practically all the people who live in the district I represent can trace their ancestry back to the American Revolution. Is it any wonder that these people are loyal? Is it strange that they are intensely patriotic? Do you marvel that they are willing to bear burdens, to suffer, and if need be to die for Old Glory? The blood which courses through the veins of the brave people who inhabit the second district of Florida has stained the sands of every battle field from Valley Forge, Yorktown, and Guilford to the blood-soaked fields of Flanders. I do not represent a constituency of great wealth. The landscape is not dotted with great factories, from the tall chimneys of which belches forth the black smoke of industry, indicative alike of swollen fortunes and human misery. We can not boast of a cosmopolitan population where strange tongues speak in languages unknown to us; "bread lines" and "soup houses" are strangers to our section, and the I. W. W. has never dared raise its infamous head in our midst. For all the years that Florida has been one of the sisterhood of States our people have been loyal to the principles of republican government, and have never failed to answer when the roll has been called for patriots to meet a foreign foe, and have with unfaltering courage ever been found where the battle raged the fiercest. In the present world-wide contest Florida is one of the States which furnished to the service more than her quota of volunteers, and the blood of her gallant sons has already reddened the fields of France. Florida, peopled with real red-blooded Americans of Revolutionary stock, has no patience with disloyalty in this hour of the Republic's peril, and justly demands that the spy, the traitor, and the "slacker" shall receive the punishment which their nefarious conduct so richly deserves. I know Florida. I can speak for Florida. God bless her! She is the brightest jewel that glitters in the crown of statehood, and her sons and daughters will never prove faithless to the starry emblem of this Republic, so often bathed in the blood of their fathers in struggles for the preservation of human liberty.

Pensions.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918,

On the bill (H. R. 9959) increasing the rates of pensions of soldiers and sailors of the Civil War.

Mr. CARY. Mr. Speaker, I shall vote for this bill, because it will give at least some small measure of relief to men who need it very badly.

I shall vote for this, as I have voted for every bill increasing a veteran's pension that has come up since I have been a Member of Congress, because in my opinion we have not even begun to pay the debt we owe these men who are all that are left of the gallant armies that preserved the Union and kept this continent from splitting up into belligerent and separate nations.

But, Mr. Speaker, I think the bill ought to have been amended in several particulars. I think the proposition denying the increase to soldiers having a \$1,000 income should have been cut out, and I also believe that the men in soldiers' homes should be entitled to the benefits of the bill.

As it is, you punish the old soldier who has been thrifty and fortunate and you punish the one who has lost everything. If he has saved his money he can not receive an increase, no matter how bravely he fought nor how much he suffered in those arduous days of long ago. If he lost his money, and now in his old age has to break up his home and seek shelter in a soldiers'

home, you cut him off from the benefits of this act. I am opposed to both of these provisions, not on account of the money involved, but because they have a tendency to make the pension roll into a charity list, and I can not think of anything more repugnant. The pension roll is and should be kept a roll of honor. A place on that roll should mean, not that the recipient of a pension is a dependent on Government bounty, but that he is entitled to grateful recognition for the service he rendered, no matter what his position in life may be to-day.

Consider the sacrifices those men made.

The men in the Army that preserved the Union received all the way from \$13 to \$15 a month. The men—privates—in the present great world's contest receive \$30 a month, and one-half, or \$15 more for the dependent wife, and from \$5 to \$8 more to the children. In addition to that, they get insurance at the rate of \$8 per thousand. Now, then, I am glad of it. We all voted for it. But let us recollect one thing—that there are less than, say, 300,000 men now surviving of that grand Army of 2,200,000 men that saved this Union.

If those men had been slackers, if they had not been ready to make the supreme sacrifice to preserve the Union, there would be no mighty Army to-day preparing to fight for the liberty and freedom of the world.

Now, Mr. Speaker, I only wish to add one word more on the subject of pensions in general. I have been very glad to vote for the provision we have made for our soldiers in this present war. Especially wise, I think, has been the adoption of measures to take care of their families and to provide liberal insurance for them. We are learning a little all the time on the subject, and I hope the day will soon come when we will have comprehensive and liberal pension laws for all veterans of every war that we have ever fought. I hope we will pass adequate pension laws for the Spanish-American War veterans and their widows and orphans, and that in the coming bright days of peace and liberty throughout the world no soldier who ever fought beneath the starry banner shall ever know what want and neglect mean, and also that no widow or orphan whose husband or father fought for Uncle Sam shall ever feel the pinch of hunger or the burden of poverty.

The Shame of a Disappointing Pension Bill.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918.

Mr. RANDALL. Mr. Speaker, this bill granting a general increase in pensions to veterans and to widows of veterans of the Civil War is brought before this House in a most unfair manner. When the chairman of the Pension Committee moved to pass this bill under a suspension of the rules he foreclosed all opportunity for any Member to offer an amendment to increase the rates provided in his bill.

Mr. Speaker, on January 3 of this year I introduced a bill to increase pensions in the following language:

That from and after the passage of this act the rate of pension for a widow or widowed mother of an officer or enlisted man of the Army, Navy, or Marine Corps of the United States, or of a woman who served as a nurse, now on the pension roll or hereafter to be placed on the pension roll, and entitled to receive a less rate than hereinafter provided, shall be \$25 per month; and nothing herein shall be construed to affect the additional allowance provided by existing pension laws on account of a helpless child or child under 16 years of age.

The rate of pension of an officer or enlisted man who served in the Army, Navy, or Marine Corps of the United States, and who is 70 years of age or over, and now on the pension roll or hereafter to be placed on the pension roll, and entitled to receive a less rate than hereinafter provided, shall be \$40 per month: *Provided, however*, That this act shall not be so construed as to reduce any pension under any act, public or private: *Provided further*, That the provisions of this act shall be administered, executed, and enforced by the Commissioner of Pensions.

Mr. Speaker, the pending bill, which I will insert also in my remarks, is a ridiculously small recognition of the glorious achievements of the men who saved this Union from destruction. They served their country patriotically. There was no allowance for the family at home, as we have in the present National Army act. The Civil War veterans received \$13 per month in depreciated paper currency. I say that it is a shame upon the Nation that we can not be more generous than the committee has been when it gave us the bill now about to pass this House in the following terms:

That the rate of pension of any person who served in the military or naval service of the United States during the Civil War and was honorably discharged therefrom, and who is now in receipt of a pension or shall hereafter be granted a pension under the provisions of any general law, or is now pensioned under a special act of Congress, and who is entitled to a pension of less than \$25 per month, shall be \$25 per month.

In case such person has reached the age of 70 years and served one year, the rate of pension shall be \$26 per month; one and one-half years, \$28 per month; two years, \$30 per month; two and one-half years, \$31 per month; three years or over, \$32.50 per month.

In case such person has reached the age of 75 years and served 90 days, \$27 per month; six months, \$29 per month; one year, \$31 per month; one and one-half years, \$35 per month; two years or over, \$39 per month.

That any person who served in the military or naval service of the United States during the Civil War and received an honorable discharge, and who was wounded in battle or in line of duty and is now unfit for manual labor by reason thereof, or who from disease or other causes incurred in line of duty, resulting in his disability, is now unable to perform manual labor, shall be paid the rate of \$39 per month, without regard to the length of service or age.

SEC. 2. That any person who served in the military or naval service of the United States during the Civil War and who was honorably discharged therefrom, and who is now pensioned or shall hereafter be pensioned under any general law, or who is now pensioned under special act of Congress at a rate of \$20 per month or more, shall be entitled upon the passage of this act to receive in lieu thereof a rate which shall be fixed by the Secretary of the Interior, in multiples of 50 cents, nearest approximating 30 per cent additional to the present rate; *Provided*, That no rate of pension shall be granted under the provisions of this act in excess of \$50 per month; *Provided further*, That no pension heretofore granted shall be reduced by this act.

SEC. 3. That no pensioner shall be entitled to receive any benefits under the provisions of this act for any period during which he shall be an inmate of any State or National soldiers' home; and the provisions of this act shall not apply to any pensioner whose net annual income from all sources, including his pension, is \$1,000 or more.

SEC. 4. That the increased rates of pension provided by this act shall commence from the date of the approval of said act, or, in case of original pensions hereafter allowed, from the date of commencement of such pensions as provided by existing laws.

SEC. 5. That no attorney shall be recognized and no attorney fees shall be paid for the presentation or prosecution of any claim under the provisions of this act.

A Letter From France.

EXTENSION OF REMARKS

OF

HON. JOHN M. ROSE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 10, 1918.

Mr. ROSE. Mr. Speaker, by virtue of leave granted to extend my remarks in the RECORD I desire to include a copy of a letter from one of the young men of the nineteenth congressional district of Pennsylvania, as indicative of the loyalty, patriotism, and love of country prevalent among the young men of America who are now fighting in France for liberty:

ON ACTIVE SERVICE WITH THE AMERICAN EXPEDITIONARY FORCE,

April 9, 1918.

DEAR MOTHER: Hope you received the two cards I sent. Would have cabled, only we are not allowed as many privileges as we were at Allentown, and the censor is very strict regarding what we write. We came over on a very fast boat and all the meals were as good as anybody could expect; in fact, we were quite surprised that they were so good. We slept in hammocks and the weather was fair. I did not get a bit sick and enjoyed every minute of the trip. We first were sent to a rest camp for two days. It was an old camp with quite a history, but it is kept in good condition. We then traveled for 24 hours and arrived at our present location, a number of miles away from the front, and it looks as if we would remain here for several weeks, at least. We are kept busy repairing automobiles, and I like the work much better than that at Allentown. Pass privileges are not much to speak of, but we did not come over for a good time. We have good, comfortable barracks and they are feeding us good, and from all indications they expect to continue doing so. We really were surprised to find the food as good as it is. We hardly realize we are in France, because we meet so many of the boys we know, a lot of them from the Allentown camp. The Young Men's Christian Association held a reception for us the first night we arrived. They had a band concert and served hot chocolate and real American apples. Robert Laughner is on the Young Men's Christian Association staff here. He knows Margaret and Dick and wants to be remembered to them.

People who say the United States are not doing their part don't know what they are talking about. I think for the time we have been in this war we are doing wonders. Really, I can't see how we could have done any more, or even so much. Of course, we are away ahead of the people over here in all industries. Their railroads look like toys compared with ours. The climate is about six weeks ahead of us. The gardens are all coming up and the lilacs in full bloom. Tell Beeky I might be home next Easter, and will play with her, and make up for not sending cards this Easter, as we were on the sea at that time.

French money and their system is very easy to learn. Their paper money looks like United Cigar coupons, and we get paid in it, but don't suppose we will be paid for a couple of months at a time. The French language is not so easy, and I am afraid if I make any friends among them they will have to learn to speak English. Some of the French boys have had a couple of years of English at school, and they talk to us fairly well. We get the European edition of the New York

Herald, and in that way sort of keep up with the news "back home." It seems funny to hear people talk about "back in the States," and I can't get used to hearing it. Don't forget "Bub" (Charles) Roberts is with me, and he might be a more regular letter writer than I am; so you better see Mrs. Roberts every now and then for news of us. He makes a very fine "buddy." Write soon, and love to all.

Your son,

BILL.

Address: W. J. Suppes, Sec. 568, U. S. A. A. S., American E. F.

To Coordinate and Consolidate Executive Bureaus.

EXTENSION OF REMARKS

OF

HON. DAVID A. HOLLINGSWORTH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 14, 1918.

Mr. HOLLINGSWORTH. Mr. Speaker, this is the second day of general debate in the House on this bill; and although not participating, I have listened very carefully to those who have, hoping to understand its full import before registering my vote. Early in the debate it was stated, in effect, that there was no opposition to the measure, the ranking minority Member in age and experience, Mr. CANNON, propounding to the House before the debate began the following inquiry without response: "Is there anybody opposed to it?"

Just why general debate lasting for days, without any actual progress being made toward the passage of the bill, should be arranged for by the leaders anxious to push legislation, especially great war measures, to a speedy conclusion seems incomprehensible to me.

It looks like wasting time and the money and means of the people to thus dawdle with important measures asked for by the administration and to the passage of which there seems to be a consensus of favorable opinion.

On yesterday, while listening to the usual House oratory, I counted the number of Members present three times, and on each occasion there were fewer than one-tenth of the membership in attendance. I do not offer this in the way of criticism; I am often among the absentees myself.

It may, however, be enlightening on the causes which gave rise during the debate yesterday to the following colloquy between the acting majority and minority leaders and a partial excuse for the suggestion of Mr. Creel, therein referred to:

Mr. GILLET. Mr. Speaker, I call the attention of the gentleman from North Carolina (Mr. KITCHIN), who is the leader of the House, and so probably more than anyone else responsible for its dignity, to a sentence from a speech by Mr. George Creel, who holds an important Government position under this administration, made in New York yesterday. In the course of his speech the question was asked him:

"What is a loyal heart? Have all the Members of Congress loyal hearts?"

Mr. Creel responded:

"I don't like slumming; so I won't explore into the hearts of Congress."

I think it is not improper to bring that to the attention of the leader of the House for his opinion or action.

Mr. KITCHIN. I do not know that my opinion will be worth anything. I should like to know what paper the gentleman is reading from.

Mr. GILLET. The New York World of this morning.

Mr. KITCHIN. With all respect to the New York World, I would rather see that verified by Mr. Creel or somebody else, rather than take what the New York World says about it. In my experience in reading the New York World I have found that it is most difficult for that paper to state the exact facts about anything. [Applause.] But I would say this, that if Mr. Creel or anybody else at the head of any responsible bureau, or department, or commission under this Government made any such statement, or has any such opinion of Congress, then he is not worthy the respect of any Member of this House, or of any patriotic or decent citizen of the United States. [Applause.]

As to the merits of important war measures Members of Congress, patriotically anxious to stand by the President in all proper measures making for efficiency in the prosecution of the war, must depend in a measure upon the investigations and reports of the special committees having them in charge. In no other way can intelligent action be had at all times by all the Members.

This bill has been considered by the Judiciary Committee, composed of 21 high-class Members of the House, whose unanimous, nonpartisan, favorable report I regard as of great value. My own study of the measure has led me to the same conclusion.

I shall therefore support it by my vote as a patriotic duty. I quote and embody as part of my remarks the following extract from the committee's report:

The Committee on the Judiciary, having had under consideration the bill (S. 3771) authorizing the President to coordinate or consolidate executive bureaus, agencies, and offices, and for other purposes, in the

interest of economy and the more efficient concentration of the Government, report the same back to the House with the recommendation that it do pass.

The committee saw no just reason why this bill should not pass.

It only gives the President power to redistribute and coordinate functions, powers, and officers of the executive and administrative branches of the Government in the interest of the national defense, the successful prosecution of the war, and for the more efficient administration of the executive branches of the Government.

The act can not remain in effect longer than six months after the termination of the war.

The powers given the President can be exercised only in matters relating to the conduct of the war.

The moneys appropriated for any executive branch can only be expended for the purposes for which such appropriation was made.

If the President concludes that any bureau should be abolished and the functions of such bureau conferred upon some other department or bureau, he is required to report his conclusions to Congress with such recommendations as he may deem proper.

Upon the termination of this act, all duties and functions of the various executive and administrative branches of the Government which may have been affected under the provisions of this act, shall revert to the respective branches as they existed prior to the passage of the act.

No substantive power is given to the President in this bill. Able lawyers contend that the Chief Executive now has the power to redistribute and coordinate the executive functions of the Government, but since there is some doubt as to this, it is wise for the Congress to give express assent to the exercise of such power.

The bill is clearly in the interest of efficiency and economy. Every executive agency of the Government should be most efficiently utilized in the interest of a successful prosecution of the war. This can not be done unless the power is vested in the President to cut "red tape," to coordinate and redistribute these executive functions wherever it is necessary in matters relating to the successful conduct of the war.

Mr. Taft, while President, saw clearly the necessity of such power in the executive branch of the Government as is here conferred, even for peace times. In his message to Congress on March 13, 1911, urging the creation of an efficiency commission, he said:

"Functions and establishments have been duplicated, even multiplied, causing conflict and unnecessary expense; lack of full information has made intelligent direction impossible and cooperation between different branches of the service difficult."

Mr. Taft in an editorial in the Philadelphia Public Ledger points to the necessity of this legislation and commends the objects sought in this bill. From that editorial the following is quoted:

"The bill will undoubtedly give to the President an elasticity of action which can make greatly for proper coordination. It enlarges his power; so it increases his responsibility for a lack of coordination in the future. There is duplication—indeed, quadruplication—of functions that might well be put under one head. Take the matter of secret service. There is now a secret service in the State Department, in the Department of Justice, in the Treasury Department, and in the War Department. Clearly it would make for both economy and efficiency to have all the agencies engaged in the highly important work of ferreting out treason and spying in our vast and varied population of 190,000,000 and in 48 different States under one responsible head. Nothing is so vital to success in the Secret Service as the concentration of all the details concerning criminal conspiracies and acts in one office and under one control, where they may be compared, conclusions reached, and action taken. The Government has been criticized for failure to convict spies and traitors. Popular imagination on the subject has doubtless been stirred without facts to justify it. Still it is likely that more spies and traitors could have been caught had there been one Secret Service."

"Another great field for improvement is in the matter of production and purchase for war purposes. Another is the matter of transportation. There are others. In some of these fields action has been taken, but its effect has been limited because of the lack of power in the President. The authority conferred by the President on Mr. Baruch it might be hard to sustain as legal until this bill becomes law."

"Under this bill the President may not abolish departments. He may not create new offices and fill them. He may take a bureau out of one department and put it in another and then unite it with a bureau or office there. He can not spend money for any function not expressly authorized by Congress. On the passage of this bill, however, nothing will prevent complete correlation and union of functions directed toward one specific end. This should make greatly for a successful conduct of the war."

Prison Labor in the Atlanta Penitentiary.

EXTENSION OF REMARKS

OF

HON. BURTON L. FRENCH,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 10, 1918.

Mr. FRENCH. Mr. Speaker, the bill that is before us for consideration is urged as a war measure. It provides for the employment of the inmates of the Federal penitentiary at Atlanta in various ways. First of all it provides for employment of some of them in the manufacture of canvas duck for uses of the Army and the Navy and for mail bags for the Post Office Department. It then provides for the purchase of land for agricultural purposes in connection with the institution. Beyond this the bill provides that the Attorney General may make some allowance to the prisoners in the way of compensation for the benefit of their families.

The House has also adopted an amendment that I offered providing that the articles manufactured by the inmates of the Atlanta Penitentiary shall be sold only to the Government.

Now, under my amendment, all of these products will be sold to the United States and will not enter into the avenues of private trade.

Let us consider this question further from various aspects. In the first place, the measure is introduced as a war measure. We are told by the Committee on the Judiciary that it is becoming difficult for the Government to obtain the duck that it is provided shall be manufactured. I have no hesitancy in saying that from this standpoint alone it is the duty of the Government to utilize the men who are incarcerated in the Atlanta Penitentiary in the service of their Government. Why should not these men even in normal times do something to compensate society for the burden that they have placed upon it? Most of all, why should not these men in a time when our country and the world are drawn upon so heavily for men do something at least that will in part pay for the upkeep of the institution in which they are maintained and add to the support of themselves by turning out agricultural products? We have possibly 100,000 men throughout the United States within the walls of prisons and penitentiaries. Here is a vast army. Shall we say that this army shall be fed at the expense of the country, and that we shall not provide means by which those who are incarcerated may in part bear the burden of the State's expense?

From an economic standpoint alone there should be no question but that this measure should pass.

THE QUESTION OF PRISON AND FREE LABOR.

There seems to be much confusion in the minds of Members on the question of labor. There seem to be those who are afraid that if we provide means by which the inmates of this penitentiary may work they will thereby compete with free labor. Now, let us analyze this question for a moment. As I said a while ago, in a large sense all labor is competitive; that is, everything that is worth while, that may be enumerated among the commodities mankind possesses, is the result of labor. This is true of all commodities and all necessities. It is true no less of public highways and navigability of rivers and accessibility of harbors than is it true of clothing and food supplies; but men should distinguish between the classes of labor that are competitive in an injurious sense to a group or a class and the kinds of labor that are competitive only in the sense that they produce something that the rest of society will be spared from doing, but in the doing no one is undermined and no one's economic position is made less secure.

Can we not see that there is a difference between requiring convicts to raise all the agricultural products that they will need for a year and harvesting the same for their own use or for the use of institutions maintained by taxation upon the State upon the one hand and the employment of convicts at the growing of vegetables to be sold upon the markets in competition with the agriculturists and gardeners in the country in which the penitentiary is located? Why, of course there is a difference. In the one instance the labor of the convicts is in competition with the labor of the entire State, and the people of the entire State should be glad that it is so, because every dollar's worth of food products that are grown will not need to be paid for by the people's money through taxation. In the other instance, where the products of the convicts are placed upon the market to be sold in competition with the products grown in the community surrounding the penitentiary, the labor of the convict is placed immediately in competition with free labor in a small locality.

Now, the same illustration can be carried further. Is there not a difference between the labor of convicts used in quarrying stone for the building of a prison house or prison hospitals and the labor of convicts quarrying stone to be sold to builders and contractors in competition with the labor of quarrymen in the city where the penitentiary is located? Is there not a difference between utilizing the labor of convicts in the manufacture of clothing, boots, and shoes worn by the inmates of the prison and the manufacture of the same articles of apparel that will be placed in competition with the productions of labor and sold from the counters of merchants throughout the land?

Gentlemen, there is a clear distinction between the utilization of labor in the one instance and the utilization of labor in the other. I am heartily in favor of the utilization of prison labor in the first instance and utterly opposed to it in the other. I am heartily in favor of the utilization of labor of convicts throughout our country in the building of roads that are of benefit to the public, in the production of clothing and foods to be utilized by those who are the State's wards, in the erection of buildings that the State must pay for, in the production of a multitude of services for the benefit of the State, but I am utterly opposed to the employment of prison labor in the production of boots and shoes that will ruin the independent manufacturer and cut down the wages of free men and in the pro-

duction of garden products that will ruin the small agriculturist in the community.

In other words, I am opposed to the employment of labor where it competes with the labor of a class and thereby cuts down wages and makes continuance in the line of occupation unprofitable to the free man. Under the terms of the bill that we are now considering, and especially in view of the amendment that I proposed and which the House has adopted, we are not asking the inmates of this penitentiary to engage in a line of work that is in competition in a direct competing sense with the producers or the laborers in private enterprise and who are free men. We are asking that they engage in a line of work that will produce something that will be of benefit to society as a whole and that will thereby compensate the Government for the burden that the convicts have placed upon it.

WE SHOULD FIT CONVICTS TO BE FREE MEN.

One of the Members in opposing this measure not only is not content to rest his objection on the charge that the labor of these convicts will be in competition with free labor—and I think I have answered this charge completely—but he goes further and opposes the measure because here we are educating men to a trade; and he says, Do you want these men to go back to your community and engage in this trade alongside of your free men, who have never been in a penal institution?

Again, he says we are educating him so that he will compete with free labor after he shall be free.

Well, gentlemen, it seems that this is a far-fetched argument. Can it be better that a criminal learn no trade, acquire proficiency in nothing, because there is nothing that he could turn his hand to in lawful manner as a free man that would not be in competition with the same activities of a free man? Surely the gentleman would not go to that extreme and permit the criminal, after he shall have spent his term in the penitentiary, to engage in competing with the only person in the world with whom he is able to compete, namely, another criminal.

But, he says, do you want him to be in your community? Gentlemen, he is in your community and will be in your community. You can not get away from the fact that these criminals after they shall have spent their terms in the prison will be in your communities, and the question is, Would you prefer to have them in your community as trained men, efficient men, or in your community without efficiency, without skill, without ability to earn a living?

It is not contemplated that all the inmates of penitentiaries shall be trained to work on the loom. This is merely one of the activities that it is hoped by the friends of this measure will command the interest and the attention of the inmates of our penal institutions.

When God told Adam that thenceforth he would need to earn his bread by the sweat of his brow, there was placed a saving opportunity in the hands of a man who had fallen. This is the first lesson that I am aware of whereby mankind is taught the redeeming virtue of labor. For a long time the world apparently lost the great truth of this ancient lesson. For a long time society was content to place those who had committed crimes in cells and dungeons, in penitentiaries and prisons, where idleness was the prescribed course, and through which the inmates would drift into death or disease or lives of utter uselessness. If they succeeded in escaping from the walls that held them fast, they were unfitted, unless they had been fitted for service before they entered those walls, to take up any gainful occupations.

Well, society during the last 50 years especially has come to take a different attitude on the subject of what it owes to itself, if, indeed, not to those who as members of society have violated their duty to their fellow men by committing crimes. Society had better do away with criminals entirely rather than maintain them in idleness and permit them to renew their crimes upon being released from custody. There doubtless are those whose crimes are of such character that society still feels—and maybe properly so—that they have forfeited all right to live; but the vast majority of those who commit crimes have not forfeited, so far as man can see, their right to live, and, that being the case, society owes to these people a duty and owes to itself a duty.

Those who have committed crimes must be punished. At the time they are being punished, however, if they can be taught to engage in some useful work valuable objects will be attained.

Society will, in part, be recompensed for the expenditure of money that it has to expend because of criminal acts of the inmates of penal institutions. Society will be further benefited if by any means those who have been guilty of crime can be worked over into units of society who are able to contribute their part in service to mankind. Society will be further benefited because when persons are contributing their part in service

they are not committing crime and society will be spared the grief and horror incident to another criminal act. Society will be further spared the expense of a repetition of trial through the agencies of justice and then the expense of maintaining a criminal in a penal institution, and the individual himself will be benefited through work. The individual will become self-respecting. A very large percentage of persons who commit crime have no profession. They have no definite means of livelihood; they have drifted; they have followed the course of least resistance and it has carried them into doubtful avenues. If these men who are incarcerated in penal institutions shall be permitted to work, two objects will be gained so far as the individual himself is concerned.

First of all, he will be improved in health, both physically and mentally. We are told that not very many years ago tuberculosis, for instance, was three times as prevalent in penal institutions as it was among people on the outside. I doubt if this was due so much to the lack of physical resistance of those sent to the institutions as it was to the amount of light and air given to the inmates. The employment of the individuals incarcerated in penal institutions will work a revolution on the physical and mental health of those imprisoned. It will do more than that, it will give to those who are imprisoned the opportunity of learning some useful occupation.

There is another gain that will accrue both to the individual and to society. When men are congregated together and are not employed there is not much that is inspiring to talk about. The first interest of all of us is largely centered in that which is occupying our hands and our minds. If the men in penal institutions are to be idle, must we not assume that the fruits of their thoughts, the ideals that they will develop, will be those that are antisocial and that make for the lowering of the mental and moral standards of the individuals, and that will then act directly upon society as soon as freedom shall be attained?

A thought that should ever be in our minds as we consider the punishing of criminals is, How can we prevent crime? In the light of the past we can prevent much crime by making decent men out of criminals. This can be done, for the most part, by giving the criminal something to do, by making him economically independent through giving him a trade or making him proficient in a line of work to which he can turn his hand when he walks from prison walls a free man. The hardest days for the man whose penal term has just expired are those that immediately follow his release. The convict feels that the world is against him, and if he has no trade, no profession, no skill or aptitude of mind or body, if he has nothing that he can cash in, his lot is a hard one, and more crime is the logical result.

Students of criminology know that most of the crime of our country is committed by people who do not have the habit of work. In addition to establishing a system that will train the inmate of a penal institution for efficiency, for useful occupation, that will possibly give him training, quite as important as all that is establishing in the mind of these individuals the habit of work.

Over and over I have heard the expression, "I am absolutely lost when I have nothing to do."

I would like to work out a system under which the inmates of penal institutions would feel uncomfortable when they would not have employment. I believe if we could begin soon enough and write into the habit and life of all of our people the incentive to work, we would have mighty little crime.

SHALL THE CONVICT RECEIVE SOME COMPENSATION?

There is another feature of this measure that is deserving of our attention. The Attorney General is authorized to arrange that the inmates of the penitentiary or dependents upon them may receive a certain amount of the earnings of the convicts.

Gentlemen, this is a wise provision. It is wise for several reasons. In the first place, as a matter of discipline, the convicts will enter upon their work with far greater enthusiasm and fidelity than if all the product of their labor should go to the State. It is not contemplated, on the other hand, that all of the product of the labor shall go to the individual or to his family. The State is entitled to and should receive part of the fruit of the convict's labor; but from the standpoint of discipline and the aid that it will be in controlling these men and the expense of employing guards and supervisors, matters will be vastly simplified if the convict may feel that he and his family are receiving at least something on account of the work that he is doing.

Again, this is a wise provision for the reason that it often happens that families and those who are dependent upon convicts are apt to become public charges. Now, it is a most unfortunate thing for any human being to come to the point where he himself is willing to recognize that he is a public charge and

to acquiesce in receiving alms at the hands of a county or State or Nation. Admitting for the moment that nothing that the criminal could do would compensate the State for what he has cost because of his crime, even so it would be the part of wisdom to permit the convict to labor and be compensated for his labor and then permit a part of that compensation to go to the family, so that the family would be spared from getting into the habit of thinking of itself as recipient of alms from charity.

Again, it is a wise provision because it continues to make the inmate of the penal institution feel that some one is dependent upon him; that his services, after all, do mean something; that he is still able to count as a social unit; and that when he shall be free he will have responsibilities to meet.

A SMALL BILL BUT A BIG PRINCIPLE.

All in all, gentlemen, this bill is within itself a simple proposition. I am calling attention to it even to the extent that I have because it suggests a great principle. We are being aroused, we are being awakened, to the duty that society owes itself in the treatment of the inmates of our penal institutions. We are not doing our full duty to society or by these inmates when we take from the latter their prison garbs and send them forth with the stigma of jailbirds and less fitted to take their part in the world's work than when they entered the institution whose doors have just been opened. Under the old system criminals went from penal institutions to penal institutions, from crime to crime. I am glad to say that under the modern system, wherein inmates of penal institutions are taught trades, are taught to be efficient, are taught to work, we are sending forth men from whom an ever-decreasing percentage find their way back into penal institutions.

New York in the War.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS,

OF LONG ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 14, 1918.

Mr. HICKS. Mr. Speaker, I ask unanimous consent to print in the RECORD a letter, with accompanying orders, recently received from the adjutant general of New York, showing the service being rendered by the citizens of the Empire State.

Mr. Speaker, without any spirit of braggadocio or any desire to be considered obsessed with narrow State pride, I have thought, in justice to the efficient service rendered by the officers and the civilians who have generously contributed their time and their effort to the administration of the law, as well as to the splendid patriotism of the men of New York and the unquestioned loyalty of her citizens, that it was proper to set forth what they have accomplished and to show how steadfastly our boys are upholding the honor of the flag in foreign service, afloat and ashore, as well as protecting lives and property without our borders. Unmeasured credit is due them for their unselfishness, and unstinted praise for their noble purpose in serving both the Nation and the State.

The matter referred to is as follows:

STATE OF NEW YORK,
THE ADJUTANT GENERAL'S OFFICE,
Albany, March 23, 1918.

Hon. FREDERICK C. HICKS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN HICKS: As a loyal New Yorker, you will be interested to read the inclosed two orders which I have just issued. We are very proud of the service which the New York Guard, now numbering 18,000 men, are doing in the State of New York to protect lives and property; but it is essential that we encourage as much as possible enlistments from it into the Federal Army, because the men whom we have trained are prepared to enter Federal service as noncommissioned officers, something very important to a new organization like our National Army.

It gives me great pleasure to report to you that over and above the 69,241 men whom we have drafted and sent into the Federal service and the 100,000 volunteers who have also entered that service we now have in this State for the protection of lives and property no less than 63,000 trained efficient, 18,000 of whom are in the New York Guard, 10,000 in the Home Defense Reserve, and 35,000 more who are youths between 16 and 18 years of age, whose military training is so far advanced that they are now taking part in regimental reviews.

We are glad to say that in this regard New York State can safely invite comparison with the other States of the Union, in many of which there has not even yet begun the organization of armed bodies of men to protect lives and property, which protection is now desirable, but which will become vitally necessary after the shipment to France of our Regular Army, our National Guard Army, and our conscripted Army.

Very sincerely,

C. H. SHERRILL,
The Adjutant General, State of New York.

STATE OF NEW YORK,
THE ADJUTANT GENERAL'S OFFICE,
Albany, March 21, 1918.

General Orders, No. 13.

I. The New York Guard is not only performing a valuable and necessary service in training its members for State duty and in guarding the Barge Canals, the New York Aqueduct, railway bridges, and various public utilities and munition plants but also it is at the same time serving the Nation as a training school for the Federal Army. The value of the New York Guard as such a training school can not be overestimated, especially in the preparation of noncommissioned officers, so essential to a new force like the National Army. Many men after a period of training in the State service are enlisting in Federal service, the United States thus obtaining recruits with military experience, and the men thus enjoying a training in the New York Guard fitting them for rapid advancement in Federal service. Men of draft age are also finding service in the New York Guard a useful preparation for their duties after being called to the Federal colors.

II. It is the desire of this office to facilitate in every way the enlistment in Federal service of members of the New York Guard who are willing to so enlist. With this end in view, commanding officers will afford every opportunity to members of their commands for such enlistment, granting them passes for not to exceed 24 hours for that purpose if on active duty. Discharges, however, will not be granted until the applicants are accepted for enlistment by a United States recruiting officer, and upon receipt of official notice of such acceptance action will be taken as set forth in Paragraph III of this order. Commanding officers should also establish cordial relations with United States recruiting officers and should cooperate with them in obtaining recruits whenever requested to do so.

III. Upon receipt of official notice, either from this office or from a United States recruiting officer, that a member of the New York Guard has been accepted for enlistment in Federal service, his immediate commanding officer will at once apply to the proper officer for the discharge of the man from the New York Guard. If the man is on active duty, he will be relieved therefrom as promptly as possible. If the man is not on active duty, he will be considered as released from State service upon his turning in to his New York Guard company commander public property in his possession, and his discharge will be forwarded as hereinafter indicated. The discharge of an enlisted man accepted for Federal service will be forwarded to the United States recruiting officer who accepted the man, with request that same be returned for cancellation in the event of the man not completing his enlistment in the Federal service.

By command of the governor:

CHARLES H. SHERRILL,
The Adjutant General.

STATE OF NEW YORK,
THE ADJUTANT GENERAL'S OFFICE,
Albany, March 22, 1918.

General Orders, No. 14.

I. The Regulations for the Military Forces of the State prescribe that deliberations, discussions, statements, or remarks with respect to military matters, whether oral, written, or printed, by officers or enlisted men of the State forces, criticizing or reflecting upon others in the military service of the United States are prohibited.

II. While this prohibition is necessary at all times to proper military discipline, it assumes especial importance in time of war, when the entire Nation is vitally concerned in military matters. At such a time any real or seeming disagreement or difference of opinion in the Military Establishment, or any criticism of or reflection upon those engaged in the conduct of the war, which is given public expression, tends to embarrass the National Government in the exercise of its proper functions, and is used by those who would sow discord and dissension among the people as an evidence of weakness and mismanagement on the part of the Government.

III. It is evident that any violation of this prohibition should be promptly and severely punished during time of war. Under the Articles of War such an offense is punishable by dismissal from the service in the case of officers and dishonorable discharge in the case of enlisted men, and such other punishment as a court-martial may direct.

IV. Members of the New York Guard are hereby directed to carefully observe the provisions of regulations in regard to this matter. Commanding officers will promptly report any violations thereof. This order will be posted on the bulletin boards of all organizations of the New York Guard during the period of the war.

By command of the governor:

CHARLES H. SHERRILL,
The Adjutant General.

Number of New York men in the service.

DEPARTMENT OF THE NAVY.

May 1, 1918.

Total in Regular Navy	198,553
From New York	21,928
Total in Naval Reserves	101,083
From New York	20,225
Total National Naval Volunteers	15,000
From New York	2,050
Total Marine Corps	37,126
From New York	3,800

DEPARTMENT OF THE ARMY.

Apr. 10, 1918.

Total sent to camps under selective draft, National Army	871,213
From New York	92,949
Total enlistments in Regular Army, Apr. 1, 1917, to Apr. 10, 1918	404,941
From New York	44,508

The above is exclusive of the New York State National Guard of 40,000 or of the enlistments in the Army previous to April 1, 1917.

New York, with a population of nearly 10,000,000, has furnished more than 10 per cent of the total number of men who are now serving with the colors. You can always depend upon the loyalty and patriotism of the citizens of New York, and the figures given above demonstrate that now, in this hour of crisis, as in the past, when the call of country sounds throughout the Nation the Empire State has responded with more than her full share in defense of the Republic and for the honor of the flag.

Speech of Hon. Walter M. Chandler, Delivered at the Town and Country Club, in the City of Washington, D. C.

EXTENSION OF REMARKS

OF

HON. JULIUS KAHN,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 13, 1918.

Mr. KAHN. Mr. Speaker, taking advantage of the leave granted me this morning to extend my remarks by inserting in the CONGRESSIONAL RECORD a speech delivered by Hon. WALTER M. CHANDLER, of New York, before the Town and Country Club of Washington, D. C., a few weeks ago, I submit said speech accordingly. I was present on the occasion when Mr. CHANDLER delivered the address. It showed so much research into history and such a knowledge of "The people of the Book" that I asked his permission to insert it in the CONGRESSIONAL RECORD, so that those who had not had an opportunity of studying the question as he has studied it might get the benefit of his research and compilation. I had read Mr. CHANDLER's instructive and illuminating book entitled "The Trial of Jesus from a Lawyer's Viewpoint." It showed such an evidence of fairness, such an entire absence of religious prejudice, that I became impressed with the spirit of catholicity of its author, and we have been firm friends ever since.

In his address before the Town and Country Club Mr. CHANDLER made some remarks that were complimentary to myself. I asked that he expunge them from his speech. He replied that he would not give me permission to insert his address in the CONGRESSIONAL RECORD if it were in any wise altered or revised and that it would have to be published as he delivered it or not at all. The speech as delivered was as follows:

THE JEW AS SOLDIER, CITIZEN, PATRIOT, ORATOR, AND STATESMAN.

My friends, I thank my distinguished colleague from California, Mr. KAHN, for the kind and complimentary things that he has said about me in his speech of introduction. His sentiments of appreciation and esteem are most cordially reciprocated by me. It is certainly a great honor to address a mass meeting of this kind over which he has consented to preside. It is indeed a still greater honor to be associated with him in national legislation in the House of Representatives.

The American Congress is honored in its personnel by no abler Member than JULIUS KAHN, of California. He is admired and honored by all his colleagues in the House, irrespective of party affiliations. He is as well and favorably known in New York City as he is in San Francisco, and if any strange stroke of political fortune should ever deprive him of his seat from his home State it would only be necessary for him to move to New York, acquire a residence of a single year, and permit us, who recognize and appreciate his great ability and his lofty and unsullied patriotism, to return him to Congress. I myself would nominate him if he should not be so imprudent as to settle in my district. [Laughter.]

JULIUS KAHN is a Jew. His able and fearless championship of conscription on the floor of the House, his eloquent and impassioned pleas for American unity in the conduct of the great war, reminding us of earlier and grander years of American oratory and eloquence, and, above all, his fierce denunciations of every form of American disloyalty and sedition, are a splendid refutation of the mean libel and silly slander of a few ignorant and unthinking persons, that American Jews are lacking in patriotism in the great world conflict now being waged.

My friends, the subject announced for this evening's address is this, "The Jew as soldier, citizen, patriot, orator, and statesman." I shall discuss the subject under the following headings:

- (1) The Jew as soldier.
- (2) The Jew as citizen and patriot.
- (3) The Jew as orator and statesman.

The treatment of these several subdivisions must of necessity be brief.

THE JEW AS A SOLDIER.

It has been often remarked that the Jews have produced no Cæsars, no Napoleons; that Jewish history is devoid of martial interest; and that, individually, the Jews are lacking in personal courage. There is a grain of truth in this contention, but only a grain. Warfare is abhorrent to the Hebrew temperament. The voice of prophecy, not the roar of cannon; the triumphs of the spirit, not the vic ories of the flesh, are the signs and symbols, the flowers and fruitage, of Hebrew life.

The Jews cheerfully admit that they have produced no Cæsars or Napoleons. Those conquerors were the scourges of humanity, the imperial butchers of mankind. Cæsar slew a million of Gauls and sent into slavery and exile still another million. Three millions of Frenchmen paid the last debt due to nature and to God while following the standard of the Corsican. As many foreigners died while opposing his despotic, imperial designs. The pious Israelite justly regards these men as monsters and thanks his God that the pages of his history have not been cursed with the imprint of such deeds.

Hebrew repugnance to military glory and Hebrew pride in civic achievement are clearly reflected in the following lines from a great Jewish historian:

If ever the time comes when the prophecies of the Jewish seers are fulfilled and nation no longer raises the sword against nation, when the olive leaf instead of the laurel adorns the brow of the great, and the achievements of noble minds are familiar to the dwellers in cottages and palaces alike, then the history of the world will have the same character as Jewish history. On its pages will be inscribed not the warrior's prowess and his victories, nor diplomatic schemes and triumphs, but the progress of culture and its practical application in real life.

Whether the individual Jew is cowardly or courageous depends upon the viewpoint taken. Truth is a gem of many facets, and the angle of vision determines the amount and quality of light supplied the brain. Too many people mistake coarseness for courage and brutality for strength. Some men are sensitive, spiritual, and physically delicate. Others are muscular, brutal, and phlegmatic. The Jew belongs to the former rather than to the latter class; hence his aversion, from a sense of inequality, to physical combat.

Nevertheless, after all apologies have been offered and excuses made, the fact remains that the Jews are not lacking in military genius or in personal courage when the loftier sentiments of religion and patriotism call them to the field of battle. The Old Testament more than once bears witness to this truth. The war song of Deborah is filled with martial music. The Battle of Gideon was a battle of heroes. The godlike feats of Saul, Jonathan, and David attest the prowess of the ancient sons of Israel. Certain of the Psalms sound like trumpet calls to battle.

Judas Maccabæus, "a lion in his deeds and a lion's whelp roaring for prey," is the great military hero of ancient Jewish history. He was the Robert Bruce, the William Wallace, of ancient Palestine. With a band of devoted followers he descended from the mountains, won a succession of brilliant victories over the best generals of Syria, and finally drove idolaters and profaners of the temple from his native country. His glorious deeds are recalled and invoked by the following thrilling poem by the gifted Jewish poetess, Emma Lazarus, entitled:

THE BANNER OF THE JEW.

Wake, Israel, wake! Recall to-day
The glorious Maccabean rage,
The sire heroic, hoary-gray,
His fivefold lion lineage;
The wise, the elect, the help of God,
The burst of spring, the avenging rod.

From Mizpah's mountain ridge they saw
Jerusalem's empty streets, her shrine
Laid waste where Greeks profaned the law,
With idol and with pagan sign.
Mourners in tattered black were there,
With ashes sprinkled on their hair.

Then from the stony peak there rang
A blast to ope the graves; down poured
The Maccabean clan who sang
Their battle anthem to the Lord.
Five heroes lead; then, following, see
Ten thousand rush to victory!

Oh, for Jerusalem's trumpet now,
To blow a blast of shattering power,
To wake the sleepers high and low,
And rouse them to the urgent hour!
No hand for vengeance, but to save,
A million naked swords should wave.
Oh, deem not dead that martial fire;
Say not the mystic flame is spent!
With Moses's law and David's lyre,
Your ancient strength remains unbent.
Let but an Ezra arise anew
To life the banner of the Jew!

A rag, a mock at first—ere long,
When men have bled and women wept,
To guard its precious folds from wrong,
Even they who shrunk, even they who slept,
Shall leap to bless it, and to save—
Strike, for the brave revere the brave!

This beautiful poem seems to have been modeled after Lord Byron's "Isles of Greece," for it has the same pathetic lament and martial rapture.

Ancient secular history is not forgetful of Jewish skill in battle. Julius Cæsar more than once paid splendid tribute to the

brew courage. This is an extract from one of his famous decrees touching Jewish affairs in Syria:

"I, Julius Caesar, emperor the second time and high priest, have made this decree, with the approbation of the Senate. Whereas Hyrcanus, the son of Alexander the Jew, hath demonstrated his fidelity and diligence about our affairs, and this both now and in former times, both in peace and in war, as many of our generals have borne witness, and came to our assistance in the last Alexandrian War with 1,500 soldiers; and when he was sent by me to Mithradates showed himself superior in valor to all the rest of the army: for these reasons I will add that Hyrcanus, the son of Alexander, and his children be ethnarchs of the Jews, and have the high priesthood of the Jews forever, according to the customs of their forefathers, and that he and his sons be our confederates.

It is respectfully submitted that Julius Caesar was a competent judge of valor, and that his tribute to the courage of those 1,500 Jews was no common eulogy.

The chronicles of the Middle Ages, like those of antiquity, are rich with the records of deeds of heroism of the sons of Israel. Under King Alfonso VI of Castile, 1063, 40,000 Jews fought against Yusuf Ibn Teshufin in the Battle of Zalaka with such heroism that the battle field was strewn with their bodies.

Modern history is also luminous with proofs of Jewish courage, skill, and discipline in war. If we are to believe Disraeli in *Coningsby*, Napoleon's great marshals, Soult and Massena, were Jews. The Jewish Encyclopedia denies that Soult was a Jew, but Disraeli was not only a great statesman but a reliable historical authority as well. Napoleon admirably styled the Gentile Ney "the bravest of the brave." He affectionately called the Hebrew Massena "the child of victory," and when giving orders to Soult he simply said, "Do, Marshal Soult, as you are accustomed to do."

In all the wars of America the Jew has played an honorable and conspicuous rôle. At the time of the American Revolution there were not more than 3,000 Jews in all North America. Nevertheless, 46 names of prominent Jews are known, 24 of them being those of officers. Maj. Benjamin Nones, a native of Bordeaux, France, who came to America in 1777, served on the staffs of both Lafayette and Washington. Col. Isaac Franks became aid de camp to Washington, holding the rank of colonel on his staff, and served with distinction through the war. And when the brave Baron de Kalb fell mortally wounded at the battle of Camden, S. C., August 16, 1780, three Jews, Maj. Nones, Capt. Jacob De La Motta, and Capt. Jacob De Leon, carried him from the field of battle.

But it was not in the War of the Revolution that the military services of the Jew in America were most signally rendered. More than 50 years ago civil war broke upon the country. The most momentous struggle in the nineteenth century called to the field of battle the finest armies of the world. Men from the North and men from the South rushed to the dividing line in serried ranks with martial step and with hearts that beat like kettle drums. Jews did not content themselves with remaining merely interested spectators of the colossal struggle, but, following where conviction led, marched side by side and shoulder to shoulder with their Gentile comrades, and on every field exhibited the finest courage and the finest discipline.

It was in the great Civil War that the patriotism and gallantry, the military ardor, and capacity of the Jew shown forth most brilliantly. The Jewish population of the United States in 1861 was less than 150,000 souls. Nevertheless, according to a list furnished by Simon Wolf, near 8,000 Jews are known to have served in the Federal and Confederate Armies. This list exhibits 40 staff officers, 11 naval officers, 9 generals, 18 colonels, 8 lieutenant colonels, 40 majors, 205 captains, 325 lieutenants, 48 adjutants, and 25 surgeons.

The highest rank attained by a Jew during the Civil War was that of brevet major general, by Frederick Knefler, a native of Hungary. He went out as a private in the Seventy-ninth Indiana Volunteer Infantry and rose from the ranks successively to be colonel, brigadier general, and brevet major general. His gallant conduct at Chickamauga gave him the highest military command ever held by a Jew in America.

Edward S. Solomon, colonel of the Eighty-second Illinois Volunteer Infantry, became brigadier general in recognition of vallant services at Chancellorsville and Gettysburg.

Leopold Blumenberg commanded a regiment as colonel at the Battle of Antietam, and received a wound from which he died in 1875.

Phillip J. Joachimson was colonel of the Fifty-ninth New York Volunteer Regiment.

Israel Moses was lieutenant colonel of a regiment in Gen. Sickles's brigade.

Both the Federal and Confederate Armies were nobly represented in the ranks by the sons of Hebrew fathers. It is a striking fact that 14 families alone contributed 53 men. To the Confederate Army, 6 Cohen brothers were sent by North Carolina; 5 Moses brothers by South Carolina; 3 Levy brothers

by Virginia; 3 Cohen brothers by Arkansas; 3 Levy brothers by Louisiana. The Jonas brothers, four in number, went from Mississippi to fight in the Confederate Army, while the fifth, Edward Jonas, fought for the Union in the Fiftieth Illinois. From the North went 5 Wenk brothers; Ohio sent 3 Koch brothers; Pennsylvania sent 3 Emanuel brothers. But it is needless to swell the list. These are given to illustrate that the Jews were well represented on the battle fields of the Civil War.

In the Spanish-American War the Jews were not lacking in numbers or lagging in courage or spirit. The records of the War Department show that more than 4,000 furloughs were granted to Jewish soldiers who wished to return home to celebrate Rosh Hashana and Yom Kippur. This suggests a much larger enlistment in the general service.

The first man to fall in the attack on Manila was Sergt. Morris Justh, a Jew, of the First California Volunteers, a regiment that numbered more than 100 Jews in its ranks.

The Astor Battery numbered 10 Jews among its 99 men.

Fifteen Jews went down to death in the *Maine*, destroyed in the harbor of Habana.

Commander Adolph Marix, of the Navy, a Hebrew, was judge advocate of the *Maine* disaster board of inquiry.

Theodore Roosevelt, the intrepid leader of the Rough Riders, declared that in that brave regiment of historic and world renown the most audacious courage was shown by the seven Jewish Rough Riders, one of whom he promoted to a lieutenancy.

Reliable figures are not yet at hand concerning the proportion of Jews who will fill the ranks of the mighty American Army that will be sent abroad to represent our great country on the battle fields and in the battle trenches of Europe; but if history repeats itself, their number will be all out of proportion to and much greater than their representation in the general population of the country. Telegraphic dispatches from the front have already disclosed the fact that Jews have already made the last great sacrifice for the country that affords them citizenship unrestricted and freedom without abridgment.

While complete and reliable statistics are not yet to be had concerning the proportion of Jews who will participate in the great world struggle for the freedom of mankind, sufficient information is at hand to make a reasonably accurate forecast.

The population of the United States is a little more than 100,000,000, of whom a trifle more than 3,000,000 are Jews. The military and naval forces of the United States number from 1,500,000 to 2,000,000 men. How many of these are Jews? Secretary of War Baker made an estimate some time ago of 60,000. We have reason to believe that this is an underestimate rather than an overestimate, for the bureau of Jewish statistics of the American Jewish Committee, with limited resources and but scarcely beginning its investigations, has already listed about 40,000 names.

But even if we accept the conservative estimate of Secretary Baker, it would appear that as the Jews of the United States constitute about 3 per cent of the total population of the country, so the Jews in the American forces constitute about 3 per cent of the personnel. In other words, judging by surface appearances alone, the Jews are contributing their full quota. Should we go below the surface, however—should we analyze these figures carefully—we would find that they are infinitely more creditable to the Jews of America than their face value indicates, and for the following reasons:

First. Because of the great influx of comparatively recent immigration among the Jews large numbers now in this country are not naturalized, and many among the unnaturalized are citizens of Russia and hence not liable to be called for service, while many others are citizens of Austria; that is, technically, alien enemies.

Second. The character of Jewish immigration during the last quarter of a century has been peculiar in so far as it has included an unusually large number of persons now beyond fighting age and of women and children. Thus a study of the immigration figures for the decade 1899-1909 will show that the Jews had a higher percentage of children under 14 and a lower percentage of men of military age than any of the immigrant peoples. At the same time, this immigration had a disproportionately large female element. Thus, in the year 1910, for example, the percentage of males among all immigrants was 70.7; among Jews it was only 54.8. The percentage of females among all immigrant groups was 29.3; among Jews it was 45.2. In other words, while among all immigrants the women constituted less than one-third, among Jews they constituted nearly one-half, of the immigration. This peculiarity has, of course, been due simply to the fact that much of the immigration from Russia and Austria has been in the nature of forced migration:

that is, entire families, young and old, were forced to migrate, and not merely the young males, as is the case, for instance, in Italian emigration.

Third. Again, many of the Jewish males suffer from disabilities—such as tubercular tendencies, nervous affections, defects of sight and hearing—all due to the oppressive conditions under which they or their parents had been compelled to live before they came to America.

Because of these facts it is probably well within the truth to declare that, while 3 per cent of the inhabitants of the United States are Jews, only about 1½ per cent of the men capable of bearing arms in this country are Jews. Now, it is generally assumed that the man power of a nation, for military purposes, is about 10 per cent of the population. In the United States, therefore, the comparison between Jewish and non-Jewish contributions may be summed up thus:

Of the general population of the country 10 per cent are capable of bearing arms, and 2 per cent are now actually under arms; that is, one-fifth of the possible levy is serving and four-fifths are not. But among the Jews of the United States only about 5 per cent are capable of bearing arms, and 2 per cent are already doing so. This means that while for the country at large only 20 per cent of the "capables" are now in service, among the Jews fully 40 per cent have answered the call. The Jews of America have oversubscribed their allotment of man power by 100 per cent.

When we come to consider noted Jews who are prominently identified with the conduct of the war on both sides, each supporting his own country with devotion and sacrifice, we are deeply impressed with the character of the men and the admirable length of the list. Let us group them by countries:

UNITED STATES.

Felix Frankfurter, Boston: Appointed confidential assistant to Secretary Baker May, 1917. Since then has been appointed by President Wilson to settle labor disturbances in the West, and is now director of all war labor.

JULIUS KAHN, San Francisco: Upon refusal of Democratic chairman of Military Affairs Committee dealing with draft bill, Mr. KAHN, ranking Republican member, though born in Germany, pressed it to passage.

Albert Michelson, Chicago: Appointed official scientific adviser of the Army and Navy Departments, Washington.

Leo S. Rowe, Philadelphia: Appointed secretary of the American group of the joint commission on Mexican situation September, 1916. Appointed Assistant Secretary of the Treasury May, 1917.

A. C. Ratchesky, Boston: Appointed vice chairman of the Board of Food Administration of Massachusetts.

Louis E. Kirstein, Boston: Appointed by Secretary Baker chairman of the committee to study conditions in the Government industry affecting the making of uniforms.

Joseph Krauskopf, Philadelphia: Appointed by Mr. Hoover member of the Commission on Food Conservation Propaganda.

Ferdinand Strauss, Boston: Member of Board on Prevention of Social Evils around Military Camps. Appointed by Massachusetts Public Safety Commission.

Julius Rosenwald, Chicago: Chairman committee on supplies, Council of National Defense.

Bernard Baruch: Member Council of National Defense.

Julian W. Mack, Chicago: Author of soldiers' and sailors' allowance compensation and insurance act.

Millard W. Mack: Chairman of war-insurance bureau in France.

David A. Ellis, Boston: Fuel administrator of Massachusetts.

Roland S. Morris, Philadelphia: Ambassador to Japan.

Albert Strauss, New York City: Personal representative of Secretary McAdoo on the War Trade Board.

Samuel Untermyer, New York City: Legal adviser to the Commissioner of Internal Revenue of the war-revenue act.

Lee K. Frankel, New York City: Appointed member of executive committee for national defense.

Samuel J. Rosensohn, New York City: Appointed confidential assistant to the Secretary of War to take the place of Felix Frankfurter.

Herbert H. Lehman, New York: Appointed textile expert of Navy Department.

Moritz Rosenthal, New York: Formerly general counsel to Mr. Mitchell Palmer, Alien Property Administrator.

Henry Moskowitz, New York: Formerly commissioner of foods and markets for New York City.

Abram Flexner, New York: Appointed by Secretary Daniels to investigate health conditions in the Navy.

Louis J. Horowitz, New York: Appointed director of the foreign department of the Red Cross.

Dayid de Sola Pool, New York: Appointed by Mr. Hoover member of Commission on Food Conservation Propaganda.

Nathan Straus, New York: Appointed by Secretary Daniels to investigate health conditions in the Navy.

Stephen S. Wise, New York: Member of the committee on organization of the food council of New York City.

Julius H. Cohen, New York: Secretary of the War Board of the port of New York.

Michael Friedman, New York: United States food administrator and quartermaster general, New York State Guard.

Sydney E. Goldstein, New York: Member of Commission on Food Conservation Propaganda.

Edward Herbert, New York: Secretary to Red Cross commission to Roumania.

ENGLAND.

John Monash, major general.

H. S. Seligman, brigadier general.

Spencer Seligman, brigadier general.

David P. Hirsch, captain, Victoria Cross posthumously.

Jack (Weiss) White, Victoria Cross.

Sir Matthew Nathan, formerly undersecretary for Ireland, now director of finance to ministry of pensions.

Viscount Reading, ambassador extraordinary to United States.

Edwin P. Montagu, ex-minister of munitions.

Herbert L. Samuels, formerly postmaster general, formerly home secretary, secretary of state for India.

Sir Alfred M. Mond, first commissioner of works in present cabinet.

Edwin Samuel Montagu, financial secretary of treasury, appointed May, 1915.

FRANCE.

Louis Lucien Klotz, minister of finance.

Henry Simon, minister of colonies.

David Fernand, minister of agriculture in Painleve cabinet.

Ignace Edouard, undersecretary for war, March, 1917.

Camille Levy, brigadier general (mentioned in dispatches at least five times).

Bernheimer and Weiller, lieutenant generals.

Heyman (major general), general of divisions.

ITALY.

Salvatore Barzilai, cabinet member with portfolio.

Luigi Luzzati, formerly prime minister.

Baron Sydney Sonnino, minister of foreign affairs (half Jew).

Gen. Ottolenghi, formerly minister of war.

Senator Ludovico Mortars, president of the court of cassation.

BELGIUM.

Paul Hymans, minister to Great Britain.

SERBIA.

Abraham Levy, assistant minister of finance.

NEW ZEALAND.

Arthur M. Myers, minister of munitions and customs.

GERMANY.

Dr. Bernhard Von Dernburg, half Jew.

Alfred Ballin.

AUSTRIA-HUNGARY.

Moritz Feldman, lieutenant general.

Leopold Ausserzhitz, major general.

Julius Bauer, brigadier general.

Von Schweitzer, field marshal.

In the light of this splendid showing of the Jewish race in the rank and file, as well as among the notables, of the defenders of the liberty, humanity, and civilization of the earth, it is indeed to be regretted that Provost Marshal General Crowder, with the approval of Secretary Baker, should have issued on February 14, 1918, to medical examiners the following instructions:

CAUSES AND MOTIVES OF MALINGERING.

These must be clearly understood in order that medical examiners may be on the alert for deception. The foreign born, and especially Jews, are more apt to malingering (to pretend to be ill) than the native born; eastern Europeans more than western Europeans.

It is creditable to the magnanimity and sense of justice of both the President and Secretary of War that this reference to the Jews was ordered stricken out when complaint was made.

After all, it is evident that Jews can and will fight when occasion requires, but it must be said to their credit that warfare is not their trade.

THE JEW AS CITIZEN AND PATRIOT.

After the fall of Jerusalem (A. D. 70) the Jew was a wanderer for many centuries upon the face of the earth without a home and country. Until the closing years of the eighteenth century the Christian Governments of Europe denied him the simplest rights of a free man and a citizen. While not a slave in the sense of chattel property, the Jews were frequently regarded

as an attachment of the soil, like the ancient Spartan helots, and were transferred from one sovereign to another. At other times, having been despoiled of their goods, they were expelled by wholesale and without ceremony from the countries which they had come to regard as their homes.

The expulsion of the Jews from Spain in 1492 by an edict of Ferdinand and Isabella was a most painful epoch in the history of the Hebrew race. The real reason of this wholesale persecution was the fact that the Jews refused to become Christians when commanded to do so by fanatically pious Spanish sovereigns. According to Isidore Loeb, 105,000 Jews left their homes and wandered away in exile in foreign lands. History relates many pathetic incidents that marked the beginning of this dispersion. Great numbers of the Jewish community of Segovia passed the last three days of their stay in the city in the Jewish cemetery, fasting and wailing over being parted from their beloved dead.

Jews were not permitted to inhabit Spain again until 1858, when a republic was established, and a repeal of the ancient edict of expulsion was secured from Gen. Prim through the influence of H. Guedella, of London. But even then they were not allowed the rights of unrestricted citizenship.

The French Revolution brought liberty and equality to Jews as well as to Gentiles in France, and gave rights of citizenship to all.

The Jews were not completely emancipated in England until 1858, when they were admitted to Parliament without being compelled to take the oath, "On the faith of a true Christian."

It must not be imagined, however, that the free and enlightened policies of France, England, and the United States have been everywhere pursued. Very few substantial rights of citizenship were enjoyed prior to the Russian Revolution by either Russian or Roumanian Jews; and, it may be added, nearly 7,000,000 Jews, about one-half of the total Jewish population of the earth, live in Russia and Roumania.

The political status of the Jew 150 years ago was a puzzle to the brainiest statesmen of Europe. Although the year 1793 witnessed the revolutionary emancipation of the Jews in France, Napoleon did not afterwards regard them as citizens. He once declared: "The Jews are not in the same category with the Christians. We have to judge them by the political not the civil right, for they are not citizens." And to gain desired information concerning them for the purpose of framing appropriate legislation for the Jews in the general reconstruction of the Empire after the French Revolution, he propounded the following 12 questions to the Sanhedrin of France:

- (1) Is it lawful for Jews to have more than one wife?
- (2) Is divorce allowed by the Jewish religion? Is divorce valid, although pronounced not by the courts of justice, but by virtue of laws in contradiction to the French code?
- (3) May a Jewess marry a Christian, or a Jew a Christian woman, or does Jewish law order that the Jews should intermarry among themselves?
- (4) In the eyes of Jews are Frenchmen not of the Jewish religion considered as brethren or as strangers?
- (5) What conduct does Jewish law prescribe toward Frenchmen not of the Jewish religion?
- (6) Do the Jews born in France, and treated by the law as French citizens, acknowledge France as their country? Are they bound to defend it? Are they bound to obey the laws and follow the directions of the civil code?
- (7) Who elects the rabbis?
- (8) What kind of police jurisdiction do the rabbis exercise over the Jews? What judicial powers do they exercise over them?
- (9) Are the police jurisdiction of the rabbis and the forms of election regulated by Jewish law, or are they only sanctioned by custom?
- (10) Are there professions from which the Jews are excluded by their law?
- (11) Does Jewish law forbid the Jews to take usury from their brethren?
- (12) Does it forbid or does it allow usury in dealing with strangers?

To these questions the French Sanhedrin made the following replies:

- (1) That, in conformity with the decree of R. Gershom, polygamy is forbidden to the Israelites.
- (2) That divorce by the Jewish law is valid only after previous decision of the civil authorities.
- (3) That the religious act of marriage must be preceded by a civil contract.
- (4) That every Israelite is religiously bound to consider his non-Jewish fellow citizens as brothers and to aid, protect, and love them as though they were coreligionists.
- (6) That the Israelite is required to consider the land of his birth or adoption as his fatherland, and shall love and defend it when called upon.
- (7) That Judaism does not forbid any kind of handicraft or occupation.
- (8) That it is commendable for Israelites to engage in agriculture, manual labor, and the arts, as their ancestors in Palestine were wont to do.
- (9) That, finally, Israelites are forbidden to exact usury from Jew or Christian.

These questions and answers formed the basis of all subsequent legislation by the French Government in regard to Jewish religious affairs and plans.

Ascher, the great Jewish teacher, framed this catechism for the Jewish youth of England:

Has the Jew a fatherland besides Jerusalem?

Yes; the country wherein he is bred and born, and in which he has the liberty to practice his religion, and where he is allowed to carry on traffic and trade and enjoy all the advantages and protection of the law in common with the citizens of other creeds, this country the Israelite is bound to acknowledge as his fatherland, to the benefit of which he must do his best to contribute. The sovereign who rules over this land is (after God) his sovereign; its laws, so long as they are not contradictory to the divine law, are also the Israelite's laws, and the duties of his fellow citizens are also his duties.

This catechism and the answers of the French Sanhedrin define clearly the Jewish notion of the citizenship and fatherland of the Jews.

But it must be conceded that in the case of this strange and extraordinary people there is a peculiar kind of fatherland known to no other race; a fatherland not based upon the soil of earth, nor bounded by streams or mountains, nor subject to the pains and penalties of physical decay and death; a fatherland whose kingdom is of the Spirit and whose law is the word of God. Hear Heine describe this fatherland:

The Jews may console themselves for having lost Jerusalem and the temple and the Ark of the Covenant and the golden vessels and the precious things of Solomon. Such a loss is merely insignificant in comparison with the Bible, the imperishable treasure which they have rescued. If I do not err, it was Mahomet who named the Jews "the people of the Book," a name which has remained theirs to the present day on the earth and which is deeply characteristic. A book is their very fatherland, their treasure, their governor, their bliss, and their bane. They live within the peaceful boundaries of this book. Here they exercise their inalienable rights. Here they can neither be driven along nor despised. Here they are strong and worthy of admiration. Absorbed in the city of this book, they observed little of the changes which went on about them in the real world; nations arose and perished; states bloomed and disappeared; revolutions stormed forth out of the soil; but they lay bowed down over their book and observed nothing of the wild tumult of the times which passed over their heads.

Zebulon B. Vance, quoting Prof. Maury, compares the great human current of this strange Jewish fatherland to the Gulf Stream:

"There is a river in the ocean; in the severest droughts it never falls and in the mightiest floods it never overflows. The Gulf of Mexico is its fountain, and its mouth is in the Arctic seas. It is the Gulf Stream. There is in the world no other such majestic flow of waters. Its current is more rapid than the Mississippi or the Amazon and its volume more than a thousand times greater. Its waters as far out from the Gulf as the Carolina coasts are of an indigo blue; they are so distinctly marked that their lines of junction with the common sea water may be traced by the eye. Often one-half of a vessel may be perceived floating in the Gulf Stream water while the other half is in common water of the sea, so sharp is the line and such is the want of affinity between these waters, and such, too, the reluctance, so to speak, on the part of the Gulf Stream to mingle with the common water of the sea." (Prof. M. F. Maury.)

This curious phenomenon in the physical world has its counterpart in the moral. There is a lonely river in the midst of the ocean of mankind. The mightiest flood of human temptation has never caused it to overflow and the fiercest fires of human cruelty, though seven times heated in the furnace of religious bigotry, have never caused it to dry up, although its waves for 2,000 years have rolled crimson with the blood of its martyrs. Its fountain is in the gray dawn of the world's history and its mouth is somewhere in the shadows of eternity. It, too, refuses to mingle with the surrounding waves, and the line which divides its restless billows from the common waters of humanity is also plainly visible to the eye. It is the Jewish race.

VANCE.

This conception of a fatherland above the earth and having no physical boundaries may seem to many a far-fetched thought, a strained political metaphor; but the idea is not new, nor is it confined to spiritual kingdoms. Waldstein says:

The abolition of slavery and the Renaissance are as such a fatherland as are England, Germany, France, or the United States.

Kosciusko was once asked where his country was. "Where freedom is not" was the reply of the valiant Pole; and whether in the wilderness of America or on the plains of Poland, Kosciusko felt at home and within the boundaries of his fatherland provided his sword was unsheathed in the name of liberty.

It has been repeatedly charged by Gentile writers that it is impossible to make a good citizen of the Jew; that he is incapable of becoming a patriot. Only a few years ago a celebrated English writer declared:

The Jews have now been everywhere made voters; to make them patriots while they remain genuine Jews is beyond the legislator's power.

This sentiment was echoed by Renan, the famous French skeptic, who said:

A Jew will never be a patriot; he will simply live in the cities of others.

It is impossible to conceive the ground of this calumny against Jewish loyalty and patriotism. Historic facts certainly refute such charges. Fewer than a hundred years have elapsed since the Jew was accorded even a limited degree of political freedom. He could not reasonably be expected to be a patriot until he had first become a citizen. Since he became a citizen he has certainly demonstrated all the finer qualities of a patriot.

Could it with justice be charged that Disraeli was not a most loyal English patriot, that Gambetta was not a most unflinching French patriot, or that Castelar was not a Spanish patriot unto death?

Adolphe Crémieux, the brilliant Jewish advocate of France, gave 100,000 francs out of his private purse to help pay the German war debt incurred in 1871. Did this indicate a lack of patriotic devotion to his distressed and humiliated country?

The school children of the American Republic are truthfully taught that Robert Morris, the financier of the Revolution, gave his fortune to the ragged revolutionary Continentals of Washington to buy bread and meat and clothing while they fought to achieve the independence which we enjoy to-day. Teachers tell these children, as a touch of pathos, that Morris died in poverty and never received in return a dollar of the money he had given the Colonial Government. But mention is never made that another financier, Haym Solomon, a Hebrew revolutionary patriot, also gave his fortune to the same cause and the same men, and that he also never received a dollar in return. Was Morris more a patriot because he was a Gentile?

But these are isolated cases, you say. Is it not a matter of authentic record that in the Franco-Prussian War French Jews on the one side and German Jews on the other fought bravely and died grandly for their respective fatherlands? Is it not a matter of daily information, conveyed to us by telegraphic dispatch, that Jews in every country of Europe are fighting bravely and dying gloriously for the countries in which they live and that they call their homes?

The fact remains that the charge that the Jew can not be made a patriot is a gratuitous slander, because unsupported by reason or historic fact.

THE ZIONIST MOVEMENT.

Under the subdivision of the Jew as citizen and patriot may be discussed the project of founding a new Jewish commonwealth in Palestine. All readers of the daily press are familiar with this project. The so-called Zionist movement has many ardent advocates and able supporters among Jews and Gentiles throughout the earth. The great world struggle has given a powerful impetus to this movement. Besides, the national idea and the religious self-consciousness of the Hebrew race in all ages have been seeds awaiting ripening for such an event. It has been truly said that "since the destruction of the second temple by Titus, since the dispersion of the Jews throughout the world, this ancient people has not ceased to long fervently for a return to the lost land of their fathers nor to entertain for it a determined hope."

The obstacles to this new plan of erecting an independent Jewish State in Palestine are many, but not insuperable. The British Government and her allies propose to guarantee to the Jews the return of the territory of their ancient Jewish fatherland. The two great essential elements of such an enterprise are in existence—a country without a people and a people without a country.

Palestine is about the size of the State of Vermont and has a present population of about 600,000 souls. There are about 14,000,000 Jews in the world. If half this number were to return to the ancient home of their race, the country could not well maintain them, but the present Zionist movement does not contemplate such an exodus of Jews from their present homes. According to a conservative estimate, the territory of Palestine could easily maintain a population of four and one-half millions of people. A successful culmination of this movement would probably realize an emigration of that number from other lands, as the innate love of the average Jew for the cradle land of his race, coupled with glorious and thrilling memories of long ago, and the hard lot of misery and grinding toil now endured by many of them in different parts of the world would be a powerful incentive to join the new settlements in the East. The tide of emigration is already beginning to flow that way.

There is no reason from a physical viewpoint why Jerusalem and the surrounding country should not become the seat of a prosperous and successful Jewish State. The popular notion that Palestine is a barren country, not capable of yielding rich harvests, is a mistaken one. Its appearance is barren only during the dry season, when the grasses which cover the greater part of it are dried up, and the herdsmen retire with their flocks of sheep and goats to the loftier mountains. The alluvial lowland to the south of Mount Carmel is as fruitful as ever, and it only needs an honest and vigorous administration to restore Palestine to its former fruitful condition.

An enlightened political management would not only rekindle the olden Jewish love of agriculture, but would revive the ancient glories of Phœnician commerce through the ports of Acre and Jaffa, which would give an outlet to all the world.

All the spiritual and intellectual elements would certainly be present in the building and perpetuating of a new Jewish commonwealth in Palestine. The Bible and the Talmud would again be their religious guides and the charters of their freedom. A Maccabean soldiery would again defend their national frontiers. A Jerusalem parliament would be heard to echo the splendid eloquence of new Disraelis, Gambettas, and Castelars. Some new Josephus would record the growth of the expanding State, and the melodies of Mendelssohn and Meyerbeer would cheer and sanctify the domestic circles of happy Jewish homes. Such a commonwealth, kingdom or republic, is a consummation most devoutly to be wished, if Jewish genius and civilization are to be lost, as is now feared, in the maelstrom of war and in the readjustment of the boundaries of States and the realignment of races.

Why should not the nations of the earth join in such an enterprise, if the Jews desire it? Every kingdom of the earth has tried its hand at exterminating them and has failed. Why should they not now change the program for awhile and extend to the patriarch of the tribes, the old man of the centuries, a kindly and helping hand? England will turn Palestine over to the Jewish people. The Christian nations of the globe could place their fleets for transportation at the disposal of honest, struggling Jews who desired to link their lives and fortunes to the land of their fathers and with the early memories of their race.

THE JEW AS ORATOR AND STATESMAN.

Noble oratory and fine statesmanship are the most perfect flowers of citizenship and patriotism. The orator and statesman whose voice is ever raised in defense of freedom and whose genius is ever directed toward the betterment of his fellowmen is the noblest of citizens and the greatest of patriots. We are only proceeding then in a climax of thought when we pass from the Jew as citizen and patriot to the Jew as orator and statesman.

The most brilliant oratory and statesmanship of modern times have been nearly monopolized by two races—the Irish and the Jewish.

It is a peculiar fact that two-thirds of the really great political orators of the English-speaking race have had Irish blood in their veins. To illustrate: The very great political orators of Great Britain have been Pitt the Elder, Pitt the Younger, Burke, Fox, Sheridan, Grattan, Curran, Canning, O'Connell, Gladstone, Palmerston, and Disraeli—an even dozen. Any other classification that did not include at least nine of these names would be ridiculous. An analysis of the list shows that only two of these orators were English: Pitt the Elder and Pitt the Younger. Gladstone was Scotch, Disraeli was a Jew. Burke, Fox, Sheridan, Grattan, Curran, O'Connell, Canning, and Palmerston were either full-blooded Irishmen or of partial Irish descent.

In proportion to population, the Jews, who have never numbered more than 1 per cent of the human race, produced more magnificent orators and statesmen in the nineteenth century than any other except the Irish. The great Jewish orators of that century, at the beginning of which the Jew first became eligible to high political honors, were able representatives of the statesmanship of five different nations. Benjamin Disraeli in England, Leon Gambetta in France, Emilio Castelar in Spain, Edward Lasker in Germany, and Judah P. Benjamin in America were types of all that is superb in oratory and profound in statesmanship.

Benjamin Disraeli, Earl of Beaconsfield, was born in London, December 21, 1804, and died there April 9, 1881. The high-water mark of Jewish success in statesmanship was reached by this eminent Hebrew. As British prime minister, he launched the world policy of Queen Victoria and made her Empress of India. The pluck, perseverance, and genius exhibited by Disraeli at the beginning of his public life illustrate most perfectly the capacity and unconquerable spirit of the Hebrew race. He was three times a candidate for Parliament before he finally secured a seat. His first speech in the Commons was greeted not with applause but with hisses, and the members refused to hear him. "You will hear me yet," said the future prime minister of the empire; and they did hear him. Once, while campaigning for a seat in Parliament, he was asked by one of his listeners on what platform he stood. "On my head," said Disraeli, and the English electors were grand and good enough to elect him on such a platform. The most brilliant parliamentary retort on record was the reply of Disraeli to the Irish orator O'Connell, who twitted him with being a Jew:

Yes, I am a Jew, and when the ancestors of the right honorable gentleman were brutal savages in an unknown island, mine were priests in the Temple of Solomon.

Leon Gambetta, a Jew, was born at Cahors, October 30, 1838, and died in 1882. With the exception of Mirabeau, he was with-

out doubt the greatest orator of the French. He was a fierce and uncompromising republican, and his grandest oratorical efforts were panegyrics of republicanism. The whole world was thrilled with admiration at the titanic efforts of Gambetta to save France from national shame and humiliation in 1870-71. Every student of history is familiar with his daring and perilous escape from Paris in a balloon when he assumed dictatorial power and endeavored to rouse all France to arms. In 1879 Gambetta became president of the Chamber of Deputies, and in 1881 premier of France. He has left no collected works. With Shakespearean indifference he seemed careless of his fame and regardless of the opinion of posterity. His reply to the Alsations who came to present him with a bronze group exhibits the noble traits of the man and the superb qualities of the orator.

Emilio Castelar, a Jew, was the most famous Spanish orator of any time. He was born at Cadiz, September 8, 1832, and died at Madrid, May 25, 1899. He was descended from humble parentage and in his early youth was subject to hardship and distress, but his precocious intellect manifested itself while he was yet a lad, and before he was 18 years of age he had written two novels of considerable merit. His relatives combined their means to educate him at Madrid. His progress was so rapid and his reputation grew so fast that he soon became professor of history in the University of Madrid and used his chair to propagate his political principles. Castelar was the most brilliant writer of Spain in his day, but he was preeminently an orator and statesman. Whatever he achieved was effected by the power of his oratory. Instances are related where strangers traveled from distant points in Europe to Madrid to hear him speak an hour before the Cortes. When he addressed this body in later life the chamber was always crowded, and carls of admission commanded an exorbitant price. His genius was so pronounced that all parties delighted to honor him. His oration on the candidacy of Amadeus for the kingship of Spain is the most gorgeous production in oratorical literature. It is a perfect "field of cloth of gold" in metaphor and imagery. As a statesman, like Gambetta, Castelar was a stalwart republican; and, after 20 years of brilliant oratorical advocacy, succeeded in overturning an ancient and inveterate monarchy and in erecting upon its ruins the fleeting yet splendid fabric of a Federal Spanish Republic. Castelar was chief magistrate and virtual dictator of this Republic from September, 1874, to January, 1875. But he was doomed to see the hopes of a lifetime blighted and blasted in a year. The Spanish nation was not then and is not now adapted by tradition or temperament for life under republican government. His countrymen showed themselves incapable of rising practically to his grand ideal, and the new-born Republic fell broken and shattered at the feet of him by whose genius it had been created. Castelar admitted the failure of republican experiment in Spain and refused to persevere in the maintenance of principles that threatened the glory and safety of his country. He was charged with vacillation and inconsistency by his former political associates. His superb patriotism and sublime disinterestedness were shown by the following reply:

Charge me with inconsistency if you please. I will not defend myself. Have I the right to prefer my reputation to the safety of my country? Let my name perish. Let posterity pronounce its anathema against me. Let my contemporaries send me into exile. Little care I. I have lived long enough. But let not the Republic perish by my weaknesses, and, above all, let no one say that Spain has perished in our hands.

This patriotic outburst was high Roman in its loftiness and courage.

Edward Lasker, once leader of the Liberal Party in the German Reichstag, was the only man whom Bismarck ever feared in parliamentary debate. He was born in Posen, Germany, October 14, 1829, and died in New York City January 5, 1884. Germany is the land of scholars and thinkers, but has produced few famous orators. It is probable that Bismarck and Lasker were the greatest of all the German orators. Lasker was an enthusiastic patriot and altogether above reproach. In general outline he closely resembled the late Carl Schurz in independent notions and lofty ideals. At first he was an ardent admirer and loyal follower of the "Iron Chancellor." But when Bismarck championed a bill designed to limit freedom of speech in Parliament, Lasker refused to follow him, and a lifetime alienation between the two great statesmen followed.

Judah P. Benjamin was the ablest and most illustrious Jew ever born in the Western Hemisphere. He was a West Indian by birth (1811), and died in Paris in 1884. He was very great as an orator, statesman, and lawyer. The late Charles Sumner once declared that Judah P. Benjamin was the most brilliant orator in the United States in his day. The force of this compliment will be appreciated if we keep in mind the man by whom and the age in which it was paid. Sumner was himself a magnificent orator, and the eulogy of Benjamin was made at a time when Webster, Clay, Calhoun, Benton, and

others rendered glorious the annals of the Republic. The political career of Benjamin was comprised, in public service, within the offices of United States Senator from Louisiana, and of Attorney General, Secretary of War, and Secretary of State, successively, of the Confederate States of America. James Schouler, in his "History of the United States," remarks:

Contemporaries had said at the outset that Toombs was the brain of the Confederacy, but that title, as events developed, belonged rather to Attorney General Benjamin, the ablest, most versatile, and most constant of all Davis's civil counselors, who acted as Secretary of War after Walker's retirement in September, and was then, by the following March, installed Secretary of State, to remain premier until the bitter end, sanguine and serene in bearing, through all mutations of fortune and misfortune.

Disraeli, Gambetta, Castelar, Lasker, and Benjamin were bright particular stars in the constellation of Jewish statesmanship, but they were types rather than exceptions, for Jewish genius has been in all ages peculiarly adapted to grand achievements in law and government.

This brief address has done poor justice to the Jew as a soldier, citizen, patriot, orator, and statesman; but I must close.

The wonderful intellectual and spiritual achievements of your race have been by no means limited to the topics and subdivisions of this discussion. They are really the minor phases of the triumphs of a many-sided genius that has enriched and glorified the literature and history of mankind. Every art and every science has been grandly adorned and brilliantly illuminated by the Hebrew intellect and spirit. Monotheism, the world's noblest religion, has been the great contribution of your people to the civilization of the earth; but no standard of principle, no mode of thought, no form of philosophy, has been omitted or neglected in the grand march of Jewish achievements through the centuries.

To call the roll of Hebrew great names is to crowd the intellect and the imagination with a multitude of the very best and bravest men and women of all lands and all ages of the earth. Abraham, among patriarchs; Moses, among lawgivers; Solomon and David, among kings; Philo, Maimonides, Spinoza, and Mendelssohn, among philosophers; Herschel, Sylvester, Jacobi, and Kronecker, among mathematicians and astronomers; Mendelssohn, Meyerbeer, Offenbach, Goldmark, Joachim, Rubinstein, and Strauss, among musicians; Sonnenenthal, Possart, Rachel, and Bernhardt, among actors and actresses; Halevi and Heine, among poets; Karl Marx and Samuel Gompers, among the labor leaders and political economists; the Rothschilds, Bleichröders, Schiffs, and Seligmans, among financiers; Auerbach and Nordau, among novelists; Sir Moses Montefiore and Baron Hirsch, among philanthropists.

Many days might be spent reviewing the wonderful triumphs of the Jews in religion and philosophy, in science and in art; but the purpose of this address has been to call attention only to those forms of Jewish genius and achievement that have to do with citizenship and patriotism, and to remind the Jews of this country and this generation that if they are even remotely disloyal or unpatriotic in the great world struggle in which our country is now engaged, they are unworthy of the splendid records of their ancestors as soldiers, citizens, patriots, orators, and statesmen.

The crisis that now confronts mankind is the most awful and stupendous in the whole history of our race. All that is dear and sacred to freemen everywhere is immediately and dangerously involved. The victory of Germany in this war would be the defeat of democracy and the triumph of absolutism throughout the world.

The natural and historic sympathies of the Jews of all the earth should be and must be with the allies in this colossal struggle for the preservation of the liberties and the civilization of mankind.

The Jew has been the child of revolution and the friend of freedom in every age and every land. The Mosaic commonwealth was theocratic in origin and character but democratic in function and effect. All the prophets of Israel were fearless champions of human rights. Isaiah and Jeremiah were the first great revolutionists of earth.

Not only have the Jews been friends of freedom in every age; the friends of freedom of every age—Montesquieu and Mirabeau, Cromwell and Macaulay, Cavour and Mazzini, and Washington—have been friends of the Jews.

Jewish union with the cause of imperialism and absolutism in this war would be a coarse and adulterous alliance, and a base betrayal and repudiation of the best and most democratic traditions of Israel in many lands.

I am deeply interested in the attitude and conduct of the Jew in this world crisis. From early childhood I have delighted to study the history and literature of his race. At least 40 per cent of the people in my district are Jews. They are among the best and bravest of our citizens. They have always

been my friends, and I shall always show a friendly interest in them and their affairs. I shall consider it my duty to defend them in the future as I have defended them in the past whenever occasion offers.

Every civilized nation on this globe is under a heavy debt of gratitude to the Jews for their marvelous contributions to the uplift of mankind and to the civilization of the earth. This debt can be partially paid by proper treaty guaranties when this frightful war is over and the representatives of these civilized nations gather around an international council board to determine the fate of Germany and the penalty that she must pay. The framers of the treaty of peace that shall conclude this war should not and will not forget the Jews. Their rights as free citizens in every land should be and will be adequately safeguarded and protected. The infamous conduct of Roumania in violating her pledges under the Berlin treaty of 1878 should be made impossible of repetition by any nation signatory to the treaty. When the time comes I shall do my utmost, in my humble way, to have this protection extended to the Jews, whose sole security for their rights rests in an effective appeal to the conscience and to the enlightened judgment of mankind.

My friends, I thank you for the courtesy and compliment conveyed by this invitation to address you, and I now bid you good night.

EXTENSION OF REMARKS

OF

HON. JACOB E. MEEKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 16, 1918.

Mr. MEEKER. Mr. Speaker, under the leave granted to me to extend my remarks I include an application which comes from the Merchants' Exchange of St. Louis for an increase of freight rates.

The application is as follows:

TRAFFIC DEPARTMENT,
MERCHANTS' EXCHANGE OF ST. LOUIS,
St. Louis, May 9, 1918.

Subject: Application of railroads to Interstate Commerce Commission for increase in rates on grain and grain products to the Gulf ports, domestic and export, and to interior points in Mississippi, Tennessee, etc., from St. Louis and other points. (Interstate Commerce Commission, fifteenth section application No. 5479 of Apr. 23, 1918.)

FIFTEENTH SECTION BOARD,
Interstate Commerce Commission, Washington, D. C.

GENTLEMEN: Referring to conversation with Mr. Oberg in Washington, April 19, during which I gave briefly the objections which our exchange has to the granting of Chairman Boyd's fifteenth section application, B-310, copy of which was then not yet in your possession:

I. This petition, briefly stated, asks for an increase of 3.5 cents per 100 pounds on all grain and grain products from Chicago, central Illinois, St. Louis, Cairo, Minneapolis, Kansas City, Omaha, and Sioux City to New Orleans and all points taking the same rates; to interior points in Mississippi, such as Jackson, Meridian, Winona, West Point, Holly Springs, Tupelo, Corinth, and intermediate stations on the Illinois Central, Mobile & Ohio, and Alabama & Vicksburg Railroads; and to Tennessee points on the Illinois Central and the Mobile & Ohio Railroads.

II. The basis of this petition is that since 1915 the rates on grain and grain products from Chicago and St. Louis to Baltimore and related eastern ports have been raised 5 cents, domestic and export; that during the same period the rates from St. Louis to New Orleans for export have been advanced from 10.5 cents to 12 cents, or only 1.5 cents, putting the New Orleans rate on the domestic basis, namely, 12 cents. It is claimed that should be corrected by bringing the New Orleans rate up another 3.5 cents, both domestic and export, and advancing all the interior points in Mississippi and Tennessee accordingly from all points of origin described in second paragraph above.

III. I call your attention to protests filed with you on November 15, 1917, and on January 25, 1918, against a previous application of the interested carriers to advance our New Orleans rate 8 cents per 100 pounds. The previous advance was predicated on the same ground as the present petition, namely, that it was necessary to advance the New Orleans rate in order to make the same advance to New Orleans as had been made to Baltimore, thus preserving the normal or prewar relationship. The normal relationship has been ruined a long time ago because the rates from New Orleans during the war have been 25 cents per 100 pounds more on grain than from Baltimore, and it is only when the Government wants to force ships into the New Orleans port to take it away that any grain or grain products can move from there at all; therefore if the petition rests solely on the ground that the advance is necessary to equalize the two ports, I respectfully submit that it must fail, because the proposed advance would not equalize the ports by at least 21 cents per 100 pounds. New Orleans would still remain out of line with Baltimore that much; furthermore, we think, considering the congestion at the eastern ports, it is undesirable for any department of the Government, whatever its name, to discourage the movement via New Orleans, where it can get out on time if the ships are furnished, by advancing the rates via New Orleans on such a pretense as Boyd puts forward. Furthermore, under the compensation bill as passed by Congress, section 10, the commission is directed in making rates during the war period to have due regard for the fact that the railroads are now operated as a coordinated national system and not in competition. What does it mean if you put in rates to New Orleans

in order to establish the normal differentials? The normal differentials in the long ago were presumed to and did approximately maintain those two ports on a comparative basis; that is not so now, however, nor will it be during the war. If you want confirmation of this, call on the United States Food Administration. Even if it were true that a competitive condition would be restored by advancing the New Orleans rate 3.5 cents, so that Baltimore and New Orleans would be on a competitive basis, the commission, by approving such action, would be approving fresh competition between the railroads serving the port of Baltimore and the railroads serving the port of New Orleans from St. Louis. Since the commission is forbidden by the compensation act to make rates on a commodity basis, and Boyd's petition is based wholly on the competitive plea for its justification, I think it must fail.

IV. The present rate from St. Louis to New Orleans, Mobile, and common points on coarse grain and feed is 12 cents per 100 pounds; distance to New Orleans, 700 miles; to Mobile, 647 miles. The rate to Jackson and Meridian, Miss., is 8 cents higher, or 20 cents, being made 8 cents per 100 pounds, or the interstate local rate, higher than Vicksburg, Vicksburg taking New Orleans rates from St. Louis and all territory north and west. When the carriers received authority from the commission to advance the rates from St. Louis to Jackson and Meridian from 14.5 cents to 20 cents per 100 pounds on coarse grain and feed in January, 1916, being an advance of over 33 per cent in that rate, they voluntarily observed that rate as maximum at intermediate points on the Illinois Central north of Jackson and on the Mobile & Ohio north of Meridian, carrying that rate way up in Tennessee without any reduction. The rate is in effect at Corinth, Miss., and Grand Junction, Tenn., which are points at the border of the Tennessee-Mississippi State line, and it goes as far north as Gilmore, Tenn., on the Mobile & Ohio Railroad, and Fowkes, Tenn., on the Illinois Central. I call your attention to the significant fact that in observing the Jackson-Meridian rate of 20 cents (which you allowed to these carriers) at intermediate points north thereof not affected by water competition in the remotest degree, the carriers stamped the 20-cent rate as being sufficiently high in and of itself. Now they come and say they must have 3.5 cents more on all those rates because they propose to advance Jackson and Meridian as much as New Orleans and Mobile, namely, 3.5 cents; thus you will see how the wheel of fortune goes around. It begins with a proposal to establish Baltimore on a competitive basis with New Orleans, which is against the law as it now stands, as a reason for advancing rates, and then it says because the export is advanced the domestic must also be advanced, and, as New Orleans and Mobile are advanced, all points having any relationship, including intermediate stations, must be advanced to the same extent.

V. Let us assume the commission has approved this and it has gone into effect, then we would have this state of affairs: The rate on grain from St. Louis to Baltimore (short-line distance 935 miles) would be 19.5 cents; on an 80,000-capacity car this would figure 4.2 mills per ton per mile and about 17 cents per car-mile. The rate from St. Louis to Gilmore, Tenn., on the Mobile & Ohio (265 miles) would be 23.5, which would figure about 17 mills per ton per mile, and the rate per car-mile, using an 80,000-pound capacity car as a basis, would be 71 cents; to Fowkes, Tenn. (241 miles), the per ton per mile would be 20 mills and the per car-mile 78 cents. If we got the 15.5-cent rate at Fowkes (provided the commission would allow the advance to that figure at New Orleans, Mobile, and common points), then revenue per ton per mile would be about 13 mills to Fowkes, Tenn., as compared with Baltimore's 4.2 mills, and the revenue per car-mile would be over 50 cents to Fowkes, Tenn., as compared with Baltimore's 17 cents car-mile. Note in fourth-section order 4868, April 27, 1915, the commission said 15.5 cents on grain and grain products was a high enough rate from St. Louis to points on the Mobile & Ohio and Illinois Central Railroads, north of the Mississippi-Tennessee State line, in any event. Compare this rate with a 12-cent rate from St. Louis to Little Rock on corn, oats, and feed and 14 cents on flour, via the Iron Mountain, their haul being 346 miles, against Gilmore, Tenn., 265 miles, and Fowkes, Tenn., 241 miles. The commission has said that rates east of the Mississippi generally should be lower than west of the Mississippi River. I can not conceive any justification for such rates as those proposed by Chairman Boyd, even allowing that there may be some difference in the traffic conditions. They can not be so great as to justify a spread such as this. If we have to stand an advance in the New Orleans-Mobile rate on the theory advanced by Mr. Boyd and against the express declaration of section 10 of the compensation bill, why should we not get an observance of those advanced rates (applicable to the principal points of consumption in that field—New Orleans, Mobile, Vicksburg, Baton Rouge, Natchez, Gulfport, Greenville, etc.), at all intermediate points on all intermediate lines, including the cross lines, such as the Mississippi Central, Alabama & Vicksburg, Southern Railway, and the Frisco Railroads? The commission will remember in all the Mississippi Valley fourth-section cases that it has had the carriers have said again and again that they could not advance the 12-cent grain rate to New Orleans because of fear of water competition on the Mississippi River. Now, apparently they have had a new thought, displacing those declarations altogether, because here they are proposing to advance all the Mississippi and Louisiana River points and the interior domestic points as well 3.5 cents per 100 pounds. Perhaps they think the commission has forgotten what they said in the fourth-section investigations. You understand the rate of 19.5 cents that I have mentioned above from St. Louis to Baltimore, which is now in effect on domestic as well as export business, applies as maximum at intermediate stations. If we are obliged to bear an increase to 15.5 cents to New Orleans, Mobile, Vicksburg, etc., can't we get equal consideration with the eastern territory in having this rate observed as maximum at intermediate stations? Why should we continue to have the fourth section (which provides that a railroad shall not charge more for a short haul, intermediate to a longer haul, over the same line, in the same direction, than it charges to the more distant point on said line) violated in Mississippi when it has been observed in practically all the rest of the country except the South and Southeast?

VI. I repeat that the representation that it is necessary to advance the New Orleans rate 3.5 cents in order to establish the normal 4-cent differential relationship between Baltimore and New Orleans wholly ignores the fact that such relationship is no longer in force, because the ships are charging 25 cents per 100 pounds more on grain and grain products from New Orleans to Europe than from Atlantic ports during the war period. Since the whole petition is predicated on that one ground, I think it must fail of approval. We ask that the commission take no action without the most thorough investigation.

Yours, truly,

CHAS. RIPPIN,
Traffic Commissioner.

Copy to Hon. JAMES A. REED, Hon. X. P. WILEY, Hon. WILLIAM L. IGOR, Hon. L. C. DYER, Hon. J. E. MEEKER, members of Senate and House Committees on Interstate Commerce and members of Joint Subcommittee on Interstate and Foreign Commerce Committee (Newlands committee).

Copy to boards of trade and chambers of commerce at the following points: Atchison, Baton Rouge, Brookhaven, Cairo, Cincinnati, Corinth, Des Moines, Evansville, Greenville, Hattiesburg, Henderson, Holly Springs, Humboldt, Jackson, Miss., Jackson, Tenn., Jeffersonville, Kansas City, Leavenworth, Louisville, Memphis, Meridian, Milan, Minneapolis, Mobile, Natchez, Nebraska City, New Albany, New Orleans, Omaha, Paducah, Peoria, St. Joseph, Sioux City, Tupelo, Vicksburg, West Point, and Winona; also Chicago and Nashville. (Also all mayors of towns with population of 500 and over in territory affected.)

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 13, 1918.

Mr. CROSSER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter written by me to Mr. F. E. Cady, of Cleveland.

The letter is as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR SIR: Believing that you would be glad to have a correct statement in regard to my action on the measures which have come before the House of Representatives since the beginning of war between the United States and Germany, I am sending you herewith a list of all the important war measures.

I opposed but one of these, either by vote or speech. The one against which I voted was the Army draft or conscription bill, my reasons for voting against it having been given in a speech, a copy of which I mailed to you, about a year ago.

The limits of this page permit me to discuss only briefly the most important measures in the list.

The expenditure of \$640,000,000 to build airships and provide men to operate them was very important to the efforts of this country in the war. Congress passed the bill in July, 1917.

The tax bill brings to the Treasury more than \$2,800,000,000. I voted for amendments to put a higher tax on great incomes, but the majority opposed this. The bill, however, increased considerably the tax on such incomes, and I voted for it as an improvement upon the old law.

The bills providing money to care for the soldiers and properly equip them seemed to me extremely necessary and desirable. The law providing insurance for soldiers and sailors is very beneficial.

The railroad-control bill was very necessary. I believe it will finally bring about Government ownership of railroads.

The Finance Corporation bill passed the House several months ago, and provides means to enable those engaged in furnishing materials and structures for the Government to procure money to carry on such work.

Congress has passed many bills appropriating and authorizing the expenditure of great sums of money, amounting in all to more than \$22,000,000,000. I supported all of these, believing same to be necessary for the welfare of our soldiers and the Nation.

There are many other measures which I would like to discuss if space would permit. I suggest that you keep this list at hand in order to have exact information which will enable you to correct any misstatements which may be made.

Yours, very sincerely,

ROBERT CROSSER,
Representative in Congress, Twenty-first District.

WAR MEASURES PASSED BY THE PRESENT CONGRESS.

War bonds, seven billions, authority to issue.
Assignment of Fleet Naval Reserve to active duty.
For extension of minority enlistments, naval service.
Authority for additional officers, Hydrographic Office, Navy.
Increase of midshipmen at Annapolis.
Increase age limit for officers, Naval Reserve.
Relating to foreign enlistments in United States.
Army appropriations.
War Army bill, draft and selective service.
Relating to enlistments in Naval Reserve Corps.
Increase enlisted strength of Navy and Marine Corps.
Military Academy appropriations.
Car-service regulations.
War-risk insurance for seamen.
Sundry civil appropriations.
Issuance of rifles to State troops.
Army and Navy deficiency appropriations.
Suppression of espionage.
Condemnation of land for Army.
Aeronautics personnel and appropriations.
Authority to acquire aviation training sites, San Diego, Cal.
Relief of homesteaders in military or naval service.
Protection of desert-land entrymen in Army or Navy.
Increasing membership, Interstate Commerce Commission.
For priority of railroad shipments and control of train service.
Food-survey authorization.
Food-control authorization.
War bonds, authority for second liberty-loan issue.
Creating Aircraft Board.
Authority to explore for nitrates and potassium.
War-revenue measure.
Providing repatriation of citizens in armies of allies.
Providing for Navy air-station site at Cape May, N. J.
Urgent deficiency measure appropriating \$5,356,666,016.
Allowing dependents to receive pay while absent abroad.

Regulating use of explosives during war.
Providing for property lost by seamen.
Permission to take public-land affidavits before military authority.
Permitting coastwise trade by foreign vessels.
Providing six months' gratuity to dependents of deceased sailors in the Navy.
Providing commissions in Army Staff Corps and removing age limits of Reserve Corps officers requiring discharge.
Prescribing court-martial procedure in Navy.
Appointing chaplains at large in Army.
Preventing publication of military inventions.
Relating to Medical and Dental Corps.
Fixing 40 cents as a commutation price for rations in Navy.
Establishing new rating for enginemen, blacksmiths, etc., in Navy.
Distribution of Cavalry units in Army, providing for.
Providing military and naval insurance.
Regulating trading with enemy.
Appropriation to continue \$100,000,000 fund to be used by the President, and for other purposes.
Increasing Naval Academy enrollment.
Authority for absence of homesteaders during war for farm-labor requirements.
Authority to call Philippine forces into war service.
Authority for marines to serve under Dominican Republic.
Providing for housing and lands for shipyard and munition workers, \$50,000,000.
Civil-rights law for soldiers and sailors.
Authority to grant furloughs in Army for agricultural and other necessary pursuits.
Daylight-saving law.
Railroad-control law.
Urgent deficiency appropriations (second session) on account of war expenditures.
Providing disposal of effects of deceased sailors.
To pay Navy firemen additional 33 cents per diem.
To pay gun pointers and captains in Navy while absent.
Authority to appoint as officers, Philippine Scouts.
Restoring discharged enlisted men to former grades if discharged to accept commissions.
Authority to discharge recalcitrant Navy officers.
Reducing instruction period at Naval Academy to three years.
Third liberty-loan authorization.
War Finance Corporation law.
To appoint additional Assistant Secretaries of War.
Regulating pay of retired chief warrant officers, Navy.
To promote export trade.
Providing for quarters for officers in field or abroad.
Delegating powers for suppression of espionage among women enemy aliens.
Relating to military training in colleges and to reserve officers' training camps.
Allowing indemnities to France for damages caused by American forces.
Preventing interference with use of homing pigeons.
Sabotage law, preventing destruction of war materials, etc.
To pay traveling expenses in Army when "on duty under competent orders."
To promote officers temporarily when filling vacancies of officers to higher grades in Regular Army.
For transportation of shipyard employees.
Silver-coinage law.
Appropriating \$1,000,000 for ordnance testing in Navy.
Authorizing building of track to medical-supply depot in District of Columbia.
Authorizing President to sell supplies, equipment, etc., acquired or manufactured by the United States incidental to the war.
Regulating the officering and manning of vessels subject to the inspection laws of the United States.
Authority to seize enemy vessels.
Authority to Red Cross to erect temporary building.
Permission to War Department to erect building on Smithsonian Grounds.
Relating to eligibility of retired Army engineer officers.
Correcting error in sundry-civil law relating to salary of Panama governor.
Extending time for Niagara water diversions.
Pensions in Public Health Service.
Excusing soldiers and sailors from assessment work on mining claims.
Suspending labor requirements of owners of mining claims during war.
Authorizing land purchase by Ordnance Bureau, War Department.
Extending effective date of section 10 Clayton antitrust law.
Garabed energy-generator tests authorized.
Extending time for filing applications under soldiers' insurance act.
Permitting outside applicants to take civil-service examinations in the District of Columbia.
Allowing applications for war-risk insurance by soldiers' relatives.

[The following statement appears on page 409 of House Journal, 1st sess., 65th Cong.]

By unanimous consent, the following communication was read from the Clerk's desk:

OCTOBER 6, 1917.

The Sixty-fifth Congress, now adjourning, deserves the gratitude and appreciation of a people whose will and purpose, I believe, it has faithfully expressed. One can not examine the record of its action without being impressed by its completeness, its courage, and its full comprehension of a great task. The needs of the Army and Navy have been met in a way that assures the effectiveness of American arms, and the war-making branch of the Government has been abundantly equipped with the powers that were necessary to make the action of the Nation effective.

I believe that it has also in equal degree, and as far as possible in the face of war, safeguarded the rights of the people and kept in mind the considerations of social justice so often obscured in the hasty readjustments of such a crisis.

It seems to me that the work of this remarkable session has not only been done thoroughly, but that it has also been done with the utmost dispatch possible in the circumstances or consistent with a full consideration of the exceedingly critical matters dealt with. Best of all, it has left no doubt as to the spirit and determination of the country, but has affirmed them as loyally and as emphatically as our fine soldiers will affirm them on the firing line.

WOODROW WILSON.

Pensions.

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. WELTY,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Monday, May 6, 1918,

On the bill (H. R. 9959) increasing the rates of pensions of soldiers and sailors of the Civil War.

Mr. WELTY. Mr. Speaker, this bill came up under the suspension of the rules of the House, which does not permit of its amendment.

There are some matters in the bill which I think objectionable; but I shall vote for it, with a hope that it will be amended in the Senate.

In the first place, a pension to soldiers should not be considered a gratuity. We should not forget that the country owes a debt to the soldier, who makes possible that country fit to live in. Were it not for the soldiers we would not be here, standing with confidence on the Constitution during this crisis. They got a mere pittance while serving the country. We have recognized this fact when we passed the war-risk insurance act in favor of the soldiers of the present war. I introduced a large number of bills granting increases where the present law fails to give adequate relief under the circumstances. Why should you in fairness withhold this modest increase for those who have an income of a thousand dollars a year? Another feature which is objectionable in this bill—it does not affect the soldier in the soldiers' home. I see two old people unable to longer earn a living, and because of a meager income are required to separate, the soldier going to the home, while his good wife is being cared for by their children. These old people have been going down the pathway of life for over a half century, and now are compelled to separate because of their lack of earning capacity and the meager pension, which fails to keep both of them. We granted the widow \$25 per month, but Congress has been slow in granting substantial support where both are still living.

The old soldier left that happy home and is now spending his declining days in a soldiers' home, away from the scenes of his boyhood and where he raised his family and spent many a happy moment with his devoted and loving wife. The increase should affect his case in such a manner as to permit him to join his wife. At least, he should have the increase, provided he left the soldiers' home.

There are those who object to any increase because of the enormous expense of the present war. They forget, however, that a country which does not care for its old soldiers will not long endure the hardships of the present war. The man who objects to a proper support of a soldier usually is the last man who would volunteer his service during a crisis.

These old soldiers have only a few more summers to live, and God have pity on the man who objects to a pay so that they will not be in want. For myself, I hope to be able to add some degree of happiness to their life, and hence I shall vote to increase their pay.

To Coordinate and Consolidate Executive Bureaus.

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 15, 1918.

Mr. KNUTSON. Mr. Speaker, I regret exceedingly that I was not present last evening when the vote was taken on S. 3771, commonly called the Overman bill. I returned to Washington yesterday afternoon from a day's visit to my home in Minnesota and had purposely cut my visit short in order to be present when the vote was taken. En route to this city I met a young soldier, who was just recovering from a severe attack of pneumonia, he having been confined for the past month in a hospital located in my district. The young man was not well and upon our arrival in Washington I called up the House

and was advised that a vote would probably not be reached before the next day, hence I personally took the young soldier out to his camp at the American University that I might explain his case to the commanding officer. Upon my immediate return to the Capitol I found that the vote had been taken a few moments before.

Mr. Speaker, I was strongly in favor of the Overman bill, and I consider its passage an accomplishment which will do much toward coordinating the various departments of the Government. We are in this war to win, and I, for one, am in favor of granting the President all necessary power to accomplish that end. The passage of the Overman bill will permit the President to change and shift men from one bureau or department to another according to needs and fitness. It is of little or no concern to me whether a man now in the Ordnance Bureau is changed over to the signal branch of the War Department. If he can be of more service in the latter place, the President should have the power to make the change. Place him where he will do the most good. Nothing matters now but the winning of the war, and we will and must win. Let it be done with the greatest dispatch and least loss of man power, time, and treasure. That is the sentiment of the American people, and to that end will we bend every energy and resource. From that object we will not allow ourselves to be diverted or turned aside.

Mr. Speaker, these are extraordinary times which require heroic measures. No matter what our views with reference to the methods employed by our adversaries, we can not but admire the clock-like precision with which every cog in the remarkable machine we call "Prussianism" works in harmony with the other parts of the machine. It is not alone precision but coordination which has made this efficiency possible. It is up to us to go them one better. We must, for the time being, lay aside preconceived notions about forms of government, yielding whatever is necessary to performing the great task in hand.

By neither vote nor voice will I do aught to impede the successful prosecution of the war. We now have, in round figures, about one-half million men in France and Flanders. We must provide ways and means for augmenting the number and keeping them continually provided with everything necessary to a perfect fighting machine. There are few homes in this land that have not some loved one with the colors. The people are a unit in demanding that everything possible be done in this country to back up the men over there. This we can not do unless all friction and inefficiency is removed here. Let us put square plugs in square holes. A visit to any of the large governmental departments can not but convince one of the urgent necessity for the legislation passed yesterday.

Consolidation of Executive Bureaus, etc.

EXTENSION OF REMARKS
OF
HON. CHARLES O. LOBECK,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 14, 1918.

Mr. LOBECK. Mr. Speaker, I have been very much interested in consideration of S. 3771, known as the Overman bill, an "act authorizing the President to coordinate or consolidate executive bureaus, agencies, and offices, and for other purposes, in the interest of economy and the more efficient concentration of the Government." I am gladly supporting this bill because I believe it absolutely necessary for the President to have power to redistribute and coordinate the functions and the powers of the officers of the executive and administrative branches of the Government in the successful prosecution of the war, and for the efficient administration of the executive branches of our Government. It is only just and proper, in my mind, that the President should have full power to act in the manner which in his judgment will bring success to the American people.

It has been my experience that practically the same or similar work is being transacted by separate bureaus, and I believe it could be done more successfully and to better advantage if under one control.

For instance, in the subject of Americanization of the people who have come to our shores to make America their future home, I have had occasion to inquire in regard to same with several bureaus, and no bureau seems to have full authority.

The Department of the Treasury, the Post Office, the Department of Labor, and other agencies have all something to do with this subject, and while I have no criticism on any division that has the matter in charge, for they are doing good work, but in conversation with the chiefs in charge I think I can truly say that they agree with me that if this important matter was under the control of one supervising head, much more efficient and satisfactory work could be done and the Americanization of the foreigners that come to our land could be much better effected.

It is only one of the many subjects that could be remedied, but Americanization of these people who come to live with us is of greatest importance to the present and the future of our land and Nation.

It is time that every child should be taught in American schools, that every young man and young woman who comes here should also attend schools where they can learn our language and get insight into the laws of our Nation and learn its history, and be taught the principles of true democracy, to respect our flag, the highest and best emblem of freedom.

I have no doubt that in the hurry of organization preparing for the defense of our country, in the preparation for the successful prosecution of this war, commissions and boards have been organized whose work could be concentrated and even do better work than they have done. I recognize and commend the splendid work that these agencies have done, but I am glad to vote for any authority that may be helpful to the President and the administration that victory may speedily come.

This is no time for bickering; this is the time of all times for prompt and decisive action. When Congress declared war against Germany we authorized the President, our Commander in Chief, to utilize all the resources of our Nation and all its man power; to that authorization our country is committed, and our people are gladly and patriotically standing by the President.

We have burned the bridges behind us; we must, we shall go forward and win in this battle for universal freedom, for democracy in its highest and best sense, and against military supremacy. There must be no faltering, no uncertain steps, but a steady united forward movement by Congress, by everyone who is under the protection of our flag, to preserve our institutions, our homes, our loved ones, and the liberties cherished by a free people; to this we have dedicated our all and shall win.

Abolition of the Premium and Time Study—The Efficiency System.

SPEECH

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 20, 1918.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 10854) making appropriations for the naval service for the fiscal year ending June 30, 1919, and for other purposes.

Mr. BROWNE. Mr. Chairman, I do not wish to take up very much of the time of this committee; but I think this is a very important provision, because if it stays in this bill it is a precedent for having the same provision in the military bill.

Mr. PADGETT. May I interrupt the gentleman just for a moment to expedite matters?

Mr. BROWNE. Yes.

Mr. PADGETT. This is the identical language in the current law. It is the identical language that has been carried for the past five or six years in the naval bill. Time after time it has been fought out here in the House, and the House every time by a large majority voted to keep it in the bill. It has been fought over time and time again here in the House, and the committee simply reported it as the House five or six times by a very decisive majority adopted it, both in the form of a motion to strike out and, when it was left out by the committee, to insert it as a limitation; so the committee has followed the wish of the House in the matter. The Navy Department has never made any complaint about it, and so far as our committee is concerned we have never heard any complaint nor has the department said it was hampered. I just wanted to give the gentleman the benefit of that.

Mr. BROWNE. I understand, Mr. Chairman, the history of this legislation very well, and it is substantially the way the

gentleman says, only the last time it came up the vote instead of being unanimous upon this subject—

Mr. PADGETT. I did not say unanimous, but I said by a large majority.

Mr. BROWNE. On February 22, 1917, the vote upon the question was 114 to 106. Now different conditions prevail. At the time this matter was considered we were at peace. Now we are at war. We are giving the various departments of this Government all the authority that such departments want. We have given the President absolute authority, as much authority as has been given the ruler of any country in the world. Now, in this bill you seek to restrict the power of the head of a great department in administering its affairs and preventing him from doing just what private employers are doing every day throughout the United States. When private concerns seek to get the highest efficiency they pay their men a bonus. A bonus is simply a reward given to any person who does more than the average day's work. It is approved by the great efficiency experts of the United States, including Mr. Edison, and by all men who have investigated the subject who are employers of labor. Now, I just wish to read what the Secretary of War said about this matter at the time this same provision was placed in the military bill. We all know the Secretary of War is in sympathy with labor. He is considered very progressive and everyone who knows him knows he would do nothing intentionally to in any way injure the laboring man. His sympathies are very strongly in favor of labor. Now, this is what Mr. Baker says:

The time study referred to may be defined as a method of ascertaining by careful observation and study in connection with a timing process the most advantageous manner in which a given piece of work can be done, and also the time in which it can reasonably be expected to be done by following this best manner. The premium is an extra cash compensation which is paid to a workman for accomplishing the work in this reasonable time, or for approaching the time within certain rather liberal limits, the compensation being in addition to the regular wages of the workman, which are not disturbed, and depending in amount upon the degree to which he approaches the reasonable time which has been ascertained. The timepiece is used only in the study of a new job, for the purpose of working it out properly and for assigning the proper time for its performance. It is not held over a man for the purpose of ascertaining whether he is working industriously, and its employment is of less and less frequency as information is accumulated which makes special study unnecessary. The premium is the workman's share of the economy which is effected by the system.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BROWNE. I ask at least five minutes more in order to present this matter.

The CHAIRMAN. The gentleman asks unanimous consent that his time be extended five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. BROWNE. Mr. Baker goes on to say:

This system has now been in practice in the Ordnance Department for something like five years. At the place at which it has been most fully put into effect—the Watertown Arsenal, Mass.—it has resulted in very substantial economy of production and in a material increase of the earnings of the employees. The last monthly report from the arsenal indicates that the total amount paid in premiums during that month was \$3,315.61, which was earned by 311 employees, an average of about \$10.66 each.

Now, he goes on and recommends this very strongly. Gen. Crozier did also. I want to call the attention, Mr. Chairman and gentlemen of the committee, to Gen. Crozier's testimony as to the effect of the abolition of the premium system on amount of work done in the Watertown Arsenal. The General testified as follows:

The first instance was that of an arsenal worker engaged in recapping the base of a 4.7-inch shell. The man in question, working under the premium system, had recapped 100 shells in 10 hours. Respecting him the General testified as follows:

"As soon as he finished that job he was given the next day another hundred to do, but the second 100 were to be paid for out of funds appropriated in the act forbidding the payment of premiums, and to do the second 100 he took 22.95 hours. The first 100 were done in 10 hours, and the second 100, done immediately afterwards, were done in 22.95 hours; that is to say, it took him two and three-tenths times as long to do the same amount of work under the day-rate system of payment as it took him under the premium system."

Again, the General says—he was asked to give the worst case he knew about:

The worst case which I have of a job done by the same man was a job of cutting a slot in 4.7-inch base slugs. A man did 100 of these in 2.66 hours under the premium system, and then afterwards he did the 20 under the day-rate system in 2.25 hours; that is to say, it took 2.66 hours to do 100 and then it afterwards took 2.25 hours to do 20, one-fifth the number. It took four and two-tenths times as long to do one under the day-rate system as it took under the premium system.

Mr. Chairman, we are appropriating \$1,300,000,000 in this bill, and we are going to reach out and buy supplies manufactured by a great many factories that have the premium system and the time study, and under the wording of this bill not one cent of this appropriation can be expended in paying any manufacturer who has the premium or bonus system. It is a very

serious matter in time of war, when we want to get all the work there is in a man, the best he can give, and when you consider that he has only eight hours a day to work. When you offer no incentive you simply allow the poorest man in the shop to set the pace. He is the pacemaker, whereas when you give a premium there is an incentive for everyone to do his best and the work is greatly expedited. Two-thirds of the men in the Watertown Arsenal received a premium, and there is plenty of authority to show that it did not stimulate them so that it at all interfered with their health. The matter of the workmen's health is, of course, very important and was watched over very carefully by the Government, and the men themselves did not claim that their health was impaired.

At this time, when we are in war, when we want to hurry up matters, and when we want these ships and want all this material and these munitions of war, and when time is of the greatest importance, to say to the head of the Navy Department that he can not pay a premium for speeding up, to say that he can not make a time study if a new job comes in, and can not use a watch even as a laboratory instrument to make a time study to see how long it will take a good workman to do a given piece of work by employing the best and quickest methods, is simply to say that the labor organizations of this country are running this Government. The Secretary of War, Mr. Baker, has come out against this restrictive legislation, and the fact that Mr. Daniels has not objected to it is no argument that he approves of it. If the Secretary of the Navy wants to take the responsibility of forbidding the premiums and time study, let him do it. I do not think this Congress can afford to handcuff the great manufacturing plants that are manufacturing the most important war equipment and munitions, munitions that are needed this very hour, by saying you can not pay a man a premium for accomplishing more than an average task or for doing twice as much work as another man standing beside him. [Applause.]

SYSTEM IN USE A LONG TIME.

The bonus or premium system and the time study have been used in the Government arsenals back as far as 1909 with excellent results. That system has been approved by every Secretary of War, Republican and Democrat, since the system was inaugurated. It was strongly approved by Mr. Garrison as well as Mr. Baker. There have been several committees appointed to investigate this matter—one from Congress—and no committee has ever yet recommended the abolition of this system.

This question, Mr. Chairman, is a question of fact. What are the facts? Is this system a benefit to the Government or is it not? Is it injurious to the Government employees or not? The testimony of the superintendent of these shops and the testimony of the Secretary of War upon these facts regarding the time study and premium or bonus system are all strongly in favor of this system. All are of the opinion that it is a serious mistake to abolish it. If anyone desires to go into the merits of this matter and review the testimony he can do so by examining the hearings before the Labor Committee.

When the premium system was abolished in the Watertown Arsenal a large petition was signed by several hundred workmen who were against the abolition of this system, asking that the system be retained. This petition was filed in the hearings before the Labor Committee. When the premium system was restored after having been suspended at the Frankford Arsenal, Maj. Shinkle, who was in charge of the cartridge branch of the arsenal, said there was a complete change in the atmosphere. Pessimism gave way to optimism; dissatisfaction to complete contentment. The Major further says there never was a better illustration of the fact that the premium system when administered in the interest of the employees is one of the greatest stimuli for the moral, physical, and financial well-being of the employees. (Hearings, p. 185.)

I quoted Thomas A. Edison as being in favor of the efficiency system. I now quote from other efficiency experts:

Lawrence Addicks, a member of the American Society of Mechanical Engineers, a graduate of the Massachusetts Institute of Technology, is strongly against the abolition of the efficiency system.

Elmer A. Sperry, of New York City, graduate of Cornell, designer of electrical appliances and noted inventor, favors the efficiency system.

A. M. Hunt, of New York City, member of the American Society of Mechanical Engineers, graduate of the Naval Academy in 1879, consulting engineer, and experienced development of hydroelectric, steam, and gas plants, is in favor of the system.

Alfred Craven, of New York City, member of the American Society of Mechanical Engineers, graduate of the Naval Academy in 1876, chief engineer of the Public Service Commission of New York City, and formerly division engineer in charge

of construction work on the Croton Aqueduct and Reservoirs, approves of the efficiency system.

Frank J. Sprague, of New York City, member of the American Society of Mechanical Engineers, graduate of the Naval Academy of 1888, consulting engineer for the Sprague, Otis, and General Electric Companies, founder of the Sprague Electric Motor Co., and concerned in establishing the first electric trolley system in the United States, takes the same position as the others I have quoted.

John F. Wallace, of New York City, formerly chief engineer of the Panama Canal, says:

The prosperity of the American Nation, outside of the personalities of its broad and progressive citizens, has been due to the introduction of labor-saving machinery and the substitution of brains for manual labor in all classes of human industry, and it should be apparent to employees in the mass as much as to employers that increased efficiency in production has not only bettered the condition of workmen but has also increased the available profits out of which compensation for labor is paid.

Elmer L. Corthell, doctor of science, president of American Society of Civil Engineers, says:

Every effort should be made to remove rather than to increase the burden on our industries. The abolition of the efficiency system will lead to irreparable injury and loss to the industry, commerce, and particularly the foreign trade of this country.

Mr. Louis D. Brandeis, United States Supreme Court judge, says:

The results obtained through scientific management depend further on a careful study of each operation, with a view to determining, in the first place, what time should normally be taken in performing the operation; and, secondly, whether it can be performed in a better manner than as hitherto practiced. The whole realm of science is brought to the aid of the humblest workman.

Scientific management recognizes also that due appreciation of the actual results of effort must be based upon actual knowledge, and such knowledge is an essential condition to the best performance. The current record of the accomplishment of each individual, of each machine, and of all material is an indispensable factor in scientific management. Without such a record the tyranny of the foreman, and all the discord which attends it, is inevitable. Without such a record justice to employer and employee is impossible. Without such a record waste can not be eliminated.

FINANCIAL GAINS.

Under scientific management the employee is enabled to earn, without greater strain upon his vitality, from 25 to 60 per cent more than under the old system. The larger wages are made possible by larger production; but this gain in production is not attained by speeding up. It comes largely from removing the obstacles to production which annoy and exhaust the workman, obstacles for which he is, or should not be, made responsible.

I could quote from many others if space did not forbid. No expert, no employer of labor, so far as I have been able to ascertain, disapproves of the premium or bonus system and time study.

Patriotism, it is true, may supply a sufficient incentive to many employers and employees, but the right to insure increased reward for better service by premium or bonus is the only certain means of obtaining necessary increased production.

INCREASED EFFICIENCY HOPE OF LABOR.

Material progress in civilization is accomplished by an ever-increasing dual efficiency of employer and employee—the one in applying, to management and direction, improved machinery, power, transportation, methods of distribution, and the advantages of stimulated invention and discovery; the other, to the incidents and circumstances of operation, higher skill, better conserved energy, improved facility in acquiring and applying progressive trade knowledge. No mode which the employer can apply in ascertaining wage cost prevents the employee from bargaining, individually or collectively, in fixing that rate. The more scientific the method of determining it the easier for the employee to present his argument for a larger participation in the joint fruit of production and the more difficult for the unfair employer to avoid a just reward.

INDUSTRY'S CRUCIAL TIME.

After the European war many predict an industrial war will follow. The American workmen should be backed by the greatest efficiency that human ingenuity can devise.

The circumstances of the present hour, the necessity for giving the Government's military department particularly a free hand in developing the best methods of administration and military defense, the economic readjustment which will undoubtedly be made necessary by a change in the world circumstances of commerce and industry at the conclusion of the present war all reject as unwise, inexpedient, and unjustifiable the condemnation by Congress of methods innocent in themselves and of demonstrated practical value. The practical application of scientific technical knowledge to the processes of production is of inestimable benefit to employer, employee, and society. Great Britain has presented the spectacle of a great industrial nation suffering severely in a national crisis from industrial inefficiency and restriction, seriously endangering her capacity for self-defense. The United States may well learn, by the moral of an experience not her own, to avoid at this time the deliberate public condemnation of inefficiency in the public service.

Exemption of Medical and Theological Students.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 17, 1918.

Mr. LINTHICUM. Mr. Speaker, I have consistently voted against including medical and divinity students in the selective draft, as contemplated by the House amendment to the Army bill. From present indications it appears to me that the lack of physicians will be severely felt within the next few years. In fact, it seems that even now we have not enough physicians to attend to the civil population and to perform the duties devolving upon them in the great Army which we are assembling.

The same thing which applies to the medical student also applies to the divinity student. They are likewise absolutely necessary. We must continue them in their schools if we would have sufficient preachers and priests for the churches of our Nation and as the chaplains of the Army.

The physicians and preachers and priests of the country are to be highly congratulated and commended upon their immediate and voluntary response to the calls of the Nation; that they are two branches of our civilization which are absolutely necessary for the physical and spiritual welfare of our people is manifest to all of us.

I can not believe that any young man with the proper spirit and red blood of an American citizen will at any time attempt to enter the medical school or the divinity school in order to escape the draft. The loyalty of the men of these two important professions in their quick response and splendid work in the Army and Navy is a refutation of any such statement, no matter by whom made. It has been the practice to eliminate these students from the draft law and to allow them to complete their studies and obtain their degrees. I see no reason why we should digress from our system at this time.

The education of a physician or preacher and priest is not a matter of months, but a matter of years. Anything which lessens the number of these men or which interferes with their studies affects the whole Nation. The men of these professions have not in any wise attempted to escape the dangers or the hardships of war; in fact, as I have said, they have been among the first to take their stand on the battle front and to do their professional duty toward the success of our Army in the field and in the cantonments behind the lines, as assigned by our Government.

I am glad that the Senate and the House have been able to agree upon a provision satisfactory to both branches of Congress.

CONFERENCE AGREEMENT.

This provision eliminates from the selective-draft act all these students now in the medical schools and seminaries of the country; and while I should like to have seen, by proper rules and regulations, all young men who desired to take up these most worthy professions eliminated from the draft, yet I concede that the only way to obtain legislation is by conceding something on both sides, and, therefore, the conferees' agreement, which exempts the young men now in the medical schools and seminaries, is a compromise which I hope will be beneficial and satisfactory to the Nation.

SCRIPTURAL REFERENCE.

It is not often that I endeavor to quote Scripture in reference to my position upon legislative matters, but it has been well said, "There is nothing new under the sun." In referring to the book of Numbers, chapters 1, 2, and 3, we find that the great Jehovah, with all of His power and might, in bringing the Hebrews out of the land of Egypt considered the question of organization, that they might be the better prepared to protect themselves from warring peoples in their onward march to the land of promise.

I find in the first chapter that Moses and Aaron were ordered by the great Jehovah to take the sum of all the congregation of the children of Israel and their families by the houses of their fathers, with the number of their names, every male by their polls from 20 years old and upward, all that were able to go forth to war in Israel. They were to be polled in the name of their tribes, the head of the tribe to be subject alone to Moses and Aaron, those that were numbered by Moses and Aaron

and the princes of Israel being 12 in number and representing the various tribes.

All those that were numbered of the children of Israel by the houses of their fathers from 20 years and upward, all that were able to go forth to war in Israel, of those men from 20 years and upward who were able to do battle, there appears to be 603,550, according to the forty-sixth verse of the first chapter of Numbers. A mighty army, indeed, organized for the protection of His chosen people! We have often wondered how this great people came out of the land of Egypt, where they had had no opportunity for organization nor for the development of their power, and had been able to conquer peoples and to finally establish the Kingdom of Israel. But when we realize how they had organized within two years after leaving the land of Egypt into a mighty army, captained and provisioned, as we are to-day organizing our Army, we can little wonder at the mighty progress and successful fight they made.

EXEMPTION OF MINISTRY.

It is my desire, however, to call particular attention to the fact that while these people were organized under direct command of the great Jehovah, the tribe of Levi was exempted from this army organization or selective draft, whatever we may chance to call it. The Lord, in verses 48, and so forth, had spoken unto Moses saying:

Only thou shalt not number the tribe of Levi, neither take the sum of them among the children of Israel; but thou shalt appoint the Levites over the tabernacles of testimony and over all the vessels thereof and over all things that belong to it; they shall bear the tabernacle and all the vessels thereof; and they shall minister unto it and shall encamp round about the tabernacle.

We find through reading the succeeding verses that while the Lord, the great Jehovah, had ordered this wonderful mobilization of the forces of Israel He had expressly provided for the exemption of the ministry of the people, they being the tribe of Levi. If we will but read the wonderful fourth book of Moses, known as Numbers, we will ascertain that our selective-draft act and the organization of our Army to-day is very little different from that ordered of Moses and Aaron within two years after they left the land of Egypt and traversed the Red Sea on dry land en route to their home land on the Jordan and the Sea of Galilee.

While it is my desire to call particular attention to the elimination of the tribe of Levi, showing that the great Jehovah felt the necessity of preachers teaching the people and the noninterference with the priests of the tabernacle, it is also my desire to call attention to the similarity between this organization and the organization of modern days. Not only do we find this organization or conscription of young men, they being the fighting men of the Nation, and the exclusion of the priesthood from this selective-draft law, but we also find that certain redemption money was provided to be paid by those who did not fight or were not required to fight. In our conflict we expect those who are unable to fight or not required to fight to contribute their money in the purchase of bonds or other contributions in other ways.

In conclusion, Mr. Speaker, I desire to say that it continues to be the policy of the Government to provide every possibility and chance for the study of medicine and the study of the gospel by the men who are to administer to our armies and to the great civil population of this mighty Nation. The President has seen the wisdom of prayer and has ordered a day set aside for that purpose. He has also seen the wisdom of the mobilization of our forces on land and sea and in the air; likewise the mobilization of our nonfighting forces and our resources. Prayer, organization, and mobilization are essential to success. I am proud of the things accomplished in and around Baltimore toward the winning of this great conflict. I am proud of my position upon them, of which the following are a few:

SOME THINGS ACCOMPLISHED.

As ranking member of the Committee on Foreign Affairs and on the floor of the House of Representatives I have given the President my active support and cooperation.

Helped draft report in committee and on the floor of the House assisted in defeating the McLemore resolution, thus sustaining the President.

Advocated and voted for greater Army and Navy at all times, believing in preparedness of the Nation, and am known as one of the big-Navy men.

Advocated and voted for shipping bill, that a larger merchant marine might be constructed to carry on the commerce of our country and help win the war.

Introduced bill to secure appropriation of \$550,000, through which was constructed at Baltimore the most modern immigration station on the Atlantic coast, which was finished just in time to be converted into a hospital for our wounded.

Introduced bill and secured transfer of Fort McHenry to the city of Baltimore, accomplishing what had been tried for years.

Introduced bill and advocated erection of monument to Francis Scott Key. The sum of \$75,000 was appropriated for this purpose with the cooperation of Senator SMITH.

Introduced bills, advocated, and after incessant work procured appropriations and authorizations of more than a million and a quarter dollars for the channel and harbor of Baltimore, giving us a splendid channel of 35 feet from the city to the sea.

Advocated and worked for the establishment of Camp Meade, near Baltimore.

Advocated and worked for the shipping depot at Baltimore, to cost about \$15,000,000, of permanent construction, fireproof, and to be used by the Government, and when not needed for war purposes to be leased for commercial purposes. The greatest asset that Baltimore has yet secured.

Am now working to secure a 40-foot channel for Baltimore.

These and other things I might mention to show what has been done to place Baltimore on a business and war basis.

Zone Postal Rates and Slacker Magazines.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 21, 1918.

Mr. RANDALL. Mr. Speaker, I received in my mail this morning a letter from Prof. Howard W. Kellogg, who is at the head of the department of Biblical Literature of Occidental College in Los Angeles. Prof. Kellogg asks for the repeal of the law relating to the zone system of postage on newspapers and magazines, and uses this expression in his letter:

That the cost of distribution of news and literature in war times should be increased from 50 to 900 per cent seems a step backward.

Two or three days ago I received a communication to the same effect, signed by the entire faculty of Throop Polytechnic School, a very high-grade institution, located in Pasadena, Cal., containing the additional statement that many hundreds of magazines and other publications would be compelled to cease publication on account of this law.

The mail of every Member of this House has for months been flooded with communications of protest against this law from his constituents.

Mr. Speaker, it is positively amazing to observe the magnitude of the propaganda of misrepresentation of this zone postal law which is being carried on by the magazine publishers.

In order to set right a portion of the public, at least, I am going to quote the exact language of the new law.

Firstly, no zone system whatever is created by this act as it relates to news and literature, but every part of the country enjoys under the new law exactly the same rate, regardless of distance from the place of publication. The present rate of postage is 1 cent per pound. The new law provides the following rate, quoting the language of this much-abused law:

On and after July 1, 1918, and until July 1, 1919, 1½ cents per pound or fraction thereof; on and after July 1, 1919, 1½ cents per pound or fraction thereof.

The present rate is 1 cent per pound. The new rate is an increase of 25 per cent after next July and an increase to 50 per cent after July, 1919.

Why, Mr. Speaker, the 110,000,000 people in this country have been paying a 50 per cent increase on their correspondence for nearly a year, and have not complained. The poor mother who writes a letter to her soldier boy in France or in an Army camp in the United States is paying 3 cents on every letter, or an increase of 50 per cent. The mothers of the boys in our National Army are actually paying 48 cents per pound for the delivery of their letters "over there," while the publishers of "news and literature" are moving heaven and earth to avoid paying 1½ cents per pound for the delivery of their publications.

Oh, yes, Mr. Speaker; Congress did adopt a new policy as to postage rates on that portion of the magazines devoted to purely commercial purposes.

While it creates no zones and no increases exceeding 25 per cent this year and a further raise to 50 per cent next year on "news and literature," it has said in the new law that every advertising tub must stand on its own bottom.

The general advertiser who uses the United States mails outside of the advertising pages of any newspaper or magazine pays 1 cent for each package weighing 2 ounces or less, or a rate of 8 cents per pound. Hereafter the advertiser who uses the advertising pages of any nationally circulated newspaper or magazine will pay 2½ cents per pound until July 1, 1919, after that and until July 1, 1920, he will pay 3½ cents per pound, and after July 1, 1921, he will pay 4½ cents per pound. Thus the rank discrimination which has always existed against the advertiser who uses the United States mails direct, and who pays 8 cents per pound, will be partially equalized so the newspaper and magazine advertiser will pay in three years from now 4½ cents per pound!

These rates for magazine advertising matter are for the fifth zone, which covers all territory 600 to 1,000 miles from the point of mailing. The average distance to which nationally circulated magazines are carried is 900 miles, while religious and farm papers fall considerably under that average, though within the fifth zone.

These zone rates do not affect in any manner any portion of the publication except that devoted to paid advertising matter.

Mr. Speaker, many of the publishers threaten to raise subscription prices to their readers if this zone postal law is not repealed. As a publisher myself, with 30 years' experience, I know what pure bunk is.

Why, I have the proof right here, which may be seen by any Member. It is a circular received in the mails from the Crowell Publishing Co., of Springfield, Ohio, publishers of the Woman's Home Companion, the American Magazine, and other publications. Listen to the flamboyant language of this advertisement:

DEAR FRIEND: The price of food has gone sky-high.

The price of materials has almost doubled.

The price of reading matter has gone up—

Except the very best magazine reading in the world—that's down. Down to rock bottom. Down to where you can actually save \$3.30.

This is their liberal offer:

Woman's Home Companion, regular price	\$1.80
American Magazine, regular price	2.40
Every Week, regular price	2.60

Total 6.80

This is all given at the bargain price—under the new zone postal rates, mind you—of \$3.50. You save \$3.30.

Furthermore, I have a receipt, given a few days ago by a subscription agent, for a full year's subscription to Everybody's Magazine and Modern Priscilla, both for \$1. The regular price of the first is \$1.50 and of the latter \$1.25, a saving of \$1.75, or more than 60 per cent, under the infamous zone postal law!

If this is to be the effect of the new law, the American people will soon be demanding more of the same!

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MASON,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 20, 1918.

Mr. MASON. Mr. Speaker, I have asked the few minutes to explain very briefly the purpose of a bill which I introduce, to protect the Government against the half-witted and half-insane citizens who indulge in mob violence.

One who has had occasion to study nervous diseases knows that there is a class of paranoiacs who will appear reasonable and quiet until some great excitement, like theology, politics, crime, or war, stirs them up, and then, suffering from an enlarged ego, imagine that they alone can take things into their hands and save the world.

Nothing is more calculated to incite unbalanced action in a community than the constant theme of killing and bloodshed. Men of standing and newspapers, feeling indignant at some act, tell what ought to be done to some one whom some one had told that somebody said was probably guilty. The paranoiac, who is always a coward, hears the words "Hang him to a lamp-post," "Stand him before a firing squad," "Shoot him," "Kill him," and he begins to think his day has come to show his patriotism by killing or whipping or tarring and feathering some one. The "wise coward" who writes and prints or speaks this treason against the law rarely ever takes a chance, but holds up his hands in horror at the work of the brute who carries his suggestion into

effect. When I was a boy, a day or two after the murder of President Lincoln the house of our neighbor, one early morning, was surrounded by 75 or more men; they had a rope with which to hang our neighbor, because, they said, he had said he was "glad Lincoln was assassinated." My father plead for time to make an investigation. Finally they agreed to that proposition. A hearing was had, and before noon that day it was evident he had made no such statement. His life was saved and our little town saved the disgrace of murdering a citizen and murdering the law of the country.

Since this war began murder has been committed in many States; men and women have been tarred and feathered, beaten, and forced to kiss our honored flag. My own State of Illinois has been injured by this damnable business. Here, between the Capitol and the White House, men have been beaten and forced to kiss the flag. The man that does not love our flag is not fit to kiss it. It is sacrilege, it is treason, to force him to kiss it.

The cases that have happened in Illinois and all over the country are shocking, and the bill I introduce puts the Government seal of disapproval on the mob and provides that the Government of the United States may try and punish the guilty ones. We will be met at once by the statement that the States have laws and county or State's attorneys to enforce those laws. Yes; that is true; but when a man is charged with violation of a national law it is the duty of the Nation to take charge of his case; not only to convict him and punish him if he is guilty, but it is the duty of the Government to see that he has a fair trial under the law and that he be acquitted if he is innocent.

And when a crowd of cowardly brutes take a man away from the Government and make themselves judge, jury, and executioner the Government should have power to punish the men who do it; and even a half-witted coward knows it makes a difference whether he is offending his own locality or whether he is up against the strong hand of the United States.

I remember the great riots during the strike in Chicago and I saw a mile of freight cars on fire. The red flag of anarchy was in the sky. We all went armed. The governor refused to ask Government protection; yet one day, when we did not know whether we could save our homes, Grover Cleveland sent a regiment of national soldiers and the red rag came out of the sky and life and property and the law were made safe. All honor to Grover Cleveland. The proposed bill makes mob rule a violation of the law of the United States, and it will be more difficult to get brainless men to hang and kill if they know that besides the State's attorney of their own county stands the stern-visaged law of the United States of America.

I am aware that we will be met at the outset with the proposition that it will be an innovation for the Government of the United States to attempt to regulate the police powers of the State; but remember that in this bill I seek only to punish those who attempt to take into their own hands the execution of the laws of the United States. The Government has laws to punish treason and sedition, and the moment any man, woman, or child is charged with the violation of that law by anyone, however great or small, that person becomes a ward of the United States and it becomes their duty not only to punish that person if guilty but to see that his life and property are protected, to the end that mobs may not murder their neighbors or tar and feather them, whip or beat them, or force them to do humiliating things, and that a mob may not murder a citizen and murder the law of the United States at the same time and then crawl back under the cloak of local influence and leave the Government of the United States powerless to see that its own laws are enforced.

A little child when he bumps his head on a chair strikes the chair in retaliation. The little man, half-witted and half-crazy, reads in some prominent newspaper how some great man, who may have been President of the United States, told who should be taken before the firing squad for violation of a civil law, and with his mind aflame assumes the patriotic duty of becoming the judge and jury and the executioner for his neighbors. And some of these excitable half-wits are cunning enough to know that their friends sometimes are on the local grand jury, and those in charge of the execution of local laws are half in sympathy with the mob. It is my thought in introducing this bill that, if it passes, the Government of the United States will have power to fulfill its duty to every citizen and will see to it that its own laws are executed with solemnity and dignity, becoming the conduct of a great Nation.

The Department of Justice of the United States is doing all that possibly can be done to protect the Government against the work of sedition and treason, and this bill will add strength to the department by enabling it to punish those spot-light pa-

triot who take out of the hands of the Department of Justice the execution of the laws of the United States.

The bill is as follows:

Be it enacted, etc., That it shall be unlawful hereafter for any person or persons, except duly authorized officers of the law, to punish or attempt to punish any other person in the United States who is charged with a violation of any of the laws of the United States. Any person or persons who shall be guilty hereafter, either alone or with the assistance of others, or who shall aid or abet others by punishing or attempting to punish any other person charged with an offense against the United States, or who shall alone or with the assistance of others engage in a mob or aid or abet others in such a mob and by force compel such persons so charged to do or perform any act against their will, or assault or maltreat any person so charged, or shall commit any trespass upon the property or person of anyone so charged, or maim or kill any such person so charged, shall be deemed guilty of a violation of this act and shall be punished by a fine of not less than \$100 nor more than \$5,000, or by imprisonment for not less than 30 days nor more than 10 years, or by both, in the discretion of the jury: *Provided further,* That if any person or persons aids or abets in the violation of this law which results in the taking of human life, such person or persons shall be guilty of the crime of murder and shall be punished by imprisonment for not less than one year or for life, in the discretion of the jury.

EXTENSION OF REMARKS

OF

HON. CHAS. POPE CALDWELL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 22, 1918.

Mr. CALDWELL. Mr. Speaker, I take upon myself the task of painting a word picture of the effort America has put forth toward winning the war with many misgivings, for I realize my limitations, and my study of the situation has shown how great the undertaking has been and how wonderful the response thereto. I would not attempt it had I not recently received from the Secretary of War a letter that I will ask the Clerk to read:

"WAR DEPARTMENT,
WASHINGTON, May 3, 1918.

"MY DEAR MR. CALDWELL: I have read with interest and appreciation your speech in the House on the subject of aircraft, and am writing this note to thank you for taking the trouble to look into the situation and speak so sympathetically and helpfully. On this and all other parts of the great program which the War Department is carrying out we are, of course, anxious to have real facts carefully investigated and frankly stated, and I know of no more useful service than so candid a statement as you have made on the subject. The country would be helped if you can find it possible from time to time to get into the CONGRESSIONAL RECORD the result of similar inquiries in other parts of the world, and as you are a member of the Military Affairs Committee and therefore have more constant contact with the subject, it may be that you will find it possible to do this. In the meantime I am sure that you will feel at liberty to call upon me for any information I can secure for you on any subject that you feel inclined to investigate.

"Cordially, yours,

"NEWTON D. BAKER,
Secretary of War.

"HON. CHAS. POPE CALDWELL,
House of Representatives."

This I regard as one of the greatest compliments ever paid me. Since Mr. Baker became Secretary of War I have, as a member of the Military Committee, worked with him in an endeavor to scientifically and with due regard to just proportions lay out and adjust a military program that would do honor to all of us and credit to our country. While I have often found it impossible to agree with Mr. Baker on details, I must say that I have found him to have the keenest mind of any man in public life that it has ever been my pleasure to come into intimate association with. Before coming to Congress I practiced law in the busy city of New York for upward of 17 years, and during that time have tried many important cases, cross-examined some of our most famous lawyers, our best-known financiers, our greatest engineers, doctors, and public men; but never yet have I cross-examined a man who was more thoroughly familiar with his subject, more exact in the choice of his words to differentiate and shade his meaning, quicker in his responses to questions, or who had a better poise than that displayed by Secretary Baker when under fire in the House and Senate Military Committees.

I have watched him develop, as he gained in knowledge, with a great deal of pride and pleasure. I feel confident that when the war is over and future generations write of it that the name of Newton D. Baker will be given a place high among those who have done the things that brought success to our armies. I was happy when the President, in the presence of several Members of this House, expressed to me his warm admiration of and confidence in the Secretary of War. This at a time when the critics of the administration believed that they had unseated Mr. Baker. It is because of my high opinion of Mr. Baker that I appreciate doubly the compliment that he has paid me, and it is this compelling force that actuates me in undertaking this large task.

At the outset, let me say frankly that we have made mistakes—yes, grievous mistakes—and had our foresight been as keen as the afterthought of our critics we might have accomplished more. But notwithstanding these mistakes and omissions, America has done her share—indeed, more than her share—for she has done many times more than any of our allies suspected that she was capable of doing and more than the greatest enthusiast in America hoped she could do. She has confirmed our friends and confounded our enemies. Or, let me put it in another way: America has raised and equipped a bigger army in shorter time and now holds a greater section of the fighting front, transporting her forces 3,000 miles across an infested sea, in 10 months, than England was capable of doing in 12 months across the English Channel of less than 30 miles. We began with less, went farther, and arrived with more in shorter time. Yet their motive was necessity and ours only desire.

When war was declared in April, 1917, the standing Army of the United States consisted of 136,000 officers and men, many of whom were in the foreign service, and the National Guard consisted of 164,000 officers and men, many of whom were too old for active service, and a large part of them physically unfit to perform the duty for which they had volunteered. Our experts told us that it would take two years to raise an army of a million men and five years to train the commissioned personnel. It has now been about one year since the first legislation was passed authorizing the increase of our Army for war purposes. The strength of our military forces is now as follows:

	Officers.	Men.
Regular Army.....	10,295	594,677
Reserve Corps.....	79,033	78,553
National Guard.....	16,903	411,952
National Army.....	23,894	510,951
On special and technical duty.....	8,195	120,000
Drafted in April.....		133,742
Drafted in May.....		
Total.....	148,328	1,882,994

Grand total, 2,038,222 officers and men.

So we have to-day an army of more than 2,000,000, of which 500,000 have already been shipped to France and a million more have had the necessary training to fit them for foreign service. These are now waiting for the boats to carry them over. Our critics now complain that we have not done more, yet we have done in one year twice as much as they thought we could do in two years.

When war was declared, each of our allies sent commissions to America to advise us what to do and to assist us wherever possible in our preparation. The English told us that they did not need men, but they did need money and supplies; the Italians that they did not need men, but that they did need material and money; the Russians that they did not need men or material, but did need money and ammunition; the French told us that they needed raw material and money, and asked that a small expeditionary force be sent to hearten their people and as an earnest of our intention of seeing the war through.

Under this tutelage and squaring our conduct with the requests of our friends, it was thought by many to be inadvisable to attempt to raise an army of more than a million men. Congress was therefore requested to pass military legislation limiting the Army to the 136,000 Regulars, the 164,000 National Guardsmen, and 500,000 drafted men, with authority to call an additional 500,000 in case they should be needed. Under the legislation that Congress passed, in spite of the recommendation from the allies, we have already raised more than 2,000,000 men, and early in the year 1919 will have 3,000,000 men in the Army. We have lately taken the "lid off," so that the President may have as big an army as necessity requires and our man power permits. Notwithstanding the fact that the appropriation measure now pending before the House is drawn with

the view of supporting an army of only 3,000,000 men, I am confident that before many months deficiency appropriations will be necessary. The Army is growing so rapidly and its needs are so urgent that the efforts heretofore made will be small in comparison with those of the next 12 months. We will probably have between 4,000,000 and 5,000,000 men before the end of the next fiscal year.

When we were considering legislation in the spring of 1917, it was thought that our largest task would be getting men. Experience has shown that this is easy of accomplishment, made so by reason of the fact that we have left open the door for a reasonable amount of volunteers in the National Guard and Regular Army and passed a draft law under which all men of military age may readily be mobilized. The justness and fairness of the scheme as worked out by the Provost Marshal General has obtained the earnest cooperation and enthusiastic support of our people as a whole.

As I have said, our military law has been amended giving the President authority to call additional increments of men from time to time as needed. It has also been amended to permit him to register and classify all men that reach the age of 21 years. We now have 2,000,000 men in the Army. The men between the ages of 21 and 31 years in 1917 have been classified, and there remains in class 1 approximately 2,000,000 men physically fit not called. The class of 1918, which will be registered this summer, will add another million, making a grand total of 5,000,000, without calling classes 2, 3, 4, or 5, containing nearly 6,000,000, and without calling the boys from 18 to 21—3,000,000 more. If the war lasts until 1924 there will be added 6,000,000 more men. The potential man power of America for a seven-year war, therefore, may be conservatively estimated at 20,000,000 fighting men of recognized military age. This out of a population of 125,000,000.

Not because I think that all of our man power will be needed, but in order that we may get a view of the task that is in front of us and understand the necessity for the large army we are calling and the huge expenditures we are making, let me recall these facts:

The central powers at the outbreak of the war had a population of 142,250,000, in round numbers, of which 26,310,000 were males between the ages of 18 and 44, and if 70 per cent of them were available for military service their man power would be approximately 18,360,000. Since the Russian fiasco Germany has occupied a territory greater in area than both Germany and Austria, in which there live upward of 51,000,000 people. And if the reports that we get are to be believed, the Kaiser has compelled the boys between 18 and 21 in this occupied territory to enter the German training camps, and he hopes in a short time to have them on the western front, thus augmenting his man power to approximately 21,000,000 fighting men.

This is the job we have on our hands. The newspapers tell us that the Kaiser has only two or three million soldiers, but it would be wise for the Members of this House in passing legislation affecting the conduct of the war to keep in mind the figures that I have just indicated. To meet this Great Britain—the British Isles, Canada, Australia, and New Zealand—France, Italy, and the United States have a combined population from which they can draw thirty or forty million, and in addition to these numbers there is an enormous reservoir from which to draw further man power in the colonies and possessions of the allies and the 23 smaller countries now allied with us in the war. To show something of the relative strength of the contending forces I will read the following capitulation, which is believed to be substantially accurate and has been compiled after very careful inquiry from the best sources available:

Man power of central powers compared with that of the allies.

	A	B	C
	Population, 1914.	Estimated males 18-44 inclusive, 1914.	Estimated available for military service of all kinds—70 per cent of B.
CENTRAL POWERS.			
Austria-Hungary.....	51,000,000	9,360,000	6,500,000
Bulgaria.....	4,750,000	800,000	500,000
Germany (continental).....	68,000,000	12,850,000	9,000,000
Ottoman Empire.....	18,500,000	3,300,000	2,300,000
Total.....	142,250,000	26,310,000	18,360,000

Man power of central powers compared with that of the allies—Contd.

	A	B	C
	Population, 1914.	Estimated males 13-44 inclusive, 1914.	Estimated available for mili- tary serv- ice of all kinds—75 per cent of B.
ASSOCIATED GOVERNMENTS.			
Australia.....	5,033,000	851,000	595,000
Canada.....	7,530,000	1,275,000	892,500
France.....	39,000,000	6,630,000	4,640,000
Great Britain.....	45,000,000	7,821,000	5,474,000
India.....	320,000,000	54,493,000	37,800,000
Italy.....	36,000,000	6,129,000	4,284,000
Japan.....	54,000,000	8,181,000	1,290,000
New Zealand.....	1,200,000	204,000	142,800
Portugal.....	6,000,000	1,020,000	714,000
Serbia.....	2,800,000	476,000	333,200
South Africa.....	6,000,000	1,020,000	714,000
United States.....	100,000,000	17,000,000	11,900,000
Total.....	623,500,000	104,995,000	68,870,500

The casualties resulting in death, permanent injury, or incapacity in the German Army have amounted to admittedly about 3,000,000 men during the four years of war, or approximately the same number as have been supplied by the young men who have reached military age during the same period. From this statement it would appear that from the point of man power Germany is no worse off to-day than when she started the war. The weakening of the German forces is represented, however, by the lack of nourishment for her workers, her women and children, and the discharges which must necessarily follow the reaching of advanced age by the old men called to the colors, both of which will be felt more keenly as time goes on, as well as the disease which must necessarily accompany conditions such as the war has produced. America will not begin to discharge her men on account of advanced age for 20 years. In other words, the man power of America will get stronger and the man power of the enemy must get weaker for the next 20 years. If, by any chance, the war should last that long. We have nothing to fear from this source.

The first war difficulty encountered came when we looked for shelter for the vast Army being assembled. Much to the surprise of everyone, it was soon discovered that there was not cloth enough in the world to put tents over an army the size of the one we were organizing, and there were not mills and machinery enough to make it. Therefore wooden cantonments were constructed. We built 32 cantonments with a floor space of 640,000,000 square feet, with the necessary water, sewers, lighting plants, storehouses, ice plants, hospitals, and recreation centers to take care of 1,280,000 men, in which undertaking there was used in 10 weeks' time more human labor than went into the building of the Panama Canal. Besides these, we have constructed aviation fields, ordnance schools, and training schools for officers—Herculean tasks in themselves. We have also put up at the ports of embarkation, and throughout the country, supply depots and storage warehouses with a combined floor space of 24,220,000 square feet for the Army, in addition to what the Navy has done in that respect, and have constructed the enormous buildings erected for administrative purposes in Washington and elsewhere. Verily, your Uncle Samuel is a modern Aladdin, who, when he wants a thing devoutly, rubs the lamp of American patriotism and the genius of America produces overnight all that he requires.

When we entered the war we had practically no surplus clothing for our Army, our reserve supply having been used up in the Mexican expedition. Our allies were using practically the full output of all of our mills capable of producing cloth of the character used for uniforms. To take over these factories would have discommoded our allies. We met the difficulty by a change of the machinery in carpet factories, ducking mills, and kindred industries, and have been able to, during the last year, make summer and winter clothing enough for 2,000,000 men, and have a reserve supply of every article of wear for our soldiers sufficient to take care of the authorized increase. England trained her first million a whole year in citizens' clothes and top hats, with walking sticks for guns, because she could not do otherwise, and this in spite of the fact that she was the greatest textile manufacturing country in the world and had all America to help her. Notwithstanding this shortage, our first million and a half of men were trained in uniforms and taught the manual of arms with a rifle. When England went into the war she had shortly before adopted a new type of gun, but her factories were not equipped to supply it. She abandoned her new type of gun, and has fought the war thus

far with an admittedly inferior type of rifle, a large portion of which were made on order in the United States.

There went up a hue and cry that America adopt a foreign type of rifle, notwithstanding the fact that the rifle is the most necessary weapon of warfare, and we had the Springfield rifle in substantial quantity, admittedly the best rifle then being used in the world, shooting the most powerful and efficient ammunition ever prepared. In the face of this criticism, we adhered to our own weapon, adopting a modified and rechambered Enfield, which differs from a Springfield in such a small way that it is not worthy of discussion, now known as the United States rifle, model of 1917, resulting in some delay but now being produced in sufficient quantity.

When Gen. Joffre made the request for a small expeditionary force, the critics of the administration demanded what they thought was the impossible—I. e., that we ship to France during the first year 50,000 to 100,000 men. During the first 10 days of May we shipped 90,000. Within one year after the first shipment America will have an army of a million men in France, with their necessary arms, equipment, and supplies. It will be the best fed, the best clothed, the best paid army of its size that the world has ever known, speaking the same language, worshipping the same God, and following the same flag. Its personnel will have the quickest perceptions of any soldiers in the world, and have been trained under modern conditions, surrounded by the best moral influences, with the lowest percentage of disease, and will be nerved by the highest motives that actuate men.

Victory for our cause is therefore certain.

EXTENSION OF REMARKS OF HON. HUBERT D. STEPHENS, OF MISSISSIPPI, IN THE HOUSE OF REPRESENTATIVES, Thursday, May 16, 1918.

Mr. STEPHENS of Mississippi. Mr. Speaker, under leave granted to extend my remarks I desire to insert the following:

HERNANDO, MISS., May 6, 1918.

At a regular meeting of De Soto Camp, United Confederate Veterans, No. 220, May 6, 1918, the following resolution was adopted by rising vote and a copy ordered sent to our President, Senators, and Representatives:

We, the De Soto County Confederate Veterans, in annual meeting assembled, resolved, and we do hereby reaffirm and reiterate, that we tender our services and every energy to President Woodrow Wilson in his noble and patriotic defense of our Government, in the defense of right and justice of humanity, in democratic promises of freedom and liberty against absolutism, monarchy, materialism, and atrociousness of despotic Kaiserism.

W. L. GLENN, Commander.
T. J. O'DONNELL, Adjutant.

Recently it has been my pleasure to see and talk with several young men from that county who are in the military service and are now stationed near this city. In talking with them I found the same spirit that is expressed in the resolution. They are patriotic, courageous, and willing to render the best that is in them.

Reference is made to the resolutions adopted by the Confederate Veterans and to these young men in order to call attention to the fact that, irrespective of age, the spirit of patriotism is strong in the breasts of the people of this country.

The old veterans displayed their love of country many years ago; they made their sacrifices, bore the hardships of war for their convictions. To-day they are just as ready to serve the Nation in every possible manner. They brought honor to the flag they fought under, though it was at last furled in defeat, and they are just as loyal to the flag that now waves over them. They will do everything in their power to help the boys who are now fighting under the United States flag, and they will do their share to keep that flag still waving over a free people.

Mr. Speaker, it is pleasing to see how splendidly the people are responding to the various needs of the Nation in this time of sore trial. With civilization trembling in the balance, with everything that we love and revere and hold sacred threatened by a cruel enemy, the people of this Nation are determined that that enemy shall not win.

This is evidenced in every section. No church nor creed, no political party nor political factions, no State nor section, has a monopoly on patriotism. It is found everywhere.

Love of country, of home, and family, and friends, inspires us all to do our utmost. Regardless of age, of differences of opinion as to questions of policy or of methods of procedure or

even of beliefs held regarding our entrance into the conflict, the universal sentiment is that the war must be won.

No, Mr. Speaker, patriotism is not a rare commodity in these days. It is the most familiar, the most everyday, sentiment that exists. Though that is true, I am glad that these veterans expressed themselves as they did and that I have been given the opportunity to make the resolution a part of the permanent records of the Nation.

EXTENSION OF REMARKS

OF

HON. CLEMENT BRUMBAUGH,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 22, 1918.

Mr. BRUMBAUGH. Mr. Speaker, I desire to call attention to a matter of nation-wide importance in the winning of this war.

There can be no doubt as to the grim determination of the people to see this war through to victory, cost what it may. Every vote we cast, everything we do or say, should have for its objective the one purpose of winning this war.

So far as the soldier in the field is concerned, we want him to know that if there is anything he wants or needs, if it grows on earth or money will buy it, we stand ready to vote to give it to him; and, while he is fighting our battles, we want him to know that loving hearts and willing hands will take care of his loved ones at home.

THE COLUMBUS WAR-CHEST UNDERTAKING.

Every community in the United States is giving expression to this sentiment in many ways, and the entire Nation everywhere is emphasizing this sentiment this week in the Red Cross drive. I deem it appropriate at this time to call attention to a superb undertaking accomplished by the city of Columbus and county of Franklin, which city and county comprises the twelfth Ohio congressional district, which I have the honor to represent upon the floor of this House. In less than five days' time more than 95,000 people out of a population of 250,000 subscribed more than \$3,000,000 for a war-chest fund out of which should be paid all charitable demands of all kinds arising during the year. This undertaking was so successful that it has attracted the attention of the people from ocean to ocean and from Gulf to Lakes.

Not a day but what the officers of this fund receive numerous letters from all parts of the United States and delegations from all parts of the United States inquiring concerning the plan pursued in this great undertaking. In fact, so much attention has it attracted that one of our greatest magazine writers, Samuel G. Blythe, has presented the entire plan in a very interesting story, entitled "One to Thirty-one," published in the Saturday Evening Post of April 13, 1918. For the benefit of other communities desiring to have full details of this plan, I shall ask unanimous consent to print this very interesting article of Mr. Blythe's in my remarks. I do this to give publicity to the method as well as to the great achievement, because it is universally acknowledged that it is the best way of meeting the situation facing communities who desire to do all they can, and do it in the best method possible. I desire to say in passing that last year Columbus gave the Red Cross Society \$350,000, and this year, with the Columbus community war chest established, Columbus has been the first city in the United States to pay in full its quota and has already paid in full its quota in the present Red Cross drive now being conducted during the present week. The very day Columbus received notice as to the expected quota in the Red Cross drive she was able to send her check for the full amount, payment in full. This splendid community, during the last six months of 1917, outside of going "over the top" on liberty bonds, war-savings stamps, and all local charities, gave \$1,034,599 to charities for various drives and campaigns, and in less than five days, February 5 to February 9, 1918, gave \$3,350,000 to a community war-chest fund. A full and interesting statement of how it was done is fully set forth in Mr. Blythe's article before referred to. He says, "Columbus did a big American thing in a big American way."

Not only did Columbus "do a big American thing in a big American way," but this magnificent, patriotic, sacred undertaking was a melting pot that fused into one common brotherhood men of all races and creeds, and we trust has wiped out forever creed and race bigotry and prejudice.

Mr. Speaker, we are living in a great and awful age. As Lowell would say—

In an age on ages telling,
To be living is sublime.

We are part actors in the greatest drama the world ever staged since the dawn of time, a drama which we believe will ring out old forms of tyranny and oppression and shall ring in a new day that shall make this old world a better place to live upon, fuller of love and truth and justice for all mankind, for all the races and children of men.

In all the flight of time the sun has never looked upon such a struggle. The very maelstrom of events focuses the destiny of the future on the United States.

The liberty not only of the United States but of all the people of the world is in our care and keeping. We must win this war; we dare not fail. Nothing should hold our thought or engage our purpose but the winning of this war.

This high resolve should be our pillar of cloud by day and our pillar of fire by night, under whose holy purpose we live and abide and for whose sacred consummation we are willing to sacrifice our all, our fortunes, and our lives. With all this as the polestar of their purpose, this superb act of the great constituency which I have the honor to represent, in doing this magnificent thing to cheer, comfort, and sustain the soldier in the field and to take loving care of his mother, father, wife, and children, is worthy of emulation and of commendation of all good men everywhere and the approving smile of Almighty God.

I ask unanimous consent to print the very interesting article from the pen of Mr. Blythe, referred to above.

[From the Saturday Evening Post.]

ONE TO THIRTY-ONE—THE STORY OF A GREAT CIVIC WAR SUCCESS.

[By Samuel G. Blythe.]

There are many communities in the United States—a great many—where the war is still a vague enterprise; where the war is held as a side line of the Nation's business, to be carried on in conjunction with and in addition to the normal activities of the country and its localities; where the war is not sensed or visualized; where neither it nor its supreme obligations are appreciated. There are many communities in the United States where the people do not understand that instead of being a vicarious undertaking it is a vital undertaking, paramount, predominant, on which the future security of the United States depends, as well as the stability of the established civilization of the world. But Columbus, Ohio, is not one of these.

Ninety thousand producers in Columbus—wage earners, salary receivers, professional men and women, capitalists, merchants, manufacturers—the heart and brains and brawn and backbone of Columbus—the men and women who make Columbus the thriving city of more than 200,000 people that Columbus is—not only know about the war and what it is and what it means but are also partners in the making of it, fused in patriotism, supporting it with their money, out to win it because they are part of it, on their toes, hell bent to whip Germany, enthusiastic, wholeheartedly for America and against the enemy, splendidly and unitedly American. What Columbus did any community of whatever size, from New York to the smallest settlement, can do. Columbus, taking a plan that had been tried elsewhere in several places, notably Syracuse and Rome, N. Y., and Jeannette, Pa.—possibly there are others—improved on that plan, organized and executed it; and the result was manifold. Columbus filled a community war chest, which was a great accomplishment, but not the greatest. Columbus in filling its war chest regenerated Columbus, brought the war home to the people, made them partners in it and supporters of it. Columbus did a big American thing in a big American way.

CENTRALIZED AND SYSTEMATIZED GIVING.

Columbus systematized war giving and war support; Columbus filled a community war chest. Columbus determined the sum of money that would be required from that city for various war purposes not governmental, such as subscriptions for liberty bonds and war savings stamps, and got that sum all at once, provided for its disbursement in properly certified and useful directions when the calls come, relieved the citizens of the bothers and harassments of various drives, coordinated its resources, and put the whole scheme over with a whoop.

Like many—most—other communities, Columbus before this work began was almost as remote from the war, so far as an acute realization of what it all means goes, as from the battle line. The city felt only the slightest effects of the war, had profited some, but looked on it as a national enterprise of certain indirect interest to Columbus, but not particularly vital. One central Ohio regiment had gone to France, but little had been heard from it. The chief war interest centered in the training camps at Camp Sheridan and Camp Sherman. There was much about the war in the papers, but little that was local to Columbus. The situation there was no different from the situation in most American communities. It was based largely on lack of information and lack of visualization, because there had been no concrete incentive of impending power. No Columbus casualty lists had come in. The war was all more or less remote.

Moreover, Columbus had had, as all other communities had had, certain drives for moneys for various funds related to the war but not governmental. Columbus had been canvassed by parties of ardent but bothersome men and women soliciting funds for various war needs—some worthy, some not. Columbus was pestered with war solicitors and was giving neither logically nor systematically nor proportionately—that is, a certain few of the city's inhabitants were compelled to bear all the burdens, as in every other place, for every whirlwind campaign whirled naturally mostly about the men who were easiest to be drawn into the vortex. In addition to this it was plainly apparent that the effectiveness of one whirlwind campaign might detract from the effectiveness of another and equally meritorious campaign; one drive might do well and another of similar obligation do poorly because of lack of system or organization. The whole process of supporting outside war needs was in a mess in Columbus, as elsewhere. There

was a prime necessity for systematized giving, for proper allotment of the resources of the city for this work; in short, for getting the most there was, to be applied in a businesslike manner for the greatest good.

I propose to tell here in broad general terms how Columbus went about this plan of securing a community war chest. The details of the Columbus plan can be obtained by any community interested by addressing Mr. George W. Gillette, secretary of the Columbus Community War Service, Columbus, Ohio. I do not intend to go into the minutiae of the operation, but to tell the story in its widest aspects; to show, first, what Columbus did and explain the general plan and scope of it all, and then to point out what seems to be a remarkable civic achievement for the benefit of those who may be interested.

The basis of the Columbus idea can be set down thus: One campaign for all war needs reaching everyone in the community will (1) reduce waste of time and effort to a minimum; (2) induce all to give a maximum; (3) conserve the financial resources of the community; (4) eliminate relatively unimportant and increase the support of the important causes; (5) raise the patriotism of the community to a higher level; (6) effect a new community spirit.

It is reported from Columbus that all these things have been done, that the plan is working smoothly and satisfactorily, and that its success is assured.

Columbus found itself in this position: In the last six months of 1917, when war needs were just becoming evident, Columbus raised \$1,034,599 through the medium of various drives and campaigns. This sum did not include the millions the community invested in liberty bonds, war-savings stamps, and so on, nor amounts given to local charities. This million was for war needs. It was apparent that these demands instead of decreasing would increase as the war progressed. Thus there was a need, and a pressing one, for some businesslike plan whereby the city could meet these obligations quickly, surely, and without wasted effort—without the obscuring of the greater needs by the multitude of the lesser ones, and in a manner befitting the wealth and importance and patriotism of the city.

THE SYRACUSE PLAN MODIFIED.

Last September the social service committee of the Chamber of Commerce of Columbus took the matter up and made a series of investigations of other plans tried in other places. The basic idea came from Syracuse, N. Y., where a community war chest idea was organized last June. Syracuse raised \$1,100,000 for her war chest, but as the need for systematic giving was not then felt so keenly, there was no great national movement in that direction following thereafter. Syracuse's plan was adopted in general terms by the Columbus investigators, modified extensively, added to, and revised to suit the needs of Columbus as the chamber of commerce saw them. Finally the chamber of commerce submitted the plan to Mayor Karb, and the mayor appointed a general committee of 120 men and women representing every phase of life and endeavor in Columbus. This general committee, on December 18 last, adopted the plan as set forth by the chamber of commerce. The general committee delegated the execution of the plan to an executive committee of 10 members, which in turn elected from its membership a president, vice president, and treasurer and selected a secretary, who became a member of the committee also.

What this committee had to do was set forth in the by-laws, as follows:

"To receive contributions from individuals, corporations, associations, firms, and others, and to disburse these contributions among war needs that come to its attention and that meet with its approval; to enlist and organize the war needs of every man, woman, and youth in the community, and to enable each individual to do his duty according to his ability during the period of the war; to conserve and render most efficient the personal services and financial resources of the entire community through a single coordinating agency; to reduce to a minimum the number of money-raising campaigns; to insure adequate support for all future war needs; to interest and educate the entire community; to encourage thrift; to distribute fairly and equitably the funds collected; to develop among all the spirit of war service."

The specific duties of this executive committee were to build up a campaign organization, raise a fund that would be sufficient, in its opinion, to meet all war needs for a year, and to act as sole trustee and administrators for that fund, with final jurisdiction over all disbursements. Wherefore it was necessary, imperative, that the executive committee should not only be representative of all classes of population in Columbus but that the men on it should have the entire confidence of the community. The men selected are among the most important in the city, and thoroughly representative of all classes. These men are: S. P. Bush, who is president of the executive committee and is president of the Buckeye Steel Castings Co.; F. A. Miller, of the H. C. Godman Shoe Co.; L. M. Boda, of the Valentine Co.; John G. Desher, banker; W. E. Bird, secretary-treasurer of Columbus Typographical Union, No. 5; S. D. Hutchins, of the Westinghouse Air Brake Co.; Simon Lazarus, of the F. & R. Lazarus Co.; A. T. Seymour, attorney; Robert F. Wolfe, publisher and manufacturer; and John Briggs, of Briggsdale.

THE SCALE OF PERCENTAGES.

After a visit to Canada by some of the divisional heads of the organization, where men who had been occupied with war funds were consulted, the task of deciding on the war needs of Columbus for 1918 was undertaken—a war budget was made. The executive committee called in representatives of all organizations that had raised war money during 1917 and secured estimates of the probable sums to be required of Columbus. Allowances were made for emergencies and for shrinkages because of poor collections. It was determined that \$3,000,000 was to be the size of the war budget of Columbus, and the wage resources of the city were surveyed. It was soon discovered that to get this amount of money practically every person of income must contribute, and must contribute on a definitely fixed ratio of his income. A scale of percentages was prepared a month before the campaign opened.

That scale of percentages was as follows:

Wage and small salary earners, one day's pay out of each month—1 to 31.
 Incomes of \$2,000 and under \$3,000 a year, 1 day's pay out of each 20 days—1 to 20.
 Incomes of \$3,000 and under \$5,000 a year, 1 day's pay out of each 18 days—1 to 18.
 Incomes of \$5,000 and under \$10,000 a year, 1 day's pay out of each 15 days—1 to 15.
 Incomes of \$10,000 and under \$15,000 a year, 1 day's pay out of each 12 days—1 to 12.
 Incomes of \$15,000 and under \$20,000 a year, 1 day's pay out of each 11 days—1 to 11.
 Incomes of \$20,000 and under \$25,000 a year, 1 day's pay out of each 10 days—1 to 10.

Incomes of \$25,000 and under \$30,000 a year, 1 day's pay out of each 9 days—1 to 9.

Incomes of \$30,000 and under \$35,000 a year, 1 day's pay out of each 8 days—1 to 8.

It was the original intention to publish this scale in the newspapers early in January, before the work of collecting began, in order that everybody might be impressed with the size of the job; but there the astute publicity men stepped in and argued that though the scale of percentages was impressive it also was depressing. They urged that the people must be brought up to this by a publicity campaign, and they won their point. They worked out a plan whereby the cold figures of the percentages were transposed into terms of pay days. This imposed a burden of 1 day's pay out of each 31 on the producers of the lowest scale of wages, and it gradually led up to the "One to Thirty-one" idea, which swept the town. Presently I shall go into the work of this publicity committee, on which the success of the whole campaign rested, and which was brilliantly effective; but first I shall continue the outline of the work of the committee.

The biggest money-raising campaign in Columbus had been the Red Cross drive in November, 1917. In that week \$356,000 was raised from a total of 12,500 individual subscribers. The committee knew that to get its required three millions this number of individuals must be increased to at least 65,000. When the campaign did come there were 90,000 individual subscribers, and the three millions were raised in five days, beginning February 5 and closing February 9, when the required sum was pledged. It had been thought to use seven days, but five sufficed, and then, true to its promise, with \$3,300,000 subscribed, the committee stopped its work of solicitation. To attain this result the men in charge of the work built up an educational and money-raising organization of 7,000 people. The advance work had been done so thoroughly that the war-chest idea was familiar to everybody in Columbus.

The plan of organization was this: The general committee and, acting for it, the executive committee. Next came the administration expense committee, the treasurer and his staff, the campaign organization committee, the education committee, the publicity committee, and the budget committee. Subordinate to and acting with the treasurer was the office organization. Subordinate to and acting under the direction of the campaign organization committee were the individual subscribers' division; the outlying individual subscribers' division; the township subscribers' division—for the campaign included not only Columbus but all of Franklin County; the factory-employee division; the utility-employee division; the retail-employee division; the public-employee division; the general-employee division, and the homes division. Each of these divisions had its captains and teams for active work of solicitation, covering wards and towns and various subdivisions of the persons to be reached. The education committee directed also the homes division and the meetings division, and the publicity division handled all publicity.

THE WRECKING CREW.

An intensive survey of the city was made, and the approximate number of people who might be reached through each division head and his lieutenants reported. The manner in which these divisions worked out and what they comprised were as follows: The individual subscribers were those, on the basis of former contributions, who might be expected to give considerable sums, the usual contributors. There were about 10,000 of these, and they were card-indexed and assigned to 28 squads of solicitors. Their incomes were known, and they had definite expectations set after their names. When the campaign was in progress a wrecking crew was organized, to pay particular attention to these men. The wrecking-crew members were bankers and manufacturers, and they were in session at all hours during the campaign. If when the subscriptions came in any of these individual prospects did not assuage up to expectations, the wrecking crew took them in hand, and usually got results.

The outlying individual subscriptions were the small stores, barber shops, saloons, and so on, outside the downtown commercial district, and the township subscribers were those living in the 18 rural townships in Franklin County. Columbus has approximately 33,000 factory workers scattered through a large number of plants. The head of the factory employee division established a separate soliciting agency in each plant employing more than 10 persons. He carefully selected an employee who was influential with his fellow workers. In the larger plants the same plan was followed, except that there was an organization for each department of the plant. In this way the plants were all organized from the bottom up and a rivalry established between the different departments of each organization. An idea that worked effectively in this factory solicitation was the 100 per cent celebration. Any small plant which secured a subscription from each individual employed was given a certificate of membership in the War Chest One Hundred Per Cent Club. Then they began publishing the names of the One Hundred Per Cent Clubs, and thus established a rivalry between different plants that had tremendous results.

The Utility Employee Division was organized for the street car, gas, electric, telephone, and other utility operatives, not many of whom had contributed to previous campaigns. The Retail Employee Division covered the stores in the downtown district, and the same 100 per cent spirit of rivalry was fostered and had its good results. The Public Employee Division covered the large number of Federal, State, city, county, school, and other public employees, and the General Employee Division was to catch others not classified, such as bank and office employees. Wages and salary information was at hand and percentages were insisted upon. The primary principle of money collecting was to solicit only at the place of business and not accept subscriptions at any other point. This caught the prospect who said he had subscribed somewhere else. He hadn't, for he had had no opportunity, and his subscription was sought and received only at a certain point. Thus the able boys were thwarted.

EDUCATIONAL WORK.

To get the results that were attained it was necessary to educate the people of Columbus and of Franklin County to an understanding not only of the plan but of the need for it and the war necessities of the country; in short, to waken them to the vast importance of the war. The three educational divisions were the Homes Division, the Meeting Division, and the Publicity Division. The Homes Division built up a city-wide precinct organization. There are 18 wards in Columbus, and a captain was appointed for each. These captains in turn selected precinct captains, about 275 in all. Each precinct captain had four assistants—two men and two women. Meetings were held before these precinct and ward workers were turned loose, at which they were thoroughly instructed in the object, scope, and necessity of the work.

These workers went out in their precincts a week before the actual money-raising campaign began. They visited each home and explained to the women in the house just what was in progress and what was hoped for and answered questions. They could not collect any money. Their work was entirely educational. Whenever they found a man or a woman of income who had no place of business they filled out a card and that person was solicited at home, but this was the only deviation from the plan of collecting at the place of business. These missionaries had pamphlets explaining the plan, which they left at the houses they visited, and the main and successful object of them was to acquaint the women with the necessity for the subscription that was expected of the breadwinners in their families.

Meetings played a great part in the preliminary work. Fifty good local speakers were selected and thoroughly coached in the presentation of the facts concerning the campaign. They were pledged to respond to any call at any time, and on an average during the intensive period of the week preceding the campaign and the week of the campaign itself 50 meetings a day were held in shops, churches, neighborhoods and halls. Nearly every singer in Columbus was pressed into service to furnish music for the meetings. Every effort was made to get the audiences to singing.

These meetings, next to the general publicity, were the greatest factors in the success of the loan. They held them at all hours—at midnight for railroad men and at 3 o'clock in the morning for crew shifts in the steel plants, at 6 in the morning for early factory workers, and at 9 at night for late men on their jobs. Always there was a man to address the meeting who had some relation to the group of workers at the meeting, a "key" man who spoke in commendation of the plan. This followed a vigorous 10-minute speech by one of the staff of speakers, and the rest of the time was musical. The people present were cajoled into singing. There were great mass meetings also held in the big city halls. Gen. White and the British and Canadian recruiting missions spoke and brought first-hand information from the war, and Charles H. Whitehair, international war work secretary of the Young Men's Christian Association, spoke at another meeting. There were a number of wounded Canadian soldiers in Columbus, brought there, as will be explained later, by the publicity men, and at this tremendous meeting they grouped a hundred mothers of Franklin County boys who were in the American service on one side of the stage and the wounded Canadians on the other side, making a tremendously effective picture. They used all the brass bands in Columbus, and these meetings were fervently, chorally, wildly enthusiastic, and patriotic. The speakers also visited the churches and the theaters, and everywhere there was a gathering of people.

This brings me to the publicity division, which, under the leadership of George V. Sheridan, made the campaign a success; to the story of the 25 wounded Canadian soldiers and the mystic "One to Thirty-one" that had Columbus guessing for several days, and that concentrated the attention of the city on the work at hand. The publicity campaign had three phases or periods, divided as follows: From December 20 to January 26, from January 27 to February 2, and from February 3 to the close of the campaign, and each period had its systematic appeal.

The first job was to impress on the people of Columbus and of Franklin County just what was in mind, how great the undertaking was, and how necessary, and to incite the men who were responsible for the work and made up the organization to the greatest effort by personal publicity. Before the selections for the executive heads of the general divisions were made the publicity young men indulged in pleasant speculation in the local papers as to who would be selected, and said the executive committee was searching for "the 12 biggest-calibered men in the city." Thus, when the selections were made, the men who were selected had much kudos from that fact. And after they were installed the publicity men kept them up to the mark by more personal publicity. Nobody dared to shirk. They starred the chief men and made them perform.

THE ELEMENT OF MYSTERY.

The second task was to explain the plan so thoroughly to the people during the week preceding the actual campaign that the solicitors would not be compelled to lose any time in explaining it themselves, nor in argument, nor urging, but could devote all their effort to getting the money. The third task was to enforce these explanations and drive home the necessities of the plan and of the Nation by patriotic awakening and appeal—to push Columbus over the top.

There were two outstanding features of this publicity campaign, and the greater of these was "One to Thirty-one." Early in the planning for the campaign it was found that to make the plan a success it would be necessary, as it was advisable, to get the active and financial cooperation of practically every able-bodied man in the city, every person of income, no matter how small. It was a hard thing to do. The table of percentages, quoted above, had been figured out, but in its bald form it seemed to imply too great a burden. The figures seemed forbidding, frightening, especially to the man of small income.

In mulling over this the publicity men decided that while it might frighten or deter a worker to tell him that he would be required to give a certain amount, expressed in money figures, each month, there was a way of making the burden seem less oppressive. When the campaign began Columbus people had not reached the proper stage of patriotic fervor to assure a great response to a plan to give a certain stipulated amount of their fixed incomes for any purpose whatsoever, much less for a war that was not yet visualized by them. Some bright young man discovered that what was asked if the \$3,000,000 were to be raised was practically a contribution from the wage earners of one day's pay out of each month—a ratio of 1 to 31.

That gave them the idea for the slogan. But before they began to incite the wage earners with that slogan the publicity men proceeded on their campaign to get all the preliminaries set forth, to till the minds of the people until their mental soil should be eagerly responsive to the seed, and to reap the harvest from that seed.

Thus the basis of giving required was not mentioned until January 28, when the plan had been thoroughly inculcated. On January 28 the publicity men covered the city of Columbus and the county of Franklin with that mysterious sign, "1 to 31." No explanations were made, but everywhere a man in Columbus or a man in the county turned he saw "1 to 31." Placards were on every post. The mysterious numerals were painted on every street car, inside and out. They were on the mirror of every barber shop. All the restaurants had the figures on their menu cards. The newspapers carried them on their first pages in each edition, and on most other pages—simply "1 to 31" in big black type, with no word of explanation. All the cartoonists played up the figures. They were all over the place. Nobody but the publicity men knew what they meant, and they didn't tell.

The result was that in a day's time all Columbus and all Franklin County were buzzing with inquiry about the mysterious figures, and by the end of the week they were the chief topic of incidental conversation.

Saloons served a "1 to 31" cocktail. The actors in the theaters made jokes about the mystery. The moving-picture houses threw the figures regularly on their screens. Columbus was mystified and interested and excited.

HOW THE CANADIANS HELPED.

On the Saturday afternoon preceding the campaign the newspapers carried an explanation, with big headlines all across their first pages, and the Sunday papers followed with an elaboration of the explanation showing that what it all meant was that it was merely the basis of contribution required from the smallest incomes, 1 day's pay out of 31—1 day's pay from the man at home as set against the 31 days of service the soldiers of Uncle Sam are giving each month.

On Saturday, January 26, when the first explanation was made, the Canadian soldiers arrived, and as they came the city, so intelligently prepared, burst into a great fervor of patriotism. On the Monday following the flag decorative scheme was put in operation, and the publicity men were shown to have won their point. Columbus was ablaze with patriotism. The basis of payment was accepted without argument. The shrewd psychologists of the publicity committee believed that if the percentages were set forth earlier there would have been arguments and discussion over their ratios, and their justness, and so on, to the detriment of the general result. As it was, nearly 50,000 contributors followed the "1 to 31" ratio exactly.

Coincident with the culmination of the "1 to 31" assault on the purses of Columbus came the Canadian soldiers, 25 of them, veterans. Each one of them had lost an arm or a leg in the war overseas. A chief problem of the publicity men was the necessity of bringing home to Columbus acutely what war really is, and various plans were discussed. When the Columbus men went to Toronto they were deeply impressed with the number of maimed and crippled Canadian soldiers. Legless, armless, blind, shattered, they saw; and they understood for the first time why Canada gives so freely and so generously to war needs. Arrangements were made to bring 25 of these men to Columbus, and they arrived late in the afternoon of January 26. Meantime all the boardings in the city had been covered with big posters reading, "Welcome, Canadian heroes," and much newspaper space had been devoted to that purpose. The newspapers of Sunday morning, January 27, carried big feature stories about the arrival of these legless or armless veterans; and also carried the full explanation of the "1 to 31" slogan—the statement that every man in Columbus and Franklin County would be expected to give of his income in that ratio for the Columbus community war chest.

The presence of the soldiers, the visible evidence of what they had given for their country, caused most people to forget the financial obligation laid upon them by the ratio of 1 to 31. Every citizen began to figure out how he could fix things to contribute, and how much he possibly could spare for the war chest. The Canadians stayed most of the week in Columbus. They were featured and pictured in the newspapers, spoke at meetings, were constantly in evidence, and added greatly to the success of the campaign.

There were nine committees in the publicity division, each headed by the best available man in the line covered. The chairman was in general charge, and each subcommittee chairman reported to him directly. A difficulty that rose early was the necessity for quick action on the part of the publicity men, and the impossibility of getting quick action at all times from the full executive committee, because of the multitude of things that committee had in hand. As their decisions often entailed the expenditure of considerable amounts of money, a way out was found by the delegation of two members of the executive committee to act in publicity matters in conjunction with the chairman of the division. This gave a board of three, with powers, and expedited the work.

The advertising subcommittee had charge of the display advertising in the Columbus and county papers. Full pages were used, and the best men in the city made the copy and superintended its display and its appearance. Newspapers and other mediums were not asked to donate space, but were asked for the minimum rate, which was what was paid. Nearly half a million pieces of printed matter were prepared, printed, and used by the printing committee. This work was in charge of a man thoroughly familiar with the printing conditions in the city, skilled in costs and in contracting for large orders. The copy department had trained newspaper writers who turned out the stories of the progress of the campaign. Understandings were had with the managing and city editors of the papers; and the man in charge, when the campaign developed to the point of being news, kept in touch with the papers and acted as general press representative. Many special articles were prepared and printed.

Advertising on moving vehicles was an effective method of publicity. Gummed stickers, 5 by 18 inches, yellow in color and with "War Chest" on them, were printed, and every moving vehicle, including all automobiles, was decorated with these. The decoration crew visited all the garages with their labels and stuck them on the cars. They put labels on every car parked in the streets. They stopped every moving car and decorated that. At first there was protest, but it was soon apparent that the crew was playing no favorites, and the citizens generally assented. The effect of these thousands of yellow labels, with their red legends, was remarkable. The traffic policemen helped by stopping cars with no labels on them and holding them up until the labels were affixed. The labels were mostly stuck on wind shields, but if the car was operated without that device some place was found to put them. A larger card was used for trucks, vans, brewery and delivery wagons.

ABLE PUBLICITY WORK.

Street cars were utilized extensively. Muslin banners, 3 by 30 feet, were placed on the sides of each moving car during the week before the campaign and the week of the campaign, and posters were placed on the windows inside the cars. During the week of the campaign a street car was covered with signs, battle pictures, and other incitements to patriotism and kept moving constantly about the city. An extensive poster program was carried out, with effective work by W. A. Ireland, called "The Kaiser's War Chest or Ours," and other posters. These were distributed and put up by regular billing men of the city, who secured the ordinary routine billing.

Then the committee took up the work. The city was divided into districts and posters were put about everywhere. Tags were used and the motion-picture theaters utilized extensively. There never were so many flags flying in Columbus as there were during the week of the campaign. The flag committee saw to that. Two special posters were printed to use in the factories, as the interesting of the 35,000 factory employees was the biggest single job the publicity men had. One of these was argument and the other was patriotic appeal.

There was a stunts committee. This body of active young men had for their task the doing of anything that would get Columbus to talking about the war chest.

This in a general way outlines the plan used by Columbus in so successfully creating and filling her community war chest. Other communities have developed similar plans, all meritorious, and Columbus has been used here to typify what can be done by a determined citizenry, as Columbus's experiment is the most successful of which I know at the present time. It is expected, as the money is to be collected in 12 monthly installments mostly, that there will be loss through failure of collections. Each subscriber signed a card of one or another kind. The salmon-colored cards authorized the employer of the person signing it to deduct his subscription from his pay and to remit it to the committee; and the white cards pledged personal remittance.

To offset possible loss of collections a city organization of women is being formed, which will place one or more women in charge of collections in each city block. If a subscriber fails to pay his subscription within a reasonable time after it is due his name will be referred to this volunteer collecting agency and an effort will be made to get the money. These women are expected to interest new residents to offset losses by sickness, removal, and death.

There will be a constant propaganda maintained throughout the year and a complete publicity campaign, but not a cent will be collected. If any organization wants money for war needs, it must come to the executive committee to get it, and will not be allowed to make any campaign whatsoever—no drive or whirlwind or anything like that. Any war organization that gets money out of Columbus this year will get it from the war chest and not elsewhere.

THE ADVANTAGES OF THE PLAN.

The expenses of the Columbus campaign were paid by private subscription. Thirty-five men subscribed \$1,000 each. The committee adopted the plan of paying cost price for all supplies and commodities furnished, paid for its newspaper space and for its office supplies at net cost. This was done to emphasize the point that no man is expected to contribute more than once, even indirectly. His action in pledging his certain amount relieves him of all further necessities for war subscriptions of this sort during the year 1918; and there was no violation of the rule by requesting merchants to donate goods and subscribe also. The executive committee holds open sessions—there is no star-chamber work—and considers itself, as it is, the custodian of public funds.

An interesting feature of the Columbus campaign was the discovery of some disloyal persons, who were reported to the proper authorities and were attended to by those officials. An analysis, only partial as I write, shows that the great bulk of the subscribers accepted the 1 to 31 ratio. There were four subscriptions of \$50,000 each, one of \$40,000, and several of \$25,000 each, but mostly the subscriptions were on the proportional basis. The mayor has prohibited by proclamation any money-raising campaigns in Columbus, and the county commissioners will enforce the inhibition in the county.

This, in a general way, tells what Columbus has done. The advantages are apparent. Time and effort are economized. Fakes and unimportant needs are eliminated. All appeals must come before 11 of the most representative men of Columbus, who work in the open. The stopping of various drives makes possible one great annual drive, wherein all the energy of the city can be utilized and all the resources tapped. This campaign brought in 90,000 instead of the 10,000 or 12,000 who usually did all the contributing. Machinery is erected for handling not only the future campaigns of the war-chest committee but for the necessary liberty loan and other governmental demands. But best and greatest of all, this campaign woke Columbus up to what war is, how vitally it concerns every person in that city. This campaign fused Columbus into an ardent and understanding Americanism.

Draft Quota Resolution.

SPEECH

OF

HON. JOHN L. BURNETT,
OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 12, 1918.

The House had under consideration Senate joint resolution (S. J. Res. 123) providing for the calling into military service of certain classes of persons registered and liable for military service under the terms of the act of Congress approved May 18, 1917, entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States."

Mr. BURNETT. Mr. Speaker, I will say only a few words in regard to the question of giving credit for volunteers. When the draft law was passed last May, the sacred honor of this Nation was pledged to give such credit as the law specifically provided for it. Many a young man, while not moved by that kind of motive, went with the positive and distinct understanding that when he volunteered his community and his State would get credit for his voluntary enlistment.

Gentlemen, are we going to break that solemn obligation with the honor of the Nation pledged to it? One of the things for which Germany is to-day being denounced, and justly denounced, is that they regarded a treaty as a mere scrap of paper.

Now, gentlemen, is that keeping faith with these men, some of whom have sealed that compact with their blood in the trenches of France and Flanders? We ought to think long and well before we undertake to violate this understanding with men who volunteered to go and fight the battles of our country.

Is the apportionment provided by this bill fair, and is it based on honest principles? The gentleman from Massachusetts [Mr. ROGERS], in his remarks awhile ago, stated that the States that have fallen below the average of 27.71 in the first class were mostly western, and agricultural, and southern

States. In that statement he is absolutely mistaken. I am going to read here some of the percentages. The general average is 27.71. Alabama has 31; Arkansas, 31; Florida, 36; Georgia, 32; Kentucky, 28; Louisiana, 38; Maryland, 29; Connecticut, 23; Rhode Island, 26; Vermont, 26; Massachusetts, which is not very southern, has 26—away under the average; California, 21. Is not the gentleman from California ashamed of his State? [Laughter.]

Mr. KAHN. Will the gentleman yield?

Mr. BURNETT. If I can have some more time, I will be glad to yield.

Mr. KAHN. I want to call the gentleman's attention to the fact that there are thousands of invalid women in the southern part of California, and old men, who have gone there for their health. They help make up the population. They come from every section of the Union.

Mr. BURNETT. And I have no doubt they have conduced to their health, some of them, by being put in the deferred class, because they think it is more healthy to stay out of the Army than to go into it. [Laughter.] But I am not talking about population, and surely your boards did not classify invalid women and old men for the draft.

To go on with the percentages of the States—Mississippi, 32; Missouri, 28; New York, 26; North Carolina, 30; South Carolina, 29; Tennessee, 28; Texas, 28; Virginia, 30; and not a single Southern State has fallen below the 27.71 average. And yet the gentleman from Massachusetts says there are Southern and Western and agricultural States that have fallen behind. I have not run through the Western States, but, if the gentleman is as far wrong in his conclusion with reference to them as he was when he made the statement in regard to Southern States, his statement can not be believed in regard to the classification of any of them.

I am not going to criticize the boards. I believe they are honest men as a rule. [Applause.] But, with all of them, this matter of classifying men for the draft was entirely new, and it was natural that many mistakes of judgment should be made. Why, even in different counties in the same district different rules were followed. In view of the fact that Provost Marshal General Crowder was constantly changing his rules, the only wonder is that more mistakes were not made than were.

It is a significant fact, however, that every one of the New England States except Maine and New Hampshire fell below the average, and the States of New York, Pennsylvania, and New Jersey fell very far below. This would seem to indicate that the boards in those States had an eye to the exemption of industrial workers, while the boards in the agricultural States of the South and in most of those of the West did not exempt the farmer boys to the same extent.

But, gentlemen, whether this great discrepancy was by accident or design, it shows the unfairness of taking those placed in class 1 as the basis on which to fix the quotas of the several States. Surely the fairest and most just basis upon which to fix the quotas is on the entire number classified, as proposed by the Shallenberger amendment.

I have always contended that the basis of population, on which the law passed last May fixed the quotas of the several States, was unjust and unfair because it took into the count the large number of aliens, who were exempt, and for that very reason I am for the Shallenberger amendment, which proposes to fix it on the total number classified. This eliminates the exempt aliens entirely from the count, and is manifestly fair to all the States; but I prefer the old population basis to the one proposed by the majority of the Committee on Military Affairs, and if the Shallenberger amendment is not adopted I can not support the bill. I am glad to state that every one of my colleagues from Alabama who is present is just as earnestly supporting the Shallenberger amendment as I am, and I can not see how gentlemen from States whose classification is so far above that of the New England and Middle States can allow themselves to be persuaded into doing their constituents so grave an injustice as to vote against this amendment. Some of the gentlemen whose States will gain so great an advantage by defeating the Shallenberger amendment have spoken eloquently against sectionalism or geographical lines in carrying on the war, and yet it will be noted that these very gentlemen are the ones who are seeking geographical and sectional advantage. I voted against war and against conscription, but now that we have both it is the duty of every patriot to do everything in his power to win the war. This I am doing; but I would be neither patriotic nor just if I stood idly by and without protest saw my people taken to fill the places of slackers from other States in the Union.

Gentlemen supporting this resolution are trying to give it force by claiming that it is an administration measure as re-

ported by the majority of the committee. This is untrue. The chairman of the committee, Mr. DENT, on whom the Secretary of War leans and largely depends for legislation to carry on the functions of his department, is earnestly supporting the Shallenberger amendment and opposing the quota provisions of the resolution as reported by the majority. Mr. DENT has just read a letter from the President, in which he says, "The whole thing is very debatable." Gentlemen opposing the Shallenberger amendment all through this discussion have continually stated that the administration is opposed to it. That, too, in the very face of the letter from the President that the quota basis for the draft is very debatable and in the face of his statement in the letter that credit for volunteers should be allowed. So it will be seen that gentlemen who are so fond of urging everyone to stand by the President are in positive opposition to his views.

Some gentlemen in trying to bolster up their arguments for a quota based on class 1 have referred sneeringly to the fact that some of the States furnished a much larger volunteer force than Alabama and some other Southern States. The gentleman from Kentucky [Mr. FIELDS] called attention to the difference between Alabama and California in this respect. But the gentleman failed to state that his own State of Kentucky, with a population of about 200,000 more than Alabama, furnished only a little over a hundred more volunteers than Alabama did. He also failed to state that about one-third of the population of Alabama is negroes, and that negroes were not permitted to enlist in the National Army in any of the Southern States except Tennessee and Maryland. He failed to state that in California only 25,376 were placed in class 1, while in Alabama 51,283 were placed in that class and in Kentucky only 50,192.

An examination of the classification will show how unjust it will be to the Southern States to base the quota on those in class 1, and yet the gentlemen who cry the loudest against any geographical or sectional divisions in this war are from States that will profit most by this unjust classification. Pennsylvania, for instance, with nearly four times the population of Alabama, has only about two and one-half times as many in class 1 as Alabama, while Texas, with only about half the population of Pennsylvania, has three-fourths as many in class 1 as the latter State.

Gentlemen, I want to win this war. Every heartbeat within me is for victory. I want to see it won without sectional discrimination or jealousies, but I do not want to sit idly by and see my great patriotic State and my great patriotic district forced to give an unjust proportion of its young manhood. It does not take such unfair methods to win this war. Victory is sure to perch upon Old Glory in the end, and when it does let it not be said that any section or any State was compelled by law to bear an unjust proportion of sacrifice while all sections share equally in the glories of the triumph. [Applause.]

The Overman Bill.

EXTENSION OF REMARKS

OF

HON. JOHN W. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 23, 1918.

Mr. JOHN W. RAINEY. Mr. Speaker, I have been in this House but a very short time. I have not had as much legislative experience as many of my colleagues. Still, ever since the introduction of this "reorganization bill," commonly called the Overman bill, I have followed closely the Senate debates thereon. From the RECORD I have gained much knowledge; I have appreciated that the Members of this Congress are men of learning, erudition, and possessed of vast stores of knowledge; I have also learned that there is much feeling, animus, and personality indulged in at times; I have read very fluent passages, logical reasoning, and consistently drawn conclusions; but I have also read many irrelevant, uncalled-for, and dillydallying extracts. From a bill which at first sight seemed most necessary, urgent, and simple we have been led into a lengthy controversy. The most far-fetched thoughts and arguments have been brought into debate. Such divergent views have been taken, such perplexing discussions taken place, that a novice in this House does not know how to express himself intelligently, does not know his own mind, does not know whether he is pro or con, does not know whether we really are drifting toward autocracy and from democracy, does not know whether America, like some other countries, has

gone mad. Nevertheless I wish to say a few words on this bill; no new thought do I intend to suggest, but simply try to explain my vote on this proposition and also attempt to show that in much of the discussion we have been going off at a tangent.

In the first place, the reason why such divergent views have been taken is because some of us have started from different viewpoints—the prolific source of all disagreement and controversy. Were we to start from the same point there would be no need of delaying this bill; there would be no need of inflated oratory. This is not a peace measure, nor would the same be advocated during peace times. This is a war measure, and as such it is a measure foreign and probably, if not contradictory at least, contrary to our national institutions. We must admit that our system of government is not designed for war; has not been modeled after the institutions of the middle ages; is not a system of government for conquest and militarism. Our Government was thought out in the minds of men who were friends of humanity, who intended to lay the foundation stones of a nation whose only end would be self-betterment, self-improvement politically, morally, mentally, and physically. But unfortunately we exist not segregated from the rest of the globe, although the Monroe doctrine intends that we should in a degree be, as it were, in a world of our own. But our right to live as such has been threatened, the Monroe doctrine has been attacked, we have been forced to defend our own existence as a Nation and as individuals. Are we to be so narrow-minded that we are going to suffer defeat because of our fear to pass a measure that may be foreign to our present national institutions designed for a peace-loving country? I think not. We have heard, and in the RECORD you will read, the cry of "beware of the dictator." They cry, "We are drifting toward dictatorship." A mere gust of wind to blind the innocent. As I asserted a moment ago, we must enact here a measure foreign to our existing institutions, not because our Constitution has failed us, not because Washington, Jefferson, and Hamilton thought wrong, but because having become obliged to take the sword we must first take off the kid glove, because we are face to face with a government built for conquest and along military lines, a government which has so far retrograded in the forest of barbarism that honest, amicable settlement of differences can not be obtained. Therefore we must and we did resort to warfare, and this warfare must be waged along war lines. We must beat the enemy with his own means, his own tools, his own system. "America will never fight," they said. They were right. America can never fight under present governmental condition; that is, fight efficiently and in a telling way. Do I mean that we must resort to imperialism, to kaiserism, to the military caste? No; not necessarily. These are only accidental. What we must drive at is centralization of powers and authority, coordination of functions, therefore reorganization in a certain sense. For our form of government is not centralized, because it is not for the State but for the individual; it tends not toward centralization of powers but is in a way centrifugal. And such is the purpose of this measure, to centralize and coordinate our authority, and not our power, as some have said. The power comes from the people, and we act here not through our own power but through the power delegated us by our people; that is, because we are authorized. The same applies to every man in authority. There lies the gist of the whole discussion. Some of us are afraid of the centralization of the national power upon our President; they are fearful of the "dictator," little realizing that the power is in the people and that the President and other officers are only authorized to exercise that power delegated to them. Then where is your dictatorship? As I understand the meaning of this term, it signifies to me an unwarranted assumption of power or authority to govern people; it is the exercise of that power belonging to the people, but which one has assumed upon himself. But this bill here favors no such condition and leads to no such results. Every power to be exercised will be a delegated power by the people through the Members of this House. And, as a matter of fact, there is to be no new power delegated, simply, as I understand, a reorganization for the purpose of greater efficiency and for war purposes and for the period of the war, of such powers already delegated. But some may say this power to reorganize is the power that is in question, is the power we fear without restriction to give the Chief Executive, is the power which may be filled with evil. Granted that this is the power. Nevertheless, would you not at the suggestion of the Executive grant him this authority to reorganize were the changes to be presented to Congress singly and individually? I think Congress would. Then, why not, to save time, to expedite the work of the war, to dispatch business quickly, and to give due backing to our first line in France, grant this authority to make such departmental and other changes in the act men-

tioned as might seem necessary during the period of the war in a lump sum? Is it to nurse a little pride that we wish to have the President come to us for every measure that he thinks necessary for the winning of the war? I do not think so.

But it is argued that we would be delegating our legislative power, which we can not, because it belongs to the people, and because the Executive could not use the same because it would be unconstitutional. Now, I am opposed to this view altogether. In the first place, has the President no discretionary powers in the administration of his executive office? Is he simply the page of Congress, or rather is he empowered to execute only that which Congress tells him to?

I can not see that we are conferring upon the President any power to legislate, strictly so called. The matter of fact is that we are legislating that he do or have the power to do certain things, which indeed, as I stated in the beginning, seem foreign to our national policies, but which we find are necessary to win the conflict in which we are now engaged. The agencies are existing and have been created either by the Constitution or by statute; the powers have been vested and authority has been given; appropriations have been made for all of said agencies, commissions, and so forth, and there is nothing in this bill which creates new agencies, commissions, and so forth, which grants new or additional power or authority to said departments. The agencies are to remain in being, and the powers are to be exercised, and the appropriations are to be expended, all according to the nature and according to the sense of the statute creating, vesting, and appropriating the same. The only change thereby made is one of accident, not of substance; it is granting a wider range of discretionary power to the Executive; it is simply the execution of powers already delegated, the exercise of authority already vested, but through a different medium. I do not say that the Commander in Chief of the Army and Navy is now authorized to make such changes, but I mean that by giving him such right we are not conferring upon him the power to legislate. However the majority feel, the President already has the power; but our Chief Executive is anxious there would be no doubt about it, and dislikes using it without confirmation by Congress.

Further, since no power is granted to establish new agencies, commissions, and so forth, since no power is delegated to create new authorities, how, therefore, can it be said that we are by this bill conferring upon the President the power to legislate and in so much abrogating the same in our regard? The only other possibility would be by abolishing either agencies, commissions, and so forth, or powers; but the bill provides that no such power is granted, and, further, that the authority by this act granted shall be exercised only in matters relating to the present war.

Are we fearful of granting to our President too much power; are we afraid that he may be too gloriously instrumental in winning this war; are we fearful that when we go back to our constituency we may not be able to say, "Look at all we have done for you and the country"? No; I do not think so, although there have been suggestions as to the trust we should have in our President. Those who raised the question whether they were for or against this bill raised an immaterial and an irrelevant question. This is not a matter of trusting the President on our part, for he has been trusted by the people, and we must presume that he will live up to this trust. The people of the United States have implicit confidence in the President. Whatever possibilities may be under this bill, we must all presume that none will become actualities unless conditions so require. And if they must come, I am not fearful of meeting them. I refer to the Interstate Commerce Commission, the Federal Reserve Board, and other important commissions now in existence. The bill provides that the same can not be abolished without the consent of Congress. That some of their functions might be suspended, redistributed, reorganized, is possible. But the range between possibility and actuality is infinite; the range is as immense as the Supreme Being. It is a sphere wherein it is beyond man to enact laws.

We may legislate as to probabilities, but it is foolish to think of possibilities when we wish to enact laws for an urgent present. I am willing to trust the President because from his past expressions of thought and actions in the Capitol he has proven himself worthy of that trust. I am positive, inasmuch as moral certitude is possible, that in all things he will use his judgment given him by a Being who preselected him for these times of trial, that in all things the interest of the people will always guide him. I am not afraid that he may become too big in the eyes of the Nation and of the world; he has already deserved the distinction of spokesman of the democracies of the world. I do not consider myself whipped into line when I do what I think should be done, although by so doing I may be

making one of my fellow men a bigger man. I am big enough; so that notwithstanding political, racial, or religious affiliation, I am willing to give credit to whom credit is due. But this is not a credit house, but rather a legislative house. I am anxious to see him given the authority, so if the time comes he may be able to act and not have any strings tied to him. The argument of trusting the President is out of order.
